THE JAPAN TIMES

A WEEKLY REVIEW OF

JAPANESE COMMERCE, POLITICS, LITERATURE, AND ART.

NEW SERIES. VOL. 1. No. 1.]

January 5, 1878.

[PRICE—FIFTY CENTS.]

[We cannot expect the public to take the same interest as ourselves in the tale of difficulties surmounted, and obstacles thrown in our way, before this first number of the JAPAN TIMES was permitted to see the light. But we must so far disregard the etiquette of the profession as to take leave to express, in this unusual manner, our deep sense of obligation and gratitude to the proprietors of the JAPAN GAZETTE. If any benefit accrues to any one from the addition of this Journal to the ranks of the foreign Press in Japan, that benefit is primarily conferred by them. Without their generous and disinterested aid, the JAPAN TIMES could not have been produced; and the rarity of the incident—in the East—of one journal thus helping another, must excuse the singularity of our making this public and grateful acknowledgment of the favour.]

SILK, AND SILKWORMS' EGGS.

WHY do the Japanese silk growers allow the best Japanese silk to be produced in Italy?

The native newspapers, last autumn, teemed with tidings of disaster, and prognostics of ruin, falling on a special branch of silk business, the production and sale of silkworms' eggs. The extraordinary fluctuations in prices were recorded, the speculative, gambling, character of the trade denounced, the damage done to the silk trade generally was demonstrated, and the evil effect on the morals and fortunes of all engaged in the unholy traffic religiously exposed. A number of native journalists raised a general wail, a few suggested remedies for the ill. But these physicians have done no good, because the basis of all their prescriptions are two nostrums which can only do harm—government protection and government interference with trade. The Government was called on by one paper, to subsidize the dealers in *cartons*; by another, to prohibit their export; in one article, to limit their production, in another, to buy up the crop; and the only sensible suggestion which we remember, was made by the *Nichi Nichi Shimbun*, at the end of a string of senseless ones:—that no assistance, direct or indirect, should be given by the Government, and that the dealers should be left to their own devices. We propose to tell the dealers how to use the remedy which they have in their own hands,—a very simple one, a remedy which will work a perfect cure, the use of which will benefit not the silk seed branch only, but the whole trade, and which will redound to the advantage of their customers as well as themselves—the only condition on which sound, wholesome, profitable trade can be carried on.

Let us first record a few statistics. There were exported in

		cards,	at	from	\$1.00	to	\$3.00
1870,	1,450,000	"	"	"	0.40	"	2.00
1871,	1,800,000	"	"	"	1.40	"	3.50
1872,	1,280,000	"	"	"	0.57	"	3.50
1873,	1,435,000	"	"	"	0.35	"	1.00
1874,	1,300,000	"	"	"	0.10	"	1.60
1875,	737,000	"	"	"	0.50	"	3.50
1876,	1,035,000	"	"	"	0.08	"	0.80
1877,	1,150,000	"	"	"			

Nothing but these figures are wanted to justify everything that native moralists have preached against the trade. But in addition:—in 1874, 500,000 cards were burnt by the dealers (after being, it was believed, paid for by the

Government,) and this year, a yet unknown number have also been destroyed. Last year, the Japanese spoilt their own market, by trying to sell 300,000 themselves, in Italy and France.

We will now compare a couple of almost typical silk seasons; for silk growers, a very bad and very good one; 1875-6 and 1876-7. In both, we take dates and prices from the time when the market really opened, and only continue the table to the date when, the bulk of the business being done, transactions in neither year would affect the general average to any important extent. We have not elaborated the table to an absolute correctness, by recording in it the number of piculs bought each mail at the average price; as this would only encumber it, without affecting our argument. We take Hanks, good No. 2, as a fair average of the quality, and our prices are for the picul:—

Then, in Season 1875—1876, we have

Hanks; Good No. 2, from	July 1	to	Aug. 23	at	\$435		
"	"	"	Aug. 24	"	Sept. 6	"	445
"	"	"	Sept. 7	"	Sept. 20	"	450
"	"	"	Sept. 21	"	Nov. 6	"	455
"	"	"	Nov. 7	"	Nov. 23	"	435
"	"	"	Nov. 24	"	Dec. 7	"	425
"	"	"	Dec. 8	"	Dec. 24	"	415
"	"	"	Dec. 25	"	Jan. 8	"	437
"	"	"	Jan. 9	"	Jan. 25	"	445
Hanks; Good No. 2; Average price							\$439

And in Season 1876—1877, we have

Hanks; Good No. 2, from	July 1	to	July 22	at	\$ 710		
"	"	"	July 23	"	Aug. 7	"	785
"	"	"	Aug. 8	"	Aug. 21	"	770
"	"	"	Aug. 22	"	Sept. 11	"	895
"	"	"	Sept. 12	"	Sept. 22	"	1,065
"	"	"	Sept. 23	"	Oct. 10	"	1,050
"	"	"	Oct. 11	"	Oct. 24	"	935
"	"	"	Oct. 25	"	Nov. 8	"	810
"	"	"	Nov. 9	"	Nov. 24	"	770
"	"	"	Nov. 25	"	Dec. 9	"	740
"	"	"	Dec. 10	"	Dec. 22	"	810
"	"	"	Dec. 23	"	Jan. 9	"	850
Hanks; Good No. 2, Average price							\$849

Again, a difference of nearly one hundred per cent shown between the average prices of two seasons, good and bad, \$438 and \$849; a most unhealthy fluctuation, damaging to the interests of buyer and seller alike. Whereas, if Japanese silk-growers would but take the needful means to ensure that Japanese silk should be produced only in Japan—by raising only enough seed for their own needs, and steadily declining to send any to market for sale to foreigners—their Silk would in a very short time find its normal price as a staple, which would only vary, as the prices of other staples, from what we may call legitimate and inartificial causes. And that this price would be a high and thoroughly remunerative one is certain. Japan silk, for colour and brilliancy, is not to be surpassed; it has a fine and strong fibre, and with careful reeling—as has been proved at Tomioka—can be improved, so as to fit it to rank in the very first place.

Now the mere export of eggs at all puts the foreign silk grower on the same level with the native; and, in practice, the native foolishly places the foreigner in an even better position than himself, by allowing him to buy the best of the eggs, retaining inferior for his own use. For the process of filling the cards is this:—the moth is first placed on a

card which we will call No. 1, on which it begins to lay eggs, after staining the paper with a preliminary exudation. As soon as this has ceased, and it commences to lay well-formed eggs steadily, it is removed to No. 2, and thence, as soon as it shows signs of exhaustion, to No. 3. Now, this has been discovered by the Italian egg buyers, and they will only have, if possible, the No. 2 cards, which contain the most vigorous produce of the insect. And, tempted by high price and immediate profit, the Japanese sells this No. 2 card and chances the production of his own silk from the No. 1 and 3. And, necessarily, the varying amount of strength in the worms, bred from this mixed seed, acts injuriously on the character of the silk they produce.

Of course, denied access to the silk districts, we have not sufficient knowledge of the silk culture in Japan, to be able to give exact statistics of the cost of production, or of the profits of the trade, and we must leave this part of the work to our native fellow workers; but we can give figures sufficiently convincing, we should imagine, to native readers. Taking the cost of a card at \$0.35 which we believe to be very nearly right,—and the average selling price of cards, all round, for the past eight years, at \$1.35, which we believe to be very considerably above the real price: then, on the 9,600,000 odd cards, remains a gross profit of \$9,600,000. But from this sum must be deducted the cost of bringing the cards to their market; the cost of the cards produced and not sold; of those actually burnt or destroyed in 1874 and 1877; and also the value of the cocoons destroyed to produce the car ons, both sold and unsold. If, therefore, we place the total profit made on the trade at Eight millions of Dollars for the eight years, or say \$1,000,000 per annum, we believe we shall have stated it very favourably for the producer.

Now let the producers imagine themselves resisting the temptation of the chance of making, in one year, a profit of a couple of millions, against nothing, or worse than nothing in the next; and,—steadily refusing to bring cards to market, no matter what price be offered for them, devoting themselves to the production of silk from these eggs which they refuse to sell. What would be the immediate result? We have no hesitation in replying—and we believe all foreigners engaged in the trade will agree with us—an immediate rise in the price of all Japan silks in stock in Europe, directly the fact of the refusal to sell eggs was established as a certainty. And an increase in the first bids for the next new season's crop, which would gradually rise, until what we have called the normal price of Japan silk as a staple was reached. Subsequent to this, only legitimate rises and falls would be observable, from such causes as affect all other staples:—wars, and rumours of wars; all the natural, political, and economical disturbances from which we pray to be delivered; and the ebb and flow of demand and supply. We believe we understate the probable profit to Japanese silk growers—were they to adopt this obvious method of improving their position—when we put it at \$200 per picul—say, all round, that an average of each season would sell at \$700 instead of \$500. Now taking 13,000 piculs as an average crop again understating our case—this alone would give a profit considerably more than double what we have shown to be the average profit on the eggs. And we leave entirely out of consideration the effect on the quality of Japan silk, generally; of judicious selection of only the best eggs for rearing; and the natural increase in quantity of the crop. On this head, there need be no fear of over-running the demand, were the fact once established that Japan silk could only be got from Japan—at least until double the average we have taken for our argument had been reached. The effect of improving the reeling, by persevering with the introduction of steam filatures, we also leave aside for the time. We content ourselves with affirming that—labouring, still, under all the existing disadvantages of imperfect manipulation, and taking the present low figure as the measure of the crop, Japanese silk growers would make double the profit from refusing to sell eggs than they make now by selling them.

This is not fiscal Protection. Nothing need be asked from their own native Government by the silk growers, nor feared from foreign Embassies. It is simply an act of legitimate self-protection by the trade; of availing itself of advantages which Nature has given to it, and which no one has a right to demand that it shall share with its rivals.

Japan grows a silk of peculiar quality, which is wanted in Europe for certain purposes, and is worth a certain price. Italy, France, Syria, India, China, are in the same position. Why should the Japanese, by allowing their seed to be exported, let Italy or France grow Japanese silk as well as their own? They cannot be compelled to do it: hitherto they have been induced into the error by the glittering bribe of an immediate profit. We have shown them that, by refusing to sell seed, they can gain a double profit; and if only—for the single season of 1878-79, they will but try the experiment we suggest, we are thoroughly certain that they will have every reason to be satisfied with the result.

PROVINCIAL GOVERNMENT.

WE intend to place on record in these columns as complete an analysis of the system of government in Japan as circumstances will allow us to procure; and the facts that the Mikado's Ministers and the junior members of the various Departments of State are on terms of confidential friendship with the chiefs and subordinates of the embassies accredited to his court—and, also, that to several of the Departments are attached foreign advisers, make our task easy, and give us the assurance that enquiry will not be deemed obtrusive, nor impertinent the tender of advice. After the mere preliminary enumeration of the several Boards of Government at the capital, and statements of the rank, number, and duties of the officers who compose them, the most important part of this work will be a description of the system under which are governed the provinces or prefectures into which the empire has, since the Restoration, been divided. And it is because a rumour is current, that a re-arrangement of these prefectures is in contemplation, that we postpone the publication of the statistics to which we refer, to the more immediate need of pointing out to the native government what seems to be an error of principle in their existing system of provincial rule.

There appears to be no settled method of choosing the officers who are charged with this most important duty, nor have we been, as yet, able to discover what are the qualifications deemed essential in a man to whom are committed the destinies of a prefecture. Yet the seriousness of this matter can hardly be over-rated. Not only is it of great present moment that those who have charge of the working of the machine of government should be competent to direct its action; but it is of even greater importance for the future welfare of the country, considering the crisis through which it is passing, that they should be equal to their position. For, though their action may be—as we know it is—fettered, if not absolutely dictated, by orders from head-quarters; still, from their reports and dispatches must be derived much of the information on which are founded the orders which are transmitted to them; and it is essentially necessary, therefore, for the well-being of the people, that the education, attainments, training, and habits of thought of each of these Prefects, should fit him for the post of governing the special district over which he is sent to rule. We foreigners, too, as well as the natives of Japan, have a direct interest in the matter; and although, as we have indicated, the object we have momentarily in view is to point out to the advisers of the Mikado what appears to us to be a mistake, in the internal administration of their own country; it is not permitted to a foreign journalist here ever to lose sight of foreigners' interests, advancement of which, happily, in almost every case, marches side by side with improvement of the condition of the natives. And, in this respect, while it is evident that a cultivated, large-minded, Provincial Governor, who can add to local knowledge of his district, its necessities and its resources, an appreciation of the way in which foreign skill and capital may aid him to supply the one and develop the other, has the means and power to influence the central government in a direction tending towards the common advantage of all;—it is equally clear that the exhibition of opposite qualities may readily make their influence felt far beyond their local sphere of action.

It is this consideration which brings us to the point we would impress on the Government. And, ignoring for the time the conservatism, which takes the form of antipathy to foreigners and resistance to all reform originating

in western habits of thought—we would ask, how is it possible for a Prefect to avoid doing harm to his prefecture, and discrediting the Central Government, who is sent to his post a stranger to the people, and to them almost as much a foreigner as if he had come across the sea? Whereas, by appointing a local magnate, Government enhances the authority of its officer, by supplementing the office with all his local and personal influence. Either he is a man of rank and family, with all the advantages of wealth, position, and hereditary and traditional respect among the people; or, by force of character and display of ability, he has won their confidence and affection. In either case, he must have special knowledge of the locality, its resources and its wants, and of the feelings, prejudices, and habits of the inhabitants. And yet, in its selection of prefects and other provincial officials, this government almost invariably weakens itself and retards the progress of the nation, by wilfully and deliberately neutralizing these advantages which lie ready for its use. Men of Northern origin are sent to govern districts in the South, and so on round the compass, the governors being, often, even absolutely distasteful to the governed, from ancient feudal antipathy, and the only symptom of mitigation of the hardship of the arrangement—and that a totally delusive one—is its reciprocal force. While the single counterbalancing advantage gained by the Central Government, at the expense to itself and the people at large of so much loss of power, is a certain amount of increased feeling of confidence—not in the loyalty of its subjects—but that it will get such information as the magistrates can give it, of disaffection to its rule; and be thus enabled to check the first movements of revolt by immediate repression.

We do not hesitate to say that this fault in the system is so grave as to make the system itself almost as bad as it can be. Examples of its defective working are so numerous in history, ancient and modern, and so obvious, that to adduce any would be almost an impertinence to our readers. It is, virtually, the system of government by force, as opposed to that of the government of love and reason; and is only excusable by necessity, in the case of conquest of a country by aliens. And, even in this latter case, a wise government avails itself as soon as possible of the assistance in its magistracy of natives friendly to its rule, and in all respects shows a wholesome regard for the wishes and prejudices of the subject race. Such has been the practice of our rule in British India, by far the most successful instance on record of such a government, though against its success have been arrayed almost all the possible difficulties of difference in race, creed, and climate. One of the strongest holds which we had over the people of India during the military mutiny of 1857—which must have succeeded, had the sympathies of the population been with the mutineers—was the affection and respect of that population for their foreign magistrates, most of whom had been born in the country, and whose fathers and grandfathers had been magistrates before them; respect and regard which had been won from the ruled by solicitude for their welfare, intimate knowledge of their languages, habits, and customs, and respect for their prejudices of caste and religion, so long manifested—almost ostentatiously—by their rulers. Indeed, the greatest objection to the competitive system, when applied to this splendid service, was the destruction, in the native mind, of the traditions attached to the old names of the Metcalfes and the Malcolms, the Elphinstones and the Munros; and though it has given us some additional hold upon the country by admitting natives of the soil to even the higher ranks of the service, it is doubtful whether what we have gained counterbalances what we have lost.

In this country, the Government has not the excuse for the system, that it was forced upon it by the necessities of conquest, though, of course, the origin of its error in judgment is not far to seek. Clan sympathies, clan jealousies, and the other inherent faults of the feudal system had long divided and distracted the country, and these the advisers of the restored Mikado have sought to obliterate by centralizing the government. In this they were right, in principle—but they have pushed the principle to a deleterious extreme by delocalizing their officers. The evils of feudalism were great and patent, and the formal relinquishment of their fiefs by the Daimios had not sufficed to destroy them. It is useless to cut down a weed, if its root

is left. The spirit of feudalism had leavened the national character, and permeated the constitution of every province in the country, and the leaders of the Restoration policy thought that safety for it and them could only be found in its total eradication. Putting aside—for the moment—the question whether they were right or wrong, we would ask them to consider whether the system they have pursued so far was the right means to their end; whether it has succeeded, or is likely to succeed; and whether a change is not likely to 'pay'—politically, as well as financially? Have they not intensified, rather than weakened, clan prejudice among the provincial communities, by the exhibition of alien provincial governors, whose ignorance of local peculiarities must often expose them to private ridicule, and whose every public act is open to invidious comparison with the procedure of the 'good old times,' by critics who would cheerfully enough have submitted to change or exaction, at the hands of the hereditary chiefs whom they look upon yet as their natural leaders? It may be urged—and with great force—that these natural leaders had often led the people to revolt against constituted authority, and that the newly established government was justified in its fear that what had been so often done before might be attempted again. And the example of the revolt of this year in Satsuma may be quoted against us as destructive of our theory. We reply by instancing the various revolts which preceded that of the Satsuma samurai, in provinces regulated under the new system. And what, but the influence of Itagaki, the *karo* of the old daimiate, prevented Tosa from throwing its weight—while the balance trembled—into the scale against the Government? 'Trust me not at all, or all in all' may, too, have been the thought which kept neutral the hereditary family at Kagoshima:—we prefer to think so, of the nobles who defied the British fleet in 1863; rather than to believe that they were actuated, in 1877, by a coward care for life and land, whatever the event of the struggle between the Government and its discarded soldiery.

But though we think an error of judgment has been committed, and that—after the Daimios had laid their fiefs at the feet of their restored suzerain in 1869—a bolder policy of trust and confidence in the hereditary aristocracy would have been more successful than the timid counsels which have prevailed, we would not be understood now to advocate any decisive retrograde step. The change from feudalism to centralized despotism was too sudden, and precipitation was its worst characteristic. Any equally abrupt re-creation of municipal or provincial self-government, now, would be confusing and harmful. What the empire wants is PEACE, and all experiments likely to put its present quiet in hazard, whether in its internal administration or in its relations with foreign powers, cannot be deprecated too strongly by all true friends of Japan. All that we would, ourselves, ask of the government at present is—to consider whether, in making any changes which appear imperative in the system of provincial government, such alteration should not rather be in the direction of utilizing local talent and influence, and even clan feeling; than in that of increasing still more the pressure of centralization, which already appears to impartial foreign observers greater than the nation can bear?

THE CHINESE EMBASSY.

DURING the past twenty years the hope has been growing in Foreign Offices, Chambers of Commerce, and Missionary Synods, that in Japan had been found the 'pou sto', from which the inert mass of China might be moved. We would not insinuate that such atmospheres have been harmful to the plant, but it is certain that its growth has been slow and uneven, and that it seems to-day farther from fruition than when its first leaflets shot up from the soil. The arrival of the Chinese Embassy in Japan has been hailed by some as a favourable development. We regret that we cannot so regard it; but we cannot, however pleasant might be the dream, close our eyes to the fact that the Government of China may entertain views and wishes of a character diametrically opposed to those of our own statesmen, merchants, and philanthropists. When the Treaty between the two countries was arranged in 1874, the clause, proposed by China, stipulating a common defensive alliance against the enemies of either, though at the time received by many foreign observers with ridicule or indifference, was by no means so regarded by more

thoughtful men. That mixed motives prompted the cabinet of Peking to accept the humiliating adjustment of the Formosan difficulty, we are all of course aware; but we shrewdly suspect that the desire to conciliate Japan, and to thereby pave the way for an attempt to gain her help, in persistence in the old policy of isolation, had more weight than any fear of what she could do, either in Formosa or on the continent—even as much as the dread of the news of her success stimulating internal rebellion. The quiet, thorough, and imperturbable manner in which has been obliterated the Woosung railway,—that leaf of the *Spes fallax* which looked so very like a blossom,—was certainly ill-calculated to support the expectation that China would follow Japan's example in accepting the civilization—and the cotton yarn—of the West; and, with our memory of these discouraging circumstances unimpaired, we regret to be unable to greet the arrival of the Chinese Embassy with any enthusiasm, a fear obtruding itself lest, rather than a step in what we deem the right direction, it should be meant as retrograde and an attempt to take from us, who have so little in Japan, even that we have.

That the bond they wish to strengthen between China and Japan is no mere sentimental alliance of 'peoples,' but that the existing from of government is approved at Peking, and that the Mikado's Ministers and their policy, individually and collectively, enjoy the sympathy of the advisers of the Emperor, has also been distinctly shown within the last twelve months. At the outbreak of the Satsuma rebellion, vessels-of-war were offered, and at a singularly opportune moment, as much ammunition as could be spared from the garrisons of Northern China was actually supplied, though the unsettled state of the country there hardly justified the sacrifice; and this seizure of the first opportunity to give effect to the defensive alliance clause has much significance. And that the efforts of Japan to gain recognition, as an independent nation, and on equal and reciprocal terms, from the Powers with whom she has concluded commercial treaties, have been carefully watched by Chinese statesmen, is certain. Hsii, the joint ambassador to England, was first nominated for the embassy hither, and was a resident here, *incognito*, for several months, in the discharge of a private and confidential mission of enquiry into the state of politics, and he was succeeded by a mandarin of rank, acting in the same capacity, who studied and reported on the public works. The example of Japan, as having the control of her own railways, was quoted in the now celebrated protest of the Toutai of Shanghai against the aggressive action of the Woosung Railway Company; and as the plant and permanent way of the Company was, we know, carefully removed and packed,—it is believed for transmission to Formosa,—it is more than probable that the Chinese authorities objected only to the establishment of the little *imperium in imperio* sought by the Company, while fully realizing the advantages of rapid transit of men and material. Again, Mr. Grosvenor, when prosecuting, at Yunnan, the enquiry into the murder of Mr. Margary, had quoted to him, by the provincial officials, the example of Japan as controlling her own Customs Revenue,—while China still suffered the interference of foreigners:—and we cannot reject the conclusion from all these facts, that the Chinese Government are fully aware of the position of affairs in Japan, and are watching its progressive steps towards civilization on the western model, though—it may be—in a spirit and from a point of view widely divergent from those which we should like them to use.

On this side of the China Sea, we have already seen somewhat, and expect to see more, of appeals in the native Japanese press, to the example of China, in successfully resisting what are called the 'encroachments' of the Treaty powers; and we have every reason to believe that the newspapers reflect the opinions of many prominent men in office. That the desire to promote friendly relations, by neighbourly acts in time of need, exists in Tokio as well as in Peking, has been lately shown in many ways. China's proffer of help to put down the Satsuma rebellion was but a fair return for Japan's offers of assistance, last year, towards the relief of the Shantung famine. Some contribution in coin was sent, rice was offered at a nominal price, and a loan proposed to them upon exceptionally favourable terms. That the two Governments are on the most friendly footing, and that all recollection of the For-

mosa quarrel is dead, appears perfectly clear; and it is certain that both entertain the belief that they are wronged by foreigners:—they resent, equally, the ex-territorial clause in the treaties with foreign powers; with equal pride and independent spirit, (qualities with much in them to admire) they chafe under the restrictions which these treaties impose upon their conduct of foreign trade; and neither, we fear, are willing to accept the truth, except upon compulsion, that China and Japan were not created for the sole use and habitation of Chinese and Japanese; but like the rest of the world, for the general behoof of all mankind.

But though we cannot, for these reasons, greet the arrival of the Chinese Embassy in Japan as an event certain, or even likely, to advance foreign interests on either side of the China Sea, we should be wrong to deny their due value to what arguments can be adduced against so gloomy a view. There are certainly some Japanese statesmen, far-sighted and intelligent, who understand that the new civilization of Japan is quite infantile, and frankly accept the provisions of the Treaties, as necessary restraints until that civilization shall have gained sufficient strength to permit of their removal. And, in spite of their recent circular, offering to throw away the export duties' revenue, if only they may be permitted to kill altogether the import trade,—it is clear, from articles recently published in the *Nichi Nichi Shimbun*, a recognized Government organ, that some members and adherents of the Government have somewhat more knowledge of true political economy. The Chinese Ambassador, therefore, will have opportunities of both hearing and reading expositions of broader and more liberal views on both political and commercial questions than are current in Peking; and we shall be delighted to own our prognostics false, should he use such opportunities aright; should the arguments and example of the enlightened statesmen to whom we have referred, overcome his prejudices and change his habit of thought. There is one subject—religion—on which he is hardly likely to find any of the Japanese Ministers ready to accord with him, to the prejudice of foreigners; while we have reason to know that the decay of Bhuddism in Japan, the revival of Sintoism, and the toleration of Christianity, have caused more anxiety and concern at Peking than would be generally supposed. Such sudden lapse from faith, and spread of positive heresy, have quite bewildered the Chinese official mind, which not only recognizes in them evidences that a formerly powerful means of influencing the political progress of Japan in parallel grooves to their own is lost to them; but fears lest, spreading to China itself, the new doctrines may hasten the fall of that feeble fabric which hardly now suffices to support a decayed dynasty. As officials of an irresponsible despotism, we cannot wonder that they should regard Christianity, especially, with fear and dislike, for if it does not exactly teach republican principles, its theory of government is that of a monarchy with the strictest limitations. "Render unto Cæsar the things that are Cæsar's" implied that Cæsar was to get only his just dues. And, though arguments in favour of slavery and standing armies have been drawn from the writings of its apostles, it is certain that the general tendency of its doctrine is levelling, and its policy liberal; and such rulers as Chinese mandarins can hardly be expected to favour a religion which not only teaches the lowest coolie that his soul is his own, but puts into his head revolutionary notions respecting his right to his body and the products of his labour. The indifference of the Japanese, and the assurance they have that Christianity has no longer the aggressive character which threatened their autonomy as a nation when it was first preached to them, guard us against their sympathizing with the Chinese in opposition to its progress; and, with regard to the decline of Bhuddism, we are inclined to think that there are strong financial reasons in the way of any attempt to arrest it. Here, therefore, are lines on which the representatives of the two countries are certain to diverge, and for the credit of Japan, we must hope that they will not be the only ones. But it is not at the end of an article, that we would enumerate the many evidences of Japan's having shot ahead of China in the path of progress; this is a comparison which we may elaborate on another occasion; for to-day, we are content to give our readers the warning that, if the Chinese embassy to this country be ultimately the means of impelling China to follow Japan on the same road—such a result is not likely to be that anticipated by the Government which sent it.

AN APOLOGY FOR A PROLOGUE.

IT is possible that some of our readers may be disappointed, when they seek in vain in these columns for an introductory article, setting forth the journal's policy. But, as an old duellist who has 'given his proofs' enjoys a certain immunity from challenge or strife; so the conductor of the *Japan Times* of 1878 claims the privilege of referring to the file of its first series—from 1865 to 1870—in lieu of publishing any formal prospectus, when issuing the first number of a second. If the memory of the writer serves him well, it was in the third number of the original publication, that announcement was made of the discovery that the Treaty Powers had concluded their arrangements with a potentate who had no sufficient *status*; that the Shogoon (or, as he was then called, the Tycoon) was but an hereditary generalissimo of the Empire; that he exercised but a limited authority over many of the Daimios; that there were provinces in the land where his warrant did not run; that the fiction, so long believed in Europe, of a dual government of Japan—spiritual and temporal—had no foundation in fact; that the rank conferred by the Court of Kioto was universally recognized as taking precedence of that granted at Yedo; and that—in view of the growing dissatisfaction of many powerful chiefs with the rule of the Bakufu—and of their fear lest foreign trade should strengthen and lighten its yoke—security for ourselves, our lives, property, and commerce, could not be guaranteed, except by such a revision of the Treaties as should relegate the Shogoon to his proper place, and restore the Mikado to his legitimate throne, as the universally acknowledged Lord Paramount and Sovereign of Japan.

How, until this policy bore its fruit, the *Japan Times*, consistently, through good and bad fortune, and alone in the foreign press of China or Japan, supported the cause, and enunciated the views, of the Restoration party—is it not written in the book of the chronicles of the time—in the back numbers of the paper? And, although we acknowledge, to the full, the truth of the axiom—that a man who cannot change his opinions is a fool; we have yet to be shown the folly of the policy advocated from 1865 to 1870 by this journal; and, moreover, have seen nothing in the conduct of the nation's affairs by its present rulers—in spite of all their errors of detail—which would justify any friend of the country in agitating for change. As has been stated in another column, what Japan specially requires for the development of its resources, the increase of its wealth, the happiness of its people, is—PEACE; and much hardship should be endured, much manifest and possible improvement postponed, should redress of grievance, or attainment of reform, necessitate any disturbance of that tranquillity which is for the nation, at present, the one greatest good. Therefore, though the right and duty of criticising Government measures will be maintained and fulfilled—of which, indeed, instance is given in other columns, our criticism will be friendly, and we trust that our advice will not be thought intrusive.

Beyond these general remarks, we have no intention of enunciating the policy of the *Japan Times*. For its opinions on Treaty revision, extra-territorial jurisdiction, finance, political economy, education, racing, 'Shakespeare and the musical glasses,' enquirers after truth must search its columns. On their correctness, and on the ability with which they may be expressed, it does not become us to anticipate a verdict. But this we may be permitted to say:—no attempt will be made to make the paper a vehicle for the circulation of the views of a single mind. That the various chords struck shall be in harmony with the key-note he sets, it is the privilege and duty of its conductor to ensure; but it will be his endeavour to bring to bear, on each important question which calls for consideration, the force of that intellect which is best qualified to treat it. The *Japan Times* will be, therefore, the organ of a party. But it will not, for this reason, refuse its aid to the dissemination of views adverse to its own, nor will it decline the assistance of critics who may deem its own views to have been inefficiently expressed. And the best proof we can offer of our good faith and impartiality is—that to friend or foe, liberal or conservative, old or young Japan, to men of any race or language, creed or degree, the correspondence columns and the subscription list of the paper are alike open.

But, though evading to the extent that we have done, what is generally held to be the duty of the conductor of a new venture in the field of journalism—we would draw the attention of our readers to the information and assistance given to them, in their work or pleasure, by the other than literary pages of the paper. Merchants who remember its first series, will bear in mind the reputation the *Japan Times* then enjoyed for the independence, as well as the fullness and accuracy, of its commercial information and market reports, while its tables of statistics were clear, comprehensive, and easy of reference. This reputation it must be our first care to revive and strengthen. We have indicated, by the wording of the paper's title, that Commerce is entitled to the first place in order of our consideration; and constant and earnest endeavour will be directed towards making the *Japan Times* of the future as trustworthy and convenient a file for reference concerning the facts and figures of the Japan trade, as was the *Japan Times* of the past.

For readers outside of Japan, and for visitors to its shores, a quantity of useful information will be given. Correspondents, here and at home, often wish to know when letters they are writing are due at their addresses, and whether mails, dispatched by particular steamers, arrived at their destination within their schedule time. Our "Mail Steamers' Register" will afford this information. Visitors to Yokohama are often at a loss to know where their multitudinous wants may be supplied: our "Professional and Tradal Directory" will inform them. The Railway Time Table and Table of Jinrickisha fares will also be appreciated by this class of readers; while the method we have adopted, and the type we use, in our advertisement columns, will make reference to them more facile, we think, than under any other system yet offered to the general public. Any suggestions for the improvement of these parts of our paper, or requests to give additional information, we shall be glad to receive and attend to and, though we are unable in this first number to do all that is required in this direction,—from want of the necessary material, we have no doubt of being able to supply every want of this character within a few weeks.

neither time, labour, nor expense will be spared to make the *Japan Times* complete and sufficient, as what its title proclaims it to be:—a weekly review of Japanese Commerce, Politics, Literature, and Art.

EDITORIAL NOTES.

WE are quite aware that in the article on Provincial Government in another page, only one side of the case has been fully stated, and that there are many cogent arguments adducible on the other. If the Prefect appointed under the present system is honest and able, he ought to be of great service in checking corruption and saving the public money. And it is quite possible, too, that local representative assemblies, or the municipal government of sub-districts, would give full scope for the exercise and use of the talents of the local men. Unhappily, this question of popular representation, if not a 'burning' one, is at present too hot to touch. Doubtless many other reasons in favour of the existing system will occur to readers of the article in question, as to ourselves: but the limits of such an essay do not permit the case on both sides to be fully stated, and we have therefore confined ourselves to setting forth those in support of the side to which we ourselves incline.

IS there any Japanese equivalent for our saying, that 'a prophet has no honour in his own country?' The present Government has so long made it essential to the appointment of officials of any rank that they shall not be natives of the locality in which they hold their posts, that it may appear to some to act upon the principle. Indeed, this negative qualification, so far as we know at present, is almost the only one indispensable in a candidate for provincial office. Now it cannot be denied that, generally, a claim to the gift of prophecy has somewhat of importance in it specially irritating, as assuming a superiority over the prophet's neighbours, which he has neither inherited, nor gained by any intelligible means; and as, besides, his predictions generally take the disagreeable form of warning of disaster or rebuke of sin, it is hardly to be

wondered at that a prophet should be unpopular, and—as we see—the wisdom of ages has crystallized the fact into a proverb. But a Prefect is not a prophet.

IT is doubtful whether Chinese residents here appreciate the arrival of their country's representatives as a boon of altogether unmixed good. The welcome they gave to them certainly did not exhibit symptoms of wild delight: indeed, it appeared to be altogether of a perfunctory and 'official' character. Ten times the amount of crackers expended, and lanterns displayed, do honour to any banker or merchant moderately popular among his Chinese clerks and customers, when he either leaves the settlement or returns to it. We strongly suspect that our Celestial friends have had a pretty easy time under the mild rule of the Kenrei, and that a Chinese Consul will be far more curious as to their means of livelihood and the amount of their incomes than will be altogether agreeable.

WE shall be surprised if Japanese journalists do not soon find reason to adopt the opinion we have elsewhere expressed respecting the Chinese embassy. That in their demands for the abolition of extra-territorial jurisdiction and revision of the tariff in a protectionist sense they are honest and earnest cannot be doubted: they are equally so—and prove their truth in their prison martyrdom—in their struggles for freedom of thought and language, and in their aspirations towards representative government; in their desire for limitation of the monarchy, or even, in some cases, in their admiration of republican institutions. It is unfortunate that their grasp is not yet wide enough to hold the truths, that isolation implies despotism, and Protection poverty; and that, in refusing freedom to foreigners, they are repelling their best allies in the effort to gain freedom for themselves. The Chinese ambassador may gain their mistaken plaudits, by supporting, in council with his colleagues, the claim of Japan to exercise jurisdiction over the stranger within her gates; or so to revise the Customs Tariff as to extinguish foreign trade:—but Japanese journalists will not so applaud the advice he is likely to give in private conversation with their own rulers:—such as offering the *Peking Gazette* as an example of what a newspaper should be, or recommending the cangue, or the split bamboo, as more suitable punishment than six months' imprisonment, for a journalist who writes nonsense about parliaments and ministerial responsibility.

WHEN this journal was first started, in September 1865, we opened a column to correspondents under the head of "Notes and Queries." Every one knows what has been done at home by the English newspaper whose name we borrowed, and how really useful it has been, as well as interesting, in bringing out, from the remotest nooks and corners, an immense mass of scattered information which would, probably, have never otherwise seen the light. We had the less compunction at committing the mild act of piracy involved in appropriating the name and idea, that a personal friend of the writer's family was the originator and first editor of the London paper, and we were secure of his approbation of our effort to become 'a picker-up of unconsidered trifles' in Japan, the valuable part of which might, in time, find their way to his own larger emporium of useful knowledge. And, in reopening the column in this New Series of the *Japan Times*, we commit no great literary fault, as we are now but plagiarizing from ourselves.

In introducing the proposal to our readers in 1865, we wrote:—

"We think that much good may be done here, in the way of collecting information about Japan. Many men know a little about the country, its history, its people and their manners and customs, but no one knows very much. By each contributing his own store to a common bank, he will acquire the right to have his own drafts upon it honoured. This is a kind of exchange in which there is, indeed, no robbery.

"All communications intended for insertion must absolutely be authenticated by the name and address of the writer, whose confidence of course, will be strictly respected. Each 'Query' at least, should carry some distinguishing signature, and the questions should be, generally, confined to Japanese matters."

"We shall be glad to receive either 'Notes' or 'Queries' from Europe or elsewhere."

We cannot aver that our effort was greatly rewarded by success. Our first enquirer asked how the Japanese fishermen caught their fish in the bay, and was, naturally, told—to go and look. Another gentleman sent us a snake found in his garden, (bottled in what the office coolies pronounced to be very good gin) and asked if it was venomous. We informed him that death ensued within 20 minutes after its bite. We got no more questions from this enquirer. Perhaps he found another snake. Then 'Botanicus' wanted to know how to pack bulbs for transport to Europe, which we were fortunately able to answer correctly, having by this time secured the assistance of an editor for the 'Notes and Queries' column who knew much more about bulbs than we knew about snakes. But—to the best of our recollection, the few other 'queries' to which 'notes' were appended, until in a few months the thirst for information was assuaged, had to be asked, and appropriate signatures invented for them, after our Editor had written his notes.

This could hardly be considered satisfactory, though fully bearing out our statement that 'many men know a little about the country, but no one knows very much.' But though, in 1865, this was true, it is by no means so now, and if our readers, native and foreign, will help us, there is little doubt that during 1878 we may get together a very respectable mass of information on various subjects. Queries may be asked, or notes in reply sent, in any language, and we will charge ourselves with appending translations; and should it appear worth while, we will, at the end of the year, collect, and reprint them, or such a selection from them as may appear likely to be useful for future reference.

WE have to note a few changes in commercial firms, such as are usually announced at this period of the year. The dissolution of partnership between Messrs. Strachan and Thomas was made public some days ago: we now note the withdrawal of Mr. J. C. Fraser from the firm which had hitherto existed under his name, in consequence, we hear, of his being admitted a partner in the firm of Messrs. Saunders, Needham & Co., of Liverpool. The business will be carried on in future under the style and title of Mollison, Fraser & Co. consisting of Messrs James P. Mollison, Evan J. Fraser, and George Hamilton. We hear that it is likely that Mr. Evan Fraser will remain in New York, and look after the interests of the house in the States. This will be as much a disappointment to his numerous friends here, who were expecting his early return—as is the abandonment of the hope of seeing Mr. J. C. Fraser out again in Japan, now compulsory on the few old residents left, who remember his having, amongst the 'last generation' the same popularity enjoyed by his brother in the present.

Messrs. Findlay, Richardson & Co. announce the admission of Mr. R. E. Findlay into their firm on the 9th of August last:—Mr. Arnold Wolff is gazetted into Messrs. Siber and Brennwald and Mr. P. A. Ramee out of that of Messrs. Smith, Baker & Co. We do not hear of any changes or promotions in the staffs of the Banks.

IT is hardly necessary for us to say that we have received the news of the amalgamation of the Yokohama Race Club, and the Yokohama Racing Association, into the YOKOHAMA JOCKEY CLUB, with unamalgamated satisfaction: and we are sure that the whole community share our sentiments. Twelve days' racing in the year have been too many, the race holidays have quite lost the character, and significance, and value, which they used to have; racing has been almost made a business: and—worst of all—that part of our community which takes an interest in sport,—including almost the entire British section of it—has been divided into two almost hostile camps, sallying out on each other, in spring and autumn, with hard words, unfounded slanders, and unjust suspicions: and during the rest of the year preserving but an armed neutrality. One of the most difficult tasks before us when we determined to revive the *Japan Times* (which under the sporting Editorship of a former sub-editor of *Bell's Life*, used to be the great authority on racing in Yokohama), was to decide under which king a Bezonian was to take service. Happily the necessity of choice is spared to us, and we can

address ourselves with an equal mind, to the task of recording the events of better race meetings than Yokohama has ever seen yet. With the strength of the stables of both associations united, and recruited by the addition of the new Japanese candidates for the honours of the Yokohama turf, Yokohama should be now able to show sport inferior to none in the East. At the meeting held last Saturday at the International Hotel, a Committee was selected by ballot which includes men of both the old parties, and likely, we think to give us a good programme for the Spring Meeting of 1878. We presume that they have power to add to their number, they would do well to invite some Japanese gentleman interested in foreign racing to join them.

We shall await with considerable interest the publication of their Rules and, especially, how they intend to treat the Lottery Question. The Double Selling Lottery was adopted in China and transplanted hither, originally from India; where it was worked very successfully. It has not thrived here, because its introducers omitted the most important safeguard from chicanery:—that no owner could scratch a horse he had allowed to be put up at, and bought in, a Club Lottery. But in a Note like this, we have not space to discuss so important a subject.

The following gentlemen were elected the Committee of the new Club:—Messrs. Keswick, Fischer, Allen, Evers, Fraser, Cruickshank, Montbel, Center, A. Barnard, Kirkwood, and De Boinville.

THAT Captain Brinkley should have consented to contribute to these columns his interesting work, the "Times of Taiko" is a piece of good fortune on which we and our readers may exchange congratulations. The few pieces written by his graceful pen, which he has permitted to appear in the columns of the local Press, have always stimulated the hope that he would give us something more; and this hope is now to be realized in the publication of the work, of which the first instalment is printed to-day, and of which the successive chapters will appear, weekly, in following numbers of the *Japan Times*. From the specimen presented to day, it will at once be seen that this is no bald translation from a single Japanese document, but that each legend selected by the author is used as a foundation, on which he raises, superstructure of carefully collected archaeological and historical studies drawn from various sources. The fault of all similar work that has been hitherto produced has been, either that it has been wholly imaginative, or too drily literal. We expect from Capt. Brinkley's book both instruction and amusement.

SUCH 'extracts' as we shall select to give to our readers will be mostly of a graver character than that which we print to-day; since we must not forget the necessity of making 'Commerce' our first care. But at Christmas time, when we can make holiday for a while, something lighter may be with advantage be used for padding; and we could not have found anything more suitable than this touching little story by James Payn, a contributor for many years to *Chambers' Magazine*. We take it from a volume of his writings, lately published by Messrs. Chatto and Windus, Piccadilly, entitled 'Halves'—the title of the longest piece in the collection; and if the perusal of 'Children I have Met' sends any of them to the book itself, or induces them to send for the book;—we can guarantee them against disappointment. The bulk is fully up to the muster we have culled.

THE new bridge over the Rokugo, on the line between Yokohama to Tokio, which has been recently opened for traffic, has hardly received the attention its completion deserved, as a fine piece of engineering work constructed under considerable difficulties. The Japanese Board of Works are to be congratulated on this improvement of their short metropolitan line, and the work should go far to establish the reputation of Mr. T. Shann, the young engineer who had charge of the works, and who also constructed a similar bridge over the Kanzaki on the Hiogo and Osaka line. But these are comparative trifles in engineering, as the Japanese will probably learn when a trunk line is run through their difficult, volcanic country. In a recent number of the *Graphic* is an engraving of the longest railway bridge yet built, and, considering the tremendous difficulties which had to be overcome in secur-

ing a sufficient foundation, while preserving intact the value of the river as a tideway navigable for ships of large burthen, also one of the cheapest. We refer to the bridge across the river Tay, connecting Fife with Forfarshire, and supplying a long wanted link between the North British and Caledonian lines of railway. It is especially this quality of its utility, apart from its magnitude, and the novelty and ingenuity of the means employed in its erection, which gives it rank with the most interesting civil engineering works ever carried to completion. Since the town of Dundee has grown to its present manufacturing importance, the great want of a bridge to connect the existing North British Railway system in Fife directly with the town of Dundee, had been severely felt. Previously, the whole of the coal, goods, and passenger traffic, coming by the North British line, had to be conveyed across in steamers to Tay Port, and thence over the Caledonian Railway to Dundee, involving not only great expense for maintenance, but frequent delays from the enormous accession of traffic, and the stormy winter weather. The Tay is a river navigable for ships of considerable burthen up as far as Perth, and broadens rapidly between Perth and Dundee until it expands into an estuary, the Firth of Tay, opening directly, without any protection from island, cape, or headland, into the turbulent German Ocean; so that the carriage of goods and passengers across the ferry was always inconvenient, frequently dangerous, and occasionally impossible.

The bridge crosses the river about one and a quarter miles west of Dundee, and connects, on the south side, with the main North British line near Leuchars, a pretty village remarkable for an ancient Norman Church, and with the town of Dundee, on the north side, by a short piece of line and tunnel running alongside the river and docks. The Tay Bridge will be the means of bringing the enormous coal-fields of Fifeshire into direct communication with Dundee, adding very much to the importance of the latter as a shipping port. During the Crimean war, when our trade with Russia was interrupted, hemp—the raw material on which then chiefly depended the manufactures of Dundee—could not be got from her, and its place was largely supplied by the then novel substitute of jute, from our own Indian possessions. This traffic with India has since grown to large proportions, the trade never having returned wholly from the groove into which our quarrel with Russia had forced it. But the jute ships, outward bound, took coal and iron to India; and the Fifeshire coal not being accessible, in consequence of the gap in the railway communication between Fife and Dundee, caused by the Firth of Tay, they have hitherto had to go from Dundee in ballast, to load at Newcastle. This will all, now, be changed; and the importance of the bridge to Dundee cannot fail to be very great.

The total length of the bridge from shore to shore is 10 320 feet. It comprises eighty-nine spans, fourteen of which cross the navigable channel of the river, and are of 200 feet each. Commencing on the south, or Fifeshire, side, the rails are 78 feet above high water, and run upon the tops of the girders. When the 200 feet spans are reached, they run over these on the bottoms of the girders, thus giving a clear headway of 88ft. above high water; the greatest altitude. On reaching the 120ft. spans on the north side, the rails are again on the top of the girders, which are continued, with the exception of a 160ft. bow string span to the north shore.

The piers, with the exception of a few near the shore, are iron cylinders filled in with concrete, and the method of placing these in position, excavating beneath them, and so finally fixing them, was very novel and ingenious, and interesting here, as contrasting with the plan adopted by the engineers of the Imperial Japanese Railways, who had no such river as the Tay to cross. The piers, in pairs, were built on the fore-bore and, connected so that they presented the appearance of gigantic opera-glasses, were floated out, between pontoons, into the positions required, and then gradually lowered, until they just rested on the bed of the river. How this was done it is almost impossible to describe without the use of technical language hardly intelligible to any but a professional reader: the means employed were chains, let out link by link, the piers being meanwhile kept in equilibrium by the aid of hydraulic rams on each of the pontoons. Then commenced the work of excavation, and this is the point to

which we would especially call attention, as contrasting with the system employed by Mr. Shann. It is specially adapted to rivers with strong currents, and with little soil, (in some places in the Tay, only 4 feet) overlying a rocky bed. He, having a loose sandy or muddy bottom to pierce to a considerable depth, but with no such current to combat as in the Tay, was able to build up his piers from the bed of the river to the surface, within the ordinary form of caisson, and then carried out successive rings of brickwork, or iron, and placed them one on the top of the other, excavating within the tube, and then, weighting it at top, driving it down to a sound foundation. But the engineers of the Tay bridge had to adopt a different plan. They placed an air-bell on the top of each of their piers, and then pumped in air, until the water was driven out, and prevented from returning below, by the increased weight of the atmosphere within the tube. The workmen, being then introduced, worked dry on the bed of the river; and, when they had dug or cut away the river bed to such a depth that the air-bell on the top was near the surface of the water it was, if a greater depth had to be attained, removed, and an additional length of cylinder added to that already sunk. And, the air-bell being replaced, the work proceeded as before, until a sufficient depth being attained to ensure the steadiness of the piers, they were filled up with brickwork and concrete, and the workmen passed on to another pair of piers.

The superstructure, on which the permanent way is placed, consists of the ordinary lattice girders, continuous over four spans, each set being provided with its own fixed and expansion bearings.

The above sketch is necessarily a mere outline, and 'popular' in the extreme. Those of our Japanese readers who are sufficiently interested in the work to wish to know more of it in detail, will find an excellent technical description of it in the *Engineer* for April 1873. The writer went over the works with the contractor in October of that year, when they were very little farther advanced than as they appear in the sketches in the *Engineer*. A similar bridge is projected now to cross the Forth, and when that is done, the railway system of Great Britain may almost be considered complete, as continuous lines can be run from the extreme south to the farthest north of the islands.

The bridge was carried out from the designs of Mr. Thomas Bouch, C. E. the engineer of the North British Railway; the foundation-stone having been laid July 1, 1871. The whole of the work was undertaken in the first place by Messrs C. de Bergue and Co. of London and Manchester, for the sum of £217,000, but the total cost has reached close upon £350,000, the final contractors being Messrs. Hopkiss, Gilkes & Co. of Middlesbrough.

AMONG the imperfections of this first number is most palpable the bad arrangement of our type. Many of these Notes would have found their proper place in our Summary of the week's News. And many items of news have to be altogether omitted: as also tabular statements, statistics, and some advertisements. And all for want of type. Our generous friends of the *Gazette* have given us 'all they had—they can no more'—and, having failed to supply our needs from Shanghai or Hongkong, we are much in the position of a father when a welcome little stranger makes its appearance unexpectedly, and there are no baby clothes ready. A *layette* would be easily enough got in London or New York, or any other large city: here we have only to hope that its friends will have regard rather to the promise of vigour shown by the infant, than to imperfections in the bibs and tuckers in which he makes his appearance.

The following TELEGRAMS have been received during the week, up to the time of our going to press.

London, December 27th, 1877.

The Emperor of Russia, in replying to an address from his subjects, said he considered that there remained yet much to be done, but that he hoped Russia would accomplish her mission.

The Servian troops have captured Appalanka, Lescovats, and Kurshumlie, and after eight hours, heavy fighting crossed into Moravia, where they succeeded in taking Pennella (P) and Nish.

The bombardment of Erzeroum is imminent.

London, December 29th, 1877.

Despatches report that the Servian troops have effected a junction with Russian forces, and are marching on Sophia. At St. Petersburg it is semi-officially stated that, at the opening of the British Parliament, the Porte will be encouraged to offer all resistance, and thus compel Russia to march on Constantinople.

London, December 30th, 1877.

The Sultan of Turkey has solicited the mediation of the British Government with the Emperor of Russia, which the British Government has consented to accept.

Austria has warned Servia not to carry the war into Bosnia and Herzegovina.

London, 1st January, 1878.

The Channel Squadron has been ordered to hold itself in readiness for sea, and the 90th Light Infantry Regiment is to proceed to Cape Colony.

The British troops have crossed the River Kei into Kaffaria.

THE JAPAN TIMES.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN TIMES must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

YOKOHAMA: SATURDAY, JANUARY 5, 1878.

NOTES OF THE WEEK.

WHEN the conductor of this journal, in evil case in body and in mind, depressed by the pain of a serious illness, and mortified at the failure of a long-cherished hope, laid down his tired pen, and ceded his property to other hands, it was stipulated that announcement should be made of the transfer. Taking as a text the chant of the gladiator: 'Morituri te Salutant' he therefore took formal leave of his readers in an epilogue, in which piece occurred the following passage:—

"The summary of the fortnight's news, always the work of the same hand, has, to the writer's fancy, been as a letter home; and many a household word, many a sly allusion, has been meant for some one or other of the fast dropping band of old home friends. It has been a steadily recurring pleasure to watch carefully, and to try to describe, pleasantly or gravely, as the time and subject asked, always faithfully and conscientiously, 'Our Life in Japan,' as at least one exile viewed it. It cannot be thought strange that he lingers lovingly over these last lines, as the old familiar faces rise and fade again before his blurred and dimming eyes."

After ten or twelve years of residence in the East, the homeward-bound traveller returns to the land of his birth to find many of his fancies false, many of his illusions dispelled. The companions of his youth have suffered a change of a different sort to that which he has felt. Much of what he has learnt has no value in their eyes, and memories which to him are bright and clear, have to him become dulled, obscure and faint. The last chapter of his home life closed, for him, with the exciting incident of his departure. To that point all the story retains, for him, a sharp outline and vivid colouring; and he is ready to take up the old companionship, where it was wrenched apart, to resolder the old union of hearts and interest, and feeling; to live out, as far as it be possible, the remainder of the tale. But they—they have formed new ties, are moving in new grooves; new characters have been introduced for them into the plot; they have but the dimmest recollection of the incidents of his departure, and seem to have to struggle against a feeling of almost resentment against his coming back. As with the Uncommercial Traveller, when he revisits Dullborough, and tells the little greengrocer that he had left the town when a child—and the unsoftened greengrocer slowly returns 'Had he? Ah! and did he find it had got on tolerably well without him?' he feels he has no right to be angry with them for their want of interest. He has become nothing to them, whereas they are 'the town, the cathedral, the bridge, the river, his childhood and a large slice of his life' to him. So the best advice to give to a man who has spent much of his life in the East, is that which Mr. Wemmick gave to Pip, on a certain memorable occasion:—"Don't go home!"

Still, life's hard truths would be unbearable without the softening graces of fancy; and, returning to the East, the exile willingly again submits his mind to the glamour of imagination. The cordiality of the welcome back to the home of his manhood has thawed from his heart the chill of his reception in the home of his youth. Some one, too, perhaps, has been faithful found to the traditions he cherished; and for him he can revive the old correspondence and with him again interchange the kindly recollections of the past. So, therefore, in this special column, we shall ask the same indulgence as of old—to say truth, shall take it; and having done our duty to our readers in discussing weightier matters in other columns of the paper in more serious fashion, shall write in this of lighter topics, without ceremony, and more for our own amusement than for any one else's instruction.

Japan has, as a place of residence, greatly changed for the worse since '65, and we have changed with it; for

'Grizzling hair the brain doth clear;
'Then you know the worth of a lass,
'Then you know that a boy is an ass,
'Wait till! you come to forty year!'

But though we don't make money as easily as we did—and so have it not to spend so gaily, cakes and ale have not altogether lost their savour, and the best to be done with the hard times is to make the best of them. Advice which has been pretty generally acted upon during the festive season which closed 1877 and ushered in 1878. The fun began with a children's party and a magnificent Christmas Tree, at the Gaiety Theatre, got up and presided over, as usual, by the gentleman who, one of the 'oldest residents' of Yokohama, retains his suffix of 'Junior,' probably to keep himself on a level with the successive generations of little children who know him as their kind and constant friend. The only thing wanting on this occasion was the presence of that ancient mariner who yearly takes the part of Santa Claus, but was, unfortunately, prevented by illness from filling his usual place. (We are glad to take the opportunity, by the way, of wishing him success in his new enterprise, recently advertised, of entertaining children of a larger growth.) As evening closed in, the firm on which in so great measure rests the whole responsibility of Christmas entertainments being successful, illuminated their shop, which had been, during the day, elaborately and tastefully dressed with evergreens; gothic arches of bamboo towering high above the roof, with, snugly ensconced in niches of fir and holly and other evergreens below,—not the cold sculptured forms of ascetic saint or martyred virgin,—but the plump, wholesome, well-fed carcases of fat bees, enormous pigs, gigantic turkeys and other Christmas dinners in the rough, while across the street swung their effigies painted on lanterns by a cunning hand, all carrying Messrs. Domoney & Co.'s cheerful motto:—
a Merry Christmas and a Happy New Year to all.'

And the architect had an artist's eye, and the soul of a poet; instanced by one master stroke it would be sinful to pass unnoticed. In one recess, he had placed a group—beautiful in its simplicity, most touching in its pathos. There, on the bosom of its mother,—a blossom untimely cropped—reposed an infantile sucking pig. And some tender hand had lovingly shrouded its form with what looked like a kerchief of costly lace, but was, in truth, the fry! This last touch of sentiment was too much: a faint perfume of sage seemed wafted towards us, and a crackling sound, as of the snapping of thin ice: with a tear in our eye, and water in our mouth,—we turned away.

Another example of that pretty Christmas house warmer, which we owe to Germany—the Christmas Tree—was appropriately lit at the German Club at half-past ten, and around it the members of the Club gave a warm welcome to their guests; and then, as midnight approached, the bell of the Roman Catholic church sounded the note that calls all Christians to rejoice over the birth of Christ, and welcomes all, of every creed, to share in the benefits of the 'Messe de Noel.' The edifice was most tastefully decorated, inside and out,—the facade being illuminated by a transparency showing the silver Star of Bethlehem, shining over the joyful words 'Verbum caro factum est,' while the invocation to worship: 'Christus Natus est: Venite, Adoremus!' adorned the gateway on either side. Within, masses of flowers, festoons of greenery and myriads of tapers adorned the building, which was crowded to overflowing by worshippers of many sects and races. The ceremony was rendered more imposing by the presence of the Bishop of the diocese. While the robing took place, the Allegretto from Mendelssohn's Symphony to the Lobgesang was played. The piece had been arranged by one of our local friends for Violin, Violoncello, Piano, and Harmonium. The instruments (all in careful hands) blended perfectly, giving the effect of a small orchestra, and the result was excellent, the only thing to be desired was a little more in quantity, the ceremony occupying a much longer time than the music prepared for. The occasion. The mass was performed under the direction of Herr Keil by a picked choir of male voices—the music chosen being

"Gounod in G," originally written for the superb Parisian choir known as "les Orpheonistes." The accompaniment was arranged also for Piano, Harmonium, Violoncello, and received due justice at the hands of the various performers. The Violin part was sadly needed, and we understand was prepared, but the player was unfortunately too ill to appear. The whole Mass was very well rendered, and produced a good effect, albeit the music is not especially suited to a bright festival occasion, and in some parts is decidedly lugubrious. Exception should be given to the "Gloria—Sanctus" and the "O Salutaris"; this last movement with the Cello obligato, was really enchanting, the finished cantabile of the instrument greatly enhancing the effect. During the offertory, one of our lady amateurs sang Gounod's "Ave Maria," founded on the First prelude of Bach; again the Violoncello playing was a special feature, and we hope for the pleasure of hearing this esteemed virtuoso yet more often. After the Mass, was sung Adam's Noel, for Bass, Solo, and Chorus, the whole service coming to an end at nearly two o'clock by the Hallelujah Chorus of Handel, given by harmonium alone.

Again, some of the same performers, reinforced by about a dozen ladies, appeared at the English Church on Christmas morning, for the usual service. Here, again, was a wealth of floral and other decoration, hiding the architectural hideousness of the structure, and thus making it possible for a worshipper, afflicted with a knowledge of Gothic, to enjoy our beautiful ritual. On this occasion, there was nothing beyond the usual Morning service of the Established Church. The Hymns and Canticles were sung to well-known tunes, which long practice has rendered familiar to the choir, and all were given with that aplomb and precision which only long practice can give. The Anthem was finely sung to the setting by Sir John Gos of the Angel's song in Luke II. 'Behold I bring you glad tidings' &c.

We hear that the long dormant Choral Society is about to be revived. We can only say that, judging from the above specimens to Choral singing, we have here ample material for a most successful Society. Certainly, for the size of the settlement, there is a most plentiful supply of available musical talent, both vocal and instrumental, and we see no reason why we should not be treated to as good music as falls to the lot of any settlement in the East. We bid the reviving society a cordial welcome and trust that under proper direction we may receive much musical pleasure at its hands.

The festival decorations in vogue among the Japanese have lately been so well described by Mrs. Ayrton in a paper read before the Asiatic Society, that it would be mere impertinence to go over the same ground. The weather has been so dismally inclement, too, that few foreigners have seen the Japanese street ornamentation on this occasion, except the few whose business has compelled them to go through the village of Honmura or as far the Railway Station. To many strangers on their first arrival in Japan, this village of Honmura gives their first glimpse of native life. Here may be found representatives of nearly every trade in the country, and as from their proximity to the foreign settlement, the inhabitants, for several years, have driven a profitable trade, they have thriven fast, and can well afford to spend a little money on any day of rejoicing, though they seem to care but little about the appearance of their houses at any other time, these remaining as dirty and squalid a set of hovels as ever. But at New Year, the whole aspect of the village is changed. Waving plumes of the graceful bamboo, with the Okazari and Kadomatsu (straw and fir branch ornaments) deck each house, together producing such a pretty effect that one could wish the decoration perpetual. Passing on across the creek into the native town of Yokohama, the same ornamentation is seen, though not so plentiful as in Honmura. Still the New Year is everywhere acknowledged, and no house seems so poor but does it reverence, even if only by a bunch of Kado-matsu. And so along the banks of the canal to the Railway station, where, perhaps the best single piece of decoration in the native town is to be found, a large evergreen arch leading to the Goods department with flowers and berries interlaced, the crown surmounted by the Railway and Government flags. The five arches leading to the station are prettily decorated, but the effect is heavy. The entrance to the Lighthouse Department at Bente is handsomely decorated with about two tempos' worth of faded matsu. The Railway Hotel by Hotsu and the native Banks in the neighbourhood are all decked out with good taste and pretty effect. The "Nisaro" European dining rooms, corner of Basa-michi and Go-chome deserves to be well mentioned; everything here is neat and in good taste, the same may be said as to the inside of the house, not forgetting the eatables; Musashiya's curio-store and Shobei's silk-store in the Honcho-dori are in gay holiday attire, the Post Office, Town, Hall and Telegraph offices are all decorated with great care, good effect and seemingly at no little cost. The entrance to the Custom-House has a cheap tawdry coloured paper and straw device, with a temporary water proof covering over it of more value than the decora-

tion; while on either side, are long lines of goods carts, locked together, and all decorated with strings of the Okazari.

Disappointing as was the miserable weather to hundreds, the streets of course had a lonely appearance on New-Year's day. The only tradesmen who kept open shop were the barbers, whose calling, allows them to take but two holidays in each year, on the 17th of the 1st month and on the 17th of the 7th month. But rain, however disagreeable, does not interfere seriously with "New Year" celebrations in Japan; the disposition of the people being to make light of misfortune and it being presumable that they are accustomed to their own climate.

That sordid want of type which occasionally vexes public printers compels us, here, to close abruptly these Notes of the Week. We leave many incidents unnoticed, some are recorded in other columns. We throw ourselves on the indulgence of our readers and promise better behaviour for the future.

THE TIMES OF TAIKO.

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

[Social grades, mutually so far removed that might and right sank utterly confounded in the intervals; multitudes of petty principalities, each wrapped in its own selfish majesty, almost to the exclusion of any common ray of patriotism; a creed of feudal fidelity that swayed the mind of the whole nation more powerfully than the instincts of love or life; and a civilization refined to subtilty, but passionately cherishing models of martial strength, and always recalled from the brink of effeminacy by the slogan of war, or the call of ambition;—in such a setting one might well look to find many a gem of chivalry and heroism.

And such are there in profusion! Japan, as we see it now, reflects but in a few things the Japan of former days. Its shores have been touched by an eastward-setting stream, chilled by the hard glaciers of social and commercial principles, and so swollen by steadily falling drops of truth and science, that—alas! alas!—the dear old ruins are tottering and falling, one by one.

The object of the following pages is to restore some of these while there is yet time.

The task is not altogether an easy one. Such annals as one finds at hand are for the most part very skeletons, often imperfect, and sometimes enclosed in elfin or unearthly crypts, difficult to demortoise or penetrate; while from scarcely any library, can one obtain material sufficient to clothe the dry bones in half the brave equipage of flesh and beauty, raiment and armour, of the times wherein they lived and moved.

But fortunately there still exists in Japan a class of men pre-eminently the best narrators in the world. Without disguise or garniture, their only accessories a desk, a fan and a rapper, these living chronicles carry their breathless audiences back to the days of the 'ancients of the earth,' and reproduce moods and feats that are fast lapsing into the land of fable. Nor are these men romancers: they never improvise beyond an allusion or an urbanity, and their materials are found in manuscripts handed down from father to son, and jealously guarded as sources of livelihood.

These records, and their less ornate brethren, the writer has endeavoured to fuse into forms faithful to the truth, hoping always that no unguent of the perhaps too easily rolling social wheel of Old Japan may prove unsavoury to western senses.]

ISHIKAWA GOYEMON.

Chapter I. THE BELLS.

MOVED by the many orisons of Horikawa, the Gods seemed at last to have willed healing for his son Shirakawa; who, wearied and wasted by three months of intermittent fever, slept now quietly and healthfully in his palace, Seiriyoden, at Kioto.

The three rooms forming a *suite*, in the most southerly of which the Emperor lay, had been known during the three centuries of their existence as the *Leopodasa*, the

Steed, and the Elf galleries, for on the silk arras of the first were depicted groups of "hagi" flowers, from the weakest bud to the lustiest blossom; on those of the second, droves of horses, in every conceivable attitude of action or repose, and on those of the third, bands of elves from the "Island of the long-fingered and ample-footed," elves whose span measured their stature and the impress of whose feet marked the compass of their graves. The legends of the palace related that the decorations of these arras had cost their several artists a decade of years, and that when, being completed, the doors that hid them from each other were for the first time opened, the whole multitude of horses, leaping from the tapestry, were on the point of devouring the *le-pedeza*. When the elves, hastening after them, drove them back with kicks of their vast feet; since which time the horses from their places had quietly gazed at the flowers, and the elves, from theirs, guarded the horses.

Separated from this part of the palace by a court-yard some ten paces wide, were the quarters of the chamberlains, and stretched behind these, a cord of purple silk led from the veranda of the Elf gallery to a peal of silver bells, sheltered under the eaves of the chief Chamberlain's office.

Near the Emperor's couch his favorite wife, Atsuko, sat watching. Some instinct of love, more prescient than the judgment of the court physicians, marred her share in the general rejoicing, and held her still to her post; though indeed all cause for anxiety about the sick man's health seemed to have been removed. Her watch was shared by two of her attendants; fair young girls of fifteen and sixteen, of whom one was engaged in fanning the Emperor, while the other performed a similar office, sometimes for the Empress, sometimes for herself.

It was autumn. The voices of the ceaseless insects sounded like the echoes of a giant harp, and a listless wind shook the bells of the iris, and gathered the breath of the half-opened lotus.

On two sides of the room occupied by the watchers and the watched, were hung curtains of glossy white flax, plaited, twisted and knotted into a thousand fantastic tassels and interstices, across which the setting sun stretched his arms to within a span of the bronze lions guarding the southern exit of the chamber. Every sound within human control was hushed, and the palace lay buried in a silence deep as the lull between the throes of a mighty hurricane.

Slowly, the sun passed below the summit of the cedar wood, and an infant moon creeping timidly in his wake, laid her silver fingers for a moment on the still warm traces of his footsteps. But Shirakawa slept always the same motionless slumber.

The night lamps had been lit and twice trimmed, the clang of the watchman's staff had twice rung up from the distant streets, and the two handmaidens, with heads drooped upon their bosoms, had forgotten the daylight and their duties. But the Empress sat, wakeful and anxious, watching the fire-flies flit past the meshes of the flax, and listening to the Emperor's quiet breathing in the pauses of the cicada's drone. A strange feeling of agitation, at first undefined, but growing with the growth of the hours, sometimes made the inaction of her vigil almost insupportable, and at others, led her away into a mystery of forebodings, than which any reality had been more welcome. At one moment the throbbing of her heart seemed to measure the march of some vast catastrophe, and at another, its sudden quiet startled her into a selfish terror, that obscured the consciousness of everything but her solitude and the darkness.

Atsuko, as was the wont of noble ladies a thousand years ago, had spent many a morning in the fencing school and many an afternoon on the jousting green, and reputation gave her one of the firmest wrists and truest lances of her compeers, though in truth the delicate and dream like grace of her beauty, without one emphatic limb or lineament, made all this, unseen, difficult of credence. She was, therefore, as little prone to fear as any woman, and yet she found herself more fearful than most women have ever been, and apparently with less reason; for even the languid breeze had breathed its last, the shadow of the lotus lay motionless on the lake, the sobbing of the waterfall had subsided into a long unvaried whisper, and nothing was abroad but universal rest.

And indeed she had almost reasoned herself into some feeling of reassurance, when from the court-yard that lay

beyond the Elf gallery, suddenly and sharply the sound of the silver bells came hurrying across the silence—the silver bells that were only accessible from the Elf gallery, into the gloom of which, barely broken by one solitary lamp, Atsuko had at that very moment been gazing.

She sprang to her feet, every nerve in her body thrilling with terror and astonishment. Had the elves trailed their huge feet from the tapestry, or the *hagi* flowers again tempted the horses into action, or the flax festoons wreathed themselves into a coil of snakes, or the demons on the doors of the Emperor's dining room rolled their red eyes and mowed their frightful faces into life,—any of these things had been less startling, since their possibility had been often present to her fancy: but that the bells, the soft-voiced bells, hid away under the shadow of the eaves and silent until now for three months, should violate the night at such a moment and with so disordered a sound! The thing was so marvellous and so unreasonable, that it paralysed the power of thought, and for a second Atsuko stood spell-bound. But the next, she was suddenly aware that the Emperor's quiet breathing had been replaced by gasps and panting. His limbs tossed uneasily, an expression of pain and horror contorted and pinched his features, while with his arms he pushed and wrestled against some presence that seemed to haunt him.

In a moment Atsuko had roused her maids and sprung to the sick man's side. Doctors, attendants, chamberlains, hastily summoned, hurried in from here and there, and after a time the chief physician himself arrived, but nothing brought the Emperor relief, and stranger still, nothing could rouse him from the slumber that seemed to have been visited by so terrible a nightmare: a very mockery of sleep indeed, real in no item, save the victim's unconsciousness; but yet a sleep that defied all efforts to disturb it. Minute after minute, the arms toiled, and the fingers grappled, with the inaccessible horror, while in measure as the muscles lost their force, the breathing became more painful, and the expression of the features more agonized. Atsuko hid her face and felt that her vague fear had been a thousand times better than this fearful reality.

This condition lasted for about an hour, after which it disappeared almost as quickly as it had come. The Emperor, opening his eyes, raised himself for a second from his pillow, and gazed anxiously towards the Elf gallery; then he laid down his head, and sank into a deep sleep, which continued unbroken till three hours after sunrise, and relieved all fear of any fresh access of fever.

Nevertheless it became apparent, as the day wore on, that this promise of convalescence was yielding to a mood of despondent lethargy. So far as speech or action was concerned, no evidence of any fresh mischief appeared; but his attendants remarked that the sick man's eye was tenanted by a look of fear entirely foreign to his character, and that every sound whose origin lay beyond the reach of his immediate observation, produced a dilation of his pupils and a visible tremor of his muscles. These symptoms, developing themselves more strongly towards evening, the conviction was forced upon the physicians that their patient's malady had entered a phase inaccessible to any trivial treatment, and they finally judged it necessary to try to obtain some account of his state from his own lips.

It was not without considerable hesitation that they determined to adopt this course; for there are certain conditions of mental disquiet whose aspect, while awakening sympathy, forbids intrusion; and all those who had access to the Emperor's side that day, felt instinctively that the judgment of the sufferer had done well in drawing a veil over the nature of his suffering. It was to Atsuko therefore that the chief physician addressed himself, and explaining the necessity for some new course of treatment, whether moral or physical, begged her to undertake the task of questioning the sick man.

Atsuko's noble devotion did not allow her to hesitate for a moment. Kneeling by the silk cushions on which the Emperor lay, she bowed her head to the ground and in a soft voice asked Shirakawa how he felt? The Emperor did not immediately reply, but stretching out his hand, placed it gently under Atsuko's forehead, and she, raising herself, saw indeed his wan face and the marvellously emaciated fingers that now rested on her own, but saw too in his eyes that look of strong love, at which the soul of a woman glows like a cascade in a rainbow.

"Atsuko," said the sick man, "will you watch by me to-night?"

"Yes, Sire," she replied, "I was here all last night."

"You were here last night," cried the Emperor, his face assuming an expression of anxious enquiry,—“then, Atsuko, who rang the bells?”

Had then the tone of those bells, soft and undecided as it was, been able to penetrate a slumber so deathlike that nothing human could disturb it? Already the daylight and the distance of the event had half obliterated its impression, and Atsuko remembering how that one peal had come without a jar or jangle, and passed away without the faintest resonance, was beginning to persuade herself that the whole idea might have visited her in a moment of sleep. But now she saw the reality established by evidence from its very nature unassailable. She did not know what to answer. A moment's hesitation admitted her knowledge of the circumstance as well as her ignorance of the cause, and she could only murmur:—

"Sire, I do not know."

"But you heard them ring, Atsuko?"

"Yes, Sire, I thought I did."

"You thought truly. Then, Atsuko, try to find out why they ring to-night, and remember that I who ask you have borne you no common love."

Saying this, Shirakawa withdrew his hand, and turned his face away. Atsuko waited for several moments, hoping he would speak again, but finding that she waited in vain, rose at last reluctantly, and returned to her seat beside the lions, her senses half bewildered and the vague pain of her midnight vigil revived. She felt that something, against which neither the craft of medicine nor the care of love could prevail, had thrust itself between the conception and consummation of her hopes. Yesterday, all had been promise, to-day all was solicitude. She did not much grieve that she had failed to elicit anything which might guide the physicians, for she knew, though she shrank from the admission, that the case lay beyond the reach of their art.

Brief and trivial however as was the story she had to tell them, when they assembled in consultation shortly afterwards, her report of the Emperor's questions and injunction produced a strong sensation; for rumour had long attributed Shirakawa's illness to causes more than human. They decided therefore to lose no time in consulting the Emperor's father.

Horikawa had but just returned to the palace. He had set out the previous forenoon, to return thanks to the God *IZANAMI*, whose shrine lay twenty miles distant among the mountains. Both in going and coming, he had stopped to watch the blue-backed minnows dart across the gold sands of the Takajima river, and on each occasion he had seen nothing but the image of a black cloud, which seemed to travel home with him to the very gates. He arrived therefore with a foreboding of the circumstances he found, and having heard the chief physician's report, immediately declared his intention of keeping watch in the Elf gallery himself that night.

The day died uneasily. Enormous billows of murky clouds rolled up to meet the sinking sun, and the lightning brisling on their crests almost destroyed the darkness. Rain, falling at first in solitary drops, was presently dashed against the walls of the palace by a wind that rushed up from the distance with a sound like the roar of an earthquake; yet the Emperor fell again into a heavy sleep, while his father and Atsuko watched beside the veranda that looked out on the court-yard of the bells.

Midway between the hours of the "Ox" and the "Tiger" (about 2 P.M.) on the preceding night, the sick man had experienced the first access of his new suffering; and as the time drew near, Atsuko felt herself again lapsing into a condition of uneasy dread. Looking at Horikawa she thought that the uncertain lamplight showed his features wearing a shadow of similar misgiving, and that, like herself, he waited, rather than watched.

The storm, which since sunset had grown into a giant hurricane, was at that moment perfectly still—a stillness that presaged its advent with fresh fury from another quarter—and only the crowing of the cocks replaced its sullen voice. But when it leaped up again, half a bow's bend farther to the East, so terrible was the first throb of its force that the two watchers involuntarily turned their heads towards its coming; and in that second, ere the glance of either could recover the court-

yard or the eaves, the bells had sounded and ceased. Horikawa, calling for lights, sprang from the portico only to find that the wind, eddying round an angle of the building shook the tassels of the bell rope, and hurled amongst the bells fragments of shingle from the gate's roof, while Atsuko hurrying to the Emperor's room, found him again tortured by his invisible enemy.

On this occasion the attack was both longer and more violent, and the Emperor awoke next day so faint and broken that the result of such another seizure admitted of no doubt. For the first time since the commencement of his illness three months before, Atsuko's fortitude entirely forsook her. She sat in the shadow of the lions, her face buried in her hands and the burning tears welling through her fingers.

It was then that Horikawa resolved to abandon both medicine and prayer, and commit the salvation of his son to whatever Japan possessed of martial prowess. He believed that three things stood between well-being and the influence of evil; the will of the gods, integrity of life, and a brave heart. He saw that all his services and applications had failed to merit the aid of heaven, and he acknowledged that his own or his son's blamelessness must be measured by the issue of this malady. Moreover, tradition had handed down a story of a death in the Imperial family under similar circumstance, concerning which the wisdom of the godlike anchorite Kibi had declared, that the evil was "begotten of guile and bred by the lack of a strong man." It only remained therefore to choose between Ishikawa Goyemon and Minamoto Yoshiie, two knights whose fames had travelled abreast from end to end of Japan.

Ishikawa's skill as an archer was so marvellous that fables said he had once aimed at and brought down an erolite; and it was well known how with four arrows at his belt he had ridden out alone to the "Hill of the seven faces," and shot dead the four chiefs of the mountain banditti, as they galloped up the ridge to attack him. Minamoto's renown rested rather on his skill as a leader than on his individual prowess, though of his fortitude it was reported that demons had failed to shake it. For, when his life was ebbing out through a spear thrust, received in battle with the rebel Takehira, his spirit, travelling to the other world, had seen his body delivered over to be tortured for ever by the ghosts of the men whose lives he had compassed in fight. Rolled all night upon a hedge of barbed spikes, heated so that his flesh hissed as they pierced it, he had struggled by day in a sea of boiling salt, while ghoulies, throwing harpoons from the banks, caught up his head lest any lurid wave should smother his suffering. Yet, believing this to be the eternity that awaited him, he had recovered consciousness to record in his death song, that were his life given him again he would not alter it, since duty ought never to halt, though judgment be blind.

Of these two men, Horikawa selected the former. In any other crisis his choice might have been different, but the bow was the weapon of the Gods, and as an archer Goyemon was incomparable.

Ishikawa was just about to set out on a hunting excursion to Lake Omiya, when the Imperial summons reached him. He could scarcely perhaps have conceived anything more improbable for himself than an audience with the ex-emperor; his rank did not entitle him to it, even supposing that any reason were apparent, and, whether for good or evil, the matter was so marvellous that when the third gate of the palace admitted him, scarcely demanding entry, he seemed to his retinue like a man moving in a dream.

He remained for some moments with his head bowed on the threshold of the 'Dragon' chamber, whither the chamberlain had at once conducted him, before a voice, which he recognised as the chief minister's, bade him come forward, and advancing a few paces, he kneeled at the margin of a broad bar of shadow strewn with dancing diamonds of sunlight, the shadow of the wonderful bamboo of Tartary, which had pushed its green head through the snow three hundred and twelve winters before, at the prayer of Kosami, the architect of the palace. Beyond this shadow, Ishikawa saw the chief minister, six knights in waiting seated in rows of three on the right and left, and in the centre the figure of a white-haired man dressed entirely in red silk and regarding him with a look half anxious, half imperious.

"Ishikawa," said the man in red, we have more than once heard of your skill as an archer and of the renown that Japan wins through your deeds. The moment to which your past life has been but the prelude has now come. We congratulate you."

This was uttered deliberately and with several pauses, at each of which Ishikawa raised his forehead a hand's breadth from its position on the mats and bowed. The speaker continued:—

"The Imperial body is tormented by a malady that baffles our physicians, but can, we believe be cured by your aid."

"Sire, my life is His Majesty's," said Ishikawa. Then finding that the silence remained unbroken, he added:—

"But my family has produced no men of talent. We have never achieved more than the very imperfect study of arms, a vassal's first duty, and my ancestors have not transmitted any elixir or medicament that might be of use at this crisis."

"I have just told you that medicine is powerless," answered the ex-Emperor; "the evil spirit by which the Imperial life is threatened comes to you to meet it and drive it away. We have done with oracles and charms, and trust only to the virtue of valour."

Now a hair's breadth might have been of his senses. Evil faith in everything beyond the evidence of his senses, he regarded as the phantasies of imbecility, and in himself credit others with more credulity than he found in his eyes. The command of the ex-Emperor had therefore borne an evil but one issue, his own ruin. Called upon to remain as yet uncertainly existing, by a method which, though his conjectures comprehensible, was surely based on a delusion, he occupied his mind, to the exclusion of any more useful device, as to the author of his impending misfortune. To comply signified failure, to refuse, treason. "Sire," he said, "I am an ignorant man, and altogether unfit to service your Majesty requires. My mean ability cannot even conceive a means of attempting to carry out your wishes. I earnestly pray you therefore to employ some more worthy instrument."

"Ishikawa," cried Yoshifusa, the Chief Minister, in a loud stern voice, "Do you mean to disobey the Imperial commands?"

"Certainly not, your Excellency," answered Goyemon; "but I venture to think that it would be treasonable to charge myself with their execution, knowing that I cannot but fail."

"Your fear of failure comes from the weakness of your loyalty," replied the Chief Minister. "What merit would there be in action, were success certain?"

"True, Your Excellency, but it seems to me that my action were madness where failure is certain. As for my life, that belongs to His Majesty, and I should be glad if he had need of it, but my reputation and the honour of my family belong to the shrines of my ancestors."

"Do you then suffer these selfish motives to precede your obedience?" cried the minister, striking his fan angrily on the ground.

But, before Ishikawa could reply, the ex-Emperor interfered:—

"We have no further need of the man," said he: "let him return and await our pleasure in his own house."

Ishikawa raised his head and walked proudly away. As he received his swords from the chamberlain at the vestibule and replaced them in his girdle, he believed that he did so for the last time, thinking that but a few hours separated him from an enforced death by his own hand. Nevertheless no man discovered a shadow of emotion in his speech or mein.

Two hours afterwards, Minamoto no Yoshiie was admitted to an audience with the ex-Emperor in the same place. It was now past noon, and little space remained to provide against the danger of the coming night. This time the interview was opened by the Chief Minister, who, avoiding all suggestion or command, merely described the circumstances of the Emperor's previous seizures, and hinting at the fear that another might prove fatal, asked Minamoto whether he could form any idea as to the nature of the malady.

Minamoto's creed on the subject of supernatural beings was altogether different from that of Ishikawa. The fearful vision that had visited him in his extremity, though

it could not shake his mind, had never forsaken it. He therefore answered at once that in his opinion the Imperial safety was threatened by some impious fiend.

The ex-Emperor now spoke.

"Minamoto, you are right. Whatever strange fatality, whether in the past or in the present, has induced this misfortune, there can now be but one remedy. Does your judgment tell you what it is?"

"Your Majesty," answered Minamoto, "I scarcely trust myself to conceive any opinion on such a subject, but I have always been taught that the sound of a bow-string drawn by the hand of a pure-hearted knight can rout an army of evil spirits."

"Then," said Horikawa, the slightest tone of eagerness vibrating through his stately voice, "then, Minamoto, you shall guard the Emperor to-night."

"Your Majesty," answered the knight, raising his head for the first time, "I thank you. Whether I succeed or fail, I shall never forget that my sovereign thought me worthy of such a trust."

With so little question and such large devotion did the brave man undertake this momentous function.

It has been well said that there is no lock for men's lips. The shadows had not crept half an inch further on the dial, before a whisper of Minamoto's enterprise had flowed round the whole palace, and for the moment one absorbing curiosity unified the feelings of all, from the knights who guarded the thirty two gates, to the minions who scoured the game-cocks' cribs; from the blind musician who studied his art in the voice of the mavis, to the scullion who fanned the frying eels. For it was seldom indeed that anything happened to vary the monotone of life within the moats of the Imperial Castle. The same stately dream numbed the vitality of daily routine and holiday pastime, from the opening spring, when the first plum-blossom shone through the mists of the "silver thread waterfall," to the decaying autumn, when the wild hurricane stripped their last leaves from the maples. Even the illness of the Emperor had come upon him so stealthily and conquered him so gradually, that its climax had been equally indifferent to the palace denizens, of whom the great bulk had never so much as looked on the sacred lineaments. But now the mystery, which for two days had been growing so fast, that these placid folks found the hours too few for their surmises and their questions; this mystery had assumed the form of a single combat between a ghastly fiend and the best knight in Japan, and whether an unsuccessful issue would transform the palace into a den of demons, or the country of the gods into an empire of ogres, were questions that credulity found little difficulty in answering.

Small marvel then that all who could look gazed, and all who were less fortunate listened, as Minamoto and his thirty followers rode down the path of the setting sun-beams to the verge of the "Tortoise bridge" that spanned the third moat of the castle. Here dismounting from their horses, they crossed the bridge, and following a marble causeway, touched on either side by wide areas of milk white pebbles, reached a gate which admitted them to the "Court of the bronze eagles." Just beyond the shadow of a cherry forest, the one in the act of alighting and the other welcoming him with outstretched neck, these colossal birds rested each a foot upon the lowest of ten granite steps leading to the hall of audience, a noble chamber, in every niche of whose ample walls some story of philosophy or valour was depicted; hollow-eyed Sain unravelling mysteries of the abacus by the glow of his caged fire-flies; Sanko with numbed fingers fumbling among folios of infant ethics by the pallid gleam of a snow-patch; Sonkei, his chamber door built up and his head supported in a hair halter, guarding his studies from sleep or intrusion; Miyo's mother sacrificing her life to secure her son's fidelity, and many another history that cycles can never tarnish.

It was scarcely an accident that prepared this chamber for the entertainment of Minamoto and his followers on the eve of their enterprise. Surrounded by classics of heroism, and seated in places made reverend by the memory of princely occupants, they received from the hands of the Minister a golden cup hitherto untouched by any lips save those of the Emperor himself, and one after another pledged the faith they followed and the life they left, for they had all sworn not to survive failure.

While the moonlight was still half hidden by the gloaming, they passed into that part of the palace where the sick man lay. Minamoto seated himself in the same place from which the ex-Emperor had watched the night before, and his thirty followers took up their posts in the Court-yard of the Bells. They were all in complete armour, greave and hauberk, breast plate and back piece, and Minamoto carried in his hand a bow whose heart had been shaped that day from a block of mulberry more than a hundred years old. Of this block, before its sap was quite dry, a part had supplied a mortuary tablet for one of his ancestors, and on the remnant, at each triennial mass for the soul of the dead man, a single letter had been traced by the officiating priest, until the characters shaped themselves into this: "in the fibre, fame or failure." Minamoto, believing that the crisis to which this prophecy pointed was now surely come, had on his return from the palace, taken the block from its place beside the family altar, and after a prayer to the guardian spirits of his forefathers, caused it to be cut into a centre piece for the bow he carried.

By the Emperor's side his father, the Prime Minister and the chief physician watched, while the room that separated this from the Elf gallery was occupied by the Empress Fukiko, her ladies in waiting, and Atsuko, who sat in her old seat by the lions. Of the rest, all those who were in the palace, as well as many thousands without, where rumour had tripled the truth, waited and wondered.

Two hours after the booming of the temple bells at midnight, the ex-Emperor, who till that moment had kept his gaze fixed upon the sick man, suddenly turned towards the door of the lions, and at the same instant those who were without observed that Minamoto, rising hastily upon one knee, seized his bow and carried his hand to the string. Almost immediately afterwards the bells in the court-yard sounded, and the Prime Minister called out loudly that the Emperor's agony was upon him.

Then the thirty one knights, springing to their feet, drew their bow-strings from forearm to forehead, and holding them stretched while their leader shouted defiance to the evil spirits, released them in unison with a twang that seemed to stir the darkness. This was repeated thrice, and, each time, the voice of Minamoto, pealing with a resonance more than mortal, the majesty of these men who had promised to die or to succeed, the mystery of the foe they fought with, and the extraordinary moment of the issue, thrilled the spectators as though a breath of winter had touched them on the autumn night.

At the third sound of the bows, the Emperor awoke, free from everything but the memory of his pain, and the following day two proclamations were issued under the hand of the Prime Minister, the one raising Minamoto to the fourth rank of nobility, with much eulogy and large grants of revenue, and the other confiscating the estates of Ishikawa and banishing him for ever from the capital.

(To be continued in our next.)

EXTRACTS.

CHILDREN I HAVE MET.

A CHRISTMAS STORY, IN THREE CHAPTERS.

By JAMES PATN.

CHAPTER I.

UPON a certain Christmas Eve, not many years ago, I was in a train on the North-Western Railway, bound for London. It is the fashion to express pity for persons of my mature age who are obliged to travel upon that festive season, when they ought to be "by rights" in the chairs by their own hearth, surrounded by laughing child-faces, and looking forward—not without some apprehension—to snap-dragon; but I did not feel any commiseration for myself whatever. My home was in town, and I should meet there with such a loving welcome, I well knew, as would compensate me for any inconvenience of my present position. As for the child-faces, they indeed were not awaiting me, but, since I had never known such, they would not be missed. I was content to picture to myself the bright glad face of her who had been my own true wife for near a quarter of a century, and which, if not so far, was ten times as dear to me as on the day on which I had beheld it first. The battle of life had been a hard one for me, and in my secret heart I think I should have lost it had she not stood by my side; for in that warfare the non-combatants count for much.

God wives are the music that puts men in heart, as the martial band inspires the soldier; only in their case it plays right on throughout the fight,—now soft, now loud, but ever heard till death comes to us or them. They are the hospital staff, who bind up our wounds and nurse us tenderly, when the battle has gone sore against us; and they are the chaplains also, who, taking advant-

age of our weakness, would lead us—God bless them!—to the skies, of which we have lost sight in all that smoke and turmoil. I would not have said this to my Nelly for a kingdom—for these angels are human, after all—but such was the thought that I entertained about her as the express flew through the fallingsnow, which had clothed all objects with its dazzling robe, as though it were attiring earth as a bride for heaven.

As the day drew on—for my journey was a long one—and the sunbeams faded, those bridal garments became those of death, and the look of the vast snow-shroud made me shiver. What would life become, thought I, if my sunbeam were to cease, and I should be left alone, without even that reflection of it to comfort me such as the widower sees, or thinks he sees, in the eyes of his children? A selfish thought indeed, but are not all our thoughts selfish, even when they are busied with those who are far dearer to us than life itself? If she did die, would the religion that I professed prove indeed a solace? Would there be any real actual consolation in the belief that we should meet again where there is neither marrying or giving in marriage, and where all the conditions of our existence must needs be wholly changed? I am not a sentimental man—far from it: I plume myself, with reason, upon my practical character. "Will it wash?" is the vulgar but expressive phrase—borrowed from a connection of many years with a certain Manchester warehouse—which I am accustomed to apply to matters in general. To many a plain man of mature years and of the middle class, who has no pretensions to be considered a philosopher, such thoughts, or others like them, have doubtless sometimes come for a brief space, to be dissipated by the first material incident. The carriage passing over the points at the terminus, and shaking us all up a little, cut the thread of my slender speculations, and set me wondering, as our train langed and clattered into the station, whether there would be a sufficiency of cabs to supply our needs. I had not much luggage, but there was a box containing a certain Christmas present for my Nelly about which I was solicitous, and I repaired at once to the luggage-van to look after it. "Of course, it is the last box," was upon the tip of my impatient tongue, as trunks, imperials, and hat-boxes were poured out upon the platform, and ever and anon the "By your leave" of the porter with his iron-wheeled barrow made my keen sense of the rights of property succumb to the care of life and limb; but, as it happened, I had this time underrated the malice of destiny; the box was not there at all. The luggage van yawned before me with nothing in it; and with my heart full of bitterness and thoughts of action at law for loss of goods in transit, I turned upon my heel, and almost overset a little woman of five years old or so, with a look of wistfulness in her tear-wet eyes of blue that would have melted Hero!

"What is it, my dear?" inquired I stooping my ear to the level of her rosebud of a mouth.

"Gibbinth," said she, laying her small hand upon my arm.

"Give you what, my darling?" It was plain she was not a beggar; indeed, I should have used the phrase, a "lady's child" in describing her, had not her woeful little face put all ideas of her social rank out of my mind. She was well and warmly clad, as suited with the snowy night, and had a sealskin muffler hanging round her neck, into which, so soon as she found she had attracted my attention, she replaced her little hands.

"You are Gibbinth?" continued she, looking at me anxiously from top to toe, as though to discover for herself some distinctive mark of the Gibbins family.

"No, my dear," said I; "I am not." It was impossible to be angry with such a tiny creature, but I certainly did not feel flattered at being taken for any such person. If it had been Montmorency or Howard, the mistake might have been intelligible enough; but—Gibbins!

"If you are not Gibbinth, where can Gibbinth be?" continued the little maiden; "the Dutchman has been in my eyes for ever so long."

I had never heard the metaphor about the Dutchman (who, by the bye, turned out to be the Dutchman), but it was evident the poor little thing was sleepy and tired. The passengers had by this time all departed, and, besides the officials, there was no one visible beneath the roof of that ghastly station save myself, this little one, and a single cabman, who was making intermittent signs to me with his whip—as though he were moved by clock-work—that he was waiting there for my convenience, and that he hoped any longer delay would be considered in the fare. A feeling began to creep over me that I had done some wrong to this poor little scrap in not being Gibbins, as she had expected, and that she had some sort of claim upon me in consequence. In vain I said to myself that that "wouldn't wash," and called up all the precepts of a long and successful commercial career to justify the great principle of non-interference. The most that they could do for me was to suggest my shifting the responsibility upon somebody else, and referring the matter to the railway officials.

As I moved away to where the Inspector's office was inscribed over a doorway, my small acquaintance again laid her little hand upon my wrist, not as a grown-up lady takes a gentleman's arm, but with a certain sense of assured dependence, that it was impossible to ignore or to resist.

If I was not Gibbins, that tiny pressure seemed to say I was in Gibbins' place, and the future conduct of affairs, so far as she was concerned, was no longer in her hands, but mine.

"Mr. Inspector," said I, when I had found that officer, "what is the meaning of this little lady being all alone here?"

"Well, sir, I was in hopes that you could have told us that." He took off his cap, which had a gold band round it, not in my honour, as I supposed, but for my small companion to admire and handle (it had been, as I afterwards discovered, her plaything for

the last six hours, in the intervals of his official business). We a! thought that you were Gibbins come at last."

"I am nothing of the sort," said I testily. "I never saw this ——" here she looked up from the cap with such an astonished gaze, caused by my harsh tones, that I felt quite ashamed of myself—"I say I never before set eyes upon this little lady in all my life."

"I am sorry for it, sir," answered the inspector, "for she don't seem to have any other friend. She has been here for half the day, and more, in the waiting-room yonder; and whenever a train comes in, out she trots, and asks for Gibbins. It's an infamous shame of those who have sent a child like that up on a Christmas Eve, with nobody to meet her, at a great station like this; and I should like to have the whippin' of 'em."

"What's her name?" inquired I, in a whisper.

"Well, you had better ask her, sir; for none of us can make head or tail of it ourselves."

Then I stooped down, and put the first question in the Church Catechism to this poor little waif and stray.

"What is your name?"

"I'm Osey," replied she, looking up in surprise that such an obvious fact should not be already known to me.

"She means Rosey," explained the inspector; "such a child as that can never pronounce her hars, bless you. It's plain to me that you ain't a family man, sir."

I had once, however, been within a very little of being so, and that was, in truth, the chief reason why I did not at once offer this delicate human waif the shelter of our home.

Some years ago, I had met, within a few streets of my own doors an ayah, an Indian nurse, with perhaps the fattest child in her arms which England has yet produced, and who had lost her way; she could understand a little English, but could speak no more of it than informed me that her master's name was "Yone," evidently Bengalee for Jones. As to where he lived, she had no notion, except that it was in the direction of the setting sun, which for London is a somewhat vague address.

She had a robe of white, which contrasted strikingly with her black and shining face; she had a ring through her nose, of more splendour, I should say, than value; and a pair of very lavishly embroidered slippers, turned up at the toes.

Altogether, she was not a desirable person for a gentleman in my line of business to be seen going about with, between six and seven in the afternoon, when his friends and neighbours are all returning from the City.

I felt at the time that she "wouldn't wash," and indeed it would have been of no use if she did; yet I could scarcely leave her to wander about all night with that enormous child; she was very tired already, it was evident, although not hungry; people had offered her buns, it seemed, in great profusion, and one woman had nearly killed her with a bottle of ginger-beer (an article, I believe, forbidden by the Hindu faith); and of the use and value of money she was entirely ignorant; in short, I was obliged to bring her home, which I did, accompanied by a mob of about forty street-boys, and a policeman in the distance; I had told him of her calamity, and he could suggest no remedy beyond the station house, but the situation interested him.

By the skilful cross-examination of my wife, it was elicited from the Ayah that she had gone out for a walk that morning with the child, and had been walking ever since, probably in a circle.

"But Jones must be the greatest idiot in Great Britain," said I, "to send a nurse out with his child who can't speak English, and who doesn't know her way."

"Perhaps he didn't want to see either of them again," observed my wife, with dismal sagacity.

Then I perceived what a very unwashable material this article I had become responsible for might turn out to be: to have a strange child on one's hands for life was bad enough, but to adopt a black woman with a ring through her nose and turned up slippers! It might be that we were about to entertain an angel unaware, but I was bound to say she didn't look like it.

"I suppose she must have sheets to her bed?" said my wife doubtfully, when discussing the arrangements for the night.

"Yes, yes; her colour is fast enough," returned I, gloomily; "she is not an Ethiopian serenader."

Not a syllable indeed did she sing or say, beyond "Yes" or "No" and "Yone" while she remained under our roof, which was only for twelve hours; nor did the fat child open its mouth except for food, which it devoured voraciously.

After breakfast next morning came Jones (of India), whom the police had informed of the asylum which his offspring had received. He swore in Hindustanee at the Ayah, boxed the child's ears for being frightened at his father's violence, and then expressed his thanks to my wife (for I was gone to the City) for her "injudicious hospitality." "I am sure your husband meant well," he was good enough to say, "but I should have had much less trouble if he had left matters to the police."

It was the remembrance of this fiasco that made me even more practical than usual on the present occasion, and caused me to hesitate in constituting myself "Rosey's" temporary Guardian.

"What is your surname?"

"My surname?" It was plain that I might as well have asked her the explanation of the Schleswig-Holstein difficulty, at the time at its acme of complexity.

"What is your papa's name?"

She shook her head till the golden curls fell over her sweet face as the summer wind scatters the laburnum.

"And mama's?"

"Mama? No, no mama" answered she quietly, as she buttoned and unbuttoned the chin-strap of the inspector's cap; an indifference far more pathetic to behold than tears.

"But where is your home, Rosey?"

"Home?" Even that word had no meaning for her, it seemed; and yet her dress and manners showed that she had experienced dutiful, if not kindly, ministrations. Her unsuspecting trust and confidence told also the same tale.

"Are you at school, then, darling?"

"Et!" — here she brightened up, well pleased to find her questioner at last intelligible—"me at tool."

"And where is your school, Rosey?"

Here she became a *laburnum* again; names and places were evidently not her strong point; she might have dropped from the skies themselves for all she knew of whence she came or whither she was going.

The station she had come from, the inspector said, was Crewe—a large manufacturing town and junction—so much was told by her ticket, and by the company's luggage label upon a large box that had come with her, but which had otherwise no address.

"What is to be done with her, Mr. Inspector?"

"Well, the woman in charge of the waiting rooms will look after her for the night, I dare say. I would take her home myself, if I had not a house too full of brats already, though, Heaven knows, I don't want to lose any of 'em. Every lady as has seen the child took notice of her, and gave her tarts and things in the refreshment-room; but when it comes to taking her home with them—why, that is quite another matter. It's so few wives, and still fewer husbands, as dares to do it, you see."

"Well, this is my card," said I; "and I will take her to my wife as a Christmas present. I suppose Mr. Gibbins will turn up to-morrow morning at latest."

"Well, if the worst come to the worst, you can but send her to the work-us you know—poor little innocent soul!" and with that he kissed her.

If I had not been of so practical a nature, and if the regulations of the company had not forbidden it, I could almost have given that inspector five shillings; as it was, I left that amount with him for incidental expenses—giving me early news of Gibbins; or what not—and then I called a cab.

"Rosey, my dear, I shall take you home with me," said I: "you must want rest and supper."

"But Tosey must turn too," said Rosey.

"By all means." I thought Tosey was some doll that she had left in the waiting room, and accompanied her thither to get it, while her box was being lifted on to the cab.

In one of those vast and cheerless apartments, with which railway travellers who arrive too soon, or too late, are so well acquainted, I found the woman in charge pacing up and down the place with a large bundle in her arms.

"Hullo, missey! said she: "so you have found your friend at last. I must say, sir," added she, addressing herself to me, that you have given me a great deal of trouble—though I don't grudge it, poor little fellow!—in minding this boy for the whole afternoon. He's as good as gold for one of his years, but of course he's dog-tired, and ought to have been in his cot hours ago."

"Why, what boy is that?" inquired I, with a vague sense of apprehension.

"Dat my itty broder Tosey," explained my small companion. Now, Tosey, tum along; the coachey-poachey is waiting."

There were two of them! None who have not had twins unexpectedly presented to them, can picture to themselves my feelings at that moment. There was, however, nothing for it, but to say with the pin-cushion—nay with two pin-cushions—"Welcome little strangers."

At the word "coachey-poachey," as though it had been an open sesame to his young affections, Tosey held out his arms to me, with a wild chuckle, at the same time kicking his little legs like one learning to swim. It was a terrible moment, for I did not know how to handle so delicate an article; it was as though a parlour maid who has never been "out" before should begin with washing up a service of eggshell China; though Tosey did not look so much like the outside of the egg as the inside, poached. So white—for the poor little soul was wan and weary—so soft, so dimpled, so wabby, and so warm he was, it seemed as though the touch of a finger would have broken him.

He was a fair complexioned child, like his sister; but his eyes were a soft brown, whereas Rosey's were as blue as the skies in June; and though, I suppose, a year younger than she, he had a look of thought and gravity (with wrinkles, too, everywhere) which might have become his own grandfather. I have since had some reason to believe that, in another state of existence, Tosey had been King of the fairies, and that the cares of his tiny kingdom still weighed upon him; but this is mere conjecture. He permitted himself great excitements, but, having expressed his feelings, sank always into a state of philosophic reflection, as though to examine whether or no they had been justified. Thus on catching sight of the cab-horse, he cried "Jee-jee," and jerked himself so violently in my arms that I thought for the moment we had both fallen backwards; then immediately afterwards he became stolid, silent, and statuesque. I seized upon this opportunity to place him on the back-seat of the vehicle, where I could have my eye on him, and where, being wedged in by his sister and her multitudinous wraps, I thought he would keep his equilibrium. This, however—although throughout the catastrophe he preserved his gravity—was by no means the case, for no sooner did the wheels begin to move, than both of the children fell forward, knocking my open purse out of my hand, from which I had just been paying the waiting-woman, and scattering its contents upon the floor of the cab, which as usual, had as many holes as a cullender. What was the precise extent of my pecuniary loss, I never ventured to calculate, but certainly I did something to realise the dream of Dick Whittington in paving the neighbourhood of Euston Square with gold.

Property however (except in the eye of the law), is of less consequence than life, and all my energies were directed to preserve my fellow-travellers. Fortunately, they were so wrapped in clothing, that they could scarcely have been hurt—unless they had fallen on their faces, which they did not, but quite the reverse—had they dropped from the top of St. Paul's; but for the rest of the journey I placed one on one of my knees, and one on the other, and held them each with one arm as well. There is a famous statue (not the least like me, however) called the First Cradle, which accurately represents my position in the four-wheeler; nor did I dare to change it even by a hair-breadth, for in a second or two both of my little friends had fallen asleep, and it was clear by their sweet faces that it would have been a crime to wake them.

Rosey was away in Paradise, where the only idolatry is baby-worship—the Peris were handing her about from one to the other, and she had a smile for every one. Tosey was back in Elfland, recounting his adventures among mortals, accompanied by philosophic reflections. Not a sigh escaped them, not a movement stirred their tender limbs; the snow, that was falling more thickly than ever, could not have come from the skies more innocent and pure than they.

I had not the least doubt of the nature of their reception from my Nelly; my apprehensions were solely upon my own account. That syah business, though it had happened long ago, still rankled in her memory. If she had been in my place, she would, I knew, have done exactly as I had done, and I should have expostulated with her upon acting upon impulse, and giving way to sentiment on Christmas Eve. It is so different, being philanthropic one's self, and bearing the philanthropy of other people.

The astonishment of our parlour-maid upon perceiving her master return with these unexpected guests, was such that she actually forbore to remark upon them, as I carried the two into the house.

"Is that you, George?" cried my wife's delighted voice from the drawing-room floor."

"I am not quite sure, my dear," was my reply; for indeed I had by this time begun to entertain suspicions of my own identity: "you had better come down and see."

"And you nice old darling, that is to look at the Christmas present you wrote about, I know."

"Well, no," said I; "that is gone astray" (I had up to then forgotten all about that unhappy box) "but I have brought you others instead."

"O! dear, delightful, generous——oh, my goodness! whose children have you got there?"

"Gibbins's!"

For the moment that answer proved sufficient, for Rosey and Tosey had both opened those masked batteries, their wondering eyes: and, silenced by their unexpected fire, my wife could only gasp and gaze from one to the other.

"Mum-mum-mum-mum," ejaculated Tosey very rapidly, with the air of a discoverer.

"Why, he takes me for his mama! I do declare, continued Nelly, with enforced admiration, as she folded him in her arms.

"And are you his sister, pretty dear?"

"Et! This monosyllable was elongated and dwelt upon with conscious pride. "Me and Tosey is sister and brudder."

"But where on earth are their parents? Where did you pick them up, and why did you bring them home?"

"They were left at the station and never called for," explained I; and since there was no sleeping accommodation for them in the waiting-room—which must, moreover, be rather a lonely place for a nursery after business hours, besides which it was snowing hard, and being Christmas Eve, when, above all times, little children should be had in remembrance——"

"Jan, bring some tea and cake as soon as you can get it," interrupted my wife; "and tell Elizabeth to get the spare room ready. She had better sleep with the poor little dears, for they are too young to be left alone, and, of course, it will only be for one night."

"Of course not," said I cheerfully. Gibbins is certain to turn up in the morning, just as Mr. Jones did."

My object was to draw a deduction from experience that might inspire confidence in these young persons being taken off our hands, of which in reality I by no means felt assured; but I had made a mistake in mentioning Jones, of Bengal.

"We shall doubtless get no thanks for whatever we do," remarked my wife tartly, at the same time taking off Rosey's multitudinous wraps with much tender solicitude. "I have no patience with wretches who leave their little children alone and friendly in the great waste of London. I wonder where they expect to go to?"

"Yes, and where they expect their children to go to," rejoined I. "However, it isn't Rosey's fault, nor Tosey's."

If the children had looked beautiful in their furs and wraps, they appeared still more attractive now that they were in their undergarments, which showed their grace of movement. Rosey's limbs were very slender, but she climbed actively enough into the chair that had been set for her at the tea-table, though not before she had seen Tosey's more plump proportions already seated in his. I was plain that she still considered him under her charge and edict. When my wife cut her a slice of cake, she passed it on to her brother, and broke it into small pieces for him, as one breaks bread to feed the birds; nor, while attending to his physical comforts, did she neglect his manners. "What does Tosey say?" inquired she, "to the lady who gives him cake?"

Tosey stared at her in shocked surprise. Could she not see that he was waiting? indulging in the only occupation in which (as she must be aware) he took at present any satisfaction? Nay, even upon the lowest ground, who could be expected to reply to abstract questions, who has his mouth quite full of currant cake? Again

she appealed to his sense of politeness, and this time he transferred his eyes from her fair face to the central ornament of the ceiling, at which he stared and continued to stare (though eating all the time) with an intensity that riveted our own attention also.

"Now what does Tosey say when he is dood, and has hax his cake?" repeated the other, more persuasively even than before.

"Moa" (more).
At this my wife burst out laughing and threw her arms about his neck. "Did you ever hear such a sensible child" cried she, "to say more instead of Ta? Why it's human nature in a nutshell." It was one form of human nature, no doubt; but it was another—though alas! one not so much dwelt upon by the theologians—to see Rosey's unselfish solicitude for Tosey's comfort, as though a nightingale should take a wren under its wing, and tend it. And the wren acknowledged her loving service. Tosey declined the offer of my wife's assistance to descend from his chair, with a certain austere calmness. "You menn well, I have no doubt, my good woman" his manner seemed to say; but this honour is reserved for another: it pleases her, and I am disposed to please her, when there's no temptation to do otherwise." So Rosey's outstretched arms received him, after his repast; and in their loving hold he immediately fell asleep, like a despot gorged with wine and meat in the embrace of some favoured slave. My wife carried him to bed herself; while Elizabeth carried Rosey, a burden scarcely heavier than he—her blue eyes heavy with sleep, her golden hair streaming behind her like a sheaf of stars. The painter who drew Jacob's Ladder with the angels ascending it, must have seen some such spectacle as that, I think, on his own stairs at home.

* The dates of Arrival and Departure of the Mitsui Bishi Company steamers are susceptible of alteration, consequent on the necessity imposed upon the Company by its contract of connecting with the steamers of the Pacific Mail.

* No days for Arrival or Departure of the Pacific Mail Company's or Occidental and Oriental Company's steamers having as yet been fixed, we are unable to tabulate them. Each separate steamer's departure from her port will be notified in the Table below, and the day of her probable arrival at her destination.

* Three days are allowed in the P. & O. Company's Schedule for transit of the Mails between London and Brindisi.

* Two days are allowed in the Messageries Company's Schedule for transit of the Mails between London and Marseilles.

EXTRA-TERRITORIALITY.

THE inherent right of every nation is to govern by its own laws; any attempt to dictate the manner of its municipal government may be justly resented as an interference with the independence of a State; a nation which admits the interference of another with its internal government ceases to be independent. These are maxims of the law political, self-evident—and trite; but in them may be summed up the arguments put forward by the advocates for the withdrawal, from the Treaties with Japan, of the extra-territorial clauses.

But such advocates ignore the masterful axiom that 'circumstances alter cases.' In considering the question of the possibility—before we approach that of the advisability—of revoking these clauses, naturally irksome to a high-spirited people, the most important factor in the calculation is the almost anomalous position of Japan as a nation, relative to other Powers. The experiment of intercourse with foreigners was tried, and adjudged a failure, during the last half of the sixteenth century: and Iyeyasu, the founder of the dynasty which ruled the land from 1605 to 1868, deliberately revived the old policy of exclusion, inaugurating its restoration with a thoroughly decisive massacre. But since this latter date, Japan has turned her back on the traditions of her past; and, accepting the truth that 'progress' is necessary to her welfare, seeks admission into Western society, and is content to re-mould her own civilisation after our fashions. She must undergo the inevitable experience of the *parvenu*. When a man, raised by innate ability, inherited wealth, or other accident, above the class in which he was born, fancies its dull society unworthy of his lustre, and seeks a more brilliant assembly, before which to strew his pearls; he finds success up to a certain point singularly facile. He is welcomed into some *salons* as a lion of the season; his exertions for social triumphs are sneered at by the class he has left, while it regrets his loss, and is jealous of his success; the social parasites of the class he attempts to join batten on the new blood, and its sycophants pander to his vices and his vanity. But beyond this point he cannot reach. Admission to the coteries of really good society is denied to him by prejudices of birth, education, and association, which he cannot overcome in his own person, and is fortunate if he can secure for his son or his grandson. And, though the truth is an unpleasant one to state:—as is the position of the *parvenu* social, so is that of the *parvenu* political, and it is not to be denied that at present Japan occupies that unenviable *status*. There is a principle of international communion, more necessary to a nation's progress among nations, and to the maintenance of a nation's fame, than even the assertion of the right of self-government:—the principle of equality. And it is the antagonism of Eastern policy to this principle which prevents the withdrawal of our claim to self-governance, or the government of our own magistrates, within the territories

of Eastern States. The rights of man, in our western polities, are held to take precedence of, to be the root of, and, concreted, to become—the rights of nations. Herein lies the gist of the whole argument of our resistance to Eastern jurisdiction. We cannot admit the equality of a nation, or its claims to international rights, whose citizens do not enjoy the equality of nature, or the rights of man. The grant of relief from external pressure must be bought by the guarantee of internal reform.

Let us instance. Essential to the preservation of this equality in civil government is the independence of magistrates. Magistrates chosen, at the will of a sovereign, from place-hunting courtiers—without qualification of knowledge, without scientific training, fail to preserve even the best system of laws from mal-administration. Removable at his pleasure, all their decisions suffer the taint of suspicion or contempt. How then, under a code of laws which we believe to be far from the best; which confessedly unfixed, unproved, receiving daily revision, and requiring more,—can foreign shepherds be expected to subject that tender lamb, the foreign litigant, to the shears of native magistrates, without independence or *esprit de corps*, of whose ability they have no knowledge, nor any confidence in their desire to be just.

Let us not be misunderstood. Perfect equality is as impossible as is the exercise, in perfection, of any inherent right. The equality we contend for is a comparative principle, as is inherent right a right of qualified application. Not the equality of a theoretic or fanciful Utopia; but such recognition of the individual as is permitted under the necessarily imperfect laws of the world's economy: a give-and-take equality. Many rights, recognized and respected, militate against perfect equality; such, for instance, as monopolies—notably the monopoly of land in the hand of the sovereign, or of an aristocracy. And thus restriction of the tenure of land by aliens has long been a recognized principle in European states. But under certain conditions, it is permitted to aliens to occupy land for the purposes of pleasure or trade in all parts of an European empire, while its inheritance is in no case granted. And herein Japan is inconsistently liberal. She refuses the right of residence or occupation—of even travel—in all parts of her empire, while in small portions she has yielded, without an objection, the right of inheritance.

Another obstacle to the establishment of such a working equality, is the remnant of feudalism in Japan. Her feudal system differs as widely from that of the village communities of India and other Asiatic peoples, as it does from the feudal system of the Middle Ages in Europe. Instead of being a system of tenure, by which was sustained the connecting bond of loyalty between the Sovereign and the yeoman; instead of conferring a right in exchange for exacted service; instead, in fact, of illustrating 'give-and-take equality,'—it became under the Shogunate

a principle of despotic government. The territory was divided into Satrapies: the governance of each was assigned to a family, whose head had within the province absolute dominion; civil and criminal jurisdiction municipal and fiscal control:—until the traditions of a province often over-rode the laws of the empire. Alike to other Asiatic communities, in this respect, that the family, and not the individual, was regarded as the unit of society: Japanese feudalism strained this principle into making the family a means of government as well as the unit of tenure. And although, at the Restoration, feudalism received a blow; yet so much of its corrupting and obsolete principles remain, as to render the residence of foreigners under native jurisdiction impossible until they are completely eradicated. A few of these obstacles we will proceed to enumerate.

The undue prerogative of officialism, and the stern rule of the *patria potestas*,—these perhaps afford the best instances for the purpose of our argument. Throughout the Penal Code of Japan (we are using Mr. Longford's translation) we find most startling instances of the prerogative of officialism: from the first clause to the last, the code is swelled with clauses which award vengeance to the official who is attacked by an inferior, or by a civilian; while on the other hand, extenuation of punishment is afforded to the official who attacks his inferior. This strikes quite through the root—as we need hardly point out—of that maxim of our English constitution:—that all men are equal in the eye of the law. Again, the military are exempt from the jurisdiction of the civil and criminal tribunals of the Empire:—

"Persons in the naval and military services are in all cases to be tried and punished by their own authorities, even for civil offences:"

And here again is violated one of the fundamental principles of the English constitution, of which Englishmen are most jealous:—the restriction of the excesses of an idle soldiery by the arm of the civil power. Were these two the only points of difference, in an attempt to arbitrate the vexed question of jurisdiction between England and Japan, they would be enough to settle it. No English Secretary of State for Foreign Affairs dare rise in his place in the English parliament, and propose to deprive Englishmen in any part of the world—for no matter what counterbalancing advantage of trade intercourse—of two such indubitable and sacred clauses in the charters by which he holds secure his property, his liberty, and his life.

Again, the power of the father over his family, of the husband over his wife, is recognized almost to the degree of constituting the head of a family a criminal judge and executioner in one, with power to adjudge and inflict capital punishment at his own will or caprice: so trifling are the penalties attached to the extremest of his acts:—

"A husband who kills a wife for using abusive language towards, or assaulting his parents or grand-parents, instead of appealing to the authorities, shall, if information of his crime be given to the authorities by the parents (we suppose of the woman) be punished by penal servitude for one year, and by penal servitude for ninety days, if, in the assault, the wife has inflicted any wounds on either parents or grand-parents."

"No penalty shall attach to the husband if the wife commit suicide after having been beaten or scolded by him for a fault of this kind."

Yet again:—

"A master who, of himself and without reference to the authorities, kills a servant who has been guilty of a capital offence, shall be punished by penal servitude for eighty days. No penalty shall attach to a master for beating a servant, unless cutting wounds be inflicted, when he shall be sentenced to a punishment three degrees less severe than that provided in the law of assault for ordinary

"cases, and if the death of the servant result from such beating, the punishment shall be penal servitude for ten years!"

Compare this with our European codes, to which native servants so often appeal, here and elsewhere in the East, on the slightest provocation by their employers.

The total absence of training for the bench, noticeable in the judiciary to which law-abiding Europeans are asked to submit themselves, belongs rather to a distinct branch of the subject which we intend to treat next week—but we must not totally omit notice of it, as an element of that uncertainty of administration which, again, is a solitary objection fatal to abolition of the extra-territorial clauses in our Treaties. The criminal code of Japan is founded on the Chinese codes known as those of the Ming and Tsing. Of a civil code, we can find no trace. So far as we can learn, it is drawn from the same source as the criminal law; but there exists no ancient written law accessible to the researches of the foreign student: and the unwritten or traditional law is not to be relied on from day to day. For, from what classes are drawn the judges, the interpreters and administrators of the laws? From the crowd of deserving courtiers or place-seekers; not from a learned and experienced Bar of lawyers. The fact is—there is no such bar. The lawyers themselves possess none of that training in the science of laws which would fit them for interpreting or administering it. There is nothing, here in Japan, to be discovered of that sound and solid foundation which exists in the Bars of Europe and America, of early education, *prestige*, long experience and *esprit de corps*, on which is built up in our Bench so lasting and splendid a structure of morality and justice. There, when a lawyer has achieved the reward of his labours by promotion to a judgeship, he sits a monument of erudition among his peers, a rock of defence to suitors; intelligently administering the law between man and man, without regard to high or low degree,—irremovable and independent, and so, impartial. Here how different the spectacle! on the Bench,

"Blind and naked ignorance
Delivers brawling judgments, unashamed,
On all things all day long:"

While, at the bar, familiarity with the literature of the country—romances and ghost stories—is a chief qualification for admission to the grade of attorney*; and exemption from the witness box is claimed for and conceded to officials of by no means exalted rank.

These are only some of the antagonisms between the laws and customs of the East and West, which are sufficient to prevent the repeal of the 'extra-territorial' clauses: but, certainly, until Japanese civilization has purged itself of at least the impurities we have mentioned above, for their repeal there can be no hope. Whether she can,—without disintegration of the whole frame of her social body,—cast off officialism and corruption, deprive the family influence of its political significance, and the head of the family of his despotic, patriarchal, power—in effect de-Orientalise herself: and whether, possessing the ability to do so, she would be the gainer by the change; are subjects into which we cannot enter, at the close of an article already of too great a length—length only excusable by the vital importance of the subject, and by our feeling that in discussing it, it would not be becoming in the *Japan Times*, to express its opinion with any reserve of sentiment, or any uncertainty of sound.

THE POLL TAX.

AFTER the good cheer has been eaten, and the good wishes exchanged; come the Christmas bills and the New Year's frosts; cough, catarrh and chilblains, and with these disagreeable heralds of 1878 marches the British Con-

* This is on record, as the statement of a native lawyer in a foreign court of this settlement.

sul, as usual, to summon British subjects to pay their Poll Tax, which the authors of the Order in Council having imposed illegally, disingenuously disguised under the title of a Registration Fee. As usual, we shall condemn it, and grumble at it, in language more or less forcible, during the month; on the 30th or 31st, the majority of us will pay it; and a few forgetful or dilatory wights will have to be reminded, in February, of their liability to fine; when in fear and trembling they will hasten to pay up their dollars thankful to owe their escape from additional imposition, to the mercy of officials who disapprove of the tax their duty compels them to exact, as much as the tax-payers object to pay it, whose supineness alone sustains the infliction.

It is barely possible, that by delaying our payments this year for as long a time as the patience of our popular Consul can be stretched to cover, we may escape scot-free, for a New Order in Council has been gazetted, though it has not yet reached us, and this obnoxious clause may have been excised in the new edition. We shall welcome with pleasure such a proof of our having written these lines in vain: but we can hardly anticipate such good fortune with any confidence, as most probably telegraphic orders would have been sent out—were such good fortune in store for us—to prevent the infliction of the tax. Our reason for writing now, instead of waiting for precise information, must be evident. If we delayed our objurgation until the publication of the new Order, every one would have paid his five dollars, every one would have recovered his temper, and we should find ourselves in the inefficient and ineligible position of Solomon's personified Wisdom, crying aloud in the streets, while no man regarded us.

That this Registration Fee is illegal, and is recognized to be so, even by the officials who have to extort it from us by threat of fine, is patent. In all the cases brought before Mr. Goodwin in 1867, he remitted the fines, and, in fact, we believe they have only been imposed when the righteous indignation of some free-born Briton has carried him over the limits of politeness into the pitfalls of contempt of Court. That the pretence of misnaming the impost, and calling it a 'Registration Fee' instead of a 'Poll Tax' is absurd and flimsy is also clear. Registration is a useful and necessary ordinance, as well for the protection of the subject, as for the information of the authorities, and no honest British subject, on his arrival in any settlement or colony in foreign parts, would think of objecting to thus making his legal protectors aware of his arrival, or to paying some such fee as would cover the expense of his registration. But that this fee should be changed into a Tax, and that Englishmen should be required to submit to the degradation of what in some other consulates is a form of punishment, or a substitute for bail; and compelled thus to report themselves periodically, to obtain what is virtually a ticket-of-leave; this is 'most tolerable and not to be endured.' It should be resisted and, as the tax can be shown to be illegal, nothing is more certain than that resistance would be crowned with success. Indeed, we have a precedent to support us, for it has been successfully resisted by English residents in the Levant, and it is from the Order in Council for their governance that our Order was copied almost *verbatim*.

It is to the Order in Council that any recalcitrant British subject is invariably referred by his Consul or his Minister; and it would seem, indeed, that our constituted authorities regard the document with a veneration considerably in excess of that which they entertain for the Common Law of England. The fact is overlooked that wherever such an Order, by accident or deliberate intention, happens to controvert that Common Law, such part of that Order is void, vicious, and wholly without force; and nothing but appeal to the proper tribunal—in this case the Judicial Committee of the Privy Council,—is necessary to have the error at once corrected. But in small communities like these, no

single individual can set himself to fight against any such abuse, without much damage to himself. Constitutional obstinacy, with more than average talent and legal knowledge—or a very long purse to buy the use of them, are his necessary qualifications. And, besides making himself a marked man, 'particularly recommended' to his successor by each out-going official—besides the inconvenience of suffering the 'law's delay' and, perhaps, the 'insolence of office'; he has to endure the suspicion of being a monomaniac; to listen (perhaps the hardest infliction of all) to his friends' advice and remonstrance; and thus to submit to the cross of martyrdom, without attaining to its crown; and, in fine, where he ought to be regarded as a patriot, is looked upon as little better than a fool, and avoided as a bore. From such a contest an individual may be excused from shrinking, at the small cost of five dollars a year and a few 'unnecessary oaths'; but the difficulties which deter the individual vanish before the determination of a community; and whatever we have lost of our rights as Englishmen, no Order in Council has yet deprived us of the right of petition, the rights of free assembly and free speech, or the liberty of the English Press. If an Association were formed, to which were invited to belong all members of the British communities in China and Japan, who are at present subject to this obnoxious tax, and if each of those members would contribute the same sum—five dollars—of which he is now illegally mulcted annually, a defence fund would be raised, sufficient to obtain the best opinion in London on the legal points involved, the best advice as to the proper method of procedure when called upon to pay in 1879, and enough would be left for taking many of at least the preliminary steps towards a successful application to the high court of appeal. This not a proper place or time to go fully into the law of the case; but we may briefly show how the present order is, as we have asserted it to be, in opposition to the Common Law of England and an infringement of the common rights of Englishmen. The preamble of the Order states that Parliament has given to the Queen in Council, the power to make certain Regulations for the better government of her subjects in such places as Shanghai and Yokohama, and other ports open to our trade in other countries, where we hold the same relative position to their rulers as in China or Japan. But Parliament cannot give to the Queen in Council the power of abrogating a fundamental part of the English Constitution—that no taxes can be imposed by the Crown without the consent of the Commons. To do this would be for Parliament to stultify itself, and to erect every Consular Court in the East into something very like a Star Chamber. And to argue that the power to impose this tax is included in the general power granted to make Regulations for our better governance is futile; because we Englishmen are specially protected, by special enactment, against any such stretch of prerogative. Parliament never intended to confer such power, and proper agitation and respectful petition would immediately restrain its exercise.

We have, purposely, not treated this question with the gravity which many may think it merits; partly because a grave argument would have had less chance of being read; partly because there is really something exquisitely ridiculous in our quiet and lamb-like submission to such a flagrant infringement by our own Sovereign on one of the most sacred of the rights for which generations of our ancestors died on field or scaffold; in comparison with the ferocious attitude we take up towards the Sovereign whose hospitality we enjoy here, on the slightest hint of curtailment of what, though indubitable rights for us, we cannot but feel are regarded by him and his advisers, as grievous wrongs for them. But though this inconsistency has invited a certain gaiety of treatment of the subject, we are perfectly serious in the advice we have given, and willing to do our part in the work we propose. We may find that

the evil has been remedied in the New Order in Council; but should this not be the case, we hope that the advice we have given will be taken, and are confident that its adoption will result in a successful victory over the most annoying grievance under which we labour in the East—where, retaining but the name and memories of Englishmen, so many of our rights and privileges disappear.

THE FINANCE MINISTER'S ESTIMATES.

IN other pages will be found the Finance Minister's dispatch to the Prime Minister, enclosing his annual estimates of revenue and expenditure from July 1 of last year to June 30 of this. We are bound to place this on record as a state paper of a certain importance, but for all practical purposes of information to foreigners the estimates are valueless,—simply because they are estimates only. If the Finance Minister had given us, in his parallel columns, a comparison of the actual revenue and actual expenditure in each department, for 1876-7, with his estimated figures for the same in the same period, we could have gone into their examination with some profit, and our remarks would have taken their rightful place on our first page. But although we recognize the evidence of much labour expended in drawing up these estimates, their value is so diminished by the absence of verification, as to be, as we have said, almost null. There is one redeeming point to be counted in their favour:—that they are not published until the financial year is half over; so that, if they really represent half a year's ascertained facts, and a guess at the rest of the year's probable results, founded on these facts, the delay in their appearance is an advantage instead of an evil, as it has been generally regarded by foreign critics. Of course our system in England is the correct one: that the Chancellor of the Exchequer, in opening his Budget, should first make his confession of error in calculation, or claim credit for correctness, with regard to the estimates of the previous year; before submitting his estimates, and making his proposals for the business of the next; but, as we cannot have this at present in Japan, it is surely better that the Finance Minister should make his guesses when he does, with six months' foundation of facts behind him, than that he should produce his Estimates in July, without anything whatever to go on. And it must be remembered, also, that his most important item of Revenue, the Land Tax, ought to be altogether a fact; as the harvest being in, the tax should have been collected. And, finally, we are inclined to be tender in criticism of such a document, inasmuch as foreign critics are open to the reply that the state of Japan's finances concern Japan more than Europe and America; and that, so long as the Japanese Government does not ask for fresh loans, and pays, fully and promptly, the interest on outside debt already contracted—it is an act of supererogatory courtesy for it to publish any statement at all.

We have noticed a singular oversight in the work of every foreigner who has, since 1869, written upon Japanese finance. The rules and axioms of political economy, as applied to questions of banking, currency and others, cognate or dependent, are quoted and argued from, totally irrespective of the great overbalancing fact, that the circumstances of Japan are totally different from those of European countries. Her long isolation; the very small proportion borne by her foreign to her internal trade; and specially, the blind and child-like faith in, and submission to, those put in authority over him, displayed by the average Japanese;—these are the most important points to be considered in any argument on Japan finance;—and yet these points have been treated as hardly worthy of mention. But, so long as there is in the country enough metallic currency, wherewith to carry on foreign trade, what need of more, if the people are content with their government's paper money? Gold and silver are, to our think-

ing more convenient *media* of exchange than pieces of card or paper; but if the card or paper will buy as much of one commodity, as a metal token, and can be again exchanged by the seller of that commodity for a fair amount of some other needed by himself, it answers the purpose of this buyer and seller; and merchants with different notions have no right to complain, so long as they are not asked to take a currency of which they do not approve. Hundreds of years before we came to Japan, the silver *boo* was four times the size of the coin we found in circulation, but we were never able to discover that the smaller coin had a less purchasing power than the successively larger ones from which it had descended. It was the power of the government which gave such a purchasing power to its metallic bank note (which is what the *boo* virtually was) that it would buy two-and-a-half times its weight of manufactured and chased silver ware, and the same influence floats its paper bank-notes. That the government of a nation, with a very small amount of accumulated coined bullion, and losing that fast, as a new trade with foreigners suggested to it new wants and imported new luxuries, for which the foreigner would only take bullion;—that this government should avail itself of its people's confidence, and make large issues of paper, ought not to be matter of wonder or reproach from the very foreigners who suggested the use of paper at all, and have taken away most of the coin. Of course the whole system would be hopelessly unsound, anywhere but in Japan: and on another occasion, when we set ourselves the task of advising Japanese financiers, we shall have to use different arguments to the above. But these are such as the Finance Minister might very well use in defence of his estimates, in reply to the fault always found with them, that he balances every account by a fresh issue of paper.

As we have said, our notice of these estimates is merely perfunctory, and they are not worth examination in detail, from the vitiating fact that they are but 'estimates', but we could hardly let them pass without some notice. We hope, next year, that the Finance Minister's statement will be of such a character as to justify us in giving it fuller criticism in these columns.

REPORT OF THE MINISTER OF FINANCE.

(From the *Tokio Times*)

NOTIFICATION No. 101.—TO KUWAN, IN,
SHO, SHI, FU, KEN.

It is hereby notified that the following Tables of the Revenues and Expenditures for the year between July of the 10th, and June of the 11th year of Meiji, inclusive, have been presented by Okuma Shigenobu, Minister of the Finance Department.

SANJO SANETOSHI,
Daijo Dai Jin.

28th December, 10th year of Meiji.

According to the annual custom, I, Okuma Shigenobu, Minister of Finance, respectfully now present to Your Excellency the estimated expenditures and income for the year from July of the 10th, to June of the 11th year of Meiji. I would humbly suggest that the Imperial decree reducing the land taxes and also extending the time for the collection of the same, has caused a great falling off in the revenues for the current fiscal year. In addition to this, if we compare the present with former years, we shall find that, among the various other levies and dues, those which have increased in amount are very few, while those which have decreased are numerous. So, although the greatest economy were practised in the various departments of the government, still the income could not have been made to cover the expenditures. Then, the war in the south-west breaking out, the cost of the expedition against the rebels has swollen to the great sum of 42,000,000 yen. Such unusual outlays could not be expected to be defrayed out of the regular yearly income, and this sudden increase in the national disbursements must be provided for by some special measures promptly instituted to meet the emergency.

The reduction of the principal of the foreign debt, resulting in the reduction of interest paid this year. Next, the capitalization of the various pensions has effected a great saving of outlay. Also, in the Kuwan, In, Shō, Shi, Kiyoku and Legations and Consulates, the expenses have been cut down from the time of the promulgation of the decree of the reduction of land taxes; and, since the breaking out of the south-western rebellion, the expenses in the various government offices and departments, as before mentioned, have been still further reduced. The reduction in the estimate of the disbursements of Fu and Ken has been accomplished by the transfer of the costs of local police service from the central government to the several Fu and Ken. The diminished expenditure for Shinto worship results from the change in the rate of salaries paid to Shinto priests. The reduction in various details of Miscellaneous Expenses has been accomplished by the erasure from the account of the items of repairs upon Imperial palaces, and of losses upon the Reserve Fund, and for the printing of bank notes, bonds, etc. And the estimates for repairs upon the four great bridges has been transferred to the account of dykes.

The total reduction in the above named expenditures amounts to 25,113,893 yen.

On the other hand there are divers items of increased expenditure, viz:—

The domestic debt, in the shape of interest on pensions and bonds or upon temporary or other loans. Also, the expenses of the Imperial Household, as established in the tenth month of the present year. The enlarged police expenses of the Fu and Ken are to be attributed to the insertion, in the accounts of the Treasury Department, of the disbursements for the Sendai and Nagasaki branches of the Sui Do Kiyoku, as well as the regular outlay for Fu and Ken police. Again, local improvements in the Fu and Ken, which hitherto have been made at the cost of the local population, have now been placed to the account of the Imperial Treasury. The increase in the items of dykes in the Fu and Ken has been occasioned by the transfer to

sales of government property, while the items have been greatly increased in number over the previous year, the sum total of receipts has been very much less than during that period. The accounts of the Miscellaneous Incomes have been changed and passed over to the Reserve Fund. The re-funding of loans to the various Imperial princes and to the old "Han" having in previous successive years been to a great extent completed, the amounts left to be paid this year are small.

The diminutions in the several foregoing items of revenue amount collectively to 12,032,326 yen.

While the revenues have, as above stated, fallen off during the year, there are three or four items in which they have been increased; the most important of which I give as follows, viz:—

The Customs duties have greatly exceeded the amount collected from that source in the previous year. Next, the products of the northern provinces have commanded superior prices in the market. Then the receipts from the Rin Kin Han have been augmented by the advanced cost of rice. The estimate of returns from taxes upon *sake*, etc., has been reckoned upon the actual income of the previous year, taken in conjunction with the prospects of the current year. Also, the income from the post offices, railways and telegraphs has greatly increased from the fact of the facilities for traffic having come more and more into favor among the people. Finally, the fees for passports giving permission to travel abroad have been largely augmented by the number of people going to the Centennial Exhibition as well as by those traveling on other business.

The total increase of revenue from all the foregoing items amounts to 353,122 yen, which, if subtracted from the former aggregate deficiency, shows the true decrease to be 11,739,204 yen.

The entire expenditure of the present year is estimated at 51,256,400 yen. This is upwards of 11,737,400 yen less than the estimate of the preceding year. The items in which expenditure has been decreased are as follows, viz:—

INTRODUCTION TO THE TABULATED ESTIMATES OF INCOME AND EXPENDITURES FOR THE YEAR.

The tables of the Expenditures and Incomes for the tenth year of Meiji, according to the custom of previous years, are founded upon the estimates received from the heads of the various departments, and these important returns consist of the items hereafter given.

The entire revenue for the fiscal year is somewhat above 51,256,400 yen, and, if compared with that of the former year, shows a decrease of upwards of 11,739,200 yen. This decrease is due to the following causes:—

The decree for the reduction of land taxes and for the delay in collecting the same, and the default in taxes in the vicinity and on account of the late rebellion. Secondly, in the income tax there has been an increase in the receipts from Imperial commissions, but the receipts from taxes upon government commissions have decreased, on account of diminution both in the number of the government servants and in the amount of salaries. Again, the decree for the exchange of pensions of the nobility and gentry for government bonds has caused a great reduction in the taxes from that source. Besides this, the stamp duties upon silk, cocoons, floss silk, and the license fees from silk merchants, have all been abolished. Also, the former year's estimate of taxes upon tobacco was greatly in excess of the taxes actually collected; therefore I have this year reduced the estimate on this item accordingly. In addition to this, various stamp duties and license fees, for lawyers, partnerships, the manufacture of weights and measures and the sale of medicines, like the tax on tobacco, had been over-calculated before, and have been reduced in this year's statement. The items of receipts from mines and government manufactures have been computed by the actual receipts of the previous year. In the navy yards the decrease in the expenditures is owing to the cessation of work in the Kagoshima yard. In the

We have first the Reserve Fund, besides various other funds that have been appropriated to other purposes but not yet expended, and these we can use for the present contingency; but they will not by any means prove sufficient to meet the existing deficiency. I have heretofore exercised my humble intellect upon this difficult question, and the result of my reflections I have had the honor to transmit to you at a previous date. An imperial decree has been published for the issue of 27,000,000 yen of new paper money, with which to redeem the old paper money. In place of this, the old paper money—of values from half a yen downward, amounting to over 27,100,000 yen in all—we are to be replaced by silver and copper coins. This is about the state of the finances for the present fiscal year, and it is plain that the immediate question of our revenue is a difficult one to deal with. I would earnestly beg of you that a decree may be published restraining the various departments and government offices from exceeding the amount of the estimated expenditures for the year, and that, in all cases where it is practicable, the expenditures may be as much as possible reduced below the figures in the estimates, so that the government without breaking faith with the people, shall be able to meet all demands when they fall due. This is the prayer of Shigenobu to all the ministers.

The accounts of the expedition against the rebels will soon be put in order, and when the numerous intricacies shall have been arranged and settled, and the report published, then will appear all the pains and trouble incurred in this matter by Shigenobu. Thus in presenting the yearly estimates of receipts and expenditures I have offered to Your Excellency my humble opinions in connection therewith, and I beg that Your Excellency will lend your aid in helping the accomplishment of these my plans in regard to the supremely important matters of our finances.

OKUMA SHIGENOBU,
Minister of Finance.
To SANJO SANEYOSHI,
Prime Minister.

his account of the four great bridges.

The total of the foregoing items of increase in expenditures is 13,376,435 yen, which, if subtracted from the above mentioned sum total of reduction in expenditures, shows the true decrease to be 11,737,408 yen.

The foregoing is the complete exhibit of the increase and decrease of the revenues and expenditures. Besides this, it is necessary to give some little explanation of the manner of compilation of the tables, as follows:

The Hiroshima mines, being only temporarily under government control, are put

in a separate table by themselves. The building of the Imperial palace not being commenced this year, it does not appear in the statement. Also the time of opening the Representative Assembly not being as yet fully settled, nothing in connection with this institution appears among the items of outlay. The Post Office accounts were in the previous year's statement, included with the Home Department accounts, but in obedience to the order of the Dai Jo Kuwan, these have this year been made a separate item; while, on the contrary, the details of the three Fu and various Ken and the Department of Worship have all been included under one estimate. The Reserve Fund has heretofore been divided into various particulars and included with the annual expenditures, but the nature of this account being different from that of others, it has this year been made a separate table. The great increase in the Home Department has been on account of the issue of bonds in exchange for pensions, or of the amounts borrowed to meet the expenses of the expedition against the rebels, or of the issue of paper money. The interest upon the various grades of bonds is shown at the end

of the tables.

The government has temporarily borrowed 15,000,000 yen of these bonds, upon which is paid interest at 5 per cent.—also, the bonds issued in exchange for the old *kin saten*, in all 2,103,950 yen, at 6 per cent. interest. These are not included in the record. Besides them, are other various classes of bonds, at 5, 6, 7 and 10 per cent. interest.

By comparison of the exact details of estimated income and expenditures for this year with those of the year preceding, the increase and the decrease are shown as follows:—

C COMPARATIVE TABLE OF THE REVENUES AND EXPENDITURES FOR THE EIGHTH NINTH AND TENTH YEARS OF MEIJI, SHOWING THE INCREASE OR DECREASE IN THE SEVERAL ITEMS.

According to these comparative tables, the revenues and expenditures of previous years, as above, will be seen to have gradually decreased from the eighth year of Meiji, in the following manner:—			
The entire revenue of the 9th year was 8,153 per cent. less than that of the 8th year, and that of the 10th year was 18,634 per cent. less than of the 9th; and, furthermore, 25,269 per cent. less than of the 8th year.			
The entire expenditure of the 9th year was 8,036 per cent. less than that of the 8th year, and that of the 10th year was 18,632 per cent. less than of the 9th; and, furthermore, was 25,171 per cent. less than of the 8th year of Meiji.

Contingencies of Local Govern'ts.	729,884,685

In addition to the above Yen 8,067,295,749 have been devoted to government loans.

EDITORIAL NOTES.

[Among the various erroneous statements and rumours to which currency has been lately given here, respecting this newspaper and its proprietor, there is only one which it appears to us necessary to notice:—an insinuation that the Japan Times, or its copyright, is not the property of its present conductor, but belongs to the Mail.

The facts are perfectly simple. In 1870 the Japan Times was sold to Messrs. Lay and Howell for a certain sum of money in cash, and an annuity until 1880, during payment of which the proprietor of the Japan Times engaged only to write, in Japan, for the Japan Mail. In 1875, five yearly payments of this annuity still remaining to be paid, an arrangement was concluded between Mr. Howell and his annuitant, by virtue of which the former paid to the latter a sum amounting to two and a half year's dues, the receipt given for which declared the agreement to be cancelled.

In a private note in which this receipt was enclosed, the writer voluntarily, however, promised that—so long as Mr. Howell remained in Japan conducting the Mail, he should have the first refusal of any articles which he might write. But this was a purely friendly offer made to Mr. Howell personally.

It is very certain that the writer considered that, by giving up half the income he was to have had, and leaving Mr. Howell free to sell his Mail without that burden, he regained the liberty of his pen, and his firm belief is that Mr. Howell so understood the arrangement and so accepted his receipt.]

ONE most important point we have only been able to hint at in our essay on 'extra-territoriality'; and as it would have over-loaded our argument in those columns and requires almost a column to itself, for its proper

development and consideration, we by no means regret the necessity of its exclusion from our leader. We refer to the extremely curious and incongruous position in which the Government of Japan would find itself, were what it considers the boon of jurisdiction over foreigners conceded to it—in relation to those foreigners, who are holders of land at the Treaty Ports, and whose vested interests must necessarily be considered in the case of any such change.

While excluding foreigners, in an almost vexatious manner, from equality of dealing with natives; from the privilege of trading outside of the bounds of the settlements assigned to them; and even, as it seems, ungenerously confining their movements for mere purposes of sport or exercise, within narrow limits;—the Government has yet yielded, within small districts of its territory, a part of the prerogative which, in Western States, is most jealously guarded:—the right of inheriting land. Within the foreign settlements, land is granted to a man and his heirs for ever; and this constitutes the grantee a 'tenant in fee simple'; the greatest estate that is allowed to a subject (even in free England) to hold. The payment of rent does not destroy the principle of tenure; Rent, as ought to be well-known, is but one of the forms of service under which a tenant holds his land.

Now supposing the extra-territorial clauses annulled, and the Japanese Government 'rehabilitated in its sovereign right'—or 'placed on an equal footing with other nations to which its progress in civilization entitles it'—or endowed with equality with Western States in any other garment of magniloquent verbiage:—in face of what a dilemma would that unlucky Government immediately find itself! Either it would have to submit to a violation of one of the inherent rights of nations, which excludes aliens from inheriting land:—or it would have to get rid of the existing contracts and its tenants in fee, by one of two equally difficult processes,—purchase or forcible ejectment.

This is just one of the numerous points of detail which occurred to us as side issues when treating the whole subject in our leading columns. Repudiation of property—or purchase for millions of dollars? A little knot to be untied before attacking the main web, by Japanese journalists and foreign advisers, whose zeal to free the Japanese Government from the net of extra-territoriality seems to out-run, alike, their knowledge and their discretion.

WHEN the new penal code of India was first promulgated, the chief objection found to it by the natives was its impartiality. They complained that it 'treated women and children as if they were men!' The little care taken of the interests of women, in Japanese Courts of Law, was illustrated not long ago, in a case which will be within the recollection of at least our local readers. An application, the plaintiff stated, for the attendance of a witness necessary for the success of her cause, was excused, on the ground that a summons could not be granted against so august an official: it would be better, she was informed by the Saibanasho, if she herself tried, privately to induce his lordship to attend! The deficiency in Oriental chivalry, of the respect and tenderness for woman, which threw such a grace and lustre on that of Europe, is by no means counterbalanced by the splendid valour, contempt of death, and noble self-devotion to the feudal chief which form the basis of most of the tales of old Japan. Such degradation of European women in their legal status and household rights, would be by no means made up to us, if we had to live under Japanese jurisdiction, by the impunity with which our English rough could then ill-treat the miserable drudge unfortunate enough to be really his wife, or called his mistress.

WE regret, for many reasons, having had to write on the Extra-Territorial Question in a sense so adverse to the wishes of many earnest lovers of their country. To an autochthonous race like the Japanese, who combine in their character the instinctive pride and free spirit of islanders and mountaineers, the appearance, even, of limitation of their rule within their own boundaries cannot but be irksome; the more they see and read of European freedom, and the more they travel, the more they learn of International Law, still the more irksome and unjust must this restriction seem. And particularly when they find that England, America, France, or any other of their

Treaty friends, will not even listen to the proposition that in those countries Japanese should be put on the same footing as Englishmen, Americans, Frenchmen &c. in Japan: i.e. should be subject to Japanese law there and tried before a judge of their own nationality. It is true that some semblance of consideration for the alien is shown in our system of mixed juries, but this is very different from the *imperium in imperio* which we insist on maintaining for ourselves in Eastern countries. Another, and we think in some cases, the strongest objection to the extra-territorial clauses, is the stigma of 'semi-barbarism' which they appear to throw on countries where they are in force. If journalists and diplomatists had been a little more careful in their choice of words when these clauses were first introduced into Treaties, this cause of irritation would be spared. It must seem supremely ridiculous to an Oriental, who has the least smattering of knowledge of European history, to hear his ancient civilization, with all its curious growth of slow-blossoming art; with its records of sciences invented and forgotten centuries before their re-discovery in Europe; with its triumphs of architecture, broken little fragments of which we Europeans beg for, to ornament our cities; it must raise a bitter laugh, when such a man hears his country spoken of as 'semi-barbarous' by men whose ancestors, only a couple of thousand years ago, were running in and out of holes in the ground with nothing on but a coat of blue paint.

As we have striven to show—it is because the two forms of civilization are so entirely different, that laws and customs under which one people can be happy, would be intolerably irksome to the other. No calm thinker in Europe but recognizes in the East the cradle of European civilization, indeed the cradle of European humanity: but Asia has stood still for many centuries, while Europe has been moving, and it is for Europe now to repay the debt she owes. Unhappily, before she can do this, the ancient Oriental polities must break and crumble away under the shock of contact with hers; but though we Europeans recognize this necessity as inevitable, we can sympathize to the full with the bewildered Oriental who sees his prejudices and his household gods contemptuously tossed aside, and hears himself called a 'barbarian' by rude, rough strangers, destitute of the first elements of ceremonial politeness, and who know not the truth that the greatest happiness is to be found in repose.

It would have been easy enough for us to have avoided the subject; other writers have found it possible to take a different view of it, but only by resolutely shutting their eyes to that which we have presented to-day. For we cannot, we confess, understand, how any man, Japanese or foreign, with the capacity to understand an argument, can compare the two civilizations, European and Asian;—the civilization of the nomad patriarch, and the civilization of the free Teuton farmer;—as symbolized by their respective juridical systems and codes of laws; and decline acceptance of the conclusion at which we have arrived: that it is absolutely impossible for men born and bred in Europe to submit themselves to Asian law or rule.

Whether Japan will gain anything by de-Orientalising herself, and in the next generation of her people, adopting the European polity—and whether an Oriental race can ever undergo such a change as would be required for the process, are questions which we are inclined, ourselves, to answer in the negative. The best advice to give her on this whole question is, we think, contained in the proverb which has done good duty on many other occasions:—*'Quæta non movetur.'*

FROM conversation during the week, we are led to fear that we failed to make our main argument—in the article on 'Silk and Silk-worms' eggs,' as clear as might have been desired. It is objected that our proposed plan of limiting the production of seed to the actual requirements of Japanese themselves, is Protectionist, inasmuch as it tends to improve the position of the Japanese silk grower, at the expense of his Italian neighbour. But those who argue thus fail to see that,—whether Italy suffered or not, the trade generally would not suffer. It would not matter to the throwster or manufacturer whether his silk came from Italy or Japan, so long as he got it: and the indubitable gain to Japan of obtaining a monopoly (which is what she would ultimately get) of the production of the

special class of silk with which Nature has favoured her, is a legitimate gain to which she is fairly entitled, and one which we maintain she foolishly and unnecessarily makes a present of to Italy, who has got quite enough advantages of her own.

The gain we refer to is the enhanced price of Japan silk all round, which we maintain would result from Japanese silk-growers producing only enough eggs for their own use and resolutely refusing to sell any to foreigners. There is, of course, much to do here, in the careful selection and distribution of the best eggs, and in improvement in reeling, and education of the reelers on better models than their own, before Japan silk could become uniformly good and take the very high position, which we are certain it could ultimately reach. But the silk itself is indubitably of fine and peculiar quality: we really can teach the natives nothing respecting the 'education' of the worm, which they conduct with infinitely more care than ourselves; and it has been shown clearly enough at Tomioka, that they can learn to reel and that the silk reeled there is second to nothing in Europe. These facts acknowledged, and the corollary appears to us indubitable, that:—as soon as Europe understood distinctly, that no more eggs were to be got from Japan at any price,—and that the Japanese had settled down steadily to the improvement of their own silk, by the methods we have mentioned—then would Europe be ready to give a relatively higher price for the next new season's crop—according, of course to the circumstances governing the home market generally. And, as soon as Japan silk, improved as we have indicated, had asserted its position in the trade, then would its enhanced price steady to a figure varied only by the usual home influences. And that figure would be a high one. A certain quantity and quality of Italians would have to be displaced to make room for it; but we fail to see how it can matter to the buyer whence he gets his silk, or who grows it for him; and we equally fail to see how such a process as we recommend, of self-protection by the grower, can be confounded with fiscal protection by a Government, which is a totally different thing.

OF course, the above is mere brutal political-economy. But mercy and charity have no place in an exact science; and it is from the pure 'business' point of view that both our article of last Saturday and the above Note had to be written. In the practice of common life, however, benevolence does come into play: and no one ought to have the heart to argue that Japan should take advantage of Italy's distress, in the case of total failure of seed. Then, even other politico-economic rules become relaxed, and governments are allowed to do the work of traders. But, as a general rule, it would be the best policy for Japan to keep her silk seed to herself: when Italy or France is in distress for eggs, then there can be no objection to her parting with enough of the surplus which she had always on hand, or can easily produce, to supply the wants of her famishing neighbours. But, as matters stand at present, the silk egg trade is speculative, feverish, gambling; and as we have tried to show, its abandonment by the silk grower here would benefit him infinitely more than its continuance is ever likely to do.

WE received a message yesterday afternoon from Tokio, asking if it were true that Mori Arinori, the Japanese Envoy resident at Peking, had been assassinated. Mori's house is in the official quarter, close to the Tsungli Yamen, where he would be as safe as in Tokio. But at this time of year, the roads in the immediate neighbourhood of the capital swarm with banditti, and it is of course, possible that some accident may have happened to him, outside of Peking. That he should have been even attacked by a mob, as suggested by the *Nichi Nichi Shimbun*, is highly improbable.

WE have still to ask our readers' indulgence for sins of omission and commission in this second number of the *Japan Times*. We have to thank some of our friends for corrections made in our very imperfect issue of last week, which have been attended to. It will be quite impossible for us, before the beginning of the next month, to do all that we want to do, and to do it properly. If we might

enumerate the difficulties under which the paper has at present to struggle into being, the fact of its appearing at all would be acknowledged as next thing to a miracle.

During the past week, we have received the following
TELEGRAMS.

London, January 3rd, 1878.—The Colonial Minister, having received a deputation which waited on him, has declared that England is determined to have a voice in the settlement of the Eastern Question.

Terrible distress has been caused in South Wales by the closing of the different Iron Foundries.

London January 6th, 1878.—General Gourko continues advancing successfully with his troops.

Frequent public meetings are being held in favour of British neutrality in the present war.

London, January 7th, 1878.—The Russian Troops have captured Sophia.

Russia refuses to entertain any proposals for Peace until an Armistice shall have been concluded.

London, January 9th, 1878.—Despatches from newspaper special correspondents at the seat of war, announce that the Turkish troops have abandoned the Schipka Pass.

London, January 9th, 1878.—The despatches received from newspaper special correspondents announcing that the Turkish Troops had abandoned the Schipka Pass are unfounded.

The Turkish forces after having gained a Victory reoccupied Kurshumlie, and have driven the Servians over the frontier into Servian territory.

The Porte has consented to an Armistice.

Italy.—Rumours of the death of Pope Pius XI. are unfounded.

LONDON, 10th January, 1878.—Despatches report that the Russian troops have crossed the Balkans near Tecece.

ITALY.—The King of Italy is dead.

NOTES OF THE WEEK.

"There is no straw given unto thy servants, and they say to us, Make brick:—"

Exodus V. 16.

THE TIMES OF TAIKO.

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GOYEMON.

Chapter II. LOVE & DUTY.

EXILED from the court and deprived of all his property Ishikawa, with only his swords and a few parcels of gold pieces, wandered southward, led by some pleasant reminiscences of hunting excursions in happier days, till

reaching the province of Iga, he purchased himself a homestead in a valley where every season was beautiful.

Here, however, the simple country folk, finding nothing in their circumstances more remarkable than this man who had fallen from so high an estate, under such unwonted conditions, accustomed themselves to remember their township chiefly as his residence, until at last the "village of Ishikawa" replaced the name "Yonemura." Ishikawa himself being a single hearted man, in whom the appetite for pleasure was satisfied by the contentment his archer's craft afforded him, found little difficulty in adapting himself to his altered plight, and living quietly the uneventful remainder of his life, left to his heirs a tenement which, if not large, was at least undiminished by his own excesses.

Three hundred years brought the birth and death of twenty two generations, with their due share of vicissitude and misadventure, to the descendants of Sayemon; till at a time when all Japan was stirred by the rumour or the reality of war, the family was represented by a petty landowner, whose straitened circumstances hardly left him leisure to keep his ancestor's swords burnished. To him was born one child, Gorokichi, a fair faced boy with marvellous thews and a fire in his eye that promised small fidelity to the hoe and harrow. The old farmer, who still preserved the traditions of his family's greatness untarnished by the rust of toil or hardship, found himself visited by many dreams of deeds that would efface past miscarriage, as he saw his child's boyhood more than fulfilling the promise of his infancy, nor heeded much the village schoolmaster complaining that tilts with bamboo spears and assaults upon fortified hillocks gravely disturbed the youngster's devotion to the Chinese classics.

When the lad was 13 years old, his father obtained for him a place in the household of a powerful baron. Here the young page's handsome face and stalwart figure might have aided him well on the road to fortune, had they not been accompanied by a disposition so proud and wilful, that things pleasant as pursuits became irksome as duties, and the very semblance of an order awoke a wish to resist. Careless of every thing except fencing, he was often unable to doff the mask and gauntlet, in time to kneel in the porch at the entrance or exit of a visitor; so that finally, discarding all the paraphernalia of the school, he studied, cut and countered, bareheaded and barehanded, thus acquiring at once skill and nerve, that soon enabled him to cope with the magnates of the art. But beyond this he did nothing. Those whose office he should have shared, found that he did not value his position at a moment's self restraint, and soon learned to refrain from remonstrances that only ended in blows. After a few months therefore, Gorokichi was sent home to his father with two fencing diplomas and a half healed sword-cut on his shoulder.

The old man finding that his son made no attempt to explain his return, was content to think that no explanation was necessary, and merely disposed himself to find some more fortunate situation for the lad, an object easily achieved, since the times were so prodigal of life that the dead constantly demanded new duties from the living. But the result was the same. Gorokichi came back within a hundred days, this time with very unequivocal evidence of disgrace. Another and yet another essay induced issues differing only in the time they required to mature, till at last the old man, unable to escape the conviction that he should find no joy in his son beyond the false promise of his childhood, lay down within sight of the cenotaphs of his ancestors, and died of a broken heart.

Gorokichi, seeing himself alone in the world, sold his house and the acres in which it stood, and with the same sword his ancestor Sayemon had carried into exile, but a smaller store of gold pieces, went out to seek his fortune.

During three years, he wandered from place to place, fighting now under the orders of some knight or noble, now under those of his own fierce temper; but always fighting and always victor, till his conduct becoming as infamous as his swordsmanship was famous, he found himself at last excluded from everything but desperate services. Thus at twenty, though never for a moment doubtful of his own ability to succeed, he began to believe that his feet were not formed to travel the common road to fortune.

Now at that time there was living in the neighbourhood of Gorokichi's native village, a wealthy knight, by name Momoji Sandayu, justly renowned for his skill in all martial exercises, but more especially remarkable as the represent-

ative of an art which had developed gradually in its transmission through many generations of his family, and attained perfection in his own practice; an art whose mysteries are as obscure to-day as they were three thousand years ago, when Sompin, its first master, caused rocks to rain upon the heads of the banditti, and Soiken's fishing rod, transformed into a golden carp two fathoms long, carried him to the hitherto unvisited "island of sweet grasses."

Unlike these adepts, Momoji's name is not associated with any singular exercise of his craft. It would seem indeed that he only once really applied its theory, but the result of that application is intimately connected with this history.

It was at Kiyoto, where he had gone to pay his customary visit of ceremony to his prince Hanayama, in the fall of the second year after the death of Gorokichi's father. A gold incense burner of the most excellent design and workmanship, which the prince had received from the hand of the Emperor himself, had disappeared, and Momoji arrived just as the unsuccessful result of a second day's search had thrown the palace into a state of the greatest confusion and distress. To Hanayama, the loss of the Emperor's present assumed the complexion of a most ill-omened misfortune, and at his earnest request Momoji charged himself with the recovery of the missing *bijou*. By the aid of his "art of stealth-craft" he succeeded in making his way into one after another of the vassals' apartments, and on the fifth night of his search, discovered the incense burner hidden behind the surbase in the room of the prince's jester.

Hanayama's delight at this event was only marred by the difficulty of discovering a suitable reward for Momoji, whose station and affluence forbade trivial treatment. It chanced, however, that there was blooming at that time in the palace a flower fair beyond the measure of conception; Shikibu, the princess' favorite attendant, whose first distinct memories of life, associated as they were with the fearful death by fire of both her parents at the sack of the castle of Misaka, had awoke in her eyes a look of timid entreaty that moved the heart more strongly, than even the faultlessness of her form and figure. If such a transient vision of these graces as one chance meeting in the vestibule afforded, had been able to transform Momoji's life during the past year into an endless craving, and turn away his heart from the caresses of his young wife, it may well be conceived with what rapturous gratitude he accepted the maiden as the guerdon of his small services. Leading her home to his country house, he lavished on her every attention that affection could suggest, and occupied his hours with offices of love.

These things happened but a few months before the day when Gorokichi, his resources and his opportunities alike exhausted, found himself visited by that instinct which in times of trouble turns the hearts of all sentient beings to the places of their childhood. He determined to return to the village of Ishikawa, not indeed with any certain prospect of better fortune, but because he had always been happy there, and because much experience of failure had disposed him to falter at the verge of fresh efforts.

His road led him within half a furlong of a large house almost buried in a forest of cherry blossoms, for it was the third month of spring, and as the soft wind came up from the south and passed him on its way to the glory of the flowers, he followed it mechanically, scarcely at first observing where it led him, but presently recognizing the dwelling of Momoji, one of his father's staunchest friends.

As he neared the house, threading his way among the mottled trunks of the cherries and over the half awakened germs of the lily and narcissus, the voice of a woman, sweet and sonorous, came to meet him, confused at first by the distance, but gradually adapting itself to the words of the old refrain:—

"Breathe on me once more with thy breath,
"Show me once more thy perfect form,
"False love that maketh winter warm,
"And death a blessing at thy death.

"Thine be the grief of him that grieves,
"And thine the curse of those that moan;
"For ere thy coming who had known,
"The emptiness thine absence leaves."

The singer, seen through the parted branches of the cherries, seemed a girl of some twenty summers. She had

apparently been washing her hair, for it was unbound, and falling in thick masses over her shoulders, bare and white as ivory, wandered like a shadow across the veranda on which she was seated. She was more handsome than beautiful. The very perfection of her features seemed to forbid all access of disturbing sensation, while her limbs and frame, though exquisitely symmetrical, were almost too muscular and well knit to be feminine. As she sat thus upon the veranda, her lips parted by tones less plaintive than complaining, her deep eye troubled by a hidden tear and her hands locked with nervous force, she seemed to Gorokichi one of those heroines of old whose histories have grown into household fables. He forgot that he was a stranger, forgot the reception likely to be accorded to a man armed and travel-stained, forcing his way through a cherry grove to the women's apartments at the back of a house, and with eyes full of marvel and lips shaping admiration advanced straight towards the girl.

Nor was he surprised to see that, as she drew her robe over her shoulders and threw back the cloud of her hair, a slight access of colour was the only demonstration his approach produced: any nervous gesture or evidence of weakness could hardly have found expression among such rich endowments.

Recalled to himself by her inquiring look, he said:—"I am afraid you will think my unceremonious approach very rude, but I pray you to attribute it to the influence of such a sight as I have never before seen. I desired to pay my respects to the master of this house, an old friend of my father's, when passing by the back, your voice turned my feet in this direction."

As he spoke thus, bestowing no attention on what he said, but all absorbed in his contemplation of the figure before him, that unerring perception that reveals to a woman the first disorder of the heart she has touched, quickened for a moment her dispassion, and showed her Gorokichi as indeed he was, one of the comeliest gentlemen in all Japan; fair faced, clear eyed, a finished unity of grand muscle, supple grace and that fearless carriage gained only by much and successful contact with danger.

She answered, "I am Miné, the wife of Sandayu, whom you seek. If you follow to the right the path on which you now stand, it will lead you to the entrance, and I will at once tell my husband of your visit."

Saying this, she rose and entered the house. Gorokichi turning quickly, like a man who had surprised himself by some involuntary action, made his way round to the vestibule, and calling lustily for admittance, was presently shown into the presence of Momoji, who received him courteously, and spoke to him of his father and the hopes the old man had not lived to see realized. Then, after a pause, looking kindly but searchingly at his visitor, he said:—

"Gorokichi, if I seem inquisitive, I pray you to think that my words are but the echo of an old intimacy. You will easily understand that I am not ignorant of your early history, nor slow to guess from your return thus, after three years of an absence prefaced by the sale of your inheritance, that you have not as yet found what you seek. Am I right?"

"Yes," replied the young man, "you are right. But if I have not found what I seek, neither have I seen any that ought not still to be seekers."

"You have then travelled oftener with trouble than fortune, since you left your native place?"

"Sir Momoji," answered Gorokichi, scarcely concealing the impatience he always felt at being questioned, "success alone justifies a confession of previous failures. I had rather looked to be taught by you, that one should recall from the past nothing but what one needs in the present, than to be questioned on what is irrevocable."

Momoji, repelled for a moment by this ungracious reticence, detached his pouch from his girdle, and quietly filled his pipe before resuming the conversation.

"Ishikawa," he said at length, "I do not demand a confidence that I am not prepared to give. My own feet are trammelled by a weight so pleasant that in losing all wish to free them, I have also abandoned all ambition, and

* What this art really was, I have never been able to ascertain. Its practice seems to have consisted in the finesse of highly trained muscle, but its professors have long ceased to exist, and their achievements have passed into the land of miracles. F.B.

only now look to leave behind me some fitter representative of the art I have inherited. If you have formed no more promising project, I offer you a place here among my pupils, not only for the sake of the friendship I bore your father, but also because of the hopes I shared with him about your career."

"I accept your proposition, Sir Momoji," replied Gorokichi after a moment's pause, "and thank you for the kind feeling that prompts it. At the same time I must confess that since pure chance has guided me here, I now merely follow my constant principle of taking what chance offers, and do not pledge myself to anything more than the duties of a pupil to a teacher."

It was thus that the man ignored all moral obligation, acknowledging no force superior to that of circumstance, and his whole life was so consistently true to this creed, that his story is rather that of his times than of himself. Another than Momoji might have recoiled in the presence of so little that was trusting or trustful, but the knight's naturally kind heart was so full of love for the maiden he had carried home from Kiyoto, that he found nothing in men's failings but an opportunity to be benevolent.

To us, looking back upon deeds that loom almost fabulously large through the mists of time and tradition, it is not surprising to find that, from the day of his enrolment among Momoji's pupils, Gorokichi occupied the place his singular endowments could not fail to attain. He was not only acknowledged chief by his comrades, but also in the science of the school, he very soon because his master's master. Momoji, seeing that any effort of his own could hardly emerge from the shadow of his *protégé*, cast a willing balance between love and ambition, and divided his time in rather unequal proportions between Shikibu and his pupils.

Nearly two years passed thus. Gorokichi had not forgotten the vision he saw across the cherry boughs on the evening of his arrival; but he was for the nonce so completely absorbed by the pursuit of his new science, that his thoughts seldom travelled beyond the precincts of the school. Moreover he had never again seen Sandayu's wife. That she was in the house, he knew from the occasional talk of the domestics, but neither at season feasts, nor on Saints' days, did she ever appear, and her very existence might have been forgotten, were it not that Shikibu sought by a thousand little devices to restore to his wife the consideration Sandayu himself neglected to pay her. It was easy to see that the gentle-hearted girl felt the pain she unwittingly caused as much as Miné herself.

Arrived however at the limit of his master's art, Gorokichi began to be visited by his old craving for adventure, and sometimes returning from the chase, sometimes from the revel, found himself often in the cherry grove behind the women's apartments.

Thus it happened that, crossing the shadow of the trees one winter's evening, when the frost's breath was just beginning to sparkle in the moonlight, his feet were arrested by a sound that never fails to move a man's heart, the sound of a woman sobbing. In a moment he saw her again, alone with some great sorrow, her face buried in her hands and her shoulders heaving in the violence of her emotion. He came quite close to her, for the sound of his feet was muffled by the snow, and after watching her for a while said half musingly,

"Do you then love him so much, Madame?"

She looked up quickly, but not too quickly to have recovered her proud self-command, and though he could see that her lips had begun to shape an angrier expression, she merely answered:—

"You will hardly say this time, Sir, that you have mistaken your way."

"Madame," he replied, "your voice led me then, my own heart leads me now."

There was no room to question the meaning of his words, and he could see that she understood their value, for her voice was softer and a little troubled when she spoke again:—

"If what you say be true, I ought not to listen to it; but it scarcely seems to me that his ardour is very great, who lingers two years upon so short a road."

"Pardon me," he answered, "but you do not judge quite rightly. Remember rather how strong must be the feeling that speaks where reason has kept it silent for two years. When I first saw you, I knew nothing of your posi-

tion in this house, and I loved you before I had learned anything that forbade me to tell you of my feelings. If I do so now, it is not because I am less conscious of what I owe to my teacher and benefactor, but because he himself has absolved me from my duty by neglecting his own to you."

"And in what, Sir, do the relations between my husband and me concern you?" she asked, flashing into sudden anger at the thought that her unhappiness should be the subject of a stranger's comment.

"Madame," he replied, "they concern me in this, that you have become a part of myself. Something calmer than my heart tells me that with you rests an influence strong enough to sway my whole destiny, and I, who have never yet raised hands of entreaty to God or man, pray you thus on my knees to let me repair that accident which saddened the song I first heard you sing, and summoned the tears I saw you shed to-night."

He spoke with much fervour, kneeling in the snow, his clasped hands raised before him, and after his words had ceased to be articulate, his lips still continued to shape, again and again, those formulae with which men are wont to urge their most passionate appeals. Few women could have resisted such a prayer made by such a man, and least of all this slighted wife, whose miserable history shows her to have been capable of everything but the restraint of her own affections. From that night, the story of their lives was only a repetition of what has been written on every heart since the Gods first discovered the imperfections of a single sex.

Momoji saw nothing of his wife's altered mien. She had long become an object of complete indifference to him, and though he observed his pupil's unusual absences from the gymnasium, he attributed them entirely to the fact that Gorokichi found nothing more to learn there.

Early in the following spring, Momoji was summoned by business to Kiyoto. On the evening after his departure it happened that Shikibu, passing along the corridor at one end of which her own apartments lay, noticed that the door of Miné's sleeping room was only partly shut, and half carelessly, half curiously, looked in as she went by.

Sandayu's wife was in the act of closing the drawer of a cabinet from which she had evidently taken the article she held in her hand. That article was a pad such as is usually inserted in the back hair of married women.

Shikibu had reached her own room and summoned her maid to light the night lamp, before she began to be tormented by the difficulty of accounting for what she had seen. It was impossible that Miné could think of having her hair dressed at such an hour, and yet, this supposition excluded, the destination of the pad became entirely inconceivable. Shikibu did as most women would have done under the circumstances; unable to think, she acted.

Midway between her own room and that of the mistress of the house, a passage leading to the foot of the watch-tower debouched. The entrance of this passage lay just beyond the path of the dim light issuing from the half open door of Miné's room, and Shikibu, stealing out quietly with her sandals in her hand, enaoned herself behind one of the pillars of the passage, so as to see without being seen.

She had scarcely taken up her position, when the light was obscured by the figure of Sandayu's wife, who, having assured herself that she was alone, by a rapid glance up and down the corridor, drew the pad she held in her hand quickly backwards and forwards along the grooves of the sliding doors in the lintel and the sill, and the panel, gliding noiselessly along its oily path, left Shikibu to grope her way back in the darkness.

Mysteries where the heart is concerned are often most easily unravelled by a woman. Miné's disloyalty had scarcely been suspected by Shikibu till that moment, and yet she set herself to watch with eyes that already saw more than the outline of the discovery she was destined to make.

About two hours before midnight, a figure that might have been a phantom, so noiseless and measured were its motions, emerged from the passage leading to the watch-tower, remained one instant recognizable in a feeble ray of moonlight that struggled through a crevice, and then turning to the left disappeared in the gloom.

For a moment the longing to cry out and give the alarm.

almost overcame Shikibu. Was she justified in associating this figure so evidently fearful of detection with any action of her master's wife, and might not her reticence be presently the cause of some irrevocable disaster? But even while she reasoned with herself, a sound like the chirping of an insect came to her from the direction in which the figure had disappeared; the door of Miné's room, obedient apparently to this signal, sliding silently back, again gave exit to a little gleam of light, and from within passed a whisper of which the word "Gorokitsan" alone was audible.

Before the darkness was again complete, Shikibu knew that the man she loved was dishonoured in his wife and in his favorite pupil.

Within the alcove of her room, lay a miniature garden complete in all details of arbour, rockery and parterre. From the paths of this toy, she succeeded with some little difficulty in gathering a handful of gritty sand, and carrying this with much stealth and circumspection to the door of Miné's room, she strewed it along the groove that Sandayu's wife had so carefully oiled an hour before. Then making her way to the servants' quarters, she roused an old retainer called Kiubei, and telling him that her sleep had been disturbed by the opening of doors and other unbidden noises, desired him to come and keep watch till daylight in the passage outside the women's apartments.

Kiubei asking no questions, took his swords from the rack and followed his young mistress, who stationed him in the same place that had already served as a post of observation for herself.

The rays of dawn were just struggling on the horizon, when the grating sound of an opening door reached the ears of the two watchers. Shikibu, a dagger in one hand and a lantern in the other, sprang past Kiubei, and found herself face to face with the mistress of the house, who forewarned by the first particle of sand the door had encountered, closed the panel behind her and confronted the new comer, not indeed with complete calm, but much less disturbed than either of those she found before her.

Shikibu was not altogether unprepared for this position. She had already conceived the possibility of Miné's assuring herself that the coast was clear before dismissing her lover, and with a well feigned semblance of relief she lowered her lantern, and drawing back a step cried:—

"Oh! it is you, Madame. I had been so alarmed by noises in the early part of the night, that I asked Kiubei to keep watch, as we cannot be too careful in Sandayu's absence, and when your door opened just now, I felt sure that somebody had been lying concealed and was just about to force his way into your room."

Before half these words were uttered Miné had entirely recovered her self-possession. She saw at once how small a space separated her from intolerable disgrace, but the peril of her position only braced her faculties, and stirred in her fresh hatred for the frail girl who, having already perverted her husband's love, now sought to rob her of her reputation.

"You are very right, Shikibu," she said, "to be careful in my husband's absence, but if anything unusual disturbed you, your best plan would have been to desire an immediate search. Surely it is not in my room you expect to find an intruder. But in truth your city nerves have been, I suppose, a little unstrung. I advise you to go back to your own room and try to recover your composure. As for you," turning to Kiubei, "instead of sitting waiting till the thief comes to you, make a proper inspection of the whole house and report to me what you find."

Kiubei knew his mistress too well either to expect that she would vouchsafe any explanation of her conduct, or to be surprised that she did not invite Shikibu into her own room until at least his round was concluded. He therefore merely bowed and moved away in compliance with his orders.

Shikibu, too saw herself completely baffled. She had no choice but to retire, and yet she felt that her own and Kiubei's removal was contrived entirely to procure an opportunity for Gorokichi's exit. Filled with this idea she determined to watch from her door, and at all risks confront Gorokichi should he try to effect his escape before Kiubei's return.

But she watched in vain. She heard Sandayu's wife shut herself into her room, and knowing that it would be very possible to open the inner leaf of the sliding door

without encountering any of the sand strewn on the outer groove, she strained every faculty to detect the slightest noise, yet when Kiubei returned she was able to be quite certain that nobody had left the opposite chamber in the interim.

What was then her surprise to see Miné throw open her door at Kiubei's summons and invite him in to make his report! Shikibu could no longer restrain herself. Forgetting all deference for her master's wife, she ran out, and, uninvited, passed after the old man into Miné's room.

If what she sought were visible, she had not been there to see it, and this reflection might have enabled her to exhibit more anxiety than astonishment, had she been better trained to dissemble. As it was, her eyes, on their return from an amazed scrutiny of impossible hiding places, fell before the look of contemptuous triumph they encountered; the tones of Kiubei's voice seemed to drift gradually away to immeasurable distances, and almost before his report was ended, he found himself helping his mistress to raise Shikibu's fainting form.

It may be that Miné's cruel energy had already shaped the course she subsequently followed; it may be that her rival's momentary helplessness suggested ideas to be afterwards more fully developed. It is at any rate certain that when Shikibu recovered consciousness, nothing separated her from the reality of her suspicions more than the kind solicitude of Sandayu's wife, who, with every token of commiseration and concern, led her back to her room, and did not leave her till the roll of the morning drum reached them from the gymnasium.

(To be continued in our next.)

CORRESPONDENCE.

To the Editor of the 'Japan Times.'

DEAR SIR,—I believe that some of your readers have been disposed to question the existence of "bells" in a Japanese house, as described in the 1st chapter of the "Times of Taiko."

The word translated "bell" is "sudzu" in the original. The "sudzu" was a plate of metal, brass, silver or bronze, (sometimes with a large admixture of gold, with was supposed to improve and strengthen the tone) pierced with holes, through which rings of the same metal passed freely, and one or more of these sudzu, suspended from a cord produced, when shaken, a tinkling sound. They were used in the houses of the nobility to summon the domestics &c., and thus correspond in every respect except form to our English idea of a bell.

From the sudzu is descended the "waniguchi," which is suspended before temple shrines and sounded by striking with a rope; while most of us are probably familiar with the "naruko," a rough imitation of the sudzu, constructed by means of a board and pendent pieces of bamboo, and often attached to the gate of Japanese dwellings.

For the rest, I can assure your readers that, so far as I am concerned, no item of these stories is imaginary. The details are all extracted from Japanese books; the description of the place at Kiyoto, for example, having been taken from an old and apparently authentic manuscript which I obtained with considerable difficulty.

Your very truly,

F. BRINKLEY.

Yedo, January 9, 1878.

EXTRACTS.

CHILDREN I HAVE MET.

A CHRISTMAS STORY, IN THREE CHAPTERS.

By JAMES PAYN.

CHAPTER II.

When my wife came down that night, after seeing the children put to bed, I was, of course, prepared to tell all that happened at the railway station; but to my surprise she did not pay much attention to the matter. When I ventured, however, to suggest that the careless Gibbins might not even turn up on the morrow to claim his own, she evinced considerable interest.

"What! George; do you really think it possible that the man may neglect his children to that extent? Why, if he doesn't come to-morrow, there would be no more reason why he should come the next day, nor, for that matter, why he should come at all."

"Even that of course is possible, my dear," said I. The poor little things will, in that case, keep Christmas with us, I suppose; one would hardly like to send them to the workhouse on Christmas Day."

"The workhouse! Who said a word about the workhouse?"

For the moment, I thought a piece of my nose was gone; I had never been so "snapped up" by my little wife before. "I was only hinting, my dear, that the law did not compel us to keep other people's children; and if the worst came to the worst, that we could get rid of these two little people."

"Get rid of them!" echoed my wife, with the clash and sharpness of a pair of shears. Who wants to get rid of them? Why, if a black kitten strays into the house, we keep it, because it is said to bring a blessing; and are not two such heavenly children as those up yonder a blessing in themselves! O George!" continued she, dropping her voice all of a sudden, and speaking quite soft and low, "I know you don't mean to be hard with them; you wouldn't have brought them home at all, had you done so; but if you had seen those two as I have just seen them, you could never have said a harsh word concerning them, even in jest. When Elizabeth and I had taken that wee creature's clothes off by the fire, and he was but in his little shift (for we had no night gown to give him—though I shall take care he has plenty to-morrow, if I cut up my own), he suddenly woke up, and as we were putting him to bed, cried out: "Where's Osey!" In an instant that sweet girl was at his side, and with her little arm round his neck. "Pairs!" said he. For the moment, I really thought the child had asked for fruit; and I felt quite ashamed that good thoughts had been so much farther from me than him, when I saw those little ones kneel down together by the bed side and pray. Rosey said the Lord's prayer aloud—such a mess as she made of some of the words! And yet they were more touching to listen to, than any I have heard from a reading desk—and Tosey repeated it after her. It seemed to me as though all the angels in heaven must have stopped their music to listen to them. Then they kissed one another—it was better than going to church to see them do it—and as we laid them down side by side, they dropped asleep in each other's arms."

"But, my dear Nelly," remonstrated I, "there is nothing to cry about, surely, in all that; it only shows they have been well brought up."

"But they've got no mother. Think of that!" sobbed my wife, who had by this time broken down altogether. "Little dots like that to be motherless, and to have a father like this Gig—Gig—Gibbins, who cares nothing about them!"

"I don't know that Mr. Gibbins is their father, my dear; and how, may I ask, did you find out that they had no mother?"

"Why, because they did not mention her in their little prayers. Do you suppose they would not have done so, had she been in existence? 'Dad bless us both and make us dood;' that was all they said, besides the Lord's prayer."

"And quite enough too, my dear," said I, softly; for somehow—I suppose it was because the little creatures had taken to me so trustfully—I was more moved than I chose to own.

"Oh, quite enough indeed," assented my wife, "especially since He has made them—as good as gold."

The use of that familiar metaphor—though it was not a little incongruous in its application—brought me back to the realities of life. "Fortunately, my dear," said I, we have plenty of money to support these little ones, whom Fate has thus thrown upon our hands, in case they have been really deserted."

"There is no chance of that," answered my wife dolorously, as though the desertion of small children was too delightful an idea to be realised. "Gibbins is sure to come to-morrow with his heartlessness and insolence (just as Jones did), to carry away his property—just as if they were so much luggage. If he does not, we are bound to advertise all about them. Moreover, there is their box: of course, if we don't hear from him soon, we must open that, and it is sure to contain something that will identify them, and oblige us to restore them to their belongings. O, George, dear George, what a wretch it will be to me!"

Then I began to understand that my poor childless wife had suffered that passionate affection for small children, which abides in all who are worthy of the name of women, to twine itself about our new comers, as creeping flowers upon dainty trellis-work will twine and grow till both are one; and for a moment I almost repented that I had opened my doors to those unexpected guests. "My darling," said I softly, "though Heaven has denied us children, it has given us another blessing—wealth; and if it would be any pleasure to you to adopt a child,—"

"No, no," interrupted she, sobbing; I should not care for that; but in this case it seems as if Heaven itself had sent us these little ones—all on a Christmas Eve too—and that sweet darling actually said 'Mum—mum,' and put his arms about me, as though I was his mother—and then, you see, he had never known his real one."

This was a true womanly touch, with jealousy as well as love in it, which I felt did not admit of reply. If Heaven had sent the children to us indeed, I might well have argued, Heaven would probably permit us to keep them in spite of Gibbins; but women draw no consolation from logic; indeed it is my experience that, in connection with the decrees of Providence, they even resent it.

I dreamt that night that I was the master of a national school, and that my wife was a baby farmer, and I was wakened in the morning by the most singular noise imaginable; it sounded like the chuckling of hens, the crowing of some infinitesimal bantam cock, and the splashing of something in water.

"Why, good gracious, my dear, there are poultry and ducks in the house!"

There was no reply; my consort was not by my side, but the crowing and chuckling continued, mingled with shouts of merriment, proceeding from the apartment above my head. When I heard laughter, I wish to be acquainted with the joke that has produced it, just as when one hears a cork drawn, one is inquisitive about the wine in the bottle, and I put on my dressing gown at once, and went quietly upstairs. The sight that greeted me in the spare room, hitherto solely dedicated to bachelor adults, was very remarkable. I had come upon a party engaged in a rite of baby-worship. My wife and Elizabeth were putting Tosey in his bath before the fire; while Rosey in a flannel dressing-gown ten sizes too large for her, was sitting on the rug in a rapture of appreciation. Tosey was standing up in the warm water, holding on to the edge of the bath, and apparently addressing some constituency in the most humorous manner and at the top of his voice. Every now and then a joke so tickled him that he cast himself backward, and was picked up pink and palpitating, only just in time, as it seemed to me, to save his life. The applause that succeeded each performance of this feat evidently gave him unbounded satisfaction; he had thrown off all his philosophy with his clothes, and was merely bent upon experiments with respect to the displacement of water, in which, to judge by puddles on the floor, he had been very successful. He acknowledged the accession to his audience in my arrival by a shout of laughter so shrill and small, and at the same time so full of triumph, that no musician on earth could—for expression at least—have competed with him; and then he said: "Hullo! all 'ight," and fell backwards under water. It was perfectly ridiculous that three grown persons and a half should have been so moved by so insignificant an object—yet we were all laughing as heartily as he. The little naked boy called Cupid could hardly have shewn himself more powerful than this his latest rival.

Presently, Christmas chimes began to peal from some bell-ringing steeple, and Tosey, standing in the water, and steadying himself by clinging to the side with one hand, held the other up—one tiny finger projecting from the rest—for silence. It was the prettiest "picture," as Elizabeth observed, one could conceive; or rather, it was a piece of living sculpture such as Nature, R. A. (Real Artist), could alone have executed. At the same time I felt my dressing-gown gently pulled, and looking down, I saw Rosey's sweet fair face turned upwards towards mine with parted lips. "A merry Kismas to you," said she, in a tone that had a music in it beyond that of any song, and with a look such as the angels use when wishing the like to one another.

"Only listen to the child!" cried my wife, delighted. That was just because she heard the bells, you may depend on it."

"Why, Rosey, who taught you to say that, my darling?" said I, stooping to kiss her.

"Dodo."

"And who is Dodo?"

Here all was blank again. Neither Rosey or Tosey could give us any information upon that point. Dodo was Dodo, whom not to know argued ourselves most ignorant. It was certainly not the bird who is the despair of natural-historians; but beyond that nothing could be discovered—until Gibbins turned up or the box was opened.

The enactment that makes a holiday at the post office on Christmas Day had my hearty concurrence that morning, for at least no tidings could come by letter which should demand a parting with our little guests. Every ring at the door, however, my wife informed me, made "her heart go," for fear it might be the herald of Gibbins; and it was not without some opposition on her part that I wrote out an advertisement for the Times, stating that two young children, answering to the names of Rosey and Tosey, were at present lodged beneath our roof, awaiting removal by their proprietor.

In leaving my address at the Railway station, I had done, she urged, all that was to be reasonably expected of me; it was there, if anywhere, that Gibbins would apply for the goods consigned to him, and to jog his memory, or to awaken his remorse for his neglect, was to fly in the face of providence, and run an uncalled-for risk, of losing the blessings it had vouchsafed us. If my wife showed herself somewhat lax in principle under this great

temptation, she, on the other hand, exhibited a keen sense of moral responsibility as regarded the children themselves. She sent into our neighbour, Mrs. Quiverful, for some Sunday toys—a message which produced a Noah's ark and a Mosaic puzzle—and decided upon supplementing their elevating effect by taking Rosey to church with us. The occasion was evidently a novelty to her, and so far a treat; but she was very loth to leave her brother, whose tender years put his attendance at public worship out of the question. The promise of hearing the organ, however, and (I regret to say) the unauthorised prospect of its having waltzing figures upon it, which was held out by Elizabeth, overcame her scruples, and to the astonishment of the pariah, our pew was for the first time embellished by the presence of a child. That many an eye was turned towards Rosey, as she sat with her little hand in mine, with admiring curiosity, was no reproach to our vicar's eloquence; no sculptured angel there, with hair blown back, and wings crosswise, no seraph painted on the pane, looked half so heavenly as she. Eager-eyed, she watched and listened, while the parson read, and the music rose and fell, but hushed as a mute bird. Only once did she break silence—when our doctor (according to his invariable custom) was called out from his conspicuous pew by his foot page, when she observed: "Look, look; there's a man broke loose," a remark that shook my gravity to its foundation.

In the afternoon I went down to the railway station under pretence of making inquiry about my luggage, but in reality to find out if there was any news of Gibbins. Those children were growing upon me so, that I felt it necessary to do my duty to their belongings—if belonging they really had—while the moral courage to do so still remained to me. My friend the inspector shook his head, and pronounced the whole affair to be "a plant" to get rid of the two children. They will be on your hands, sir, it's my opinion, until you think proper to send them to the work-house."

"You really think that, Mr. Inspector?"

"I am pretty sure of it, Sir," replied he despondently. "It is not the first time that such a thing has happened, to my own knowledge. Well, I am sure, sir, you are very kind."

"Don't mention it," said I, it's Christmas day, you know, and you have had a great deal of trouble about that luggage. Good morning to you."

"But you are going away without it, sir!" And so I was. I felt, in fact, but little interest, comparatively speaking, in the article in question, which, as happened, had arrived safe enough; and the sovereign I had given the man was for his "opinion," just as one gives a doctor or a lawyer one pound one for theirs—which are not generally so pleasant. Would it be possible, I wondered, to retain our little treasures by giving a pound or two to Gibbins himself? Was there any law against child-selling, as well as wife-selling, and if not, would Gibbins be authorised to treat? The loss of Tosey would, I knew, be to my wife a very serious blow, and however unreasonable it was in her to feel it, it was only my duty to avert, by all lawful means, such a catastrophe. As to Rosey, I confess the dear child had taken such root in my heart, that I could not bear to think of parting with her, and especially to persons who had shown themselves so careless of their responsibilities. I knew that my position both in law and morals was untenable—I was painfully aware that the whole transaction "would not wash," something must surely be conceded to the feelings of a parent; and was not I in loco parentis—which is the same thing as a parent—to that heavenly child. Tosey, too, had distinctly—or as distinctly as he could—claimed my wife as his mama, so that the chain of relationship might be said to be complete.

Nelly received my Christmas present with gratitude, but without enthusiasm: a fact which, considering it was a new bonnet, will give the measure, to any of her own sex, of the extreme preoccupation of her mind.

"A thousand thanks, my dear," said she. "But was there any news of Gibbins?"

Then I thought it was really time to administer to her a lecture upon the vanity of human wishes, and on the great improbability of their being gratified on the present occasion. I observed, how wrong it was of her, from every point of view, to nourish such vain and unprincipled expectations: in fact I used every argument which I had deliberately rejected myself, and, in the end, had the satisfaction of perceiving that we should never be divorced upon the fashionable ground of "incompatibility" of character, inasmuch as they had precisely the same effect upon her as they had had on me.

"Mum-mum will never part from her Tosey, will she?" inquired she (I must say very foolishly) of the child himself, who was playing at her knee. "Say, never, my own darling." He looked up with preternatural gravity, and delivered (in the character of a dignitary of the Court of Chancery) his decree against any such separation: "Nedder." At the same moment, Rosey stole her little hand in mine, and whispered: "Me tay too."

If Gibbins had turned up just then, in the imperative mood, I believe I should have put him in the water-butt and purchased a filter.

"But my dear Nelly," sighed I, "there is their box."

"I wish it had been lost, like the bonnet" answered she bitterly.

"Still since it is here, we are bound to open it, and thereby discover to whom these little guests of ours belong. We had better get it over at once, since every day will make it more difficult for you to part with them."

So that Christmas night, when the children were fast asleep in each other's arms—a sight as full of Christmas thoughts as any sermon—my wife and I had the box brought into the parlour. It had no lock, so I had only to cut the ropes with my penknife, to know our fate; for, indeed, it had come to that: with such unconscious magic had those little ones bewitched us in a day and night, that to part with them would not only have been a "wrench," but a catastrophe. Perhaps it was the blessed Christmas-tide—wherein above all seasons, little children assert their power—that had so worked with us; but so it was. A mother whose task it is to look over the clothes, or toys, or other "fond records" of some lost darling, must be one of the most pitiable of God's creatures; but to her at least the worst has come; the parting is over—whereas, to us this little box might be the cradle or grave of Hope. I felt that it was much more likely to prove the latter; it was to the last degree improbable that Rosey and Tosey should remain as such mere fairy-folk with fairy names—and nothing more, when we had made examination of its contents. Miss Rose Gibbins and Master Thomas Gibbins, of some seminary for young persons near Crewe, would presently be revealed to us in the most common-place fashion, and demand to be given up to their "friends." Nothing occurs, however, as the paradoxical Frenchman tells us, except the Unlooked-for. Not a scrap of writing, either on paper or linen, informed us of the personal identity of our little guests. Their Lilliputian garments, layer after layer of which we found arranged with the utmost neatness and order, were indeed all marked, but it was only with those names which Love, and not their god-fathers and god-mothers, had bestowed upon them—Rosey and Tosey. In some cases, it was worked upon the tiny linen in hair.

"They had a mother then," whispered my wife significantly; and though no mother herself, I thought her judgment just upon that point. Moreover, the handwriting, where the names were written, was fine and delicate, like a lady's hand, and not a servant's; though to my fancy (for this could only be guess-work) it lacked the firmness of health. I could not help building up the theory that the mother had been failing and failing, without the strength to do much more than this slight loving service; and Nelly thought the idea a probable one.

"In that case," remarked I, "the careful packing and disposal of the clothes must have been done by another."

"Of course," returned my wife: "after her death, poor soul."

"And yet we have not come upon a single article of mourning."

"The woman who took the mother's place was poor," answered Nelly softly.

It was likely enough. The mother had been poor herself, for though all the garments were in good repair, they had seen much service, had darts and patches in them; the latter, as my wife pointed out, let in with elaborate skill and care. The last layer was made up of baby-clothes, most exquisitely worked by hand.

"Good heavens," cried I "is there then a third?"

"No, no, these were Tosey's before he was short-coated. How nice he must have looked in them, dear little fellow!"

The tears of my childless wife fell fast upon the lengthy robe of state that had once enveloped Tosey's limbs.

"My darling," said I, you ought to be pleased, rather than cast down; for nothing has come to light as yet which demands our parting with the children. If Gibbins would only——"

"Look, look!" interrupted my wife, with a sharp cry. Below the last layer of clothes, and pasted on the bottom of the box, was a sheet of white paper, around which a clumsy attempt had been made with ink to rule a mourning border. In the centre of it was written, in a hand evidently unused to penmanship, the words "Pity the motherless."

"These children, then, have been bequeathed to us, my dear" said I after a pause. My wife was greatly affected, and I was just a little taken aback myself. "When you are quite calm and collected, Nelly," said I, "we must consider whether we shall accept the legacy."

I had for my own part quite made up my mind to "administer," as the lawyers call it; but I thought the expression of doubt would rouse her, and do her good.

"Dear George," said she, without taking the least notice of my remark, but still poring over those appealing words, "I think this is Dodo's writing. She is some faithful nurse, who finding herself unable to support these orphaned darlings, has sent them forth,

trusting to God's providence to find them home and friends—and they have found them. How happy, how thankful I feel! They will now be our own for ever!"

"My dear Nelly," said I, gravely, "do not too much encourage a hope which if it one day prove fallacious will be bitter in your mouth indeed. The children are not orphans, or Dodo would have stated as much. Pity the motherless, she says; that is (I fear,) those little ones who have no mother, but worse than no father—who have a father that has deserted them."

"But we will not desert them."

"By no means; only this man may turn up at any time, remember, and demand his own. Will you still accept them on such conditions?"

"I will," replied she, firmly. I look upon them as Heaven's own gift, and I believe that we shall be permitted to retain them."

"Very good, my dear; so be it," said I; but I had still my doubts, and grave ones.

(To be continued.)

THE JAPAN TIMES.

A WEEKLY REVIEW OF

JAPANESE COMMERCE, POLITICS, LITERATURE
AND ART.

Price Twenty-four Dollars Per Annum.

CONTENTS OF No. 2. NEW SERIES, VOL. I. JANUARY 12TH, 1878.

" 12	Oceanic	Metcalfe	Bri. str.	3,700	Hongkong	Jan. 18	Mails & general	O. & O. Co.

Passengers:—Per *Takachiko Maru*, for Hakodate, left Jan. 6, Messrs. E. Dun, P. Schleuter, L. Boehmer, E. H. Duns, Riddle, Capt. Will, Mrs. O Tsuru, one Japanese lady and child.

Per *Malacca*, P. & O. Mail steamer, for Hongkong and Europe, left Jan. 8, Mrs. Enslie, Mrs. Hartley and three children and servant, Messrs. Maclay and Roper; fifteen Chinese and one Japanese in the steerage.

Per Japanese steamer *Nagoya Maru* for Shanghai and ports:—Miss Takana, Mr. and Mrs. Norton, Messrs. Kasano and child, Van Oordt, Chira, Otsuzu, R. B. Cuthbertson, W. C. Law, J. Y. Twombly, Tsuchiya and child, Watanaki, Horiguchi, Ishizuka, and E. Popp.

Per British steamer *Dragon* for Hakodate:—Messrs. H. J. Snow and T. Ford.

Per Brit. steamer *Oceanic* for Hongkong:—Messrs. J. S. Swire and P. H. Halt.

Loading:—*Gaelic*, for San Francisco, 14th January.—O. & O. Co.

Volga, for Hongkong and Europe, 14th January M. M. Co.

Hiroshima Maru, for Shanghai and Ports, 16th January.—M. B. Co. For Kobe:—*Hiogo Maru* 15th January and

Kumamoto Maru 12th M. B. Co.

Messenger, for New York, quick despatch.—Smith, Baker & Co.

Mails Leaving For:—Hongkong and Europe M. M. str. *Volga* Jan. 13: for San Francisco, O. & O. str. *Gaelic* January 14: for Shanghai and ports M. B. M. *Hiroshima Maru* January 16: for Kobe, *Kumamoto Maru*, January 12; *Hiogo Maru*, January 15: for Hakodate, *Suminoya Maru*, January 12.

Cargoes:—Per P. & O. str. *Malacca*, Jan. 8, for London 60 bales Silk; for Italy 47 bales Silk.

Per Japanese str. *Nagoya Maru* for Shanghai and ports:—Treasure, \$168,700.00; Treasure, Yen 6,600.00.

THE JAPAN TIMES

A WEEKLY REVIEW OF

JAPANESE COMMERCE, POLITICS, LITERATURE, AND ART.

NEW SERIES. VOL. 1. No. 3.]

January 19, 1878.

[\$24 PER ANNUM.]

TEA. 1877—1878.

ALTHOUGH, in the present article, we cannot furnish a full review for the season, still many points of interest present themselves which afford fair mark for comment, and the opening of the New Year seems an auspicious moment to pass briefly in review the course of last year's Tea market.

Up to the opening of the season in May, little matter of interest offers. The *Coulmakyle*, the last direct vessel of the year, had despatch for New York on March 17th; after which, steamer shipments dwindled down to mere nominal figures, and the record of 1876-77 was closed.

From the severe weather which we experienced during February and March, 1877, first musters of the new crop were rather backward in making their appearance, being fully a fortnight later than in the preceding season. As usual, first arrivals only represented "garden Teas" and afforded little or no reliable information as to the prospect of the coming crop. First arrivals of "new crop" came on about 3rd May, and were at once secured by sanguine buyers at prices varying from \$50 to \$56 per picul.

There seems something wonderfully attractive in first arrivals of new crop Teas. Year after year, the same rush, the same anxiety are exhibited, though most buyers should have learnt from experience that, ten days later on, the same goods could be procured at a reduction of \$10 to \$12 on opening rates. But this consideration never seems to influence their judgment, and we go on persistently in the same course, year after year, in a wild competition, disadvantageous alike to foreign buyer and Yokohama native merchant, which experience and warning seem alike powerless to stop.

At an early date in 1877, it was apparent that the Japanese were not bestowing their usual attention on the curing and preparation of the leaf, and many complaints were current about the difficulty of obtaining parcels that would fire into really desirable goods for the United States markets. The Teas were very mixed; the leaf lacked twist and finish, and, from some districts, many samples came in, showing signs of an undue application of fire heat in their curing, so much so as, in some cases, to seriously affect their final preparation here in foreign hands. Again, other chops were so slightly prepared, that they early showed signs of heating, from the amount of moisture remaining in the imperfectly cured leaf. To sum up:—the character of the generality of the first crop was decidedly inferior to the average of the two or three preceding seasons.

A large business was done during the months of May and June; settlements at the close of the latter month amounting to 40,000 piculs. Prices had now declined to a fairly safe basis for operations, standard Good Medium ruling at \$21 to \$22 per picul; but later experience shows that with an expected total export from Japan of twenty-

four million pounds for the season, Good Medium must not cost over \$20 per picul, if there is to be any margin left for profit, as the average quotation for new crop Good Medium is not over 27 cents per pound in the United States.

During the period onwards to the close of the year, business continued fairly steady, the principal feature worthy of comment being the disproportion in price of the commoner grades, which commanded extreme figures, considering the quality of the bulk of parcels brought down. It is much to be regretted that so great an amount, ranging from two-and-a-half to three million pounds of Teas, grading under standard Good Common, should have found their way this season to the United States, at a critical moment, when the American Tea Markets were just recovering from the evils of an over-export from this side, and consequent too great accumulation of stock at home. A large proportion of this common trash will be merely used for market speculation, and remain a dead weight, passing from the hands of one speculator to the other, as opportunity requires, but little actually going into domestic consumption. That these Teas are not cheap to the general consumer is easily demonstrable. Take the tenth part of an ounce of Common Japans, such as shipped this season, and costing, laid down in New York, about an average of twenty cents—and then take against it one sixteenth of an ounce of Good Medium Tea, costing twenty eight cents;—and any one will in a moment see that the better grade Tea is by far the most economical, without taking into account the great superiority of the flavour.

Another feature of interest deserving comment is the efforts the Japanese are making to produce Black Tea. So far, they have failed, although some reports from America go so far as to character the cup quality of some parcels shipped, as "approaching Assam flavour" but the many samples which have come under our notice, have not, in our ideas, shewn the slightest trace of anything like Assam quality; the Teas lacking the powerful, malty, burnt quality of the Indian Teas, and being faint and almost druggy in the cup, and likely to turn out very indifferent for long storing, as they speedily lose any little briskness they once possessed, and the liquor becomes apt to draw flat and almost sour. If the native producers would give their full attention to produce a high standard of "natural leaf" leaving the final manipulation necessary for shipment to the foreign buyer, their efforts would be in a right direction; but the idea of producing black Teas, bearing in mind the steady increase in the area and production of Tea plantations in India, can only be compared to an attempt in England to grow Wine. Such an experiment to a limited extent might prove successful; for it is certain that wine, of a sort, was anciently produced in England—*teste* the survival of the name of 'vineyard' in so many sheltered spots of old church lands;—but France could

always produce wine at a very much lower scale of price, and without the risk attendant on a precarious crop. Japan has found an ample market for her produce in the shape of "natural uncoloured Japans;" let her study carefully to preserve that trade, instead of ambitiously craving after the production of an article, to which soil and climate seem alike unfavourable, and tacitly shew themselves antagonistic to success. Several musters of Japan fired Teas, evidently fired and coloured according to the best ideas of native Teamen, have also come under our notice. To instruct our Japanese friends in the art of Tea firing is hardly within our province; suffice it to say that, had the leaf been sold in native packages in its unfired state in Yokohama, the result would probably have been on the whole better for all concerned.

A few remarks on figures must bring this sketch to a conclusion. Most native authorities, early in the season, were loudly demonstrative in favour of a short export; and even threatened that, unless prices improved, little or no third crop pickings would be made. Had this been the case, the foreign merchant would have been little or no loser, and the tea plants would have largely benefited from the respite granted. But the demand continues; fresh orders from New York come in and are executed; enabling our Export to creep up to, and even promise to exceed, the total of last season. Kobe shows a large increase: her figures standing roughly at eight million pounds to date, exclusive of shipments per last steamer, *Gaelic*, and amount already shipped on board the *Messenger*, making a total, in all not far short of eight and-a-half million pounds, an increase on corresponding figures, last season, of fully two-and-a-half million pounds.

Total export to date from Yokohama, including cargo of *Gaelic* and amount on board the *Messenger*, may be computed at thirteen million pounds, so that actual settlements of "fired teas" to date is not less than twenty-one-and-a-half million pounds against a total, at a corresponding period of last season, of nineteen-and-a-half million pounds.

How much more will be shipped during the balance of the season seems now a matter of pure conjecture. Fresh orders from the States have been received, and some even executed, on terms which show an advance of two dollars per picul in price, and quite the same amount in depreciation in quality, in comparison with parcels purchasable about the middle of last November.

The average price of Tea, as shewn by official figures for the past seven months of the Season, has been about \$19.50 per picul, a full high rate, considering the course of the home markets; and unless we see some improvement there, we must make up our minds to purchase Good Medium Teas at not over \$18 per picul, if we wish to show on the right side in the States; or else allow our enterprising native friends to have the barren honour of shipping to a market where it is almost certain to realize a serious loss.

THE JAPANESE CIVIL SERVICE.

IN the first number of this journal, we pointed out what we consider a radical error in the system of Provincial Government in Japan:—the 'delocalization' of officers. From feudalism in its extreme, the Government have rushed to the opposite evil of centralized despotism. They could accept from the Daimios the gift of their independent sovereignties, their lands, their fleets and armies: but they had not the courage to trust the Provinces, into which the ancient Daimiates were re-arranged, to the rule of the givers, in the changed capacity of servants of the Crown. Fully recognizing the value of arguments in favour of this centralizing policy, arguments maintained by men whose experience and sagacity entitle them to all respect, arguments which have, of themselves, much intrinsic weight and force,—we have yet to be convinced that they

over-bear those which we adduced against it, and we have therefore, indicated the line which,—should there be truth in the rumour of change of system—we think that the Government should pursue.

But, needful for either system, centralized or de-centralized, are proper tests of qualification for office, and regularity and method in the organization of the Civil Service, the want of all which is clear, and fatal to its efficiency.

The Naval and Military services of Japan do not come within the scope of our remarks. In these, the Japanese have gone the right way to work. By the engagement of competent foreign instructors, and the establishment of schools for the education of military and naval cadets, these services have been re-organized in a manner which reflects credit on all concerned, and which has already borne splendid fruit in the masterly suppression of the late revolt. And in criticising, as we have to do, to-day, the Civil Service of Japan, we would also grant honourable mention to the Railway, Postal and Telegraph departments, all which do their work satisfactorily, having had the same advantage of organization under skilled management, as the Army and Navy. It is with the Civil Service generally, as concerned with the people of the country, that we have to deal; and it is from sympathy with the people, and an honest wish for the country's welfare, that we write at all, upon a subject in which few but native readers will, we fear, take much interest.

In most countries of Europe, the Civil Service of the nation is open to all comers, who shall show, by means of approved tests, their attainment of a certain standard of education. In England, whose Constitution is happily described as "broadening down from precedent to precedent," these tests of fitness are severe, and the system of training for civil appointments elaborate and careful. Periodical examinations are held for appointments in the various departments of civil employ; for each separate branch of the service, a special and distinct standard of fitness is established; and, in proportion to the importance and dignity of each particular employ, the examinations vary in a scale of finely marked gradation, so as to admit all ranks of society into the service of the State, and at the same time to secure the best men for the most important offices. And in regard to some of the higher classes of civil employ, the successful candidate must complete a prescribed term of probation, before he is a permanent member of the service. In Germany, too, thanks to the liberal and thorough curriculum of the National Schools and Universities, the ranks of the Civil Service are recruited from amongst men of education and capacity; and the State can rely upon the fitness of its public servants, whether the tests employed be competitive or merely qualifying. It would be easy to multiply instances, but one other will suffice. If we turn to Japan's nearest neighbour, we see a similar system in force. In China, corrupt and defective as her public service is acknowledged to be, examinations have, from the earliest times, been part of the administrative system, and no candidate can hope to gain any appointment, whether military or civil, without passing the required tests, which in their own way are as severe as those in any European country.

We abstain, of deliberate purpose, from bringing into the category of comparison, Japan's other neighbour, on her other hand,—the United States of America. Had we been writing but one short year ago, we should have had to instance the Civil Service of this, another great English-speaking community, as affording the most striking contrast to that of England; to have adduced it as the 'frightful example' for Japan to avoid; as we are proud to be able to exhibit our own, as a model for her to imitate. But 'America's adversity is not England's opportunity,' and it is not when a great-hearted statesman like the new President, Mr. Hayes, is engaged in the Herculean task of strangling and searing the Hydra's heads of corruption, imbecility,

nepotism and fraud, born from the fatal principle:—‘to the victors belong the spoils’—that we can refer to the shades of a Past, soon to be lost in the splendour of the rising Future. All our sympathies are with the monarchical system of government; but ‘blood is thicker than water,’ and though detail of the evils, through which General Jackson’s system of Civil Service has dragged his country nearly to the verge of ruin, would have rendered our argument more powerful—we cannot sacrifice our consinship on the altar of the Antithesis.

In Japan, the machinery of Government is still strikingly complex. Things are in a transitional state and the situation is abnormal. Fifteenth century civilization, side by side with the intellectual progress of the nineteenth, presents a startling picture. And there is more behind. In the political and social upheaval which accompanied the revolution of 1868, the nation witnessed the destruction of the established order of things, with nothing at hand to supply its place. Here then, there is no beaten track for administrators to work upon. It is not a question of strengthening the foundations of a sufficiently firm structure, or of altering the positions of certain supports, so that the weight of the whole shall rest equally on the sustaining props; but it is a question of building up, bit by bit, a fabric of government which shall meet the requirements of a people who have, in the space of a few short years, leapt over stages of development which it has taken other nations centuries to overpass. Great therefore is the necessity that, in their construction of the edifice of government, the designers should be men of ability; but even more essential is it that those, to whom the execution of the design is entrusted, should be fit and capable for the task. Granted that, for some years, the measures which are introduced must be of a tentative character; let the experiment be conducted at the least possible cost to the country. And to this end, it is requisite that there should be some standard of fitness for civil employ, some approved tests, by means of which the country should get the best men for her money. The most diligent enquiry, however, in this direction, would be fruitless, for the simple reason that none of those qualifications demanded in other countries are considered necessary here. Here, no tests of fitness for office exist, nor is any course of training prescribed for public officials, before entering upon the duties of their posts. Under such circumstances, what wonder if appointments are made capriciously, and vacancies filled up in too many cases by the creatures of a central despotism? Where no special training for particular branches of the administration exist, mistakes must, in the very nature of things, occur; and it is useless to express surprise, if the talents of a clever financier be frittered away in some diplomatic sinecure, or an able administrator be called on to expound the law, of the first principles of which he is ignorant.

And of equal importance with the need for the establishment of tests of fitness for public office, is the necessity for proper organization. The two go hand in hand. First ascertain the fitness of your officers, and then let them have confidence in the system of which they are a part. A Civil Service, founded on no regular system, is a source of weakness to a Government; a properly organized service is a great and powerful ally. Organize a service, create a system for the control of each branch of civil employ, and you at once call into being a feeling of *esprit de corps*. In a regular Covenanted Service, are found the best incentives for the play of individual energies,—such as emulation, mutual confidence, proper pride, and legitimate ambition;—with that perfect confidence in the security of the material private future, which leaves the mind free and unembarrassed for the work of public duty. In the race for official distinction there is animation, there is life. Men feel, as in the race for wealth, that they must do their utmost to secure and keep a place in the front rank, or be left behind

in a rack of contemptible mediocrity. And there is more;—there is a sense of security in the knowledge that, if a man does his duty, the ladder of promotion is there for him to scale. It is only in such a service that a really high tone,—an elevated *morale*—are to be found. And these qualities all improve with time; the dignity of age steps in, to strengthen and perpetuate them. On the other hand, take any employ which is not organized on a regular system, and what do we find? Stagnation of energy and hope; no pride, no emulation; too often, no consciousness of duty. And, blighting even the good intentions of many, an all-pervading, chilling sense of insecurity;—a secret dread that the same caprice which lifted the official into power yesterday, may turn him into the gutter to-morrow: a dread which too often suggests the necessity of making the greatest possible profit out of the precarious situation of to-day.

Thus is it that, in its organization and its stability lies the strength of the English Civil Service. Candidates win their first posts according to their merit: and, thereafter, ‘the best men for the best places’ is the unwritten rule. Confidence in his superiors, generous rivalry with his equals, and sympathy with his subordinates, are the consequences of the system under which he works, and the causes of a development, in fullest and finest form, of the feelings of *esprit de corps* and patriotism. In the conquest of British India, English civil servants took the most prominent part; in its consolidation, they did all; and later history has not failed to place on record their splendid achievements in the suppression of the Mutiny of 1857. It was a civil servant who defended Arcot and won the victory of Plassey; a civil servant who raised the army which rendered possible the capture of Delhi; a civil servant who defended Lucknow. It is such a service as this of which England boasts, that we would see hereafter in Japan: some commencement of training youth for such a career that we hope to see, in the present. That such a case should be possible, as that furnished not long since,—when the judge of an appeal court resigned his office and left the Bench, to become a practising barrister in the court over which he used to preside,—is the only scandal we need to mention to support our assertion of the necessity for radical reform.

Into the question whether, in the examination of candidates for civil employ, competitive or qualifying tests should have the preference, and other details, we will not enter. We will merely remark that, while owning a preference for qualifying tests, the number of idle hands which the wreck of feudalism has left stranded on the country, makes it doubtful whether the interests of the people might not be best served by throwing open to public competition certain branches of the service.

We may be accused of optimism for dreaming that such a reform as we contemplate can ever take place in an Oriental country; these suggestions of ours may be met with the timid wail so frequently heard at one time in the Native Press—“It is yet too soon!” To these objections we reply that such a view of things may be applicable to the past, but not to the present. Japan is entering upon a new career; for her has begun a new political existence. She has shewn an amazing talent for imitating and incorporating into her political organization the fullgrown conceptions of other nations; let her persevere in this course. Let her National Education be established on a wide and thorough basis; let it be recognized by her rulers that for special branches of the public service, a special training is required, so that diplomatists be skilled in diplomacy, law-givers be versed in law, and administrators understand the principles of government; let the Civil Service of the country be systematized and its ranks be recruited from among those whose capabilities have been duly ascertained—and then and thus only will her public servants enjoy the confidence of the country, thus only will the foundations of a

sound constitution be laid, and the nation be brought into harmony with its rulers; and, when all this has been achieved—then, and then only, will it be possible for her European allies, who watch with such interest her struggle towards the perfection of civilization, be able to grant to her the boons they now so reluctantly withhold—political freedom and international equality.

REVIEW.

THERE is a story which we have never been able quite to believe—because we never met so stupid a Scotchman—of a native of the Land o' Cakes being found reading a Dictionary of the English Language, under the impression that it was a historical novel; and who, asked how he liked the book, replied that it was 'vara interestin' reading, but that the chiel author's style was a wee disconnekit.' A review of a Hong List would appear at first sight to be about as interesting reading as the Scotchman's Dictionary, and yet it is astonishing how much there is to interest, especially by suggestion, in turning over such a work as that which has just been placed in our hands.* Take for instance, the London Directory, and read the full page Review of the work which one or other of the London daily papers annually dedicates to it. Some of these essays are as interesting as any novel. New streets have, during the year, been cut through blocks of ancient London which show, on the section, a perfect conglomerate of archaeological, architectural and historical treasure. An old Company's Hall is pulled down, and straightway the reviewer puts before you a graphic sketch of old civic life on some great 'gandy day,' when the conduits ran wine, and old Chepe was draped from end of end in tapestry and cloth of gold, and masques, triumphal arches, dancing flags, the merry music of Bow Bells—aye, and the merrier sound of ladies' laughter and glances brighter than all the gold, gave a life and colour to the street that one can hardly credit it could have worn, as one gazes at the dull, even rows of grimy smoke-blackened brick boxes which we now call houses, and try to 'live' in. Or a bit of tessellated Roman pavement is struck, twenty feet below the surface; or the crypt of some long forgotten church, burnt in the Great Fire; or a treasure trove of arms, coins or chased metal work discovered. And on each such incident recorded in the year's history, and marked by some necessary change in the year's Directory, does your reviewer discourse you, leading you skilfully on, paragraph by paragraph, and storing your mind with the necessary business knowledge of the new streets, their direction and advantages, and cost; while you imagine you are but reading a well-written bit of description of old London. Then the yearly spread of the great City; the expansion of the population within the Bills of Mortality: what opportunities of other sorts are given to the reviewer there! And so we might go on, if our object were to tell our readers how newspapers are filled, instead of—as it is—to recommend to their attention and their writing table, the excellent new edition of the *Gazette's* Hong List. We can do this very truthfully and of good conscience: for this year's issue is very far ahead of anything of the sort which has yet been attempted in Yokohama. It is extremely well printed and read; there appear to be hardly any errors in it; it is conveniently bound, conveniently arranged, well and copiously indexed; and gives to its purchasers a quantity of useful commercial and statistical information, easy of reference, and which it will save time to have at hand. We are glad to see that a considerable bulk of advertisements helps to swell the volume, and trust that the success of this year's edition will be such as to justify its proprietors in persevering in the work of improving and enlarging their Directory year by year.

Running rapidly through its pages, we find, first, some information that will be of great service to the compilers of the, hitherto, very incorrect gazetteers, Calendars, and similar works published in London; viz.: a list of the names and titles of the Reigning Sovereign and his Family, with a Chronological List of his predecessors on the Imperial throne. 660 B.C. the date of Jinmu Tenno's assumption

of the dignity, is a long time to look back to, and during the 2500 odd years since then, it is quite possible that a few errors of name and date may be discoverable by the microscopic eyes of some of the Yedo critics who occasionally publish such long and interesting dissertations on the value of accents, and with such heat and fury fight for the pretensions of their favourite hs or fs. Looking over the list, by the way, and remembering Macaulay's marvellous feat of memory of repeating the list of the Popes, one is more than ever tempted to regret his death, as surely even his memory would have had to own an overtax, if this list of names had ever been given to it to swallow. Some of them, such as Tsuchimikado, and Gotsuchimikado, sound almost like fabrications to our unaccustomed ear, and make us wonder whether, truly, the nation ever had; but the simpler and more homely memories stirred by the Suisei, and Annei, and Gemmei, of the first page of the list retain them in our minds easily enough. Then follows a valuable page indeed:—a "comparative Table showing the export of Silk from Japan to other countries; the price ruling for 'all round,' or No. 2½ Hanks and the exchange current at given periods of each year from 1871 to 1877." No merchant's office can fail to require this, and we should think copies on card-board for reference on a wall would be popular. The *præmia* and titles and addresses of all the Fire Insurances follow this, and then come ninety-five pages of Directory: official, commercial, and social, for Yokohama and Tokio, giving the requisite information respecting the Diplomatic and Consular Bodies, Imperial Government Services, Foreign Services, Navies, Hospitals, Religious Societies, Postal Services, Associations &c., &c., and then the personal lists of firms, and private residents, all as correct as can possibly be expected. We say 'possibly be expected' because residents are occasionally apt to forget that faults in this department are generally traceable to their own carelessness, reticence, or ill-humour. If a man mislays, or neglects to return, the slip with his name and address printed on it with, may be, some trifling error in a number or an initial, or drives away with a curse the unhappy collector who calls on a mail-day to get a proof corrected, or declines to give information about an approaching change in his firm:—such an one does not well to be angry when he finds his noble name of Smythe shorn of its final e, or his firm of Brown, Jones and Robinson incorrectly printed as Brown, Jones & Co. with the junior partner described, as in last year's edition, as 'assistant.' (Robinson, by the way, in such a case, generally takes care that such an error as this does not occur.)

Then follows an Appendix, in which first appear, in succession of the importance of the Ports as Commercial emporia, the Directories for Hiogo and Osaka, Nagasaki, Hakodate and Niigata, and a list of 'those few sheep in the wilderness'—Foreigners resident in the Interior. This closes the Directory proper, and we have here to find fault, for the first time, with the arrangement of the book. The subsidiary Directories above mentioned ought to have been grouped with these for Yokohama and Tokio; and the blot seems to have been detected too late for re-numbering the pages; as at this point is inserted a Table of Contents of the Appendix proper, which is all matter introduced for the first time in this settlement into a Hong List, and which will be found of great use occasionally, for reference.

The Austro-Hungarian Treaty of Commerce with Japan, has been selected "as a compendium of the privileges acquired, and of the rules and conditions to be observed 'by foreigners of all nationalities in Japan' and this, 'with its addendum of Trade Regulations, will be found to contain everything that any one ever refers to a Treaty to find. Following this is the Tariff Convention of Yedo of 1866 and its 'revised' Tariff, revision of which is now so urgently demanded by a section of the native press. We note here an omission which might easily have been supplied. The duties are given only in *boos* and cents of a *boo*, whereas, when this Tariff was originally published by the *Japan Times* in 1866 these figures were all calculated out into an additional Column of dollars and cents. The *Times* and its copy of the Tariff are alike out of print, but a little enquiry would have put the *Gazette* in possession of a copy of the latter. Should the Tariff not be again revised during this year, we recommend the publishers to note this point for their next edition.

Then follow the revised Bonded Warehouses Regula-

* The 'Japan Gazette' *Hong List and Directory*, for 1878. Yokohama, Printed and Published at the Office of the *Japan Gazette*, January 1878.

tions and Tariff of Charges, a number of Notifications, the Japanese Law of Surety and Law of Appeal; and the Time Table of Imperial Government Railways and List of the Mitsui Bishi Mail Co.'s Fleet ends the book.

We suggest to the publishers to give us, next year,—Schedules of the different Mail Steamer lines, Rates of Postage, Comparative Tables of Japanese and Foreign weights and measures, a meteorological table, Light House Directory, and the names and performances of horses in the Imperial stables likely to show, at the coming Spring Meeting; when their work may be considered complete for the present, until silk goes up, and the Eastern Question is settled, and residents in Japan find themselves able to pay more than Three Dollars per copy, which is the present modest *honorarium* set upon their labour by the compilers of this extremely useful little volume.

EDITORIAL NOTES.

THERE are more points than one left untouched in our article on Tea: they hardly come legitimately within the scope of a simple review of a season. Adulteration, and the loss of *bouquet* incurred by transporting the leaf before firing, are among them. We shall not omit to express our views on these subjects in due course. It suffices to say, for the moment, that not one pound of Japan Tea, faced as firers here are now compelled to face it, to suit the vicious taste of the American buyer, could ever get through the English custom-house, since the Adulteration Act became law in England; and that, if the native Government would give encouragement to foreign enterprise and capital, to improve Tea, their second best staple product—by allowing us to cure it at the tea-farms, instead of here, at the outports, the value of this export, and their customs revenue thereon, would speedily be doubled: an infinitely better way of increasing the revenue than a revision of the Tariff in a protectionist sense, which will kill the import trade, without benefitting either native producer or native consumer.

WE have heard that an objection has been taken, by a Japanese official of high rank, to the article on 'Silk and Silkworms' Eggs, which appeared in the first number of this journal:—the idea of improving the condition of the silk trade which we therein suggested, viz: that the native silk-men should cease to bring to Yokohama silk-eggs for export. He acknowledged to our informant that the arguments which were adduced in that article had convinced him, but alleged, as an insuperable objection to the practical development of the idea, the opposition with which the Foreign Ministers would meet it and the pressure which would, infallibly be put upon the Mikado's Cabinet, to prevent its fruition. His Excellency is entirely deceived. The Foreign Ministers might, with propriety, object—as to a breach of Treaty—to the Government forbidding the trade in silk worms' eggs; but our article was addressed—not to the Government, but to the silk-growers; and no Foreign Minister could possibly dare to ask the Japanese Government to *compel* their subjects to sell silk seed to foreigners against their will. The measure we recommend is a purely self-protective one, to be adopted by the trade, without governmental interference, for, or against it. The Government would do the silk trade of Japan, and foreign silk-merchants also, a great service, by encouraging the translation and publication of our advice, by means of the native press, throughout the silk districts of Japan, and we can confidently guarantee that they shall have the support of the Press of Great Britain against any opposition, from any Minister, of any nationality, who may oppose or object to their action.

WE have to acknowledge, with thanks, the receipt of a handsome volume, the Calendar of the Imperial College of Engineering (Kobu-dai-Gakko) and of a pamphlet containing the Reports of the Principal, Mr. Henry Dyer and Professors during the period from 1873 to 1877. We shall give them early review.

WE also have to acknowledge the receipt, last week, of the List of Lighthouses, Beacons, &c. which have been established by the admirable Lighthouse Department at

Benten. We purpose taking an early opportunity of referring to the question of Light and Harbour dues; when it will be convenient to have this handy little volume at hand to refer to. It reached us too late to receive this acknowledgment in last Saturday's *Times*.

THE first number of the *Kiushiu Times* reached us just too late for notice in our last issue. We have now received the second, and remark with regret that its editor has fallen into the mistake common to all amateurs, of forgetting the imperative necessity that his second number should be better than his first. We must fall back on the first number to find matter for notice, which, as with the audience of a maiden speech, courtesy requires to be laudatory. It contains a great deal of matter, its commercial and shipping intelligence is very well done—which was of course to be expected, from the Editor's antecedents, and it is most beautifully printed: so that our laudation of it may be taken as quite sincere, instead of merely perfunctory. It contains, especially, one article on "Coal" which we must notice more in detail.

A great deal has lately been written, here, on the subject of coal duties, and the coal trade of Nagasaki, by persons apparently very indistinctly informed—for the articles have thrown no light upon the subject whatever. The Editor of the *Kiushiu Times* ought to be thoroughly acquainted with it, and shows conclusively that he is, by the article to which we have referred. He admits the injustice of levying a duty on the article when carried by sailing vessel, while steamer carried coal is duty free; but very properly says that the injustice falls on the shipper by sailing vessel. The arrangement was made in error, no one at the time thinking that any of this trade would be done by steamer. He recommends a reduction of duty to 7 or 10 cents per ton; or better still, in his opinion, to nothing at all. And the article is wound up by a comparison between the coal trades of England and Japan, arguing in favour of total abolition of duty in the latter country from the experience of the former.

He would complete his work, if he would compile a table; showing us the number of steamers, and their tonnage, their destination, and the amount of their cargoes, in any one year. For the purpose of the Treaty revisers, and for us watchmen of the press, these facts are much wanted. It is perfectly clear that, when steamer-carried coal was made duty free, all parties to the Treaties understood and meant that such coal was to be for steamer's use. The apparent petty illiberality of charging duty on coal shipped per sailing vessel—even on the smallest quantity for ship's use, shows the meaning of the other clause clearly enough. But, of course, it was perfectly legitimate for any steamer to take in coal at Nagasaki, for as long a voyage as she had to make, if she could carry it. She was by no means bound to coal, there, only sufficiently to carry her to the next port, and, in practice, steamers were purposely run bare of coal just on entering Nagasaki, in order to get as much as possible, the coal being so good. We do not in the least agree with the *Kiushiu Times* in the conclusion it arrives at, that Japan coal should be made duty free. Japan has an advantage here of which she ought to make use, a duty on coal would be a 'productive' not 'protective' duty, and a steady income is derivable from this source which should not be overlooked. The error to be avoided is—increasing the duty until foreign coal becomes a more advantageous purchase to the consumer.

If the editor of the *Kiushiu Times* will leave off writing about the War in Europe, and keep 'down in a coal mine' a little longer, we fancy he would have a better chance of seeing the circulation of his paper go 'up like a balloon.'

THE following cutting from *The English Mechanic and World of Science*, a London weekly paper, affords a curious instance of precocity in a more useful direction than precocity is generally shown. But some boys are as fond of playing with numerals as others are of playing at marbles:—

"A NEW LAW OF ROOTS AND SQUARES.—In making some experiments with numerals, I came upon a curious law relating to roots and squares which may not be known. If it should be, I should like to know where I could see it in print.

"Rule.—Subtract the number of the difference from the difference between the square (the root of which you want to find), and the square next before it.

"Squares. 1, 4, 9, 16, 25, 36, 49, 64, 81, 100, &c.

"Differences of squares. { 3, 5, 7, 9, 11, 13, 15, 17, 19, &c.

"Numbers of difference. 1, 2, 3, 4, 5, 6, 7, 8, 9, &c.

"Ex. To find square root of 81. Subtract number of difference = 8 from difference between 81 and 64 = 17 gives = 17 — 8 = 9 square root of 81, and so on. By means of this rule, tables of roots and squares might be constructed with a saving of labour to the calculator. I find also that squares may be found by multiplying any square number by 4. Thus, if the squares above the multiplied by 4, they will be intervening squares.

"Ex. 4, 9, 16, 25, 36, 49, 64, &c. multiply by 4.

"= 16, 36, 64, 100, 144, 196, 256, intervening squares.

"Squares left out—25, 49, 81, 121, 169, 225, &c.

"This I hope to extend.

AUGUSTUS HALLE (age 14)."

The writer can vouch for the *bond fide* character of this extract, as the boy is well known to him.

NOTHING more has been heard about the rumoured assassination of Mori, so that we are glad to believe that we were correct in our impression, last week, of the falsity of the report.

THE *Tsukuba-Kan*, Japanese man-of-war, formerly H.M.S. *Malacca* left on Thursday for Australia, with Japanese officers and crew. She will make a great sensation in the Colonies, where the commissioners who lately visited Australia on the occasion of the Melbourne Exhibition were so well received. At the same time left the *Seiki-Kan* another native man-of-war, on a similar errand to Europe. The *Tsukuba-Kan* is a 3rd rate, of 1,033 tons, and carries 12 guns. Her commander is named Matsumura. The *Seiki-Kan* is a smaller vessel; of the 4th rate, 850 tons, and carrying 5 guns only. She is commanded by Capt. T. Inouye. Both vessel are screw propellers. We are sure that all their foreign comrades here wish them a pleasant voyage round the world, and a safe return home. We note, by the way, in the *Gazette* Hong List, that there are four young Japanese on board Her Majesty's ship. The youngsters on the *Sultan* and *Minotaur*, at all events, have a chance of seeing some active service.

This is the *Japan Times*, so that we seldom intend to favour our readers with much of our valuable opinion respecting European matters, further than as they affect our trade here. The Reuter's telegrams we publish this week are sufficiently alarming and the silk market has certainly been affected. Last Tuesday or Wednesday, better news seems to have come by private message, for quite a number of silk-buyers were hovering about the native town. The Chamber of Commerce telegram in the afternoon, however, seemed to have completely discouraged them, for no business resulted. It is odd that, as noted in our Silk Report, the natives have, from their Consul, or Minister, in London, just as good and early telegraphic information as we get ourselves. If so, it would appear that the Japanese do not believe in the imminence of a general European struggle.

THIS is the time for annual Meetings. On Thursday was held that of the Athletic Association; on Friday that of the German Asiatic Society, and the Rowing Club, and that of the Yokohama United Club is coming on next week, or the week after. We have not space, unfortunately, to report their proceedings, which seem, too, to be quite fully recorded in the local dailies, on whose province a weekly Review has no object in intruding more than is necessary. All seem to be in a flourishing condition, except the unfortunate Dramatics, who are in a chronic state of impecuniosity and discomfort. Why do they not resort to the expedients of home managers in such straits—get up some old stock pieces. They would have two bumper houses, if they would give us *Cox and Box* and *The Critic* again; and for a change, let Mr. Spurgeon double Sir Fretful and Don Whiskerandos, and give one of his colleagues a chance of distinguishing himself in the principal character.

After the perfectly detestable weather of the New Year holiday week, the fine, frosty seasonable days we are now enjoying are delicious. There has been some skating, but we regret to have been unable to see anything of it. We shall have somewhat to suggest on this head, next week.

During the past week, we have received the following

TELEGRAMS.

London, January 12th, 1878.—Despatches report that after severe fighting the Russian troops have captured the whole of the Turkish Army at Schipka.

London, January 12th, 1878.—Despatches report that Nish has capitulated.

Russian Troops have arrived before Yenisagra and Bazardchid? Query Basarjik?

A New Turkish Ministry has been formed and Handi? has been appointed Grand Vizir, and Server? Minister of Foreign Affairs.

All Civilians have evacuated Adrianople.

London, 14th January, 1878.—Telegrams report that the Russian Troops have completely invested Erzeroum.

The whole of the British Mediterranean Squadron has been ordered to *rendezvous* in the Levant.

THE JAPAN TIMES.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN TIMES must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

YOKOHAMA: SATURDAY, JANUARY 19, 1878.

NOTES OF THE WEEK.

LAST week and this were run into one, by the omission of Sunday, which was the hardest working day of the fortnight. (We shall have more to say, anon, respecting this desecration of the Sabbath.) The *Oceanic* left for Hongkong, and the *Suminoe Maru* for Hakodate on Saturday, the 12th; and then, in succession, on the 14th, 15th and 16th departed the *Gaelic* to America, the *Volga* to Hongkong and Europe, and the *Hiroshima Maru*, to the Coast ports and Shanghai. After which the land has had peace. No inward mails have troubled us, save the *Saikio Maru* from Shanghai, Kobe, &c. which arrived on the 17th inst. The *Tanais*, with the French mail of November 30th from London, is reported as having left Hongkong on the 11th inst. at noon, but has not made her appearance up to the moment of our writing these lines. The *Bombay*, with the English mail of the 7th December, left Hongkong on Wednesday the 16th inst. at noon, and may be looked for on Wednesday night, 23rd.

The P. M. S. Co.'s *Alaska* left San Francisco on the 3rd inst. and cannot be fairly expected, at this time of year, before the end of the month, or say 1st or 2nd of February; the O. & O. Co.'s *Belgie* was to leave on the 16th inst. From the South, the Pacific Mail boat, the *City of Peking*, leaves Hongkong to-day, and will be here about Saturday next.

We regret to have to record another death from *asphyxia* by burning charcoal; Mr. Auguste Perret, first officer of the M. M. S. S. Co.'s steamer *Volga*, being this time the victim. Having to keep the middle watch, he turned in as usual at 8 p.m., and as it was very cold, had a small brazier or 'hibachi' put in his cabin to warm it. When his watch was called at midnight, he was found dead. M. Perret was a man about 30, justly esteemed and liked by his superiors and comrades, as a good officer and a pleasant associate. A circumstance that makes the accident more peculiarly sad, is that this homeward trip of the ship would have been his last in her, as he would have proceeded to France on board of the connecting vessel from Hong Kong.

There seems to be a sort of caprice about this deleterious method of getting heat. When we first came to Yokohama, there was not a chimney or open fireplace in the whole settlement, and not

many stoves; and nothing was more common than to see an office or a dining room heated by "hibachis" some of which were handsome bronze bowls or vases. A 'hibachi' in a bedroom was certainly considered rather a dangerous sleeping companion, but otherwise, they were used pretty freely, and without accident. The writer sat, for the whole of the winter of '63-'64 in an office certainly not larger than 10 ft. by 8 ft. which was agreeably heated by an enormous bronze brazier, about 18 in. in diameter; and without ever feeling the least inconvenience. The only precaution he ever took was to have a large copper bowl of water standing on a tripod amidst the hot charcoal, and about a foot, or 15 in. from its surface; but this was adopted more on account of the dryness of air created by the consumption of the fuel, than for any other reason. But it was always noticeable that, before firing the charcoal, it was, in those days, well soaked in water, and exposed to the sun: and it is possible that some part of the free carbonic acid was thus absorbed before the fuel was burnt. We doubt if our servants take the trouble to do this now. It would be interesting to know, also, whether charcoal made from different woods varies in its proportion of free carbonic acid gas when burnt: and as we are by no means too proud to set the good example of owning our ignorance, and asking for information, we make this subject the ground for our first "Query."

We don't remember any thoroughly authenticated case, in those days, (say from 1858 to 1865) of charcoal poisoning. (The prevalent fatal diseases were two-sworded men and *delirium tremens*.) One elderly gentleman, agent for a leading American house, was found lying insensible in his office one day, and this was attributed by some to charcoal fumes—but it was doubtful whether it was not, rather, a slight stroke of paralysis. And a young gentleman died in his bath, but this was clearly proved to be from disease of the heart. Of course it behoves us all to take proper care, but we are strongly inclined to believe that charcoal here has got more dangerous of late, because our servants are too lazy to prepare it properly.

Servants, by the way, have an immensely easier time of it than they did, when they only got as many *boos* as they now get *yes*. Who ever dreamed of going out, in the old days, without the attendance of a boy with a "Choching" as (*pacete* sinologues,) we used to call lanterns? And very choice were men in their lanterns, with monograms or crests, names or numbers painted on them. And oh! the mess the Japanese artist generally made of a motto! Now, if a few old fogies keep up their lantern, they, as a rule, carry it themselves, and are laughed at by the wiser youngsters, who splash home through the mud, and occasionally bark their shins over a plank or a door step, and grumble at the absence of gas. One such antiquated relic of an 'old resident' who is in the habit of carrying a lantern thus, was observed going home from his dinner the week before last, in company with a small shrimp of a servant, who was walking along behind his master, carefully keeping his socks and *getas* out of the puddles, and grinning with intense glee at his absent-minded *domasan* lighting him home. It was not till he had got half way to his house, that it seemed to occur to the master's mind that the servant might just as well carry the light for him.

Again, who cares, now, whether he enters his compound through the main, or side, door of his gateway. In the good old days, the side door was for the coolies, the great gate for the master, or his friends: and many were the contests between foreigners and *yakumin* at the gates which barred the end of the Main Street; contests in which foreign patience, good temper, and perseverance always got the better of official insolence. We have frequently seen a foreign resident, who understood the insult that was meant to be inflicted on him, when told to dismount, and lead his horse through the side gate—dismount, indeed, but only to compel the chief of the watch to lay down his pipe, and open the main gate, with his own hands, for the passage of the horse, much to the officer's discomfiture and the amusement of the native crowd. And one occasion is on record of a foreign Minister having the closed gate broken down before him. Toadies of Young Japan will howl at all this, perhaps quote the record of such acts as just and sufficient provocation for the cowardly and treacherous assassinations,—every one of them initiated by a blow at the victim's back, and consummated by hacking at him while lying helpless on the ground—which disgraced alike the 'gentlemen' of Japan—the sword-bearing class—and the feeble government of the day, whose police was powerless to prevent or punish the atrocities. But such men, writing at what seems now an incalculable distance of time from the events (so rapid has been the advance of Japan under a stronger government, willing and able to accept as a conceded fact our presence in the country) and in crass ignorance of all the small surrounding circumstances of the period, with which none but old residents are familiar,—such men cannot but be utterly mistaken. No foreigner exacted more than the respect which was his due, which was paid to his equals in position in native society, and which he especially took care should be paid by his servants, and which he paid himself, to a native guest.

Japanese officials in those days were the only class who gave trouble and their insolence was extreme. In such cases as we have mentioned above, it was perfectly well known, that they trespassed on the presumed ignorance of the stranger of the customs of the land, with the inhospitable and vulgar design of insulting him and getting a laugh at him out of the street rabble; and nothing was more delightful to the rabble than to laugh in the other direction, as described. Nor are such trifles of ceremony altogether the *nugae* which they seem. They have a value of their own. We may save ourselves a minute's time by slipping through a small side door, as if we had come for the soiled linen, or returned from market with the potatoes; but we don't have such active *mombans*, or such cleanly, attentive, or honest servants, as we had in the old days. We are free to confess ourselves *laudatores temporis acti* and believe that we have an inferior class of domestic servants now than we used to have, because the class that used to serve the old generation, cannot treat with respect another set of foreigners who seemingly do not respect themselves.

The 'Times of Taiko' begins to smell of blood. This is the defect of all Japanese romance, but, of course, in tales of this description, the author must give a true reflection of the genius of the people, and the manners of the time. There is a trifling matter, too, of diction, which troubles us dreadfully, in all our sinologues' work of this character. They will write of Japanese 'knights';—forgetting that knighthood (for we do not suppose that they revert to the Roman polity for their knighthood,) was specially an Order created for the defence of Christendom against all Jews, Turks, and Infidels—including, naturally, the Japanese. We confess ourselves unable to suggest a substitute for the word, but it grates upon our ear. It offends us almost as much as the parallel case of bestowing the honours of English knighthood on certain foreign money-dealers a few years ago did the Rev. Doctor Opimian, a divine not so well known as he should be. He vented his ill-humour in a few verses which we will take the liberty to quote:—

'A NEW ORDER OF CHIVALRY.

I.

Sir Moses, Sir Aaron, Sir Jamramajee,
Two stock-jobbing Jews, and a shroffing Parsee,
Have girt on the armour of old Chivalrie,
And, instead of the Red Cross, have hoisted Balls Three.

Now fancy our Sovereign, so gracious and bland,
With the sword of Saint George in her royal right hand,
Instructing this trio of marvellous Knights
In the mystical meaning of Chivalry's rites.

"You have come from the bath, all in milk-white array,
To show you have washed worldly feelings away,
And, pure as your vestments from secular stain,
Renounce sordid passions and seekings for gain.

"This scarf of deep red o'er your vestments I throw,
In token, that down them your life-blood shall flow,
Ere Chivalry's honour, or Christendom's faith,
Shall meet, through your failure, or peril or scath.

"These slippers of silk, of the colour of earth,
Are in sign of remembrance of whence you had birth;
That from earth you have sprung, and to earth you return,
But stand for the faith, life immortal to earn.

"This blow of the sword, on your shoulder-blades true,
Is the mandate of homage, where homage is due,
And the sign, that your swords from the scabbard shall fly,
When "St George and the Right" is the rallying cry.

"This belt of white silk, which no speck has defaced,
Is the sign of a bosom with purity graced,
And binds you to prove, whatsoever betides,
Of damsels distressed the friends, champions, and guides.

"These spurs of pure gold are the symbols which say,
As your steeds obey them, you the Church shall obey,
And speed at her bidding, through country and town,
To strike, with your faulchions, her enemies down.

II.

Now fancy these Knights, when the speech they have heard,
As they stand shod and shoulder-dubbed, belted, and spurred,
With the cross-handled sword duly sheathed on the thigh,
Thus simply and candidly making reply:

"By your Majesty's grace we have risen up Knights,
But we feel little relish for frays and for fights,
There are heroes enough, full of spirit and fire,
Always ready to shoot and be shot at for hire.

"True, with bulls and with bears we have battled our cause;
But the bulls have no horns, and the bears have no paws;
And the mightiest blow which we ever have struck,
Has achieved but the glory of laming a duck.

"With two nations in arms, friends impartial to both,
To raise each a loan we shall be nothing loth;
We will lend them the pay, to fit men for the fray;
But shall keep ourselves carefully out of the way.

"We have small taste for championing maids in distress:
For State we care little: for Church we care less:
To Premium and Bonus our homage we plight:
"Percentage! we cry, and "A fig for the right!"

"Twixt Saint George and the Dragon, we settle it thus:
Which has scrip above par, is the Hero for us:
For a turn in the market, the Dragon's red gorge
Shall have our free welcome to swallow Saint George."

Now God save our Queen, and if aught should occur,
To emperil the crown, or the safety of her,
God send that the leader, who faces the foe,
May have more of King Richard than Moses and Co.

Poor little Rosey and Tosey! We fear we have much to answer for; and, truly, were sorely tempted to tamper with our author's text, and re-write his last page. 'Twas difficult indeed to correct the proofs. Let us hope that Jizo, whom Captain Brinkley tells us of, will have a special care of their little pebble cairns, and that Shotsuka-no-baba may not trouble them at all.

The London *Examiner* has the following paragraph, referring to two gentlemen very well known in Japan, and to a brother known as well in Europe:—

"Paul Lindau, formerly the editor of the *Das Neue Blatt* and the present editor of *Nord und Sud* and *Die Gegenwart*, has nearly completed a new comedy, *Johannistriebe*, which will be shortly produced at Dessau. Paul Lindau, who has rapidly advanced to the first rank of *litterateurs*, is one of three brothers, all highly talented, two of whom are in the Prussian diplomatic service. Before the Franco-German War the attention of Prince Bismarck was directed to a series of articles in the *Cologne Gazette*, which so pleased him that he telegraphed for the author's name. It was Richard Lindau, to whom by the next post came a letter from the Prince offering to open a career for him in the Prussian service. He was in consequence appointed to the Prussian embassy in Paris; and soon afterwards his brother, Rudolf, to the consulship at Marseilles, whence he was for a time transferred to Bayonne to watch the progress of the Carlist movement. The world will probably hear more of the two diplomatists, unless, indeed, more pleasant pursuits than diplomacy distract their impressionable minds."

The *Examiner* is not so correct in its information as usual. Richard, formerly a partner here in Messrs Alt & Co., is the Consul at Marseilles, while it was Rudolph, the gentleman who represented Messrs Pustau & Co. here, and afterwards Messrs Walsh Hall & Co. who attracted Prince Bismarck's attention in the way mentioned. Herr Lindau had, also, been a successful writer in the "*Revue des deux Mondes*" and it was to the appearance in that periodical of some clever papers under the title of "*Un voyage autour du Japon*" that he owed his first appointment in a merchant's house here, the attention of its head having been drawn to them just at the time when he was thinking of commencing business in Japan. Rudolph Lindau accompanied the Prussian Guard through the whole of the war and wrote, subsequently, an interesting account of their services. At the peace, he was appointed to the Embassy in Paris, where he now is; and the last public mention we noticed of him, before this, was in the *World*, where he was said to be 'whispering into the ear of the lovely Princess'—

All which is excessively interesting to poor devils of penny-aliners, as showing what may happen to us. Only one must take care not to be an Englishman. The only attention he is likely to get from his Minister is a threat of deportation.

LATEST REUTER'S TELEGRAM.

As we go to press, we receive the following:—

London, January 17th 1878.—Austria and England refuse to recognize any separate Peace or one which is contrary to the Treaty of Paris of 1858.

THE TIMES OF TAIKO.

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GOYEMON.

Chapter 3. OUTLAWED.

SANDAYU'S wife herself had been equally astonished at Gorokichi's disappearance. In the moment of her parley with Shikibu, the impossibility of concealing him anywhere had presented itself simultaneously with the wish to do so, and since nothing is more embarrassed than dishonest love at the aspect of detection, she had almost hesitated to rejoin her lover, so humiliating did she find the new condition of their intrigue.

The four walls, the alcove, the recess for the rain doors

and a few simple articles of furniture, all these things, embraced in a single glance, rendered a search unnecessary, while at the same time they made the man's sudden invisibility more than marvellous.

Miné, however, having drawn all possible advantage from the result, set little store by the means, and seated by the charcoal brazier on her return from Shikibu's room, disposed herself rather to ponder the probable issue of the discovery her rival had too certainly made. With her elbow resting on the rim of the brazier and her chin supported by her hand, she had remained some moments buried in thought before the chill morning air directed her attention to the smouldering fire. She took the tongs, and was on the point of assembling the embers of charcoal, when she observed that the ashes of the brazier had been raked so as to present an even surface, on which were traced four characters signifying, "under the next mat." Now the brazier was touched on one side by the cushions of the couch, and thus the word "next" became under the circumstances entirely distinct. Inserting therefore the handle of a small mirror between the interstices of two mats, Miné succeeded with very little difficulty in raising the one described, and then saw that the boards it covered were loose, so that by removing them a perfect hiding-place presented itself under the floor of the room. Gorokichi's disappearance was thus no longer a mystery, and although she knew that his evasion was only an exercise of the art her husband taught and in which her lover was reputed so perfect, Miné could not but admire the quickness and address that had been so successfully applied at such a crisis.

Gorokichi meanwhile had made his way very unconcernedly to his own quarters. With men of his temperament, resolution often precedes emergency, and it cost him nothing to see the approach of a conjuncture that would again launch him on the stream of adventure.

Indifference being at once the condition least likely to excite rumour, and for him most easily assumed, he had disposed himself to pass a few hours in sleep, when he was disturbed by the voice of Miné's maid parleying with his servant in the vestibule.

The girl was not, as Gorokichi expected, the bearer of some subtly worded message intelligible to his ears alone, but of a letter, which she said her mistress had found on Sandayu's desk on the preceding evening, and concerning which the knight had apparently forgotten to give directions before he set out. That Sandayu, failing to meet his head pupil, should have left some written communication for him was a very simple supposition, but the statement that the letter had been discovered the night before, showed Gorokichi that it was not exactly what it purported to be. He was not therefore surprised to find that though the address was apparently in Sandayu's hand, the letter itself had been written by his wife, and contained these words:—

"I will provide that after this evening Shikibu shall not impart her suspicions to anyone. Kinhei however is already in her confidence, or will be so to-day. Can you not devise a means of averting any inconvenience in either case?"

"The stream that winds by mead and bower

"Is touched but once by any flower."

Gorokichi read these words over and over again without being able to satisfy himself that he had reached the limit of their import. Miné undertook to be responsible for Shikibu's silence after that night. So much was certain. Supposing then—and this was one of the contingencies the letter embraced—that Kinhei was still unwitting, it only remained for him, Gorokichi, to contrive the old man's absence until the evening. On the other hand, such a measure would be manifestly futile, if Kinhei were already Shikibu's confidant, and yet some step that would meet this condition also was to be taken. Finally the everlasting separation of the water and the flower it touches once in flowing, was no less typical of death the divider, than of time the irrevocable, and the echo of the last idea repeating itself after every surmise, Gorokichi left his quarters, and took the way to the gymnasium without devoting any more time to the analysis of the letter.

His object was to find Kinhei. He had not confessed to himself any evil design, nor even traced the outline of the plan he proposed to pursue. A mechanical avoiding of question or request, the easiest sources of information, as well as an extreme circumspection which he detected in his

method of seeking, were the first indications he had of his own purpose.

Kiuhei was not at the gymnasium nor in the servant's quarters. Neither was he on duty at the gate, for it was easy to see the warden's seat, and almost the whole interior of the lodge, across the thick wooden bars of the window.

This absence of the man he sought began to cause Gorokichi some disquiet. The old retainer might be at that very moment listening to the recital of Shikibu's suspicions, or even following his master with tidings of them. In the latter case, however, he could not be far on his way, for having charge of the purveyance, he would not have risked observation by absenting himself from the morning meal, of which the scullions were even then in the act of removing the apparatus. The result of this reflection was that in a moment Gorokichi found himself at the top of the watch-tower, and commanding an almost uninterrupted view of the road to Kiyoto as far as the exit of the valley.

But in this stretch of more than two miles not a single traveller was visible. Gorokichi had therefore turned to descend, when a sharp sound, like the stroke of a mattock on a stone, directed his gaze towards a row of rice-straw stacks at the back of the stables.

There he saw Kiuhei busily digging, and from time to time stooping to pick up something which he transferred to a section of bamboo suspended from his girdle. Then Gorokichi remembered that the old man generally spent most of his leisure hours fishing, and with a feeling of compassionate reluctance, watched him as he collected bait for his favourite pastime.

But a spring day, soft edged clouds and brisk dashes of rain gave such promise of sport, that the search for bait was presently concluded, and Kiuhei, taking up his fishing rod and basket, trudged briskly off along a little path that wound across the valley.

His destination was a lake in the grounds of an old castle some dozen furlongs distant. Entered through a gate, over the remains of which a huge pine tree stretched its sturdy arms, the manor road, despite much debris of stone work and palisade, preserved for a time faint traces of the many feet that had once trodden it, but soon, rugged with roots and brown with sprays of cedars at its sides, ended abruptly on the verge of a bamboo grove; for its face was hidden by the hardy saplings that had pushed themselves many an ell beyond the shadows of their ancestors. On the other side of this grove, masses of matted weeds and creepers disfigured what had once been a fair and ample tract of well trimmed turf, stretching down to the margin of a little tarn whose deep waters, stirred by broad shouldered carp and lusty gudgeon, had always been a chosen resort of rustic anglers, until by some strange series of accidents, the same month, in four consecutive years, had seen the dead body of a fisherman entangled among the thick tresses of fir and alder that shaded three sides of the lake. After this, an evil fame had turned away the feet of the country folk, so that the place was now seldom visited except by an occasional woodman or gatherer of mast and chestnuts.

Gorokichi, his head muffled in a hood that hid everything but his eyes, and a farmer's rain-coat of hemp and straw thrown over his shoulders, followed Kiuhei to within a bowshot of the tarn, and then removing his disguise, walked down to the old man's side, just as the first hook had been baited and dropped beside the buttress of a ruined summer-house.

"Why, my master," cried Kiuhei with a merry laugh, "what accident has brought you here?"

"No accident, Kiuhei, but the sight of you and your fishing rod. I want to watch you pull out a few of those drowsy carp you carry home so often."

"Ah! Then I hope you will soon be satisfied. But indeed I thought at first that you might have come to hang up an erotic tablet at the shrine of the old temple in the wood, or perhaps to try conclusions with the ghouls of the tarn!"

Gorokichi looked sharply at Kiuhei, as if he detected some hidden meaning in his words.

"And what should I have to do with love tablets or any nonsense of that sort, old man?" he asked.

"Oh! Nothing, my master, surely nothing more than any one of your age and mien might have. The idea only occurred to me as a consequence of my concern for a heart that is, I fear me, sadly disturbed by sad matters."

"Whose heart may that be, Kiuhei?"

"You have no need to ask me that, Sir. The knight's lady is too young and too pretty to be neglected as she is, and if jealousy never recalled love, it has often done a great deal to banish happiness."

"I do not think there is much cause for uneasiness, Kiuhei. Sir Momoji is not the man to trouble himself about jealous complaints."

"Perhaps not, Sir, perhaps not. But you know the proverb, 'who seeks least trouble, trouble mostly seeks.' For my part I see in every quiet day that passes a happy chance which may never repeat itself."

"An irrational state of mind, Kiuhei. Anticipating unhappiness is the worst way to be happy. Besides, your jealous lady is but a woman after all. If, indeed, she had a sympathizer, she might presently also have an avenger. Is that what you look for, Kiuhei?"

Neither this explicit question, nor the questioner's tone of challenge, disturbed the old man's tranquillity. Without raising his eyes from the float of his fishing-line, he answered half musingly:—

"Sir Momoji's wife is too proud to share her sorrows even with a lover, if she had one. But that is of all things least likely. She is beyond the reach of any passion that could blemish her fair fame."

Gorokichi made no reply. He saw plainly that Kiuhei neither knew nor suspected anything, and probably during the few moments of silence that succeeded, he sought to devise some means of escaping from his own intentions.

He was roused from his reverie by the voice of the old man crying,

"Look, my master, we are going to have some sport," and turning, he saw that the float, after a moment's uncertain agitation in its place, suddenly sank below the surface and began to move steadily out towards the middle of the tarn. Immediately Kiuhei rose to his feet, and striking the hook well home, the quiet water was forthwith lashed and furrowed by the death struggles of a monster carp.

If it be true that the shadow of coming fate is sometimes cast on the features of its victim, Kiuhei's face might well have looked sombre as he stooped to remove the hook from the mouth of his capture, for at that very moment, with a motion rapid as thought, Gorokichi drew his sword and divided the old man's body from shoulder to waist. He fell forward without uttering a sound, and Gorokichi wiping his sword on the doublet of the corpse, walked quickly away.

But before he had taken twenty paces some sudden thought seemed to visit him. Retracing his steps he passed round the tarn, and made his way through the wood on the opposite bank.

Near the point where he emerged, he found the junction of two mountain roads, enclosing in their angle a group of wayside gods. Behind these stone figures he concealed himself, disguised again in his hood and raincoat.

Shortly afterwards, the notes of a drinking song came down the hill, and were presently followed by a yeoman, whose tipsy feet with difficulty discerned the narrow pathway. As he staggered past the images of the children's tutelary gods* Gorokichi stretched out his hand, and drawing the yeoman to his side, after a very brief struggle, strangled him.

Throwing the body over his shoulder with hardly a semblance of effort, he walked back to the tarn, and having deposited his burden a short distance from the spot where Kiuhei lay, he drew the yeoman's sword and slashed the head and trunk of the corpse with a number of wounds, such as might have proved fatal in the aggregate, though not immediately disabling. This done, he unsheathed Kiuhei's sword also, and let it fall in the track of the blood that still crept towards the edge of the tarn.

Disposed thus, the bodies, when discovered a few hours later, seemed to tell a story that found credence with all but Miné. She indeed more than guessed the truth, but

* According to the Buddhist creed, the paradise of children (Sai no kawara) is a region in Hades abounding with pebbles, which the little fingers amuse themselves in collecting and piling up. But in the same region dwells a crabbed old crone (Shotsuka no baba), whose delight is to scatter the half formed heaps and otherwise torment the baby shades, until her vexatious malignity is restrained by the goodnatured god Jizo, the guardian of children. Images of Jizo are generally set up by the road side, that young folk passing by, may form little tumuli of stones at the god's feet, or add a pebble to the contents of his wallet (Dzudabukuro), while mothers hang their babies' pinafores round his neck. F.B.

since she had not completely estimated her lover's recklessness, it did not occur to her that this double murder could have been anything but a necessity. Gorokichi had no doubt discovered ample evidence that Kiuhei was cognizant of her disgrace, and if Kiuhei, why not others also?

This consideration, pointing to the possible imperfection of the step she contemplated, would to most women have proved deterrent; with her, on the contrary, it became an incentive.

She sent a message to Shikibu saying that she wished to speak with her about Kiuhei's death; a message perfectly calculated to startle its recipient, who was even then vainly battling with the terrible conviction that in some way or other her own action had brought about the old man's end.

Minè's simulated solicitude was however even more impressive than Shikibu's real anxiety. She proposed a number of questions tending to the supposition that Shikibu had been in the dead man's confidence. She hinted that Kiuhei might have known more than he confessed about the disturbances in the house the night before, and finally she said plainly that she was not satisfied to accept the idea suggested by the position and circumstances of the two bodies.

All this was the more embarrassing, because of its proximity to the truth, and it had the effect of so completely bewildering Shikibu, that she found no room to be astonished at her altered relations with Minè, who seemed to have altogether put off her former hostility, and now entreated Shikibu to be her guest for a few hours, until the horror of Kiuhei's death should in some measure have been dissipated.

So it fell out that at sunset these two women supped together for the first time. It would seem that across all Shikibu's confusion some memory of the past night's occurrence still pierced. She resolutely refused the wine cup offered first to herself as a guest, but in doing so, fell an easier victim to the scheme that was on foot; for when, seeing her hostess drink from the same flask, she knew that suspicion was unjust, her generous nature prevented all subsequent denial, and thus, on an occasion when the most heedful vigilance alone could have helped her, she returned to her room at midnight with a throbbing head and senses desiring nothing but rest.

Chance, which sometimes seems to league itself with crime, willed that many a sound might have escaped observation that night, amid the dash and patter of the spring rain that tumbled in torrents upon shingle and pavement, with such an unceasing tumult that even the deep breathing of an uneasy sleeper hardly sufficed to guide one already within reach.

Sandayu's wife, upon hands and knees, and trailing after her a soft silk girdle half coiled, was creeping towards Shikibu's bed. A night lamp burned behind a low screen, but the rush had been consumed to the very edge of the oil and scarcely glimmered within its paper walls. The woman's first care was to raise the wick, light being essential for the achievement of what she had in hand.

Having done this, she found herself behind Shikibu, but separated from her by the screen. She therefore drew it gently aside, and then saw that the girl's head had slipped from her pillow and was resting on her bent arm.

This position made the execution of Minè's design doubly difficult. In order to place the girdle under Shikibu's neck, it became necessary to pass one end of it between the sleeper's chin and shoulder. To guide the limber silk, Minè therefore attached it to a short stick with which she had come provided, and which was apparently the lower bar of a vest rack.

But though the stick easily effected its passage, the knot, necessarily a clumsy one, refused to follow.

In this dilemma, Minè, her fingers trembling, her throat parched and a din in her ears that deadened the tumult of the rain, remained a moment doubtful whether to withdraw the stick and rearrange the fastening, or apply, at all risks, force sufficient to overcome the obstacle. But while she debated with herself, an almost incredible accident occurred, for the sleeper, raising her head, turned completely over and rested her forehead on the pillow.

The result of this movement was that the girdle found itself directly under her neck, its point of attachment lying two hand-breadths clear on the other side.

After this Sandayu's wife did not hesitate an instant. Carrying back the free end of the bar she passed the girdle

twice round it, so that, at the last, the stick was grasped closely over the back of the girl's neck, while from its ends depended a loop encircling her slender throat.

Then holding the bar horizontally, Minè began to twist it, at first slowly and watchfully, but presently with all the energy and speed her desperate deed dictated.

Under this terrible and always tightening pressure the unhappy girl's convulsive struggles only sufficed to raise her beautiful head once, and that a very little space. She had long ceased to breathe before the grasp that held her body down relaxed.

When Sandayu's wife found herself certainly in the presence of death, she took a sealed letter from her bosom and laid it beside the murdered girl's writing desk. Then extracting from the wardrobe a number of garments and other articles, such as their owner might have selected on the eve of a sudden departure, she made them into a bundle, which, together with the dead body, she carried along the passage, through the kitchen and out into a garden that lay on the south of the house. There, before emerging from the shadow of the eaves, she collected a number of stones, thrust them into the bundle, and tied the whole to the feet of the corpse with infinite precaution of knot and fastening.

But when she essayed to raise the body thus weighted, great as her strength was, she found it insufficient. Again and again she strove with desperate energy to complete her task, now lifting the body, now the bundle, and when at last she saw herself baffled, a frantic terror fell upon her. It seemed to her that the Gods themselves had interfered to stay her crime. She could not hope without much leisure and pain to loosen the knots that held the stones, while now her previous deliberation was replaced by an intolerable impatience.

In her despair she grew reckless. Seizing the bundle of clothes she stumbled blindly forward, dragging the murdered girl by her feet across pools and bushes, till at last she reached the edge of a well, over the brink of which she half lifted, half pushed her ghastly burden, and then, scarcely yet persuaded that the end was attained, hurried back to the house, her ears ringing with the echo of a dull plunge and the plashing of disturbed water.

No search was made for Shikibu before Sir Momoji's return, as it was very naturally supposed that the letter found in her room would account for her sudden disappearance. This letter, addressed to Sir Momoji, was in a woman's hand. It said that the writer might have felt more than respect for Sir Momoji, had he found her heart disengaged, but that such was not the case. Her troth had been plighted before Prince Hanayama's commands consigned her to the knight, and finding it impossible to live any longer separated from the man she loved, she fled, she said, to seek him, praying Sir Momoji not to mar the kindness he had always shown her, by a pursuit which if successful, could only end in her death.

These characters, though irregularly formed, suggested the idea of emotion rather than disguise, but were in nothing similar to Shikibu's writing, of which however the knight had but scanty knowledge. Whether, however, the words contained some import subtly devised to disable Momoji's resentment, or whether a merciful instinct restrained him from seeking the reality too closely, he seems to have accepted the event as irremediable. It was obviously easy to obtain assurance in the main of the letter's truth or falsehood, by reference to Kiyoto, while at the same time nothing was more unlike the practice of the age than to surrender his mistress tamely to another. Yet he astonished his friends by complete inaction. Long hours of dejected reverie and an entire distaste for all former pursuits, are not moods that usually visit a strong man, when he sees himself abandoned by a heart whose love he never possessed.

Spring ripened into summer, and as the voice of the insects grew stronger, a deeper gloom gathered over the old homestead in the valley. The knight had long ceased to visit the gymnasium, and now in truth rarely left his room, so that, one by one, his pupils fell away, and at the last, the school was shut, and only the bats visited the watch-tower.

Gorokichi indeed remained, held by his guilty love, but whether the unison of their wills was weakened, or whether their opportunities were narrowed by the knight's constant presence, the lovers seldom succeeded

in meeting, and often when they did, found themselves separated by an embarrassing memory of the past.

This was surely not the end that Miné had proposed to herself in the early days of their passion. She who had already undertaken so much to prevent the interruption of their intercourse, was not likely to recoil before anything that might ensure its permanency. In people of her disposition, retreat is always more intolerable than the anticipation of any hazard incurred by advance, and it seems certain that she only waited to attempt a second crime, lest its close proximity to the first should teach men to associate the two. But whatever her designs may have been, an accident interrupted their progress.

Midsummer brought with it a long series of parching days. The morning dews had no longer strength to raise the drooping head of the young rice plants, and the hues of the wayside lily began to be hidden by the restless dust. Sir Momoji sat alone in his room. An open book lay before him, but over its pages was spread a letter that bore evidence of much perusal, for the edges of the paper were frayed and the words traversed by a multitude of creases. He looked at the letter, but did not see it, for he was reading its impression on his own heart, and at the same time struggling to decipher a tracery of strange doubts that seemed to underlie the characters.

At this moment an arrival was announced, and in his visitor the knight recognised Hatori Shozo, one of his oldest and most respected friends. Hatori was the senior by many years, but beside his host he looked a young man, for sorrow had suddenly multiplied Sir Momoji's age.

After the exchange of their first greetings, Sandayu had well-nigh lapsed into an embarrassed silence, for, though shunning any selfish exposure of his sufferings, he did not care entirely to hide his heart from a friend so close to it. But the other was evidently prepared for what he found.

"Sir Momoji," he said, "I have come to offer you my heartiest sympathy. I owe you many apologies for not having done so sooner, but I hope presently to explain my omission."

"There is no need Sir Hatori," answered the knight, "Our friendship is, I hope, beyond the reach of such formalities. Besides, what has happened is not worth a second thought."

"I am glad to hear you say so, Sir Momoji, but your friends in the capital are disturbed by rumours that reach them, and you will pardon me if I say, that to my eyes the circumstances of your life here seem somewhat changed."

"Well yes," answered Momoji, "probably the absence of my pupils gives the place an air of gloominess. I have been rather out of health lately, and find the school somewhat irksome."

Hatori pushed the cushion on which he sat close to Momoji, and touching his host's hand, said.

"My old friend, let there be no concealment between us. The sages teach that reserve is the nurse of bitterness, yet would I gladly leave the cure to your own strong heart rather than employ the medicine of advice, were it permitted to forget that a gentleman's honour is dearer to him than love or life."

"Are there any who dare to accuse me of forgetting that?" cried the knight, looking up quickly with a flushed brow.

"If there were such to my knowledge," said Hatori quietly, "you know well I should have answered them fully before coming here. But it is not a question of what men say. Were all the world dumb, conscience would still speak, and you, I believe would hear it plainer than any. But since you have in part anticipated my idea, I tell you without further hesitation, that your inaction has surprised me, and even threatens to overturn my esteem. I ask you then to avert this danger, which no doubt arises from my ignorance of the truth."

It was impossible to be reserved in the presence of so much frankness, and Sir Momoji related all the circumstances of Shikibu's disappearance, surprised at the end to find that he had added the story of Kihei's death, as though the two events were in some way connected. Hatori, having listened silently to the whole history, waited a moment as though he expected more, and then said half disappointedly.

"Yes, that only differs from what I had heard in a few points of detail. Then, Sir Momoji, I have but one question to ask. Do you believe that all these things happened as you have told them?"

Greatly moved apparently by this enquiry, the knight covered his eyes with his hand, and in a low broken voice, said:—

"I have never been able to realize that she was a hypocrite."

"I understand you, Sir Momoji. Of the truth of her feelings towards you none can judge so clearly as yourself. But you will remember that I knew her also, both before and after she entered your house, and because of this knowledge, which tells me she was incapable of deceit, I have devoted three months to search and enquiry. Not, mark you, expecting to find her, but rather to acquire the certainty that her word had never been pledged to another, and that if she left your house at all—"

But here the knight raised himself from his seat, and bent towards the speaker with such a gesture of suspense and agitation, that the other paused in amazement:—

"If she ever left my house at all," repeated Sir Momoji in a hoarse whisper:—

"It was not," continued Hatori, "with her own consent, nor perhaps ——— with her own knowledge."

He scarcely dared to look at Momoji as he uttered these last words, but he could hear that the knight breathed hard, like one who had just escaped some great peril. Neither of the men spoke for some time, but each had apparently followed the other's thoughts, for when Hatori presently held out his hand, Momoji at once placed in it Shikibu's letter.

"Can you tell whether this is her handwriting?" asked Hatori, after he had carefully read the letter.

"No," replied the knight, "for strange to say, I have never seen a letter of hers, but a few characters she has traced in my presence bear little or no resemblance to those on that paper."

"Then what credit can you possibly attach to the document?" demanded Hatori with astonishment.

"Well," answered Momoji, "the hand is unquestionably a woman's, and it is more than improbable that Shikibu would have employed another to transcribe her confession. Besides the writing bears evidence of an agitation such as the girl might well have felt when she penned it."

"It seems to me, Sir Momoji," returned Hatori, that all your ideas are based upon the supposed reality of Shikibu's flight. Now I am about to make a curious proposition. Will you allow some one of the women of your household to copy a part of this letter according to my directions?"

Certainly," replied Momoji, "though I confess I cannot see your object."

At that moment a maid-servant entered carrying a tray with fruit and cake. Hatori took a pen, and suspending it from a nail in the wainscot by a string attached to the end of the handle, directed the girl to write the following words, taking care to keep the string always stretched.

"Watakushi koto Hanayama in dono ni on miyadzukai no uchi ni fukaku moshibawaseshi h'to goza soro tokoro omowadzu mo shujin no ose nite kokoro naradzu mo kano h'to ye michi wo yaburi soro koto."

He then handed this to Momoji together with Shikibu's letter, and to the knight's great astonishment, though the two writings were different, it was easy to see that they had both been penned under similar circumstances. Finally Hatori caused the girl to trace the same words with a free pen, and showed Momoji that her writing was now so changed as to be scarcely recognizable.

"What conclusion then do you draw from all this, Sir Hatori?" asked the knight.

"Before I answer that question, Sir Momoji," replied the other, "I would fain know why you have hitherto taken no action in this matter."

"You will find the reason here," said the knight with some hesitation, pointing to that paragraph of the letter in which the writer indicated that her own death would be the result of pursuit. "I had received a gift out of all proportion to my services, and that it should remain in my possession would not have been equitable. The girl was not sought by her lover, but went, she says, to seek him. She alone therefore was to blame, and had I raised my hand, it must have fallen first on her. No," he continued as though speaking to himself, "my only object in seeking her, would be to assure her happiness."

"In truth," said Hatori with a look of infinite pity, "the writer of this letter knew your chivalrous heart better than even I did until now. But what," he added lowering his voice to a whisper, "what if it should appear that the

object of action might be not to punish, but to avenge her?"

"In that case, Hatori," answered the knight, his voice tremulous with passion, "all the days of my life were too few for the attainment of such an end."

"And is there," asked the visitor speaking slowly and with evident significance, "is there anything in the whole world that could deter you?"

"Nothing," cried the other earnestly, "nothing but the peril of my honour."

"Then," said Hatori, "you have seen the result of my first suggestion, and will therefore, I hope, be willing to accept my next, which is that you should examine all your pupils and servants, one by one, in my presence."

To this proposition Momoji readily assented, and by his friend's advice, wrote letters to those of his pupils who still remained in the neighbourhood, asking them to meet him that night at the principal inn in the village, for Hatori desired that this examination should not take place at the knight's house. With the despatch of these letters the visitor charged himself, and then took his leave, engaging Momoji to be at the inn by sunset.

Left alone, Momoji, though unable even dimly to discern the truth, found that every doubt of Shikibu's fidelity had already fallen from his mind. Taking down her harp, which had stood covered in the alcove ever since the day of their separation, he set up the ivory bridges one by one, and touched the strings mechanically, as though seeking to recall the measure to which his life had once so pleasantly moved.

Presently he passed to the open veranda, and looked out to see how long the day had still to live, but the sun's rays had not yet sunk to the level of the eaves, and Momoji stepped into the garden, crossing the same belt of pebbles from which a part had lately been taken to serve so fearful a purpose.

Before him lay a bed of irises on the verge of blossom, and he remembered how it had once pleased Shikibu to anticipate the colours of their still sealed buds. The plants looked sapless and languid, for their roots drew no nurture from the parched soil, and finding a bucket with its long handle resting against the stem of a plum tree, Momoji lowered it into the well.

He poured the water among the irises, and as it flowed through the intervals of their clusters a piece of half decayed silk rested in its track. This suggested an examination of the bucket as it ascended a second time, and in the joint of the handle he found a number of long black hairs clinging.

He looked wonderingly now at these, now into the well, but could detect nothing in its obscurity, till inverting the long bamboo from which the bucket depended, and thrusting it here and there beneath the surface, he felt that it encountered some soft substance, and saw bubbles ascending slowly through the water.

Then suddenly the fearful truth looked up at him from the depths of the well, and staggering back, he fell unconscious beside the irises.

When he raised his head, he found himself in his room, tended by his wife and servants. His limbs were still half paralyzed and his senses confused, but the sun, which was just touching the horizon, recalled his promise to Hatori, and careless of all remonstrance, he took his way towards the village.

As soon as he was out of sight, Miné hastened into the garden. Something in her husband's demeanour had excited her suspicions, and when she saw the bucket resting on the margin of the well with its handle pointing downwards, and remembered Sir Momoji's significant silence, she knew that the crisis which had so often troubled her dreams was now surely present.

Of all the guises in which fancy had portrayed the approach of discovery, this had been the most dreaded. Too close and certain to permit either device or evasion, nothing remained but flight.

This resolution taken, reserve became unprofitable. Miné sent for Gorokichi, and receiving him without any disguise, confessed the whole circumstances of Shikibu's death, adding also that her intention had been to poison her husband, and thus remove the last obstacle to their union. She then described the events of the afternoon, and the imminence of discovery, and asked Gorokichi to fly with her, before escape became impossible.

Now by Hatori's advice, Gorokichi, alone of all Momoji's pupils, had not been included in the summons of that evening. This he knew, because the others had called at his quarters, one after another, to seek some explanation of the rendezvous. Combining this fact with Miné's revelations he at once divined the position of affairs and confessed the necessity for immediate action. It was therefore arranged that he should meet Miné, an hour later, at a wicket opening on the road to the mountains, while on her side the woman undertook to come provided with some rouleaux of gold extracted from her husband's cabinet.

Gorokichi carried nothing but his swords. Despite his vast intrepidity, he detected some tremor in the tone of his enquiry as, passing the lodge on his way to the wicket, he asked whether Sir Momoji had yet returned. Reassured by a negative reply, he made his way quickly to the place of meeting, and concealed himself behind a yew tree that stood at the side of the road.

Miné's confession had appalled him. Until that moment Shikibu's flight had seemed a fortunate reality, but now, across the trellis of the gate, he could see the well that hid her murdered body, and with the memory of the gentle girl's grace and helplessness, came horror and detestation of the unfeminine ferocity that had compassed her death.

He scarcely recognized himself in the moral helplessness that overtook him. Years of contact with the egotism of the world now, too late, taught him the value of the love that had smothered his broken-hearted father's reproaches. Owing the only true friend he had ever found, not, forsooth, to his own versatile prowess and singular endowments, but to the memory of a simple old farmer, he had perverted that friendship into an everlasting index of ignominy and dishonour; and now, for all his arm of iron and inflexible will, he felt that life had nothing left for him, but the career of a miscreant and an outlaw, so that, in the phrensy of his self-reproach, he gnashed his teeth and clenched his fingers till the nails pierced his flesh. Then his mood was visited by the image of that loyal man whose full benevolence had ripened once into an indestructible love, and over the days of those patient life a never-lifting shadow now brooded. Should he consummate his evil-doing by flying with this woman, whom, in the bitterness of his soul, he loathed as the authoress of his own endless remorse, and the perpetrator of a crime that made him shudder, or should not rather he show his abhorrence of her deed, by a blow that would at least avenge the memory of his benefactor's love? But then his word, his word, pledged to her who was even then preparing to join him, and who given him her heart at his own prayer! Faithless to his father, faithless to his friend, faithless to his mistress, could he ever again draw his ancestor's sword, or look straight in the face of his foe? No, there was no light; nothing anywhere but despair and self-contempt, and seeing himself hopelessly exiled from the aims of honest men and the epitaphs of fair fame, he rested his head against the yew tree, and wept such tears as only a strong man can shed.

Little more than half the appointed time had elapsed when Miné issued from the house. In her right hand she carried a packet of clothes and in her left, a small parcel carefully wrapped in silk. She moved so stealthily and made such a long detour, to avoid the neighbourhood of the well, that Gorokichi did not detect her approach till he heard her touch the latch of the wicket, and then instead of advancing to meet her, he raised his hand quietly and loosened his sword in its sheath. She opened the gate and pronounced Gorokichi's name twice in a low voice, but receiving no reply, advanced half a pace, closing the wicket behind her. As she then stood, she faced the tree under which her lover was concealed, but presently she turned to look in the opposite direction, and immediately Gorokichi's blade fell on her head. The blow was delivered with all his usual force and precision, but the point of the sword encountered the roof of the gate, so that though the woman fell, death was not instantaneous. He did not, however, wait to strike again, but stooping, took the parcel from her left hand, and replacing it by a folded paper, hastened off along the road.

Momoji entered the house, before Miné had passed the wicket. More than one of his pupils had confessed their belief in Gorokichi's intrigue with his master's wife, and Hatori had afterwards awakened a more terrible suspicion in the knight's mind, for he had explained that his own visit was mainly the result of a story told to his household by a

maid formerly in Momoji's service, who declared that she had seen her mistress writing something with a pen suspended from the ceiling of the alcove on the night of Shikibu's disappearance. Momoji therefore hastened home, determined to charge his wife at once with Shikibu's death.

He reached his room, accompanied by Hatori, just in time to hear Miné's cry, as she fell under Gorokichi's sword, and, seizing a spear, he sprang into the garden.

Miné lay outside the gate, scarcely breathing. It was easy to see by her dress and the packet of clothes she still grasped, that flight had been her intention, and from her left hand Hatori drew a paper on which was written "this is Shikibu's murderer."

While they prepared to carry her body in, a number of farmers passed, supporting three wounded men. They said that within a few yards of the knight's house they had encountered a man running with his sword drawn, who, clearing his path by blows, had maimed three of their party and severed the lantern they carried, but not before they had recognised in the fugitive, Ishikawa Goyemon.

The following day Shikibu's body was raised from the well, but after the knight had assured himself that it was indeed her corpse, he caused it to be lowered again into the same resting place, and gave directions that the well should be filled up and the ill-fated girl's tombstone raised over it.

Then, with Hatori, he prepared a document, in which the two men swore to seek out and kill Ishikawa Gorokichi, each promising that if either abandoned the quest, his life should be forfeit to the other. When the paper had been written and signed, Momoji first, and Hatori afterwards, drawing the knives sheathed in the hilts of their dirks, made incisions on the backs of the third fingers of their left hands above the nails, and confirmed the document with their blood.

(To be continued in our next.)

NOTES AND QUERIES.

QUERIES.

Q. I. Can any experienced woodman, or analytical chemist favour the community with a disquisition upon charcoal. Is there any method of getting rid of the free carbonic acid gas which rises from it—before burning, or of any portion of the same? Do different woods give of different volumes of vapour, and if so, which is the safest to use in a bath room?

J. T.

Q. 2. Where can I find any account of the ceremonies in use on the occasion of birth, death or marriage, among the Japanese? Do any of the French, Dutch or German works on Japan contain such: I fail to find any information on the subject in English books. A work like Sir John Davis' "The Chinese" is a great desideratum in Japan.

CHILDREN I HAVE MET.

A CHRISTMAS STORY, IN THREE CHAPTERS.

By JAMES PAYN.

CHAPTER III.

When I wrote that I had my doubts about the adoption of Rosey and Tosey as our own children, it must not be understood that I entertained any idea of parting with them unless I should be compelled to do so; I ought rather to have written that I had my fears. It seemed too good to be true that these little darlings should have come to us as unexpectedly, like a Christmas-box, and that we were to keep them for our own for ever.

The advertisement of their arrival had already been sent to the newspapers, and would doubtless elicit some reply, if not from their father, at least from those who had a better claim to their custody than ourselves. As to Gibbins, I was inclined to disbelieve in him as an entity altogether. Dodo had probably stretched her imagination to its utmost limits in inventing him. She was compelled to tell the children that some one would meet them at the end of their aimless journey, and she had called him Gibbins, a name which had at least the merit of being easily

pronounceable. It was from their father that I chiefly feared molestation. I pictured him to myself as a selfish miscreant, who, without any natural affection for his offspring, might nevertheless resent their adoption by other people; or, if he found that we were really fond of them, might make use of his relationship to extort money by threats of demanding their custody. This would be a state of affairs which indeed "would never wash," and yet we should be powerless to avert it.

However, as time went on, and the advertisement remained unanswered, and no one put in their claim for Rosey and Tosey, we began to have an unmitigated enjoyment in the possession of them. Being an idle man, and also because, hitherto, I had been a childless one, I gave myself up to them more than grown men generally do; I deny that I spoilt them—indeed, whoever yet confessed to such a charge? People did indeed say that I indulged them considerably; but, in return, they indulged me in many ways, and especially with ungrudging opportunities of observation of their manners and habits, thoughts and small talk, logic and feelings. These formed the prettiest study conceivable; all Lilliput life was laid before me, with its springs and wires, and I am bound to say I suffered no disenchantment by being admitted behind the scenes. If the actors had been two boys, or two girls, it might have been otherwise, but with these two, there were no jealousies, no jars, no quarrels. They were avoided in this manner; Tosey had everything his own way, Rosey ministered to his pleasure. Her self-abnegation was complete; it was not "ask and have," because she anticipated his wants: her greatest trouble was when she was compelled to refuse him anything upon the ground that it would disagree with him; for all his desires were fixed upon something to eat, and it was generally unwholesome. Not for a moment would I have it imagined that Tosey was a glutton—

"But knowledge to his eyes her ample page,

Rich with the spoils of Time, had not unrolled."

Science, Literature, and Art, were for the present dead to him and what had he to do but to eat? Many a discreet old gentleman, who has retired from active life, makes the same excuse with less reason; and as to selfishness, one does not consider a king to be selfish (and far less do we call him so), because he takes every thing he wants without enquiring into the miserable details of how it is procured: it is enough that he is graciously pleased to accept it from his devoted subjects. Moreover it was by right divine—the genuine majesty of Love—that Prince Tosey ruled us. His nature was affectionate to an extreme degree, and his temper was flawless; some detractors said, indeed, that this last was never tried—that we pronounced it perfect, as one might praise a bridge that has never been crossed; but my wife and I despised such remarks. The dear child had a desire for having his own way which was far superior to caprice: it rose to genius. I happened to be present on one occasion when he said his nightly prayers, as usual at the dictation of his sister; when she got to "Thy will be done," he declined to repeat that sentence, and moved an amendment. "No," lisped he; "my will be done, not thy will: it is Tosey's choose this time." A revelation of human nature to its very depths! How many of us, who are ten times his age, echo his infant thought, though not in words! It took all Rosey's eloquence and theology to convince him that this matter was not one of alternation and equality.

As for her, no such audacious ideas had ever intruded into her sweet thoughts; she was the most humble and reverent of human creatures, and while entertaining the quickest sense of injustice as respected others, never imagined that to be a wrong which interfered with her own wishes. As a teacher of religion and morals, she was, in fact, without peer. But she would doubtless have failed as a certificated schoolmistress—her grammar was original, infinitely superior in my opinion to that of the most well-informed people, but it rejected the rules of syntax. Her sentences—probably from her entire freedom from egotism—began with "me" instead of "I," and her pronunciation was far from distinct. A curious result of this latter peculiarity of his teacher came out in Tosey. When he had grown many months older, and was kneeling at Mum-mum's knees (she was always "Mum-mum" now with him, and I was "Da-da," just as it should be), she detected in his devotions a certain roll in the word "Hallowed." What he did say, was, in fact, Harold—"Harold be thy name." "But, my dear child, what does that mean?" "I don't know," replied Tosey, frankly, "but I thought that made it more sense"—a lesson for fathers (and mothers) much more significant, I venture to think, and worthy of parented attention, than is contained in Wordsworth's poem of the Gilded Vane.

In spite of the early touch of heterodoxy to which I have alluded, Tosey was singularly devotional in his habits; he was by no means a gooly-gooly child, being full of humour and naturalness; but when there was a doubt of matters being arranged wholly to his satisfaction on this earthly ball, he would at once evoke Heaven

to his assistance. He was once found upon his knees on the landing of the stairs, on his way down to dessert, and being subsequently interrogated on the matter, explained it thus: "I was praying," he said, "that there might be apples—and," added he triumphantly, as though he had annihilated a sceptic, "there were apples." As he got on in months, a taste for books—or rather for the pictures he found in them—developed itself; he became acquainted with all the leading events in Biblical history, and applied them to our own time with a facility that I have rarely heard equalled in the pulpit. Upon my wife being taken ill on one occasion, the ailment, however, being, as it happened, not very serious, nothing could exceed Tosey's concern and sympathy; "Supposing I had died" said she to him, when she was getting better.

"Tosey would have been very sorry, would he not?"

"Mum-mum will never die," answered he confidently.

"Nay, but we must all do that, my darling."

"All but Mum-mum: she will be taken up to Heaven in a chariot of fire." And then he proceeded to describe the details of that incident, which was to take place from the back garden, as being the locality, I suppose, most convenient for the start.

The philosophy of Tosey's character, discernible on our first acquaintance, became so marked as often to be embarrassing. He would pass hours in silent speculation, and evolve therein theories of the most startling character, and which struck at the root of everything. Indeed, some of them were so natural, as well as tremendous, that they were utterly unanswerable. It took all I knew, and more, to evade his inquiries. He would lay his tiny finger upon the anomalies of the scheme of Creation with the most ruthless accuracy, though, it must be acknowledged that, like some objectors of larger growth, his propositions for amendment and reform were crude enough. He was cross-examining me, upon one occasion, on the nature of Conscience, which (perhaps from its inquisitive character) he assumed to be of the feminine gender.

"She knows everything, Da-da, does she?"

"Yes, Tosey." I always confined myself, as much as possible, to generalities, for if Tosey once drove you into a corner, it was all over with you.

"And she is everywhere, is she?"

"Well, yes; she is everywhere, Tosey."

"Then she's in this ink-bottle and I've corked her up—so we'll have no more of Miss Conscience."

It was impossible to explain to him that that very desirable consummation is not so easily effected; though I am sure, if Conscience ever troubled Tosey, she must have done it out of revenge for this attempt to limit her sphere of action, and not in the way of duty.

The most touching speech (save one) that I can call to mind from this child's tongue was on the occasion of his nurse, Elizabeth, leaving our service to better herself (as she sanguinely expected) by matrimony. It was arranged beforehand that no actual "Good-bye" should take place, lest it should harrow the child's feelings, and the attendant that was to succeed her had for some time been living in the house, in order to accommodate herself to the children's ways. But when the evening arrived on which his Elizabeth was not to return, an explanation of some sort became unavoidable. It was broken to him that for that night the new hand was to put him to bed; "What!" said Tosey, "that strange woman? Nedder, nedder!"

In vain it was urged that the arrangement should be only temporary. Tosey was quite unappeasable, and I received a request to come upstairs in person to the nursery. There I found him, arrayed in his tiny great-coat, and his little hat, evidently bent on a night-journey. It was about the time in winter he had first come to us, and a thick fog reigned out of doors, yet he was determined to find his Elizabeth. "Da-da," said he, "I must go to my dear Lizzy, only tell me this: shall I turn to the right hand, or shall I turn to the left, when I get out at the door?"

Conceive the determination of that small child, and picture him, in the wild waste of wintry London, looking for his lost friend, whom he only knew by her Christian-name, shortened for love and euphony. I confess the spectacle almost upset me (as for my wife, she was crying worse than he was), and if I could have inveigled Elizabeth from the arms of her bridegroom, I am afraid I should have done it. As it was, Rosey's tender eloquence, combined with a judicious application of "pigs" of oranges, persuaded him to retire to rest; and ten days afterwards, when his Lizzie came to see him, she was half broken-hearted to see how easily he had transferred his affections to her substitute. "I love all peepy" (people), was Tosey's boast, "and all peepy loves me."

And certainly everybody did love him who had the privilege of his intimate acquaintance: his very foibles assumed such a pleasant guise, that they were attractive; and even his childish selfishness had a humour about it which half redeemed the fault. It was necessary to impress upon him that he was always to give

way to ladies, and so he did (for he was obedience itself), but it went against the grain; with Rosey especially, who was for giving way to him in everything, he found it difficult to practise these Chesterfield manners. On one occasion, the two children amused themselves by changing clothes: Rosey became a shy retiring boy of heavenly loveliness; and Tosey, a brilliant girl, not without a dash of that "beaute du diable" which is ascribed to some of the softer sex. They hurried into our room to admire themselves in the pier-glass, and Tosey pushed Rosey aside with this remark: "Ladies first, if you please, dear." He was at that time, so far as we could calculate, about five years old; as clever as John Stuart Mill at the same age, if not so learned, and with fifty times the fun of that philosopher at any period of his unnatural life.

Rosey was not quite so intelligent, though full of practical good sense, guided by an exquisite tenderness. "I do not understand—I love" might have been her motto. In all those questions of theology and philosophy which Tosey tackled as readily as a navy a wheel-barrow, her curiosity was tempered with humility. It was but rarely, and only when we two were quite alone, that she would ask to have a doubt resolved.

"God could put my head on again if it tumbled off, could he not Da-da?"

"Certainly my dear," said I, then added by way of rebuke for her absurdity "though that might not be done probably in the way you imagine."

"Ah, I see. He could do it with blood, I suppose, while man could only do it with glue."

On one occasion when we were about to be driven out of our London house by the painters and cleansers, and there had been, as usual, much domestic debate about our sea-side, Rosey inquired confidentially: where do the people in Heaven go to, Da-da, when that is being white-washed?"

Sometimes the child would administer an unconscious reproof. I heard you say, Da-da, that Mr. Jones was a brute, the other day; how could that be, when he is a man?"

Rosey's conversation and remarks were of course very ridiculous: to me at least I confess, they were infinitely better than amusing. To Rosey and Tosey I was the interpreter of nature, and the high-priest of the mysteries of life, and they came to me to unravel all the tangled skein. The position was embarrassing and full of responsibility, but my occupation of it endeared them to me more than words can tell. To feel that they were dependent upon me for everything, and so confident of the best being done for them that could be done by word and deed, was to strengthen the claim they had upon my love by fifty-fold. They had changed all the ways of home for my wife and me, and given it light and colour. The patter of their little feet above our heads, their childish glee, and chatter, made music where before had been a brooding silence. They made the cheerful morning brighter by their presence; the livelong day more teemed with life because of them; the evening, when we had seen them in their beds and kissed their eyelids, was more full of calm content. To have said we were rewarded for having taken pity upon them in their friendlessness and desertion would have been to say little indeed. They had taken pity upon us, rather; enlivened our solitude and dowered us with undreamt of joys.

After a few months, the fear of their father coming to claim his own faded clean away from our fond hearts, and left them free for those two children's names; and they will be found engraved there when we are dead.

Only at times, as a secret writing is brought out on a sudden by the fire, the terror of such a blow would be evoked for a brief space, to fade away again like the effects of a nightmare.

It was just three years after the children had come to us, that Tosey began to exhibit certain signs of delicacy; there was nothing very wrong with him, nor could the ailment be identified with any particular disease, but the doctor said he "wanted care." Heaven knows, care was taken of him, but he didn't seem to mend. We kept him close indoors that winter weather, but sorely against his will; he was up at the window half the day, looking out upon the falling snow, and the white world that lay all around us. One day some men came by with the usual cry: "We are all froze out," and Tosey was lavish with his pence as usual, "It must be worse to be frozen out," he observed, than to be frozen in, as I am;" and then after a long pause: If the men can't dig because the ground is so hard, how will they dig my grave, Mum-mum, when I come to die?"

His words, I could see, went through my poor wife's heart, and her only answer was to strain him to her bosom, as though death itself were already about to snatch him from her. At the same moment the door was softly opened, and Rosey slipped out of the room. I followed her, but paused at her chamber door, for I could hear her crying as though her little heart would break, and, alas! I had no comfort for her! It was evident that she had

wished not to distress us by the sight of that grief, of which Tosey's simple speech had opened the flood-gates.

The fear of losing him had been, I felt sure, in her inmost thoughts for weeks, as it had also been in ours, though we had not dared to speak of it; but it had been intermittent; henceforth the shadow was upon us from that hour. Not that Tosey grew greatly worse, or that the doctor took a more serious view of his case; but our presentiment of woe was stronger than our faith in sciences the child's strength and spirits failed him—which they did very gradually, though to our loving eyes not imperceptibly—his affections appeared to grow stronger for us all; but they concentrated themselves on his beloved Rosey.

"It almost seems," whispered my wife, "as though he feels that he is about to leave her, and grudges every moment they spend apart."

Perhaps it was so; Heaven only knew; but in my heart was a terror too great for utterance; a fear that those two might not be parted, but that Rosey's gentle spirit might take its flight with his. It seemed to me that the girl could never outlive her brother—that they were flowers upon a single stem. The doctor, to whom I secretly communicated this apprehension, treated it with scorn: the girl was delicate, he said, but there was no organic disease, such as he had begun to suspect by this time in the boy's case. The affections of children, however powerful, were evanescent; and I should one day give Rosey away with my own hands as the bride of some honest young fellow. Heaven knows that I tried hard to believe him.

It was spring-time, and Tosey was still with us, and could even go out of doors in an open carriage; but he had to be lifted in and out—a burden that grew lighter every day. It was piteous to see him failing and fading, when every tree was putting forth its leaf, and every plant its blossom. I never smell the May flowers now, nor see their snowy masses, without recalling Tosey's delights in them upon that day—the last in which he ever saw them. Once, when he passed a field so thick with buttercups that it looked like a veritable Field of the Cloth of Gold, he asked to get out and go among them; and when we reminded him of his weakness, he answered contentedly: "All right!"—and what a soft and tender phrase he made of that "All right!" "It wouldn't be much good, for, you see, I should be afraid to put my foot upon them." Tosey did not know that the poet had written—

"A lover would not tread

A cowslip on the head,

Though he should dance from eve to peep of day."

but spoke from a heart all gentleness and pity. It could be said of him, as it can be said of few children, "He never hurt a fly" and yet what a pang he gave us, more sharp and bitter, and lasting than any sword-thrust, when he whispered that night, as we laid him in his cot: "I don't think I shall ever play about in my little nursery again." He never did; he left us within that week, and he took Rosey with him. It was not to be expected—I never did expect it—that she who had come from Heaven to be his guardian angel upon earth, should remain here when her mission had been accomplished. We had been up all night with him, but towards morning he had fallen asleep, and we had left him with his nurse and Rosey. If he moved, if he sighed, if he breathed a deeper breath than usual, that child would spring noiselessly out of bed, and be at his side in an instant. The nurse was watchful too, after her kind, but it is Love alone that has the fine ear. What gentle shock dissolved soul from body, we know not—perhaps he did but lisp his sister's name; but Rosey heard it. We found them in the early morning locked in one another's arms, both dead. Their Father had come for them at last.

So ended the one romance of our unromantic home, but the memory of it abides with us both, and will ever do so. It was never cleared up in any way. Who Dodo was, or where those darlings came from, we still know not. We only know—and for certain—where they are gone to. We do not regret that our Christmas-box (as Nelly used to call them) was given to us, only to be taken away again so soon; we have the comfort of it even now. Moreover, we dare to think that we shall one day see them again. There will be change in us, but surely not in them. My Rosey's face will have the Light from the Presence upon it, but it will be the same face; for it was always that of an Angel.

NOTICE.

In next week's "Japan Times" will appear another short story by the author of "Children I have met" entitled

"BORN TO GREATNESS."

YOKOHAMA MARKET REPORT.

JANUARY, 19TH, 1878.

SILK.—During the first half of this month, the New Year's holidays, the scarcity of good parcels, and especially the disquieting news from home, kept the market very quiet, and scarcely any business was done. The American mail of the 14th took away only 54 bales, and the French mail of the 15th, only 275. We have precisely a similar report to make this week; if possible, the market is still quieter. Continental houses have made a few insignificant purchases, and these firms, indeed, are the only ones which show any disposition to operate: the English houses keeping entirely out of the market: a state of things easily accounted for by European politics. Yet, in spite of this stagnation, and of the presence of what is—for this time of year—quite a considerable accumulation of Stocks, (fully 3,000 Japanese bales) holders show hardly any disposition to give way in their pretensions, and prices to-night are barely maintained at our quotations.

TEA.—Operations have been rather restricted during the closing week, only one settlement of any consequence being reported.

Total amount which has changed hands during the period is about 900 piculs and in consequence of stocks being exhausted prices are for the moment \$1. per picul higher than those ruling last week. Arrivals are now almost nominal.

The *Messenger* is on the berth for New York but only progressing slowly in completing her cargo.

SUNDRIES.—Arrivals of Nambu new leaf have taken place to a small extent, but the price asked is fully high.

In vegetable wax there is nothing doing for Export—a fair demand is apparent for all qualities.

In Rice, transactions amount to some 35,000 piculs for the month, Chinese buyers having run the price up to quotations, and the market closes strong.

Arrivals of Sulphur have not been of a quality sufficiently good to lead to much business; we notice the despatch of a vessel to San Francisco from Hakodadi with a full cargo.

EXCHANGE.—In spite of the large business reported in Imports this week, there has not been the slightest demand for Bank paper, though rates have been gradually falling to our quotations of to-day. The sales of goods reported must have been on credit, or to arrive, or the goods have been drawn against at home. With an almost complete cessation of business in the Silk and Tea Markets, there has of course been no mercantile paper on offer and the quotations we give must, therefore, be considered nominal.

We quote:—London, 6 months Bank 3s. 11½d Private 3s. 11½d. Hongkong Demand Bank ¼ per cent disc. nominal 10 days sight Private 1 per cent disc. Shanghai Demand Bank 7½ 10 days sight Private 7½. BULLION Gold yen 387½ Silver yen 401.

ADVERTISEMENTS.

ORIENTAL BANK CORPORATION.

INCORPORATED BY ROYAL CHARTER, AUG. 30, 1851.

Paid-up Capital £1,500,000.
Reserved Funds..... £ 500,000.

The Corporation grant Drafts, and negotiate or collect Bills payable at London, Paris, Bombay, Calcutta, Colombo, Foochow, Hiogo, Hongkong, Kandy, Madras, Mauritius, Melbourne, Point de Galle, Port Elizabeth, Shanghai, Singapore, Sydney, Tellicherry, New York, and San Francisco; on terms which may be ascertained at their office. They also issue Circular Notes for the use of Travellers by the Overland Routes via India and America.

They undertake the agency of parties connected with India and the Colonies, the purchase and sale of British and Foreign Securities, the custody of the same, the receipt of Interest, Dividends, Pay. Pensions, &c., and the effecting of remittances between the above named Dependencies.

They also receive deposits of \$100 and upwards for fixed periods, the terms of which may be ascertained on application at their office.

Office hours, Ten to Three; Saturday, Ten to Twelve.
Yokohama, January 1, 1878.

CHARTERED MERCANTILE BANK OF INDIA

The dates of Arrival and Departure of the Mitsui Bishi Company's steamers are susceptible of alteration, consequent on the necessity imposed upon the Company—by its contract—of connecting with the steamers of the Pacific Mail.

No days for Arrival or Departure of the Pacific Mail Company's or Occidental and Oriental Company's steamers having as yet been fixed, we are unable to tabulate them. Each separate steamer's departure from her port will be notified in the Table below, and the day of her probable arrival at her destination.

Three days are allowed in the P. & O. Company's Schedule for transit of the Mails between London and Brindisi.

Two days are allowed in the Messageries Company's Schedule for transit of the Mails between London and Marseilles.

PLUTONOMY IN JAPAN.

MOST recent writers on Political Economy have had to acknowledge, and in some cases have tried to account for, the strong prejudice against their science which prevails in the minds of no inconsiderable section of the educated public. Even so distinguished an author as Mr. Froude, in his latest published work, is found writing of this 'so-called science' as 'the most bare-faced attempt that has ever been made on this earth, to regulate human society without God, or recognition of the moral law.' This prejudice has, by the writers in question, been correctly attributed, in the first instance, to an utter misapprehension of the nature and extent of their aims, and they have taken pains to combat it accordingly. They have made it a practice to preface their expositions of economic doctrines, with a deprecatory definition of the narrow sphere which circumscribes the scope of their science. They have repeatedly pointed out the error of supposing an investigation into the nature and laws of wealth, to be co-extensive with a dissertation on the whole art of government; and they have frequently and fully admitted the propriety of subordinating economical to other, and especially to moral considerations. But these apologetic labours seem to have been in great part wasted. In spite of expostulation and protest, hostile prejudice shows but few symptoms of abatement, and the misunderstanding which underlies it seems somehow to be endowed with an indestructible persistency. The slowness of the spread of economic truth is one of the standing puzzles of the age. To minds familiar with the first principles of the science, the fact seems too strange to admit of being accounted for by any of the commonplaces respecting popular indifference to the light of knowledge, or the imbecility of the intellect of the average man. The true cause of a phenomenon so unexpected and so deplorable must be sought for in lower depths. In truth it has been so sought, and in an unexpected quarter has been found. Of late the conviction has been brought home more and more closely to Politico-Economists that, of all the obstacles which impede the reception into the public mind of the truths their science demonstrates, the most subtle and the most potent has been the name by which it has been called.

And, indeed, in the long list of names with which the various departments of systematized knowledge have been labelled in ancient or modern days, it would be difficult to find one more infelicitously chosen than that of Political Economy,—to denote the Science of Wealth. It owes its currency to the accident of the title of the work in which the leading truths of that science were first luminously demonstrated; but it is far from being an accurate indication of its subject matter. A wealthy nation is merely one in which the aggregate of the individuals composing it are wealthy; and strictly speaking—Political Economy has but little to do with politics. The name covers a much wider field than that actually occupied by the

science, and the discrepancy has been, and continues to be a prolific source of misunderstanding. A new name is urgently needed for this, the best developed member of the group of Moral Sciences, and Plutonomy,—the Science of the Laws of Wealth, is by far the best that has been yet suggested. Its speedy victory over the older compound designation may be confidently predicted. At all events, 'Political Economy,' being at once a pretentious and a misleading title for a branch of abstract knowledge which bears but slightly on political practice, stands virtually condemned; and in no long time, its teachers will be saved the trouble of elaborately explaining to the multitude that it has nothing whatever to do with what they know as "Economy" and but little with what they understand as "Politics;" in other words, that the limit of their science and the character of the theorems discussed in it are altogether different from what its designation ostensibly declares them to be.

If such be the consequences produced by the misuse of words amongst peoples of the West, where the opportunities and means of correction are abundant, how largely is the mischief multiplied, when the very germ of the error is planted afresh in the soil of another language, in the minds of a people whose modes of thought are in a special manner adapted to receive and propagate it. For generations, indeed for centuries, the Chinese classics have moulded the intellect and shaped the polity of the Japanese race. The spirit that pervades those ancient writings and the fundamental ideas that underlie them are of the sort distinctively known as Oriental. They treat largely of Government and its functions; of the State, and the principles upon which it should be regulated. But their sole ideal of government is the rule of beneficent despots. In their scheme of political philosophy, the people have neither part nor lot in the work of administration. Everything is to be done by the sovereign for his subjects; nothing to be undertaken by the people for themselves. And neither in the literature nor the history of Japan itself, is there anything to counteract, while there is much to intensify, this propensity to ignore the importance of spontaneous effort for their own advancement on the part of the governed masses. The central authority is looked upon as the only possible source of initiative in every department of political and social activity. To minds trained in this school of thought, the set of ideas suggested by the term 'Political Economy' may be easily imagined. Interpreting the expression in the most obvious and usual sense of its separate terms, they take it to be synonymous with State Management, and they naturally enough conclude that its subject-matter is virtually an exposition of the principles which should guide governments in their efforts to regulate production and trade. Hence all sorts of schemes for increasing the national prosperity are pressed upon the government, and in many cases find only too ready an acquiescence. Either, production is directly undertaken by government establishments, or loans and

subsidies are dealt out to individuals or companies. And if the same kind of wasteful and injurious intermeddling with the course of exchange, as with production, is not attempted, it is not because the will to do so is wanting. How completely are such ideas and practices at variance with the true spirit and teachings of the Science of Wealth! As a historical fact, 'Political Economy' grew out of the conviction, in the minds of thoughtful men, in the seventeenth and eighteenth centuries, of the impolicy of the numerous interferences and restrictions imposed by governments on industry and trade, and of the policy of allowing private individuals, whose personal interests were at stake, to judge for themselves for what occupations they were best fitted; how they can best carry on those occupations; what are the best markets to buy and sell in; and what they will take in exchange for their own produce. And the most important of the practical conclusions arrived at, by those powerful thinkers, as the result of their observation and analysis of the phenomena of trade, is the doctrine of "laissez-faire," or non-interference on the part of the State with private individuals in the pursuit of their own interests. Can it be doubted that in Japan, as in Europe and everywhere else, private individuals in their own small sphere have much better means of finding out the shortest and best road to wealth, and much stronger inducements to discover and travel by it, than any government can find for them? In respect to the development of the resources of the country, the true function of the State is not that of attempting to regulate the industry and trade of its subjects, but to remove all the restrictions and obstacles that hamper the free play of individual enterprise; obstacles which have been for the most part imposed in the interests of some section or other of the subjects themselves, to the detriment of the greatest number. The demonstration of the truth of this position rests upon the elemental facts of human nature and society; and has been verified by experience in every quarter of the world.

Unfortunately, however, the very opposite of this conviction, has obtained currency for the present, in the minds of politicians and journalists in this country. The patriarchal theory of government, and the protectionist theory of trade are, for the nonce, in the ascendant. Considering how short a time has elapsed since the nation was awakened out of the deep slumber of isolation and feudalism, perhaps the case could hardly have been otherwise. But it does not follow, because Plutonomy is not a body of practical rules of statesmanship, that statesmen can therefore afford to be ignorant of its teachings. On some subjects, the knowledge of what to avoid doing, is scarcely less important than the knowledge of what to do; and a serious obligation rests upon the rulers of this empire to make themselves acquainted with the results of a century of investigation by the ablest minds of Europe into the causes of the Wealth of Nations. We have too high an estimate of the capacity of the national intellect to entertain any doubt as to the result of a conscientious effort in that direction. But as yet no standard treatise on the subject has met with a competent translator.

THE TRANS-PACIFIC CABLE COMPANY.

WILL Puck's 'girdle about the earth' ever be a realized fact, or remain, during our time at least, only a poet's dream? So much has this generation seen of wonders; of the powers of Nature subjected to Man's will; of mechanical forces trained, till engines seem almost endowed with intelligence; that the word 'impossible' has been erased from the vocabulary of the engineer, and a new proverb has been added to the store of wise saws:—"nothing is certain to happen except the unforeseen." But until some radical change is made in the manufacture of submarine cables, or in the process of laying them, we

cannot believe that the project of connecting America with Japan, by a direct line under the Pacific, can ever be brought to fruition, and we cannot advise capitalists to risk their money in such an adventure.

Some ten or twelve years ago, a proposal was made which was ingenious, theoretically correct, and responsive to all the requirements of a perfect telegraphic system. This was to run a circle of wire round the earth, as near as might be to the Arctic Circle, so as to save, as far as possible, submarine deposition of cable, and also to secure the smallest possible expenditure in length of the line. Up to stations at convenient points on this circle, messages were to be sent from the countries nearest to them, carried round the circular wire, and then despatched to their destination from other convenient points of departure. Unfortunately, it was found impossible to work this plan; European and American operators not being able to support life continuously, under the temperature at the Arctic Circle, while the roving habits of Esquimaux, and other cold-blooded inhabitants of these regions were opposed, we presume, to their undertaking the duties of telegraphists. The comparative success of the Atlantic cables then induced many to believe in the possibility of similarly spanning the Pacific, and we remark that, recently, this idea has taken the tangible form of a Company founded in San Francisco. In recent papers from this port we read of the incorporation of the Trans-Pacific Cable Company, at a meeting held at the Merchants' Exchange. Mr. Leland Stanford was elected President; Mr. Cesar Moreno, the projector, and Mr. J. F. Miller, Vice-Presidents; Mr. A. S. Hallidie, Secretary, and Mr. Mark L. Macdonald, Treasurer. Eleven other gentlemen were chosen as Directors, and the capital stock of the Company was fixed at Ten Million Dollars, divided into a hundred thousand shares of a hundred dollars each. We may mention that Mr. Moreno had previously tried to float his Company in London, where he completely failed, the several construction Companies requiring cash down for a cable; and that, judging from the meagre report before us of his remarks at the meeting in San Francisco, he appears to be under the most complete misconception as to the amount of earnings likely to be realized by such a line, and also as to the support to be got on this side of the Pacific from the taking-up of his stock. He said, for instance:—"There is no limit to money in China, I have seen vast amounts idle for want of investment." Nothing could be more directly contrary to the facts. Six bad years out of eight, culminating in famine, have greatly impoverished the country. Disafforestation has done its work, and the population having died out or moved into the cities, after eating the seed-corn and beasts of burden, whole provinces are relapsing into sandy steppes. There is no money in China for any purposes than those of her own dire necessities. The Shansi bankers, the Canton merchants, are poorer now than they have been for generations, and certainly the course of foreign trade has not, for the past eight years, been such as to leave any "vast sums for investment" in the hands of foreign merchants. With regard to the business for the new cable, to be got from China, Mr. Moreno is equally wrong. There is foreign business enough to give paying occupation to one cable, but not to the two now existing; which consequently do not find the China business pay—and, as it is not pretended that any special advantages are to be offered by the Trans-Pacific line, it is difficult to see how one-third of a business, of which one-half has been proved inadequate to give a fair profit, could return anything but a loss. Nor must the fact be here lost sight of, that of this foreign business, at least nine-tenths would consist of messages to New York and Europe, and from the gross charge for these would have to be deducted the tolls of the lines across America and of the Atlantic cables. As for the Chinaman 'securing his passage on railroad or steamer' or 'sending despatches, and offer-

ing a pound of tea or silk, or an animal's skin in payment' all this is the wildest bathos. Without pausing to note the discrepancy in value between a pound of silk and a pound of tea, or asking Mr. Moreno whether a grey fox or a sea-otter is to furnish the fee for the Chinaman's dispatch,—we would ask, how is any sudden increase of native messages to be expected to accrue from the establishment of the Trans-Pacific-Line? A line on the China coast, between Hongkong and Tientsin, carried overland as much as possible, and with a moderate tariff, might pay; but up to the present time, the coast traffic of China has borne a very small proportion to the whole trade; and there is certainly nothing whatever to be got out of it, which would justify the attempt to lay a deep sea line across the Pacific Ocean. No mention was made at the meeting, we remark, of any expected subsidy; which was judicious, as the United States Government seems to have lately shown unwillingness to grant subsidies for any purpose whatever; and we are very sure that neither from China or Japan can any be looked for. Japan makes a good profit out of the messages from outside passing over her local lines, and would, doubtless, give encouragement, to the extent of facilitating landing its shore end, to any new cable that offered an addition to this business; but neither shareholders nor subsidy need be hoped for here.

Turning now to the difficulties of laying the cable as proposed, we find them,—with the reservation we made in our first paragraph—almost insuperable. Across the Atlantic Ocean, the cables rest on a bed of comparatively even level and at practicable depth. But the recent cruise of the 'Challenger' has proved that the bed of the Pacific is infinitely more rugged, while it was in the very path of the proposed cable, that the deepest soundings ever made were taken. Therefore, the mere distance from Honolulu to Japan, nearly double that from Ireland to Newfoundland, by no means represents the length of line which would have to be used. Probably we understate the fact when we put 8,000 miles as the length requisite for the whole distance from San Francisco, across Japan, to China. And this line would have to be extra heavy, and the price of a mile of it is from £300 to £335: therefore, after expending nearly two millions and three quarters sterling on the cable, there would not be much left out of ten million dollars for the establishment of stations, for a steamer stationed at San Francisco, of 800 tons burden and 200 horse power, for another at Honolulu, and a third on this side, of the same size—which would be required for the inevitable constant repairs. Then must be taken into consideration the extreme difficulty of raising faulty sections from the Pacific depths; and the unavoidable injury done to the sound portions in the process. A line hauled up from a great depth suffers 'attenuation;' the core and its covering are elongated, and electric continuity is disturbed, while the outer sheathing is rendered permeable to water and the attacks of infusoria; all which is now matter of experience on the Atlantic lines, and, by experts, thought fatal to laying cables at greater depths.

To revert, for a moment, to the earnings of the line. The average life of a cable is now estimated, from the deteriorating effects of the sea and its animalcule inhabitants, and from the results of accidents and consequent disturbances referred to above,—not to exceed twelve-and-a-half years. Ten per cent of the cable's cost, to be laid aside for a reserve fund, for at least five years in succession, is, therefore, by no means too much to estimate for, when starting a new Company. And thus, requiring, as this line would do, fully Three Millions Sterling, for merely laying the cable, £300,000 a year must be earned and put by, before working expenses could be paid, or any dividend honestly distributed to shareholders.

The scheme is impracticable, the natural, mechanical, and economic obstacles, at the present stage of telegraphic science, insuperable. If it were worth while

to lay a cable from America to China, to supplement the two existing lines, which appear to us to be fully sufficient for the work to be done, there is no doubt that the proper route is across Behring's Straits and along the line of the Aleutian and Kurile islands, where much of the wire would be laid on land, where what must be submerged would be easily accessible, and where, consequently, the cost of maintenance would be reduced to a *minimum*. But, as we have shown, there is no need, no work for a third line, nor any chance of the line creating additional paying business for itself. We regret to have to write thus discouragingly of an enterprise apparently started in good faith and hopeful enthusiasm: but, however naturally anxious to welcome and foster any proposal to bring additional business to Japan, we should greatly fail in our duty, were we to shrink from exposing, clearly and candidly, faults and miscalculations like those we have noted, certain to bring disaster and disappointment on the promoters of any scheme, however theoretically promising. It only remains for us, therefore, cordially to recommend Mr. Cesar Moreno, Mr. Leland Stanford, and their colleagues, to reconcile themselves to the loss of 'preliminary expenses' as well as they can, and to pass the Trans-Pacific Cable Company through the process of liquidation as speedily as the San Francisco lawyers will permit.

THE ASSASSINATION OF MR. RICHARDSON.

A MOST unpleasant and ungrateful task is forced upon this journal by the reticence of English newspapers of longer standing in Yokohama, which appear to decline the responsibility of fulfilling a plain duty. The *Japan Times* is intended to be, what its title proclaims it, a 'Review' rather than a newspaper, and, endeavouring to supply to its readers essays, more or less instructive and intelligent, but always impartial, upon the 'commerce, politics, literature, and art' of Japan, it will but seldom happen that, in its leading columns, social questions will be brought under discussion. It is the special ambition of its conductor that its readers shall never be wearied by the personal altercations between individual correspondents, or the pseudo-impersonal squabbles of 'able editors' which so easily fill, but so terribly degrade, the mere newspapers of such a community as this. It will hardly ever happen, therefore, that a local contemporary print will be so much as named in these columns, and it is with the greatest reluctance that we have to-day—and only that it is in defence of the dead—to refer to an article in the *Tokio Times* of the 12th inst. which gives an entirely inaccurate and misleading account of the circumstances of what the writer justly calls 'a memorable murder,' but labours in vain to prove to have been otherwise that it was—a cowardly and completely unprovoked assassination.

The writer referred to may plead that, the *Tokio Times* not having been established till years after the event, when all the actors in this melancholy drama were dead or far away, he has had to compile his account of the transaction from such sources as are usually accessible to writers in newspapers; and to a limited extent, we may admit his plea. It is clear that he has allowed himself to be entirely misled by the anonymous author of a pamphlet called 'The Kago-shima Affair: a Chapter of Japanese History' published in Tokio in 1875, apparently for the purpose of disturbing the harmonious relations between Great Britain and Japan, by misrepresenting the actions of the servants of the British Government of the time, who had to perform the unpleasant duty of punishing a Japanese criminal, whom the Shogoon's Government confessed itself powerless to bring to justice. And, in so far as he has been misled by the unscrupulous writer of this pamphlet, he may have the benefit of his excuse; but he has to exonerate himself from the grave charge of neglect to obtain the personal narra-

tives of the few remaining residents who were living in Yokohama on that mournful 14th of September 1862, who brought in Richardson's still warm body, and who nursed Marshall and Clarke, while recovering from their wounds; and from the graver charge of neglecting—while pretending to write history—to consult the best and most authentic narratives of the event: the depositions of the survivors, and the official Minutes of meetings of Residents, conferences of Foreign Ministers, and interviews of Foreign Ministers with the Gorōjiu and other native authorities, all of which were as accessible to him, as they are at this moment to us, in the files of the *Japan Herald* and in the English Blue-Books. * He may be able to explain this negligence: he certainly owes the explanation to his public: for, failing it, the writer in the *Tokio Times*, having adopted and incorporated into his article the inaccuracies of "The Kagoshima Affair" must share the obloquy which rests upon its anonymous author.

With the preliminary part of the article of which we complain, and with the writer's first extract from the 'Kagoshima' pamphlet, we have no concern. Condensing the cloud of verbiage which follows, we distil the following version of the circumstances preceding and immediately surrounding the assassination, as related by the author of the 'Chapter of Japanese History' and the contributor to the *Tokio Times*. One of the articles of the Treaties with Foreign Powers provided that foreigners, citizens of the friendly States, should be free to go where they pleased, as far as the river Rokugo, at Kawasaki, and within a circuit of ten *ri* (some twenty-six or twenty-seven miles) in any other direction. In those days there was no race-course, no New Road; and the Tokaido, the main road to Yedo, was the only ground upon which exercise on horseback could be pleasantly taken, and the stretch of level highway between Kanagawa and Kawasaki, was accordingly the favourite outlet for what the writer calls 'the rambling propensities' of foreign residents. (It must here be interpolated that, from 1858, when the first Treaties were concluded, until a few months before the assassination of Richardson, the foreign Consulates were all located at Kanagawa, that being the port opened by the Treaties, the record of the fact being still preserved in the official style and title of at least the British Consulate. Also that though, for trivial convenience several Consulates had been removed to Yokohama, the American establishment still remained on the other side of the bay.) But to the feeble government of the Shogoon, exercising, only by a sort of sufferance, jurisdiction over the Daimios, who ignored or resented his arrangements with foreigners, the exercise of our right to traverse the Tokaido was a constant source of solicitude, lest that should happen which did happen, on the 14th of September; and it was their habit to warn the foreign Ministers, who passed on the notifications to their fellow-countrymen, that, on such and such days, some Daimio or other dignitary would be passing to or from Yedo, and that, on such occasions, foreigners would do well to keep off the highway. And such warnings were at first accepted in good faith, and attended to. But they became so frequent, as to lead to remonstrance and protest. With our present fuller knowledge of the state of parties in Japan in 1862, we understand now that these precautions, and others—such as the erection of gates, and establishment of guard houses—were *bona fide* efforts of the Shogoon's Government to protect foreigners' lives and property, and to avoid embroilment of themselves with Foreign Powers; but in those days,—the Gorōjiu exaggerating their master's power, and arrogating for him a paramount sovereignty over the country, which he by no means possessed,—it was perfectly natural that foreign Ministers and foreign merchants should resent and resist what appeared to them to be, under pretext

* To these, the author of the pamphlet only refers once—and gives a garbled extract.

of care for their safety, an attempt to make of Yokohama a second Decima. And Colonel Neale, the *Chargé d'Affaires* in the absence of Mr. Rutherford Alcock, the British Minister, happened, on the very day of the assassination, to have put this resistance, for the first time, into the form of an official dispatch. The Gorōjiu had intimated to him, that morning, that, on the next day, the 15th of September, (this date must be marked) Ohara Sayemon-no-Kami, a special Envoy of the Mikado to the Shogoon, would leave Yedo on his return to the Southern Capital, and that on the 16th, as he would be passing through Kanagawa, it would be well for foreign residents to avoid meeting his train. Colonel Neale, replying on the same date (the 14th) very properly protested against the brief notice given, and, generally, objected to the breach of Treaty involved, but (a part of his dispatch dishonestly omitted in the quotation in the *Tokio Times*) wrote that he would abstain from "causing any interruption to the arrangements on the present occasion and that he would instruct the Consul "to request British subjects not to frequent the Tokaido "on the days in question"

Before it was possible for this Notification to be issued (which would have tabooed the Tokaido for the 15th and 16th) Mr. Richardson, Mrs. Borradaile, Messrs. Marshall and Clarke had started on their afternoon ride to wounds and death. That they rode out in full belief in the safety of the road, and the good will of the people, is proved by the facts that a lady was one of the company, and that, at a time when foreigners generally went armed in the streets of Yokohama, not one of them thought it worth while to encumber himself with a revolver. 'Unluckily,' as the *Tokio Times* puts it, Shimadzu Saburo, the father of the reigning Prince of Satsuma, left Yedo without notice, on the 13th, or morning of the 14th; and of his departure no warning was given to the foreign Ministers, not even a runner being sent in advance of his retinue. He met the English party two or three miles on this side of the Rokugo. Richardson was mortally, Marshall and Clarke severely wounded, and Mrs. Borradaile escaped from the chivalrous Satsuma gentlemen, with the loss of her hat, which was cleft in two by a sword-cut aimed at her head. It is with the circumstances surrounding this attack that we have now to do.

The author of the "Kagoshima Affair" prefaces his statement, by the assertion that

"the Satsuma leader for the second time put himself in opposition to the anti-foreign inclination of his subordinates. He gave strict commands that, in the event of meeting with strangers, his people should abstain from any demonstrations of hostility, that they should even give way, and turn aside, if they were confronted:—

and this, he says, he had from Shimadzu Saburo's own lips—an extraordinary statement, which we simply do not believe, and for which, considering the dishonest garbling of an official document of which we have convicted him, we think the foreign public, at least, are fairly entitled to ask some better guarantee than the unsupported word of an anonymous pamphleteer. More especially, as it happens that, in the *Japan Times* of the 27th of August, 1865, is on record an account, by a still producible eye witness, of an interview between Sir Harry Parkes and Shimadzu Saburo at Kagoshima, when the Japanese noble expressed his regret at this occurrence, and 'hoped that bygones might be left as bygones;' but never advanced any such defence of himself. Nor was any such defence ever advanced, by him, or for him, officially or otherwise, at any of the numerous conferences on the subject held throughout 1862-63. Also, reference to a quite authentic document, a minute native history of Japan, from 1854 to 1864, translated and published by the *Japan Mail* in 1871, shows with absolute clearness that the object of the mission of Ohara Sayemon and Shimadzu Saburo was to force the Bakufu on to the painful task of expelling foreigners from

the country. Also that, on his return to Kioto, Shimadzu was rewarded for the work he had done, receiving an increase of rank and a sword of honour. The assertion that he 'put himself in opposition to the anti-foreign inclination of his subordinates' is not, therefore, worthy of credence.

The *Tokio Times* then proceeds to give its version of the catastrophe. It is stated that the behaviour of Mr. Richardson was distinctly objectionable, in spite of Mrs. Borradaile's repeated requests to him to be more careful in his conduct, that he gave no heed to her remonstrances, and that he 'continued to push his horse in and out of the groups forming the cortège, reckless of menacing glances and gestures.' That at last Shimadzu's own *norimono* was met, escorted by a compact body of troops, who drew off to the left of the road; but that the English party would not do the same, Richardson insisting on 'holding the centre of the road.' That Clarke and Marshall felt it necessary to interpose:—

" 'Don't go on' said the former, we can turn into a side road? 'For God's Sake,' said Mr. Marshall, 'let us have no row.' 'Let me alone,' answered Richardson: 'I have lived in China fourteen years, and know how to manage these people.'

"A moment later, the blow fell. The commander of the Satsuma body-guard states that it had become evident that Mr. Richardson would not give way, and that his attitude indicated that he was determined to maintain his position, and compel even the *norimono* to give way to him. This is in a degree confirmed by a letter from the United States minister, who wrote that it was 'supposed' that the horse of one of the party forced itself between the *norimono* and the retainers who marched as a guard beside it.' At last the affront, in Japanese eyes, was unendurable. A soldier sprang from the ranks, and made an imperative sign to him to retire. The warning was now taken, but it was too late. As the party were endeavouring to turn their horses, the head of the column closed upon them. The three men were wounded almost at the same moment—Mr. Richardson fatally. Mrs. Borradaile was not hurt. They succeeded in breaking through the group of guards, and rode back at full speed toward Yokohama. Mr. Richardson soon fell from his horse and was never again seen alive by his companions. The others escaped, two with severe injuries, the lady with the shock of an agonizing terror."

This is all given—on what authority? On that of a Satsuma officer 'who has since attained a high position in the Japanese service' and who was leading the personal escort of Shimadzu. But, as this Satsuma officer presumably did not understand English, the exclamations of Clarke and Marshall are taken from the deposition of the latter gentleman (which shows that these depositions were before this dishonest writer) supplemented by a phrase, invented for the occasion to be put into Richardson's mouth, for which there is no evidence whatever. And the statement that Richardson would not give way, is what the writer calls 'confirmed'—by a 'supposition' of some informant of the American Minister!

Now let us turn to the depositions of the two wounded men and the evidence of a disinterested Japanese witness. It must be premised that the depositions of Marshall and Clarke were both taken on oath, two days after the event, when they had sufficiently recovered from the shock to be able to give evidence, but while they were both lying in bed, severely wounded. According to the law of all civilized countries, evidence given in such solemn circumstances is justly held to be of special weight. The depositions were taken independently of each other, no possibility existed of collusion, and in all material circumstances they agree. The account given in these is, that after passing, along about three and a-half to four miles of road, a series of small groups of *norimono*s and attendants, walking their horses while actually meeting these groups, and cantering when no one was in sight, they met the main body which

filled up the greater part of the road. 'We did not'—Mr. Marshall deposes:—

"go faster than a walking pace for at least a quarter of a mile before we came up to the procession, where we were attacked. We neither spoke, nor made gestures, nor did anything else whatever to give offence to the procession; in fact, we tried to get out of the way of 'avoid it.'"

On meeting this main body, they at once drew to the left, when a big man left the ranks, and stepped out in front of Mr. Richardson and Mrs. Borradaile, making menacing gestures. "Richardson looked back, and said: 'We are stopped.' Clarke said: 'Don't go on, we can turn into a side road.' I (Marshall) said: 'For God's sake, let us have no row. The party were then quietly turning their horses to retire, when—as the *Tokio Times* says: 'the blow fell.' It fell on Richardson first,—of course on his back. The cowardly assassins then closed round the party, hundreds against three unarmed men and a woman, and, as the Japanese historian whom we have quoted says, in concluding his account of the affair, 'the military glory of the house of Shimadzu shone more brightly.'"

Messrs. Marshall and Clarke, running the gauntlet of sword blows and spear thrusts, rode back along the line of the procession, and escaped with their lives. Richardson was not so fortunate: after galloping a few hundred yards, he fell from his horse. And then was perpetrated a savage atrocity, which the *Tokio Times* and the author of the "Kagoshima Affair" carefully conceal. We will relate it, in the words of a Japanese woman, who kept a tea house, close to the spot where the wounded man dropped. Her evidence was taken on the 28th, by the British Consul, and runs thus:—she

"recalled seeing a foreigner fall from his horse, on the afternoon of the 14th of September; he had a large wound in his stomach; went up to him, and he immediately asked for water, but she took him none, because too much afraid. Afterwards saw him drinking from a bottle (Mr. Richardson is known to have taken a bottle of champagne with him slung upon his arm). She asked him to get off the Tokaido, because, on looking up the road, she saw that a Daimio's cortège was approaching. She saw one of the advance guard of the train draw his sword, and attempt to cut the wounded foreigner's throat, but was prevented by his putting up both his hands; one of his hands was then cut away; more men came up, drew their swords, and hacked him; finally, one of them caught him by the beard and cut his throat; they then covered up the body with straw, and went on."

The medical evidence at the inquest enumerates ten horrible wounds.

And this the *Tokio Times* says was not an 'assassination': this plain statement, made up from the sworn depositions of men who lay, severely wounded; and the evidence of disinterested witnesses, and official minutes, letters, and other documents, it calls a 'flagrant misrepresentation of facts.' The crime has been atoned for; its record should be buried in oblivion. The former Japanese Government suffered heavily its consequences, and Shimadzu Saburo personally expressed to the British Minister his deep regret at its occurrence. The existing Government has led the people so far in advance towards a higher civilization, that all young Japan looks back upon the catastrophe as a stain upon the nation's record. That stain was fading before the dawn of a brighter day, when—without provocation,—for no conceivable reason that we can discover, than a morbid hatred of anything English—an anonymous pamphleteer revives the shameful story, and the *Tokio Times* now attempts to give it fresh life. The *Tokio Times* loses no opportunity of declaring that it 'supports' the present Government; is it possible that the intelligent statesmen who compose the Mikado's Cabinet desire to have such a supporter; desire to have the attention of foreigners drawn to what all are so willing to forget; to have excited again the fear so nearly laid to sleep, that under the varnish of Western civilization

still lies the rough grain of ferocity, treachery and lust for blood? It cannot be. For us, we have reluctantly taken up the subject; have exhausted it; and lay it down with a feeling of intense relief; our readers will understand that nothing but the compulsion of a sense of duty would have induced us to touch it. We have done. To the few who remain of the pioneers of foreign trade in Japan,—the 'old residents' of Yokohama,—it may seem that we have not fully discharged the duty which has devolved upon us. We have it, on the authority of St. PAUL, that it is sometimes "well to be angry," and surely, wrath can never be more righteous, than when excited in rescuing from slander the character of friends who have passed into the voiceless Silent Land. But a strong case is weakened by the employment of strong language: we have striven to be verbally moderate, and argumentatively fair. It is for the public to judge the case, and we do not fear the verdict.

EDITORIAL NOTES.

The article from the *Hochi Shimbun* of which a translation is given in another column is remarkable in more than one particular. First, as confirming the view expressed by us that it was necessary for Japan to de-Orientalise herself before she can adapt her judicial system to the exercise of rights over natives of Western States resident within her limits. And secondly, showing that, however the native press and a few *soi-disant* well-wishers to Japan may harp on the necessity of subjecting foreigners to the jurisdiction of the various Ken and Fu courts, there are some Japanese who acknowledge, and are not ashamed to proclaim, the extravagance of such a contention. The writer in the *Hochi Shimbun* in exposing the fallacies of Mr. Umi Uchi's scheme of Hotch-pot law, displays an acquaintance with the history and science of jurisprudence, quite not free from error, but still the result of study and honest thought. Escaping from the errors of Umi Uchi on the formation of English Equity, which has grown, stratum on stratum, not been created by legislative will; he falls into the more pardonable confusion, shared in by the early schoolmen, between *jus gentium* and *jus inter gentes*, or international law. The *jus gentium* was the name given to a system of law gradually built up by the Roman prætors adapted to the conquered nations and settlers, precluded from citizenship and consequently deprived of the rights of tenure and contract, the *mancipium* and *nexum* required by the strictness of the civil law. The settlers or *peregrini* increased in numbers and importance; with their growth grew the fictions necessary to the judicial wants of the time, without breaking into the *jus civile*; until citizenship becoming a sham, the fictions of the *jus gentium* were openly admitted into the judicial system of the Roman Empire. As it is possible to some minds to arrive at a right conclusion from wrong premises; so, starting from opposite points of the political compass, we may gain the desired goal. A system of law analogous to the *jus gentium* might be constructed by the Japanese which, while sparing all the prejudices of Orientalism would be acceptable to the settler: Japan, the progressing nation of Eastern polity, borrowing from Rome the conquering nation of the West, might in time found a system, to be alight to guide the steps of jurists of future empires. With a *lex civile*, and trained judges, competent and earnest, she might succeed. In all her endeavours she has our best wishes, but we cannot shut our eyes to the fact that the fulcrum and lever are wanting.

The proposition for the formation of Mixed Courts which is taking the place of the position of exclusive jurisdiction, now found to be untenable, is a weak invention of the enemy. Having experience of the antagonistic views and advice of the Ministers accredited by different Powers, the Japanese know that a tribunal formed of such conflicting elements would never work. If the evil spirit of discord has hitherto prevented the adoption of a scheme for the Municipal direction of a settlement, how, when it is brought with seven-fold force to be applied to the decisions of vital questions, can it escape condemnation? The decisions of such a tribunal could but be arbitrament. Hard cases are said to make bad law, but arbitration makes worse: each arbitrator is, perforce, the advocate, and not the judge, of the principle which most benefits his own nationality. A decision can only be arrived at when the interests of two prompt a temporary treaty, to crush a

third. Even in affairs political, it is generally admitted that, although arbitration once achieved a success by the settlement of a discordant agitation, yet, since the success was gained at the cost of the dignity of the tribunal, the attempt to form a like one will never be renewed.

WE commend to the attention of our readers an announcement which appears in our Advertisement columns, to the effect that Madame Jacquemot, a lady who has resided in Yokohama for many years, proposes to return to Switzerland, and, in Geneva, to establish a school for girls, and for boys up to a certain age. One of the greatest drawbacks to residence in the East is the stern necessity under which parents find themselves placed, of parting with their children, just at the age when they most need parents' care. It is not with us in Japan, as in India, that we must send them out of an unhealthy climate lest they droop and die—we rejoice here in one of the finest climates of the world—but we have still to part with them, to afford them education which, except at great cost, can hardly be given to them here. But children born in Japan, or who have lived here during their first years, require specially careful attention; and a knowledge of the circumstances which have surrounded their infancy such as is possessed by any resident,—and which Madame Jacquemot's length of residence here gives her in ample degree—must necessarily be of the greatest advantage to a teacher. Geneva, as we need hardly tell Europeans, is probably almost the best place in Europe for getting sound, intelligent and thorough education, with the advantage that it is a very cheap and most healthy residence. Mme. Jacquemot's numerous friends here will be sorry to lose her, but those who have children to commit to her care have to congratulate themselves on the decision she has taken.

OUR article on the assassination of Mr. Richardson, though extending to great length, could not, of necessity, include a complete reply to all the incorrect statements, respecting foreign residents in Japan generally, which appeared in the pamphlet we were reviewing, or rather in such parts of it as were quoted by the *Tokio Times*. But there is one point, made by the pamphleteer, which some may think we should not fail to notice. Though he pretends to lay little stress on it, the tenor of the pamphlet as a whole is meant to give the impression that Richardson and his friends ought to have shown some mark of respect to Shimadzu Saburo, and if they had, would probably have escaped. Here is one passage referring to the point:—

"They saw certain Japanese from Yokohama, who were known to some of the party, standing beside their horses, from which they had dismounted, according to a rule which no native would have dreamed of infringing at that time. One of the most inexorable regulations of Japanese etiquette was that no casual passenger should continue to ride, either upon his horse or in any conveyance, during the occupancy of the road by a dignitary of high station. Whether this usage should or should not be held applicable to Europeans is a point hardly worth discussing. Most visitors in strange lands recognize the expediency, if not the propriety, of conforming to the established public customs. A traveller who should refuse to lift his hat at the approach of a European monarch would not escape uncomfortable treatment on the plea that he came from a distance and owed no allegiance to the sovereign in question. It is certain that no Japanese would have been suffered to pass unmolested even the advance of the procession, through which Mr. Richardson and his friends were allowed to move for some miles."

This is all misleading. In the first place, Shimadzu Saburo was not the sovereign of the country, and in no European country is it imperative to salute noblemen with whom one has no personal acquaintance. Secondly, it is not correct to say, as the writer says: that no Japanese would have been suffered to pass unmolested the straggling cortège of baggage bearers and subordinate retainers which preceded Shimadzu and his body guard. And, finally, we would ask, to what depth of humiliating obeisance would this writer have had Richardson and his friends to descend? A Japanese, in those days, had to grovel in the dust, on such an occasion. Should these English gentlemen have done the same? And is it possible that this pamphleteer knows so little of Japan and the Japanese of 1862 as to imagine that any thing of the

sort was expected, or that their lives would have been spared had they dismounted? The three survivors were saved, only because they were able to keep their saddles; had they dismounted at the approach of Shimadzu, we should have had to have buried four mangled corpses instead of one.

IT is rather an odd circumstance that the second 'Query' sent to us for publication in search of an answer should be one sent over twelve years ago, to the old *Japan Times*, when we first opened the column to querists. The Altar, the Cradle and the Tomb, seem to have a perennial interest. Titsingh gives an elaborate account, we believe, of some of the ceremonies respecting which our Tokio friend is inquisitive: but having the file of the old paper at hand, we cannot do better than extract for him the answer to part, at least, of the Query, by our Editor in those days, of this very useful part of the *Japan Times*.

Williams' "Middle Kingdom" by the way, we would suggest to our correspondent, is a better authority than Sir John Davis' "Chinese"; being the outcome of fully twenty years' more experience, though Davis' work is of undeniable value.

It is from Japanese readers of the *Times*, of course, and from those European students who are specially engaged, especially in Tokio, in working with Japanese, that we expect to get the majority of our 'Notes.' It is easy enough to coach up a 'Note' and then frame a 'Query' with a pseudo-signature, to fit it; and as we confessed, in introducing this column to our readers' notice, we were reduced to this expedient in the old days, when few, or none, of the natives knew English, and those foreigners who knew anything of Japanese could be counted on one's fingers. But journalism in Japan was then really almost a joke; and when our 'Notes and Queries' column tottered in this way for want of support, we abolished it. Times have changed, and the laugh has been taken out of us, by so many disastrous years in Silk, Tea, and Imports; and the conduct of a newspaper has become a serious matter. We can promise our readers, therefore, that all our 'Queries' shall be *bona fide*, and, as soon as the supply ceases or we cannot get 'Notes' in reply, we will drop the column again as a useless incumbrance.

During the past week, we have received the following

REUTER'S TELEGRAMS.

OPENING OF PARLIAMENT.

London, January 19th, 1878.—Parliament was opened by Royal Commission on the 17th instant, when the Queen's Speech adverted to the proposals made for Peace, and stated that the Emperor of Russia had expressed a hope that a pacific solution of the difficulties might be arrived at through the good offices of England. It also stated that Great Britain had hitherto respected neutrality, but if the War was prolonged, circumstances might oblige the country to take precautionary measures, and the Government therefore trusted that Parliament would act with liberality and supply the necessary means. It was further stated in the Speech that Government intended to make no proposals until the terms for Peace likely to be required by Russia were made known, and so ascertain whether the war was likely to approach localities affecting British interests, in which case the Government would be prepared to defend the interests of Great Britain.

The House of Commons negatived an amendment to the Queen's Address.

INTELLIGENCE FROM THE SEAT OF WAR.

London, 19th January, 1878.—Despatches report that the losses of the Russian Forces at the capture of Schipka numbered 5,464 men; also that Russian troops have occupied Philipopolis, and part of their army is threatening Adrianople.

There is a suspension of hostilities in Bulgaria.

London, January 21st, 1878.—Despatches report that the Russian troops have arrived before Adrianople, the

garrison of which city is retreating towards Constantinople.

The Sultan of Turkey has called out for military service all men in his country capable of bearing arms, for the defence of Constantinople and the line of the Scheldaldja.

SOUTH AFRICA.

A general rising of the Galekas has taken place, and there has been severe fighting, in which the British troops have been successful.

THE JAPAN TIMES.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the *JAPAN TIMES* must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

YOKOHAMA: SATURDAY, JANUARY 26, 1878.

DEATH.

At Yokohama, January 23rd, CHARLES ASHTON, the infant son of Chas. J. and Josephine Emily Strome.

NOTES OF THE WEEK.

SINCE we wrote last we have received both the French and English mails, the *Tanais* bringing despatches from London via Marseilles, of the 30th November, and arriving here on the 19th inst. and the *Bombay*, with dates to December 7th coming in this morning. The *Sunda* left with the homeward mail on the 22nd inst. and the usual coast steamers have arrived and departed. But, is not this all written in the chronicles of our shipping intelligence?

We have again been fortunate in our weather: a fine, frosty, seasonable, time; but tempered, too, with bright sun in the mornings, which has nicely aired the days for delicate throats and lungs, before exposure to the chill air. Skating has been actively practised by the experts of the art on the very miniature rink in a paddy field close to the Athletic Society's ground at the foot of the Rifle Range. To a mere spectator, ignorant of the divine art, how very diverse are the styles of various professors. There is your ponderous, deliberate skater, a big portly man, who gyrates, with a sort of majestic grace, reminding one of the old school of waltzing, which was, to compare with your modern *trois temps*, like the savouring of Burgundy, sip by sip, to the tossing off your goblet of creaming, but too evanescent, Champagne. 'Tis an odd thing, by the way, how graceful fat men often are. By far the most elegant waltzer in the fashionable Edinburgh balls, twenty, or five and twenty years ago, was a gentleman who weighed two and twenty stone when he came of age; and who was, besides, an excellent 'point' in the cricket field. That there is a dignity inseparable from corpulence has often been remarked, an upright carriage of the head and stateliness of stride are two of the consolations of a Banting; but the grace of movement, the 'poetry of motion' are not so often noticeable, because, as a rule, your fat man declines such exercise as allows of their display. Then you have your jerky, fussy, little skater, to whom pace seems to be the *summum bonum*, and who reminds one of Mr. Perker, in 'Pickwick,' or Pancks, in 'Little Dorrit'—ungraceful, angular, erratic,—at the very opposite pole of the art to the skater deliberate. And alas for him, if their opposite poles come into collision, as they sometimes do, for Gigas calmly occupies the centre of the pond, while Pancks must be always flying up and down it, as often backwards as in the way affected by ordinary mortals; and when collision does take place, the inexorable laws of dynamics come into play, and are illustrated to the great discomfiture of the smaller body. Then, of course, in skating, there are all gradations of skill, from the artist who cuts eights and nines on the outside edge, to the tyro who 'splodders' about in every one's way, and only 'cuts a figure' of a ridiculous sort. But for all, it affords good exercise in pure air, and as such must be healthful and useful. We wonder why a larger space had not been prepared for a skating rink; but it is presumable that 'what was every body's business was nobody's business,' or that some petty difficulty was made at the Kencho. One can understand the objection to paper-chasing, and that pos

sible injury to some crops may be a result of that sport; but surely, with gate money of twenty sen per head, which is what the owner of this little bit of paddy ground gets, and which nobody grudges to pay, he must reap a harvest in winter many times richer than he ever did in the autumn. In '68 and '69, we remember, there used to be a piece of ground three or four times as big, flooded for the purpose; and surely, if any one would take the trouble to communicate with the Governor on the subject, an arrangement could easily be come to for the preparing and properly flooding a much larger piece of ground than that at present in use. And why should not the numerous Scotchmen here get up a Curling Rink? Sixty yards by forty gives you as big a pond as many a good Club in Scotland can boast of, and affords room for three good rinks. We submit that this suggestion is worth following up. To carry it into practice, application should be made this season to the Governor, and the site selected, and we should then have ample time to get out the stones, cramps &c. in time for next winter. The Caledonian Club would at once grant a medal, and the Curlers' 'beef and greens' would give us one more pleasant night to enliven this dull time of year.

We hear from Kobe that, a very unusual thing, they too have had some skating. They have a splendid pond, or mountain tarn, but have to walk a couple of miles up hill to get at it. We have had most amusing accounts of the enthusiasm with which the sport has been followed up there.

We understand that the Yokohama Choral Society has recommenced operations, with about twenty five active members, and that an Amateur Orchestra is also being formed in connection therewith. The work in rehearsal is Haydn's Creation and could the chorus be increased to about forty members, we doubt not that we should soon have the pleasure of hearing a performance of this genial work. We would strongly recommend all who can sing and will sing, to at once send their names to the Hon. Sec., Mr. J. T. Griffin, so that all the available vocal talent of the settlement may be enlisted in so good a cause. Surely it is not impossible to find forty vocalists and twenty instrumentalists? The Society possesses an energetic working Committee and in Mr. Keil, an indefatigable conductor. The quality of the nucleus is good, and we have faith to believe that the quantity required will soon be forthcoming. Meetings for practice are held every Wednesday in the Gaiety Theatre at 5 p.m. And if we might, without offence, give a hint to Amateurs, it would take the form of an exhortation to strict punctuality and regular attendance. A great deal of valuable time gets cut to waste by neglect of punctuality, and, without regular attendance at rehearsals, it is absolutely impossible, that any work of the kind, dramatic or musical, can be ultimately given with that smoothness and finish which perfect execution demands. It is especially those quicker to learn, or more advanced in their art, who should compel themselves to regularity, and put aside all other engagements that could interfere with this. Because, the better they know their parts, the nearer they approach to absolute perfection, so much the more valuable becomes their example, and the support—in concert singing especially—which their confidence and command over their score, give to the weaker members of the corps. If this advice be taken, we are sure that the work of preparation will be much more rapidly got through, and the result will be more gratifying, both to performers and audience. We hope soon to be able to report that good progress is being made.

On Tuesday night there was a performance by Japanese acrobats at the Gaiety Theatre, which was so good as to be worthy of particular description, as well as of the usual and almost meaningless phrases of general commendation given to the previous attempts of the troop by the local press. The stage of the theatre is very ill-adapted for the requirements of Japanese acrobats, there not being sufficient height to display fully the feats performed. Thus, one of the cleverest had to be shown in a position where the principal performer could not be seen, and the most difficult part of the work therefore missed the commendation it deserved. But, with all these disadvantages, there was room enough for the Japanese to perform extremely well some very difficult 'business' and we were glad to see that Mr. White's efforts to amuse the Yokohama public were rewarded by a fairly good and appreciative 'house.'

The party consists of an old man, the chief, whom we recollect very well, performing at private houses here fifteen years ago, and who has since been pretty well round the world; a young man who does very well the tub and pole balancing tricks, and a couple of girls; the younger, a child of 11 years of age, being the 'star' of the company. To these were added, on Tuesday night, a monkey.

The child we have mentioned above, opened the evening's performance with an exhibition of rope dancing, and repeated it later in the evening, but upon a *silk cord* instead of a rope. This we do not recollect having seen done before, and it certainly is about the cleverest thing of the kind we ever witnessed. Our readers must understand that this cord is literally not $\frac{1}{4}$ th of an inch in diameter, by no means so thick, not half so thick indeed, as ordinary window-

blind cord. In fact, when the string was put up, it appeared incredible to the writer, who passed it through his hands, that it could support the child's weight, and, of course, to the audience it must have been quite invisible, and the girl must have appeared to be walking in mid air. On this, as on the thicker rope before, she walked backwards and forwards, turned (imagine going right-about-face on a slack string little more than a sixteenth of an inch thick!) lay down and sat down, rising to her feet again with perfect ease—and all with no artificial means of balance whatever. Blondin could not do it, to save his life, and there is very little doubt that if this little creature were to perform in Europe, she would draw excessively well. How is it that these Japanese acrobats manage to dispense with the balancing pole? We don't know if any of our readers ever tried it, but to walk along the edge of a plank with a pole, is by no means difficult, and can be done with very little practice; and of course to walk across a rope strained tight as these ropes are strained, is only a degree more difficult. But here is an elastic silken string, attached only at each end, and swaying from side to side at every movement of the dancer, and with no artificial help whatever, she moves upon it—not with perfect freedom, of course, that is out of the question, but certainly as easily as any European armed with the usual balancing pole. It is possible that their diet steadies nerve and muscle, and it is certain that the prehensile power of their toes and feet generally is far greater than anything our acrobats attain to, being really almost equal to that of the hands: yet this hardly seems enough to account for their marvellous skill. It can't very well be long practice, for here we see a child of 11 years of age perfectly at home in the difficult position, actually swaying the string from side to side, till it rocked to and fro like a poplar in March. We must confess ourselves baffled, and our best acrobats beaten.

The other parts of the performance were good enough in their way, but they were generally not very novel. The elder girl did the well-known butterfly trick rather clumsily; the old man performed, with three little truncheons, the familiar ball tricks of our street jugglers and did it with a grace, precision and dexterity, which gained much well deserved applause: the intent expression of his very comical face also tickling the audience immensely. Especially noteworthy in this very clever feat was the absolute disconnection of action of the hands. The younger man did the tub balancing tricks fairly well, and also the well known 'business' with the little girl, called in the profession, we believe, the 'Risley business'; its first exponent being an acrobat who was afterwards resident here for some time. Two or three movements in this, by the way, appear to be peculiar to the Japanese, as bending the child into an arch, of which the abutments are one foot and one hand of the man, and the whole was extremely well done; as also was the pole balancing. Here again, these people beat us—for, instead of a stiff pole, whereof the end goes into a socket, attached to the waist of a man who moves about freely on his feet, while the second performer is posturing on the upper end,—they employ a comparatively flexible bamboo, the supporter lies on his back and takes the pole on his shoulder, and really the performer at the upper end of the bamboo appears to have as much to do with the balancing as the man below.

So very remarkable was the little child's performance on the slack rope, that it beat 'all to fits' an attempt made by a monkey afterwards to do something similar. The animal ought, one would imagine, to have shown more confidence, prehensile power of foot, and agility, than the child, and yet this was not the case, for the monkey seemed desperately uneasy, very much afraid of falling, and excessively glad to be taken down; whereas, but for a preternatural gravity unsuited to a child, and a certain fixity of gaze necessary to the work, the little girl seemed perfectly at her ease, and rather to enjoy her difficult task; and as comfortable as a sparrow on a telegraph wire.

We did not wait to see the whole performance, and probably some 'bonne bouche' was reserved for the last: but we saw enough to enable us conscientiously to recommend Mr. White's company to the patronage of the Yokohama community, as decidedly the best of their kind who have yet exhibited here. All the arrangements for the comfort of the audience were well attended to; the audience, though the majority of the tickets were sold at fifty cents, were perfectly orderly and well-behaved; there is nothing in the performances, difficult as they are, to excite apprehension or fear; nor anything to shock the most fastidious taste. In fine, Mr. White deserves the patronage of the 'elite' of Yokohama Society, and we hope he will get it.

We have to note the occurrence of a fire which, on Wednesday night, burnt No. 12, fortunately an empty house. Much damage was done, however, to the goods of Messrs. Isaacs Brothers' store next door by water and removal. We are sorry to be wholly unable to pay any compliment to the Fire Brigades on this occasion. Yokohama is sadly in need of a Municipal Reformer.

A British subject, a sailor of the name of William Brown has been killed by some unknown persons, and on Monday his body was found in the Creek. The poor man had the character of being a quiet, inoffensive, sober person, and robbery apparently was the motive for the deed. No clear whatever seems to exist by which to trace his murderers.

The Mikado, on Thursday, opened a new Agricultural College in Tokio. An excellent account of the ceremony, and description of the Institution appeared in the *Gazette* of last night, to which we must refer our readers, as we received the hint to stay away which is conveyed by neglect to send an invitation.

LATEST REUTER'S TELEGRAM.

London, 24th January, 1878.—Despatches report that the Russian forces have arrived before Keshan and that a panic has taken place at Gallipoli.

The Turkish Parliament has petitioned the Sultan of Turkey to endeavour to hasten the conclusion of peace, at the same time however, it has resolved, that should the conditions demanded for peace be exorbitant, the country will continue the war to the last extremity.

Suleiman Pasha with his troops is at Kavala.

CORRESPONDENCE.

TO THE EDITOR OF THE JAPAN TIMES.

Yokohama, 25th January, 1878.

SIR,—There is a trite old saying:—"Jack of all trades and master of none!" which impressed itself very forcibly on my mind while reading a very irascible editorial article, anent Silk, which appeared in a recent number of the *Japan Weekly Mail*.

We all know that a man may be a good Tea-taster, and eke have a smattering of many other arts, without having a practical knowledge of shoe-leather; in the same way, another may attain the position of a successful barrister, and even upon a pinch pass muster as the Editor of a weekly journal, without possessing a thorough knowledge of the craft and mystery of the Silk Trade. Neither indeed do we expect him to have this knowledge: but we do hold, that it is his duty to consult some competent authorities before delivering himself of a dogmatic, disjointed tirade upon so important a subject. He would not then have committed himself to such misguided statements as the following:

1.—"Seed has been exported for years, yet while the price of 'cards has declined the demand for Japan silk has not lessened."
2.—"and the history of the silk trade in Japan shews clearly enough that the export of seed has neither deteriorated the quality nor lessened the quantity of Japanese silk."

I could gather many other similarly "bad shots" from the leader in question, but these two will suffice for my present purpose: which is to show that some of the *Mail's* own clientele, or even reference to the old files of his paper, could have furnished him with information, which would have kept "Jack" from displaying his ignorance of this particular trade.

In reply to extract No. 1:—I perceive a letter signed J. G. in the *Japan Weekly Mail* of 18th Oct., 1875; in which the writer, after carefully reviewing the progress of the art of Silk-culture from China, its fountain head eastward into Japan, and westward through India, Persia, Asia Minor, and Turkey into Italy and France; demonstrates that—with proper care in the "education" of the worms, as well as in the sorting of cocoons and reeling of the thread—Asiatic silk may be made to take precedence of the best European varieties. The letter concludes with this remarkable passage:—

"Now, the Japanese have hitherto shewn some inclination to adopt Western ideas and civilization,—at any rate on the surface of things—and there is no doubt that if they will give themselves up liberally to the idea of growing their silk in accordance with European usage, they may for many years to come ensure a ready, and even eager market for their produce at good and remunerative prices. On the other hand, if they do not take warning in time, the present dislike among 'Consumers' to Japan silk will increase, until it become, what is so forcibly expressed by the words 'a drug in the market.'"

The italics are mine, and I would like to point out the fact, (which every Silk merchant can bear witness to,) that Japan Silk, shortly after the above was written, did actually sink to the level of a 'drug in the market'; the price of the article in the home markets actually falling below its relative value. And why?—simply because the improvident Japanese hastened to sell his best seed to Italian *graineurs* while he reared and reeled the inferior qualities himself.

In reply to extract No. 2; I have now before me a pamphlet

entitled:—"Review of the Japan Silk Trade for the Season 1873, '74" the writer of which was well known to the *Japan Mail*, and often contributed to its columns. From this review I cull the following:—

"If the trade in silkworm's eggs has not materially affected the quantity of our export, its influence on the quality of Japan silk has been manifest. There are some favored districts in the province of Joshu, Shinshiu and Oshiu which produce the best eggs in Japan. When the foreign competition ceases, when the native silkwormer may revert to his former custom of deriving his yearly supply of eggs from the best sources at a moderate price, then, we hope, will Japan silk regain that reputation which it won during the period from 1860 to 1865; and lost, soon after foreigners, by exporting the best seed, deprived the country of one primary condition in the production of good silk."

Again the italics are mine. To this strong testimony I will only add that every man in the trade admits the fact that the export of seed has caused a marked deterioration in the quality of native grown silk, and further argument on the point would be futile. Truth before everything,—and Truth is modest" says the *Mail*. Surely the writer of the discursive diatribe of January 12th should confess, in the name of Truth, that he knows nothing about the matter, and admit that, for once, "Jack" was induced to hazard a public performance without the oversight of his master.

To conclude:—it is well known that the export of good seed has had a serious effect upon the quality of Japan silk and it is doubtless to the interest of all natives engaged in the trade, that this seed should be grown, instead of exported. It is also to the interest of manufacturers in Europe; for they all, with one voice, confess that they would much prefer a Japan silk grown in Japan to a European raw grown from Japan seed; not, as the *Mail* erroneously asserts, because it is capable of more "weighting," but, because the Japanese silkworm, reared in its native land, spins a thread of better "nerve" than it does when transported to an alien clime and is fed with different food. The Japanese grower should also pay more attention to the "education" of the worm on European models: the occupation of reeler should be separated from that of grower, the latter selling his cocoons to the former, who in his turn should subject them to a rigid process of sorting for size, colour, and quality, before commencing to reel: let this be followed by a careful system of reeling and cleaning, and there is no reason why Japan Silk should not rise to the first place in the produce of the world.

The *Japan Mail* had better confine itself to the publication of new acrostics and old chess problems; discussions on Japanese botany and the highly interesting questions whether "fu tong" should be spelt with an f or an h, and whether we should, in future, talk of the great commercial emporium of the country as was Osaka—or, hilariously pronounce it Oho! Saka—and leave serious commercial subjects, interesting to the mercantile community, to the better informed writers whom you, Sir, have apparently the secret of inducing to contribute to the columns of a local Review.

I am, Sir,

Your obedient servant,

YAMAMAI.

THE TIMES OF TAIKO.

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GOYEMON.

Chapter 4. THE BIWA BANDITS.

AN evil night would have been his most probable prospect who, in the times of Taiko, started with only the stars as guides to traverse the peaks that looked down on Lake Biwa; for nothing wandered there then, but the hunter and the hunted. Unseen by mortal eye, the lily and the egg-plant, from season to season, bloomed and faded far down in the depths of torrent-torn valleys, and the summer wind that shook their petals, came untainted by the dust of roads, or the smoke of homesteads. Hill and hollow, cliff and cleft, rock and ravine, such a scene of trackless and tortuous wilderness, that a passer-by might well have marvelled at the self-reliance of one who, seated on the trunk of a fallen pine, suffered the twilight to overtake him, a few evenings after the day that had driven Gorokichi for ever from the village of Ishikawa. The swords which the man carried in his girdle were not absolutely ill-assorted with his hunter's garb, nor did his features bear the soil of aught but sun and service, yet was there an equivocal something in his presence that awakened instincts of mistrust.

He was looking down the path that scarcely asserted its right to such a name, amid the rocks and ferns, and the thought that dilated his eye was one of much astonishment, for up the mountain side a solitary figure was toiling; the figure of a man, it might be some five or six and twenty years old, his frame muscular and well knit, and his fresh, handsome face somewhat marred by weariness. He wore the costume of a merchant, and carried a sword unusually long for one of his class.

The new-comer, apparently delighted at the aspect of a fellow creature, forthwith addressed the man on the log, prefacing his speech with due measure of bows and greeting:—

"Pardon my rudeness, Sir, but I should judge from your appearance that you are a hunter, and if so, well acquainted no doubt with these mountains. For my part, five hours of incessant walking up and down endless steepes, has so completely wearied me, that if you will show me the way to the nearest house, it will be indeed a kindness."

While the traveller spoke, the other subjected him to a scrutiny almost insolently undisguised, and protracted for some moments in silence. At last, hardly noticing the salutations that had been addressed to him, he answered in a species of monologue:—

"Well, I wonder what your business may be. One could scarcely expect to find a seeker of houses among the mountains of Omi. Your pursuit is not likely to be a very profitable one, young man."

"Apparently not," replied the new-comer, seating himself on a rock with the air of one who prepares to study some curiosity at his leisure. But that depends a good deal on myself, and on the aid I hope to derive from my fortunate encounter with you."

"Your encounter with me may not bring you much gain, Mr. Merchant," retorted the other gruffly.

"Indeed!" said the traveller with an assured smile: "certainly searching for civility here seems like 'looking for fish on a hill top.' However, the benefit I shall derive from your society is tolerably certain, I think."

"How so?" demanded the hunter:—

"Simply because you must live somewhere. I presume, and not being able to decipher these strange paths myself, I mean to take the liberty of following you."

"You mean to take the liberty of following me," cried the other, almost startled out of his self-possession. "But what if I objected to be followed?"

"Surely it is unnecessary to consider a case that can only arise from your own irrationality!" said the young merchant naively; "allow me to remind you, that between man and man, a simple request does not generally excite so much caution and such scant courtesy."

"Well, but what is your business?" demanded the hunter, whose insolence was gradually beginning to give way before the other's insouciance.

"I am not sufficiently fortunate to have any business," replied the traveller, "and my purse is too light to cause me any concern on the score of the banditti, by whom they say this place is infested."

"Banditti!" said the hunter with a start, "well—yes, banditti there are, they say, but I for my part do not fear them. However, night is falling, and, without a guide, you are as far from a house as if there was no house at all. What say you? Shall I find you a lodging?"

"I shall be immensely obliged if you will," answered the young merchant, and thereupon, without further parley, the man of the log, straightening his gaunt, sinewy figure, led the way down the cliff.

Arrived at the bottom, they found themselves beside a dense pine wood, and through this the guide, threading his way, emerged at the margin of the lake. Thence along the edge of the water, stepping always upon boulders and pebbles, too flinty and rugged to acknowledge the impress of a pathway, he strode with the rapid pace of long habit to a point where, at a bend of the shore, an excited little mountain torrent leaped out from beneath a monster rock into the quiet bosom of the lake. Passing behind this rock, the guide grasped the barkless arm of a stout mimosa, and swung himself on to the broad shoulders of a stone that pushed itself out overhead. Then, without paying any attention to his companion's progress, he began to climb along the very bed of the tiny cataract; under rocks, over rocks, round rocks, sometimes barred by branches, some-

times helped by them, here backwards, there forwards, now to the right, anon to the left, and always hidden from the daylight by dense entanglements of bough and parasite; until they reached at last a narrow pathway, on either side of which walls of cane bamboo rose to a height of seven or eight feet. This path had evidently been out in the jungle, and the feet of the wind, rustling among the cane tops seemed to travel away, to left and right, over vast stretches of untrodden thicket.

A long mile of this slender passage led the two men at last to a well-sheltered hollow among the hill-tops, and here the traveller saw a creation that he had almost attributed to the mountain genii, so miraculous was its presence amid such surroundings. A house, stout, ample and fairly fashioned, with thickly thatched roof, far stretching eaves, and gardens lacking neither shrub nor rookery.

The man of the log, anticipating any expression of his companion's wonder, said:—

"You will be surprised no doubt to find such a house in such a place, but we pay no taxes up here, and lonely as the region is, it affords easily all the materials for what you see there. Besides" he added with a significant glance at his companion, "we have to keep out those banditti you speak of."

They were now before the gate, which was opened after some parley, and the traveller's guide leading him to the vestibule, desired him to wait a moment till the chief's wishes were consulted. The young merchant, who had apparently resolved not to be surprised at anything, seated himself composedly on the mats, while the other passed through the hall, traversed two or three passages, and finally entered a large chamber, whose aspect first suggested an idea of the occupant's employment. An armorer in such a region could scarcely have expected to see his porch entered by many customers, yet an armoury the house apparently was; for stands of arquebuses and bows, racks of spears and halberts, with piles of chain shirts and breastplates, occupied the whole apartment, save, it might be, one fourth of the central space at the far end, where the floor, raised some six or seven inches above the surrounding mats, assumed the form of a finely grained threshold, supporting a series of sliding doors, whose frames of embossed lacquer enclosed borders of damasked silk, and within these, panels cunningly painted to represent the tortures of the damned in the eighth *inferno*.

Into this inner chamber and the presence of the chief, the man of the log passed with much show of ceremony. The chief, a little, keen-eyed man, sat looking into the garden, and the smoke from his pipe almost seemed to mingle with the spray of the waterfall that tumbled and jumped without the veranda. Down in the marts, men's first care and chief difficulty in fashioning a garden, is to create something of the rough and rugged, to reproduce a little of the idea that nature suggests; but how light all this labour becomes, when the rocks are already climbing upon one another, the ferns already trailing from fissures opened by the earthquake, and the water leaving everywhere in its headlong course, pools where only the eagle can drink!

"Sir," said the man of the log, "I found one, apparently a merchant, wandering about the hills in the neighbourhood this evening, and I had to choose between helping him to a sword cut, or bringing him with me, for he is either so simple or so determined, that there's no shaking him off. He declared that unless I showed him the way, he would take me for his guide by following me to my house."

"And why did you not show him the way, Washidzukai?" asked the chief simply? "Surely there are many ways that one can point out, besides the right one."

"Yes, Sir, but that depends a good deal on the man you have to deal with. Even had I succeeded in misleading this young merchant, which is very unlikely, it would not have contented me to leave him roaming about so near us, for a lost man, as they say, often finds what he is not looking for."

"So then, to be brief, you have brought him here, I suppose?"

"Yes, Sir, he is now in the vestibule."

"If that be so, we have to deal with results, not reasons. Show him in here, please."

So, the man of the log again acting as guide, his charge presently found himself bowing before the chief in the

inner chamber, to whom he briefly expressed his acknowledgments for the hospitality afforded, attributing his intrusion to the perplexing uniformity of the mountain paths.

The accustomed cup of tea was handed round and sipped in silence, for the host did not seem to be a man of many words, and possibly conceived that his guest's rank hardly demanded a formal announcement of his own. A little surprised, however, it seemed, at the young man's composure, he presently laid his pipe aside, and delivered himself somewhat strangely, thus:—

"Washidzukami here has promised you a night's lodging, and you are welcome to it. But it is as well you should be taught at once, that one night here means all nights. This, as you perhaps know, is the mountain of Shidzugatake, and I am Matsuyama Raitaro; so you will easily understand that our circumstances forbid all careless confidences. We have an oath and a headsman, and between these two, you are at liberty to choose."

This Raitaro was a robber, of wide notoriety; his name was known in every province that could be seen from the summit of Migami⁽¹⁾, and few would pass the northern shores of Lake Biwa after sunset without a prayer to Mitsumine⁽²⁾. The young merchant had, it seemed, fallen in with a very evil chance, and the alternative proposed might well puzzle him unpleasantly, yet, strange to say, he was not one whit moved. His hand never shook, as he knocked the ashes from his pipe, nor did his voice falter in the least, as he replied:—

"I was not altogether unprepared for what you have said, Sir; your armoury there seemed to me too well stocked for hunting purposes alone. I thank you very much for your kind permission, and will avail myself of it, to choose the oath."

"Most men in your position would do the same," said Raitaro with a smile. "But let me tell you that, if you leave anything difficult to part from in the world down yonder," giving his hand a sweep in the direction of the white mists that were beginning to creep up from the surface of the lake to the tops of the pine woods, "you may find your life here a little irksome, for your novitiate I will promise you, be amply long enough to wean you from old attractions."

"It will bring me no grey hairs then," replied the young merchant. "I have found nothing in the plains that makes me prefer them to the hill tops, and whichever you elect will be equally agreeable. I only fear that you will find me a very useless addition to your band."

"In truth, a very proper spoken and hardy nerved young man," mused the chief, beginning to look with more interest at his visitor's comely face and strong fore-arm.

"As to your usefulness or otherwise, I can say nothing. No man fails entirely if he tries to succeed, but you are only a beginner now, and must take a beginner's part. If however, you deserve well, promotion will surely come, for we have no favouritism here, and plenty of vacancies, as you may suppose. For the present, your chief business will be to study fencing. Have you ever handled a stick?"

"Well, I have, once or twice, Sir. But I shall be very glad to take some lessons from such a teacher as you no doubt have here."

"Come along then, I will put you in his charge, and at the same time introduce you to your comrades. And I can tell you a man might well consent to be outlawed for half a dozen years, if it were only to become Nakaseko's pupil, for as a master of fence, he is simply peerless."

Saying this, the chief led the way through the outer room and across a wide court-yard, to a long low building, from within which, the sounds of stroke and parry, challenge and onset, were already issuing. Passing within, they found that the evening's fencing had not yet absolutely commenced, though a couple of lads were assailing each other pretty vigorously, on the dais of sand in the middle of the room. It was the robbers' habit to fence by lamp-light, for they seldom saw the sun shine on an adversary's features, and many a good wrist had failed to foil the thrusts learned in that dusky chamber. The feeble rush-

lights now flickered and flared on thirty strong men's faces, some scarred, some scatheless; some smooth, some wrinkled; but all more or less touched by that cloud that clings to the brow, when the heart is soiled. These thirty faces turned with much curiosity towards the chief and his companion, as they entered the room, for to most of them the presence of a stranger on the plateau of Shidzugatake was a novelty without parallel, and to the rest such an event recalled some painful memories. But Raitaro simply announced his companion as a recruit enlisted that evening, and presently to be enrolled with due formality, and then, followed by the young man, passed up the room to the corner where the fencing sticks and paraphernalia of the play were piled, and where, a giant in frame and fame, the fencing master stood.

To him the novice was presented, and received not very cordially; all teaching is irksome, and most so the teaching of fencing, for whatever mysteries of the art the veteran may unfold, he cannot inspire the spirit that nerves the wrist; he fashions the puppet, but fails in the breath. It was accordingly with some show of apology, that the master begged one of the youths who were already masked and gloved, to give the visitor a lesson, and desired the latter to select a stick and prepare for the bout.

The old rule that a quick return is better than a long parry is one of the last that a fencer really credits, and when the visitor, instead of selecting a long stick, chose one of the shortest in the rack, some curious looks were exchanged by the old hands.

A very short business was that first bout, for the visitor's opponent had scarcely time to assume the easy position of a confident victor, before the "pear-splitter" cut resounded on his helmet. Two or three others, who followed, shared the same fate in about the same time, and presently the whole school was in a buzz of excitement. All the robber band, and everybody pertaining to it, from the scullion to the gate-porter, came flocking in, and as victory after victory placed the new-comer, without pause or parley, before a fresh opponent, there seemed every chance that his arm must tire or his eye fail. But though he was soon *vis-a-vis* with the very grey-beards of the science, he delivered, to each and all unerringly, the same terrific cut in the very centre of the helmet, and since not only the grace and almost mechanical certainty of his action made it easy to forecast the result of each encounter, but also in the impetuosity of the moment, men forgot all order and method, the spectacle was presently seen of two or three fencers, gloved and caparisoned, struggling which should be the next to face the victor, even before the issue of the contest actually in progress was decided.

But now the attention of all was instinctively averted from the combat, to the corner where Nakaseko stood, looking wonderingly over the heads of his pupils and comrades. The master, though not a word was addressed to him, became immediately conscious of this mute appeal, and with little of his wonted coolness, began to unfasten his belt and harness himself for the trial. His minutest preparations were watched with breathless interest, for there was something so magical about these repeated defeats, that the spectators knew no longer where to look for the first signs of disaster.

As for Nakaseko himself, he felt that his eye began to be clouded by some curious sensation of uneasiness. Never, for twenty years, had he seen a trick of fence that was not as familiar to him as his wife's face, but that night, eight of his best pupils had succumbed to the same stroke, and yet he did not certainly know that its method was not still a mystery to him. "Was the stick passed once or twice outwards, or how was it manœuvred?" Men with such marvellous wrists and sinews do not travel the mountains for nothing, and the heart of the master burned, and his muscles stiffened, as he thought that the stranger, who was beating his pupils and laughing at his art, could not be anything but a spy; a spy whose signal might perhaps summon destruction to their quiet retreat in the hills, and give their heads to the gibbet. Nor was the master singular in this thought. The same idea had already suggested itself to several of the band, and a cry of eager encouragement rose from every lip as Nakaseko leaped into the ring.

His foot planted on the accustomed spot and his hand armed with the familiar single-stick, that momentary feeling of uneasiness passed away like a breath from the mas-

* (1) The highest mountain in the province of Omi. It is also known as Omi Fuji.

(2) A god who protects his votaries against thieves. His amulets with the figures of three wolves (his messengers) may often be seen over the lintels of shops, &c. stick?"

ter's heart, and with eyes of fire and wrists of steel, he dealt cut after cut, and thrust after thrust. But none found their way home. The visitor stood quietly on the defensive. Hitherto it had apparently been his object to come to terms with his opponents as quickly as possible, but now he paused, he parried, he retreated, and already cries of "yera! yera!" welcomed the master's victory. But it was only for a moment. Even the master's multifarious methods of attack had their limit, and presently the two figures were standing quiet in the middle of the arena, their crossed blades motionless, save for a little tremor telling of the taunted muscles that grasped them. Now it was the visitor's turn to attack. "Would he try the 'pear-splitter,' and would the master parry it?" The audience, breathless, pressed so close to the arena as almost to touch the combatants, but a small space sufficed such fencers. A shuffle, a flashing of sticks and a wild exulting cry. The "nashi-wari," was parried; the master knew the foil! But ere the echoes of that cry were faint, they were overtaken by a bitter voice, for the master was staggering back with the point of his adversary's stick thrust against his throat. This time the "pear-splitter" had been only a feint, for though given with a strength sufficient to convert it if successful into a fatal reality, the visitor's wrist had still a reserve of force that recovered his stick, and carrying it with the rapidity of lightning round his opponent's upraised hands, he had delivered the point full in the master's gorge.

A moment of silence succeeded that cry—a moment during which hot shame and anger flushed the brows of those thirty men, as they watched Nakaseko standing with bowed head and lowered sword—the next, all was tumult. Some who carried swords drew them, others seized the single-sticks and spears of the school and brandished them like real weapons, one grasped a brazier, another an armour stand, while not a few, running out, came back provided with large stones, but across all this diversity of method one terrible purpose pierced, the death of the stranger. Raitaro, however, springing to the fencing master's side, laid hold of him and almost lifted him behind the young merchant, while passing himself to the front, he wrenched a sword from one of the bandits and holding it high above his head, shouted with a voice that conquered the confusion:—

"Comrades, will you murder a man because he is a good swordsman? Think you that, if he were other than he pretends to be, he would have risked discovery by beating you all? Truly you are as excitable as women and children." Then turning to the young merchant, he said sternly:—"Young man, who are you and with what object have you come here? Answer me at once in the presence of all my comrades, but remember before you speak, that despite your strong arm and marvellous skill, nothing but the plain truth can save your life now."

The young merchant, at the first burst of the tumult, had untied his helmet, and dropping it on the ground beside his single stick, had folded his arms and watched the progress of the disturbance without moving from his place. Addressed, however, by Raitaro, he bowed his head slightly, and speaking so as to be heard by all present, answered:—

"My name is now Ishikawa Goyemon. When men knew me as Ishikawa Gorokichi, love and imprudence drove me to deeds that induced me to seek your company, but these things are my secrets, and you, who have your own, will no doubt respect them. Give me a trial, or if you mistrust me too much, you have your alternative," pointing to the drawn sword that Raitaro held.

But Raitaro, little wont to hear such words, did not immediately reply, and already low, angry murmurs had arisen here and there, when suddenly the fencing master stepped forward.

"Comrades," he said, "I have been with you twelve years and will be so, I hope, to the end. Let me be your warranty for this man. To kill such an adept would be a disgrace to the art we love, and while he is alive, I can only be content as his pupil. Let us make him our master of fence."

Then turning, he bowed low to Ishikawa, and begged to be taken as his first pupil. Raitaro himself followed, and with these examples before them, the others could not choose but imitate.

So Ishikawa, without any term of probation or novitiate, was at once elected to a position that all strong men respect, and most of all those who, like the bandits of Shidzugatake, stake their safety on the skill learned in the fencing school. Possessing preeminently all the elements needed for success under these conditions, he soon gained such an ascendancy over his comrades, that Raitaro very plainly saw his chieftainship drifting away from him, and having found five of his oldest accomplices, who agreed with him in thinking, that a result which could be so easily obviated by a spear's thrust was not to be deemed inevitable, these six chose a night in early winter, when there was less moon than cloud, and stole along, one by one, to a thicket at the end of the garden on which the new fencing master's room opened.

Their plan of action was that Raitaro should cut the bolt of the rain door, an art in which his skill was unequalled, while Iwai and Ichiku, the truest spearmen in the band, were to stand ready to transfix the fencing master, should he come at once to the door, as he certainly would did the noise disturb him; for this tacit tribute they paid to the man's bravery. Raitaro's art was not however exercised on that evening, for it seemed that neither bolt nor bar was wont to trouble the fencing master's hands at sunrise. The night wind was indeed for the most part excluded, but the one panel that received the bolt was lying undisturbed in the door-case. So the six men, crossing the veranda, opened the inner slides and entered the fencing master's room, so silently that they could hear one another breathe, and even the rats did not desist from their raids on the rice bag.

At the foot of the bed stood a low screen, and Ichiku, who reached it first, looking over, saw within five feet of his hand the white throat of his victim hardly touched by the feeble flicker of the night lamp. Keeping his eyes steadily fixed upon this happy chance, and baring his arm lest his long sleeve should catch in the carved frame of the screen, he slowly raised his spear till the point had well nigh passed the barrier before it, when, as if by magic, the beam of the lamp seemed to travel round and fix itself on another throat, some three or four yards distant.

This strange apparition for a moment numbered Ichiku's power of action, but soon recovering himself, he stole round towards the new beacon, and poised his spear so close to its mark that the breath of the sleeper was parted on its point. But now the light, creeping quietly back, was reflected from the throat at the foot of the screen as before, and Ichiku's heart was wrenched by a sudden pang of terror, for he seemed to be dealing with spirits, not men. The tone of his appalled voice, rather than the few words he whispered to his comrades, made them all sharers of his terror, and presently the whole six men found themselves standing in the garden, with faces and weapons turned towards the open door, as though they looked to see the fencing master with his unerring blade leap out on them.

But the aspect of things did not change, and no sound came from within; so that, after a time, they resolved to make another attempt, and Iwai having procured a lantern, they again mounted the veranda and peered into the dimly lighted room. There stood the screen as before, and the master's swords lay untouched in the alcove, so now almost persuaded that Ichiku's story was a delusion, they advanced stealthily but resolutely, Raitaro himself in front with the lantern.

Scarcely, however, had the chief crossed the threshold when his lamp was suddenly extinguished, not by any breath of air or drop of water, but by a quiet subsidence as though the flame had died, and Raitaro heard his five followers leap precipitately into the garden. Following them there, he upbraided them angrily, asking them whether a "Friar's lantern" and a bad wick were the measures of their courage, and whether they had come out with swords and spears to be the dupes of a vulgar sorcerer, till at last the six determined that, come what might, they would go in and cut to pieces every body found inside, were he man or devil. Still the old stealthy habit of their craft delayed them a moment on the threshold, and in that moment the room was suddenly illuminated, and there, half a dozen steps within, his arms crossed and a quiet smile upon his lips, the fencing master sat.

"Raitaro," said he, "you saved my life once, not indeed knowing how little store I then set by it. I am glad that you have given me this opportunity of in part repaying

you by preventing you from murdering your guest and teacher."

"Silken sayings," as the proverb tells "often choke their hearers." Raitaro and his comrades, confronted so suddenly and in such a condition by the man they had looked to kill, found few words to answer his courteous contempt, and busied themselves principally in trying to hide their now irksome weapons, so that Ishikawa at last fell to laughing at their plight, and asked them whether he should put out the lights again to give them opportunity of collecting themselves, or whether they would come in at once and learn the simple tricks that had baffled them.

Thus, instead of reasserting his chieftainship, the issue of that evening's enterprise was that Raitaro swore allegiance to one whom he could not but confess his master, and thenceforth, he and his comrades were not only initiated into the mysteries of the art Ishikawa had studied under Momiji Sandayu, but also educated in the tenets of a creed, that fell but little short of dignifying the robber's profession. For Ishikawa taught that the judgment of men is based on the form, not the fact of crime. "Injustice and avarice," he said, "are the licensed robbers of life, just as we are the proscribed ones. Let us then turn our hands only against our more polished, though not less profligate brethren, never diverting the bread that fills the hands of toil, not disturbing the sleep that honest labour earns, but if in any storehouse lies a hoard of rice hidden from the need of the Japanese army, or in any treasury a chest of gold increased by extortion and undiminished by charity, then if we take, we do but utilize."

In the summer of the next year he broke up the settlement on Mount Shidzugatake, and desired his followers to go out and seek employment in the households of nobles or wealthy merchants, taking, for the nonce, morality as their principle, and devoting themselves entirely to collecting information for the guidance of future enterprises.

(To be continued in our next.)

NOTES AND QUERIES.

QUERIES.

Qy. I. Can any experienced woodman, or analytical chemist, favour the community with a disquisition upon charcoal? Is there any method of getting rid of the free carbonic acid gas which rises from it—before burning, or of any portion of the same? Do different woods give off different volumes of vapour, and if so, which is the safest to use in a bath room? (Unanswered.)

J. T.

Qy. 2. Where can I find any account of the ceremonies in use on the occasion of birth, death, or marriage, among the Japanese? Do any of the French, Dutch or German works on Japan contain such: I fail to find any information on the subject in English books. A work like Sir John Davis' "The Chinese" is a great desideratum in Japan. (In process of answer.)

B. H.

Qy. 3. Can any of your readers give me information respecting the comparative value of money in Japan five centuries ago, and at present?

Were the actual incomes of the Nobles larger or smaller then, as represented by their official rent-rolls, and have they now, as a matter of fact, more money to spend on themselves, than they had in old times?

N. or M.

Qy. 4. To what amount of restraint was a Noble subjected by the supervision of the 'karo.' Could he, for example, go out alone, or with only a favourite attendant?

N. or M.

Qy. 5. Dwellings on the Bluff are much more susceptible to the motion of the earthquake wave, than those on the Settlement. Why so? is the object of this Query. One would think that, considering the magnitude of the causes at work, the few feet of elevation of the Bluff from the Settlement would make no difference at all in the perceptible motion of an earthquake; for the same reason it would appear childish to suggest that the weight of the

various constructions on the Settlement would have the effect of steadying, as it were, the earth's crust; however it is a fruitful matter for conjecture, though by no means a pleasant one.

JISHIN.

NOTES.

ANSWER TO B. H.'s QUERY No. 2.

MARRIAGE CEREMONIES.

N. I. The lower orders of the Japanese employ some married couple to make matches for their sons, and these agents are called *nakodo*, or go-betweens. Betrothal sometimes takes place in the infancy or childhood of parties, but is very often deferred till they are old enough to wish to have some voice in the matter themselves, which, however, is denied them if they have parents living. When, by reason of the death of his parents, a young man is left free to manage the matter in his own behalf, he chooses a pair of go-betweens from among his friends or acquaintance, and through them makes inquiries for a suitable help-mate, and when they report the discovery of one, he sends then to solicit her hand of her parents.

If the proposal suits her parents, the bargain is made, and by their connivance a meeting is arranged to take place between the young people at some tea house, unless they already know each other by sight, where the betrothed can only cast sly glances at each other, but are permitted to hold no conversation, as that in the present stage of affairs would be a breach of Japanese etiquette.

In arranging matter for the wedding, fixing the day for it, &c., other go-betweens are employed, whose office expires only when the two are made one. First, the young bridegroom sends the go-betweens with the presents to the parents of the bride elect. These may consist of a variety of things, varying according to the taste or ability of the bridegroom, or his parents, provided only that certain things are included in the number; as, for instance, some edible seaweed, and *noshi*, or strips of dried and powdered Awabi. The preparation of the latter is made chiefly in the department of Isc. If *noshi* cannot be obtained, a kind of dried fish will answer the purpose. But, whether the presents be few or many, the bridegroom must send a written list of the articles along with them, for which a specified form is furnished in the Japanese works on the subject.

These presents being received, and the wedding day being fixed between the bride's parents and the go-betweens, nothing remains to be done but to await the appointed time. Meanwhile the bride and her family are occupied in preparing the numerous presents to be made by them to the parents and relatives of the bridegroom on the night of the wedding.

In the evening of the day set for the nuptial ceremony, the bride, dressed throughout in white, (the colour of mourning in Japan) is escorted in the *kago* or *norimon* (palanquin) by her parents and invited relatives to the house of the bridegroom. At the present day she is met in the entrance of the house by certain females employed to receive her, called *machi-joo-roo*, who conduct her into a separate apartment where she takes a little rest. It should be stated that she left the father's house having her head covered with a *wata-booshi*, a cap made of floss silk, which entirely conceals her head and face from view, and is not removed until she has become a wife. When a sufficient time has elapsed for the bride to refresh herself, both she and the bridegroom proceed separately to the best room, where the young man seats himself at one end of the *tokonoma*, a sort of open closet or recess in the wall opposite to the entrance, which is considered the most honourable place in the Japanese house. And the young lady takes her seat at the opposite end of the *tokonoma*. The go-betweens also sit down, the male by the bridegroom, and the female by the bride. Two other attendants, male and female, usually young persons, each bearing a vessel with a long handle, used as a receptacle for saké, are likewise present to wait upon the bride and bridegroom and fill their cups. The long handle flasks have a paper butterfly fastened to each; a large and a small one to represent a male and a female butterfly. The attendants who bear them are therefore called by these names, and the idea expressed by the symbol, is, that, as butterflies always go in pairs, so the husband and wife

should accompany each other through life with a like constancy.

Between the bride and groom is placed a tray bearing three lacquered cups, one upon another, the smallest at the top. The two butterflies pour a little saké from both their flasks into the uppermost cup, while the bridegroom holds it to be filled, grasping it with both hands. He then said the wine three times, in a very slow formal manner, and passes the cup to the bride, who takes it in her hands and takes three similar sips under cover of her veil, when she hands the cup to the female butterfly, who sets it aside. The second cup, and the third, are filled and emptied in like manner, so that each party drinks nine times. Hence this ceremony is called *san-san-kudo*, and forms the most important part of the nuptial rites, for it makes the parties husband and wife. While this drinking is going on, one or two male singers are seated behind the screen in the same room, chanting songs of congratulation to the happy pair. They are now married, and the bride and groom proceed to another room, where they pay their respects to her parents, by drinking saké together: nominally but not really going through the *san-san-kudo* again. After that they are conducted to another room where the bride removes her veil, and exchanges her white dress for one of bright and gay colours; and the groom puts on the *kami-shimo*, or Japanese full dress, distinguished by the wing-like shoulder pieces, and full trousers; and then again they drink to each other three times three cups, in mutual congratulation at the happy change that has come over them, as indicated by their change of dress.

This being done, there follows a feast to all in the house, who assemble in one room, and regale themselves with the fare that is set before them; and having kept up the festivities till about the dawn of day, the wedding party breaks up. Three days after, the bride usually pays a visit to her own parents, when another entertainment is made, to which the relatives of the family are invited.

Henceforth the married woman is regarded as having been absorbed, as it were, into the family of her husband and to have sundered her relationship to her father's house. Her duty to her father-in-law and mother-in-law supersedes all the obligations of filial piety.

The common people, in their matrimonial rites, endeavour to ape as far as possible, their superiors, the daimios and other great people of the land. If required to do so, we may on another occasion, describe the nuptial ceremonies of the latter. J. T.

THE JAPANESE PRESS.

JURISDICTION OVER FOREIGNERS.

(From the *Hochi Shimbun*.)

THE Editor of the *Nichi Nichi Shimbun* (No. 1813) publishes a draught of a proposed method of jurisdiction over foreigners, by a Mr. Umi-uchi, of which the following is a brief summary:—

"That as the customs, laws, civilization and religion of Japan are unlike those of the countries of Europe and America; it is impossible to bring natives of these countries under our Common Law. In Japan, up to the present time, progress in legislation has not extended to Equity, and therefore, in our jurisdiction, it would be best to adopt their system of Equity jurisprudence, and, for its administration, a Mixed Court would probably answer the purpose." The Editor, in a note to this article, states that he had already

"maintained the advantage of establishing Courts of Equity, as was done at Rome in ancient time, although Mr. Umi-uchi's opinion differs from his, on one or two points."

And again, in the issue No. 1819, the *Nichi Nichi Shimbun* publishes another article by the same author on Treaty Revision, the arguments in which are almost identical with those of the article above quoted.

Now, what are these Laws of Equity referred to by the Editor? From what he says of the ancient Laws of Rome, it would appear that they resemble the 'jus gentium' which was framed by Roman lawyers, unwilling to extend to foreigners the special privileges of the Roman citizen, and yet anxious that all foreigners should have some

Common Law to be adopted and obeyed by all. If it was really so, I would then at once say, that the impracticability of applying the principle to foreigners resident in Japan, is precisely as great as that of applying the principles of European International Law to Oriental countries. Suppose a Law to be a medicine, and a Nation a sickness; to discuss the adoption of a Law without considering the difference of nationality, would be as foolish as to apply a remedy without knowing anything of the nature of the disease.

Does the Editor of the *Nichi Nichi Shimbun* consider the relations between ourselves and those we call 'foreigners'—such as English, French and Americans, to be the same as those existing between the Romans, and those they called 'foreigners'—such as Samnites, Tuscans, Latins, Campanians, Carthaginians, and Greeks? If so, I should compare him to one who considered diseases of the legs to be the same as diseases of the eyes.

In ancient times, before Rome had united all these countries under her sole rule, though the countries in Italy were not only hundreds in number, but varied in size, and strength, and also at times in their rise, fall, separation and union, had towns and villages, and formed themselves like independent countries; Rome was then only one of these, and the people in these countries came to, and went from, one another, starting from different countries, taking different roads; some starting from Greece, others from Ionia; some by land, and some by sea.

Thus, though there were little differences in their languages, customs, religions, laws and civilization, they were almost all of the Indo-European race, and from the frequency of the visits they interchanged, it is not wrong to say that there was no great difference between them. Even the Carthaginians on the other side of the sea were of the same extraction.

Thus, the laws of one country being well regulated, it was possible, by means of them, to adjudicate for the people of the others. For the same reason, the customs, laws, religion, and civilization of European countries, being similar, and their intercourse frequent, the laws of one are competent to adjudicate for the people of all.

Grotius and others observing the state of Europe in the 16th century, and noticing this resemblance between it and that of ancient Italy, believed that the 'jus gentium' would be the only law generally applicable at the time, and therefore took it as a model in framing their 'International Law.' Thus the 'jus gentium' of Rome was framed for the use of a number of peoples in adjacent countries, with common habits. But the Editor of the *Nichi Nichi Shimbun* proposes to frame a new Treaty, bringing under a common law, ourselves, Europeans, and Americans, whose customs, laws, religion, and civilization are all widely different. This is indeed 'to cure a sickness peculiar to woman with a medicine only useful for diseases of men.' I therefore hold, that the 'jus gentium' is as inapplicable to foreigners resident in our country as European International Law is to Oriental peoples.

It may be argued that the 'Law of Equity' as described by Mr. Umi-uchi does not mean the 'jus gentium' of Rome; but that it is rather an union of the practice of the Roman prætors and the equity judgments of English Lord Chancellors, and neither the unwritten nor statute law. And that, taking natural reason, (common sense?) and personal rights as his foundations for his judgment, a judge, so deciding may of special right, make his decisions law—and that so, without reference to any foreign system of jurisprudence, Japanese judges should adjudge cases in which foreigners are concerned, according to what they consider common sense, and with due regard to individual rights—and that this is a matter of urgent present necessity.

I would reply that this is so, indeed, but that it does not hide the error of the *Nichi Nichi Shimbun*. What I maintain is that the 'jus gentium' is not practicable in our country, and that it is not possible at present fairly to adjudge foreigners, according to what Japanese judges consider to be common sense or individual rights, without reference to home or foreign statute law. Suppose the attempt made, in defiance of common sense, what would happen? Suppose for instance, our Emperor, taking in hand the question of judging foreigners according to the law of equity, were to say to the Foreign Ministers: "Formerly, you denied me jurisdiction over foreigners, on account of our laws not having progressed so far towards perfection as yours."

"I therefore propose to order my judges to adjudicate for foreigners in accordance with the principles of natural reason and personal rights, without reference to any statute law, native or foreign. I have therefore to request you to restore to me at once the right of jurisdiction."

What would foreign ministers reply to this? According to my thinking, they would probably say:—"what are these principles of natural reason and personal right of which you speak? We hear that, ten years ago, a samurai was permitted to kill any one who disobeyed him,* and the expenses of Government officials were taken from the people without repayment, and on the least offence, the property of the people was confiscated. Now you have revised your laws in these respects, for which we are not a little obliged to you, but to dispense with statute laws and to judge us by the shapeless principles of 'natural reason' &c. at this we should feel very uneasy. The establishment of law always succeeds to that of civilization after a certain interval, and the existence of the one is no guarantee for that of the other. We do not feel safe under your statute law, and how can we be satisfied with what your judges may consider to be equity &c. &c."

Such, indeed, is my individual opinion: how much more would it be that of old and experienced diplomatists?

Again, it may be argued that Mr. Umi-uchi does not propose to adopt simply the 'shapeless principles of equity' &c. without reference to home and foreign law, and that the Roman 'jus gentium' and the edicts of the prætors are not such a mass of 'shapeless principles':—the former being a system of jurisprudence formed on the study of home and foreign customs; and the latter, a system which reformed ancient law by abolishing useless matter, and improved it by additions where it was defective; and that moreover the English equity judgments are mostly extracted from Roman and canon laws, and not simply founded on the 'shapeless principles' of which we have spoken.

Should Mr. Umi-uchi hold this latter opinion, there is no excuse for his taking such ground. For he said, in his first article, that

"A law framed in imitation of another could easily be revised . . . and that it is beyond the power of ordinary students to fathom and detect the precise points which lie at the foundation of grand general laws—and that this is the reason that the progress of equity Law is so slow."

From this it would appear that Mr. U—thinks, that borrowed laws, not being the production of our own country, would be bad; and that it would be better to let our judges discover for themselves the grand general principles of law, and judge foreigners in accordance with these. But if he now advocates codifying laws for foreigners in accordance with the example given by great English lawyers, then he cannot surely deny that his former opinion is contrary to his latter!

And what does the writer in the *Nichi Nichi Shimbun* think about the civilization of the several countries of Italy in ancient times? The state of things then was very unsettled, the laws of those countries were then incomplete, and no accurate difference was made between law and natural rights and, certainly, there could have been no distinction between tradition and equity: but natural principles and established law must have been always intermixed. Thus it was not possible to put in practice the 'jus gentium.' But now, on the contrary, in modern times, the French have a complete (codified) law—the English and Americans also: and other States, though having no codes, yet have laws suitable to the present degree of their civilization; and so, our people—who are superior to the peoples of ancient Italy in their intelligence and acquirements, well distinguishing the principles, and many understanding the details, of home and foreign law—might easily adopt extracts from the laws of foreign countries. And is it not evident how Rome gradually united those countries under one administration? At first, Rome was on an

equality with them, but, gradually increasing in strength, and making herself superior to them, she finally brought them under subjection to herself. Thus these countries were, as regards Rome, as powerless as sheep against a wolf; which is the same case, I regret to say, with ourselves, as against the countries of Europe and America. Now it is easy for a wolf to exercise jurisdiction over sheep, but how could a sheep judge the wolves? And although, for instance, our Government might think it well to adjudicate for foreigners by means of a code of mixed home and foreign laws; foreigners would certainly say: 'we fear and dislike Japanese law, how can we reasonably be expected not to fear and dislike such laws administered by Japanese judges.'

It may be objected that Mr. Umi-uchi does not propose to combine at haphazard the laws of Japan and foreign nations; but to carefully select from them what is good—and reject what is bad, guided by natural reason (common sense) and the law of personal right. In reply, I would object 'how very unsettled are the data of this discussion! In making a journey, surely the destination should first be fixed, before the road to it is selected, and the length and description of that road should be considered. For instance, a man having decided to go to London, would do well to consider the length and description of the two routes, before he decided to go via Scotland, or via the Cape of Good Hope. The writer in the *Nichi Nichi Shimbun*, arguing about adopting, or not adopting the Law of Equity as the foundation for the proposed jurisdiction over foreigners, says: 'having almost decided, which laws are to be adopted.' This is purely 'begging the question.' If it were already decided which laws were to be adopted—this would be codifying the laws—and then what becomes of the Law of Equity? The idea of Equity, in fact, is always undergoing change in this writer's mind, and his confusion is not unlike that of a man who should examine the length and description of the road through Scotland, or through the Cape of Good Hope, before he had determined whether he wanted to go to London, or to Rome:—or of a physician who is equally ignorant of the nature of a disease, and of the properties of the medicine he proposes to apply.

In conclusion, the question then presents itself:—"what ought we to do?" There is only one way—to select, for the cure of the disease, a medicine suitable for it. It is certain that International Law is impracticable among Oriental Nations; because their customs, laws, religions, and civilizations are so different, each from the other. Consequently, it is impossible to employ judges of one nation only to adjudicate amongst disputants so differing in customs, &c. The only plan, therefore, is a Mixed Court of Judges selected from the nationalities of the various suitors, judges conversant with the laws of their respective States. This is the only proper and safe method to be adopted in the adjustment of disputes between subjects of Eastern and Western nations at present . . . and putting aside for the time the question whether now or hereafter is the suitable time for their establishment, there is no doubt that when it shall become necessary to establish a Court to judge between natives and foreigners, there is no doubt that a Mixed Court is the best and proper tribunal to establish.

[The Editor of the *Hochi Shimbun*, in publishing the above remarkable article, says that though he does not agree with the writer, that the communication enunciating doctrines and emanating from a source for which he has a high respect, he gives publication to it without 'responsibility for the sentiments of his correspondent.']

EXTRACTS.

THE CHEFOO CONVENTION.

TO THE EDITOR OF THE TIMES.

Sir,—Oriental finance in general is not the most promising field for amateur experiment, and the fiscal system of China in particular has puzzled all who have ever tried to master it. But the subject presents no difficulties whatever to the Archbishop of Canterbury, the Duke of Westminster, Cardinal Manning, Mr. Spurgeon, the two Messrs. Morley, a group of "Professors," Ritualists, and Quakers, missionaries and Comtists, with some waifs and strays of

* *Legacy of Iyeyas*. Chap. XLV. "Samurais are the masters of the four classes. Agriculturists, artisans, and merchants may not behave in a rude manner towards Samurais. The term for a rude man is 'other than expected fellow' and a Samurai is not to be interfered with in cutting down a fellow who has behaved to him in a manner other than is expected."

"Samurais are grouped into direct retainers, secondary retainers, and nobles and retainers of high and low grade; but the same line of conduct is equally allowable to them all towards an 'other than expected fellow.'" [Ed. J. T.]

the mercantile community, who have lately memorialized the Government on the subject of the Chefoo Convention. If these distinguished persons would try the experiment of united action in some simple matter within the sphere of their own observation, such as the endowment of a bishopric or the reform of a school, they might perhaps be led to suspect that their unanimity on a question which concerns the social life of a singularly little-understood people on the other side of the globe must be the result of inspiration rather than of knowledge.

The memorialists urge the Government to ratify forthwith the Convention concluded in September, 1876, between the British and Chinese representatives, on the ground that the Chinese have already fulfilled their part of the agreement. One of the memorialists, Sir E. Fry, has, however, shown that this argument will not hold water. The memorialists complain that the Chinese Government cannot now go back to the *status quo ante*, the meaning of which is this:—A treacherous attack by Chinese soldiers was made on a British exploring party travelling under the safe conduct of the Chinese Government, and Mr. Margary, a promising young officer, was barbarously murdered. If Sir T. Wade is to be believed, this piece of treachery was deliberately planned, not only the Provincial Government of Yunnan, but the Imperial Government of China being parties to it. The reparation granted for this outrage by the Chefoo agreement was certainly of such a kind that, once given, it cannot conveniently be withdrawn—at least not entire. One element in it was a letter from the Chinese Government to the Queen expressing regret at the sad occurrence, and the withdrawal of such a letter would certainly be open to a peculiar construction. The reparation further included the promulgation of a decree enjoining on all Chinese officials the duty of henceforth observing existing Treaties in favour of foreign travellers in China. It is difficult to see what injury the Chinese Government have sustained through the issue of this decree, the withdrawal of which would also be a little awkward. There was, moreover, the sum of £55,000 paid by the Chinese to cover the expense of the exploring expedition, Mr. Grosvenor's mission, various unsettled commercial claims, and a compensation to Mr. Margary's family. How the Minister of the richest country in the world should have been so eager to swallow this miserable bait is not the least incomprehensible part of a mysterious affair. An ordinary accident on a railway will cost the company more than the Chinese Empire is called upon to pay by way of "indemnity" for one of grossest outrages ever committed by one nation against another. The Chinese should certainly be allowed to take back this blood-money if they please. Nor need the re-closing of the new ports present any insuperable difficulty if such a step be required by the Chinese in order to restore the *status quo*.

Our memorialists, however, take the view that no reparation at all was due for the Yunnan outrage, for they say, in effect, that England is in the wrong to accept any, unless she agrees to buy and pay for it separately by means of important commercial concessions.

It appears clear, however, that the Chefoo Convention in their eyes resolves itself into one clause, that relating to the duty on imported opium. The memorialists demand that the Chinese Government shall not only be permitted to place, but assisted in placing a protective duty on imported opium. Of course, the effect of a protective duty is just the same on opium as on any other commodity; it compels the consumer to pay a high price for an inferior article. The already expensive cultivation of the poppy in China will be further stimulated by the increased price—a doubtful benefit to the Chinese people, who, whatever their physiological relations to opium, undoubtedly spend too much of their earnings on the narcotic.

But the operation of the opium clause in the Convention is more far-reaching than some of the memorialists are probably aware. It is tolerably well known that the revenue system of China is wholly barbarous, the essential feature of it being the power of irresponsible taxation exercised by the officials all over the empire. Officers with practically no pay are put over populous districts to make all they can out of their opportunities. Their career is watched with a kindly interest by their superiors, even by those in the highest places, who look eventually to share their good fortune. It is this canker which reduces the richest country in the world to the condition of the very poorest coun-

try for all effective purposes. The Opium Clause in the Convention will embalm this very rottenness of Chinese finance, and place it more than ever beyond the hope of remedy, until the yoke of the present Tartar Government is thrown off by an uprising of the people. The mandarins have been taxing opium at their pleasure all along, but the new agreement stipulates that the British Government shall henceforth supply the machinery for collecting by Chinese from Chinese an unlimited amount of duty, the local authorities being left to decide "according to the circumstances of each," what the amount shall be. For the British Government to intermeddle between the Chinese tax-gatherers and the Chinese tax-prayers, to take the side of the oppressor and to undertake an obligation to which no limit is assigned, would be attended with inconveniences of the gravest kind. Yet it is to force on this unnatural state of things, and no other, that the fussy philanthropy of England has been set in motion.

The signatories of the memorial of course thought that they were somehow or other striking a blow against opium-smoking, because the memorial was fathered by a society which has been got up, according to a speaker at Sir E. Fry's lecture, "to put an end to opium-smoking in China." But in truth the consumption of opium in China can only be associated with the ratification of the Chefoo Convention by a process of reasoning suited to that peculiar cerebral condition which refuses to see through a straight tube, but requires it to be bent. It is this:—At present Indian imported and Chinese grown opium compete in the Chinese markets on fairly equal terms. The Chinese Government desire to stop the growth and the use of opium in their country. The first step in this operation is to levy protective, to be followed by prohibitive, duties on imported opium, whereby an enormous stimulus will be given to the cultivation of the indigenous plant. The Chinese Government has never been able to prevent the cultivation of the poppy; but when the trade in foreign opium has been killed, and the area of poppy cultivation in China has vastly increased, then, it is contended, it will be quite easy for the Government to step forth and crush the growth and the use of opium with one blow. This is the kind of pabulum which is thought good enough for the persons who have undertaken no less a task than that of reforming the domestic and social habits of the oldest and most populous nation in the world. I am, Sir, yours, &c., KITAI.

BORN TO GREATNESS.

(By JAMES PAYN.)

THE tale of the drawing room, which has left the strongest impression on me, arose from a conversation about servants, a subject which is very popular there. Yes, indeed, if you may imagine that religion and politics are discoursed of on the first-floor during your absence, you are excessively mistaken. Nor is one word of medical science, properly so called, ever uttered there. Women talk of their children's ailments. But I am digressing. With elderly ladies, servants is the topic. They sail into the drawing-room—the old ones—and at once make for the ottoman, which affords ample room for their magnificent proportions and skirts, and at once begin to compare notes together about their domestics; while the young (about whom I may have to speak at another time) make little coteries of their own, consisting but generally of two each, their object being to exchange "confidences," some genuine, most of them fictitious, one or two—there has always been, as far as my experience goes, at least one of their class—one or two approach the table to examine the books, or any scientific instruments, such as the microscope, which may happen to lie there; but these intelligent personages are unpopular. "We are afraid we are not clever enough for you," is the remark with which they are greeted by their young friends, should they be so unwise as to make advances to them. But I am again digressing. I know my own faults, you see; crossing my postscripts; italics; digression. Where was I? For each of the confidential couples the lady of the house has a good-natured word, and a piece of good advice for the student: "Wearing out your brain, as usual, my dear Miss. Bluestocking. Why don't you let it rest?" And then she gravitates towards the ottoman, where the Great Topic is already being discussed.

"I am sure I don't know what we shall do for servants next," says Number One; "They are all getting so high and mighty."

"This notion of educating every body is destruction," says Number Two. "It makes them all dissatisfied with their places."

"With that position in life," says the rector's wife, with an air of the pulpit, "in which Providence has placed them."

"Just so; and then they are so ignorant!" says Number Three.

"Most shockingly ignorant," is the unanimous reply, except from the hostess, who with a dim notion that it is her place to prevent too great inconsistencies of statement, remarks, "Ignorant or opinionated, one or the other."

"You may say what you like," says Number Four, "but what lies at the bottom of it all is those fly-away caps. They are always setting them at somebody."

"Oh as to that, you know," says Number One, sinking her voice, and looking round to see that the young ladies are duly engaged with their confidences or their microscope, "there is a most shocking story afloat about poor Mr. Methusaleh and —"

Here all the heads on the ottoman approach one another so closely that a collection of birds and foliage, with a turban or two, like nests, is formed, and the remainder of the shocking story is related in a whisper.

"Well, I never!" "You don't say so!" "There is no fool like an old fool!" are the observations with which the news of Mr. Methusaleh's approaching "marriage beneath him" is received.

"I have only known one case of that description ever turn out well," observes a voice which has hitherto been unheard. It proceeds from Miss Flutter, a country cousin of the hostess, a lively, dapper little woman, who may be any age from thirty-five to fifty. "The exception only proves the rule, you know," adds she, apologetically; "but I have known an instance where such a match proved a success."

The other ladies turn inquiringly towards the hostess. Is her cousin (whom they have understood to be but a poor relation) to be credited? One of them shakes her head (with an ostrich feather on it) and smiles satirically, in token that she will not believe such an outrage on common sense, although the woman that should narrate it had ten thousand a year.

"I have often heard Cousin Jane tell the story," says the hostess, prudently; and it is certainly a very curious one.

"I should like to hear it," says Lady Stalkingham, the only titled person present, and whose wish is law. Whereupon followed Cousin Jane's story:—

"At Bath, where I used to live, good servants were as hard to procure as they are here in London. When you did happen to get one, you called her a 'perfect treasure,' and flouted her in your friend's faces as a model of what their servants ought to be, till in time she grew to be your mistress, and no servant at all. When you got a bad one, you put up with her, for fear that in the exchange you might chance to get a worse. My own position was singularly unfortunate in this respect, since most of my neighbours kept a footman, and I had not even a page-boy; and you all know what an objection young persons in service have to coming to a place where there is no gentleman's society. Under these unpleasant circumstances, I once found myself for six weeks without a parlour-maid. It is a more difficult situation to get filled than my cousin here, with her butler and footman, has any idea of; for a young woman must have strength to bring up the dinner tray from the kitchen, and dexterity to lay the cloth and wait, and a good address when answering the door. I once lost my best China dinner-service (all but the butter-boat) through a slip on the stairs, and my best friend through a slap on the face, which Matilda Jane, being in liquor, administered to her in the hall. After which it was, that the interregnum of which I have spoken took place. I really didn't dare advertise for another parlour-maid, lest I should get that dreadful young woman's counterpart, but made my want known to my acquaintances, and waited till I should hear of some one eligible through them. And at last I did so. The husband of an old school friend of mine being appointed to a colonial bishopric, she wrote to me to say that their establishment in England was to be broken up and that one of the pieces was a 'perfect treasure' of a parlour-maid. She had tried to prevail upon the girl to accompany her to the Caribbean Islands, which were situated in her husband's See; but Emily had heard some foolish stories about cannibalism, and preferred to remain in England, for which one could hardly blame her. 'I have no fault whatever to find with Emily Seton' wrote my friend, except that she is absurdly afraid of being like Hood's School-fellow, 'scraped to death with oyster-shells among the Caribbees.' 'My friend's husband was afterwards killed and eaten, and the whole family 'potted,' by the bye, though that is neither here nor there, and I only mention it as an incidental proof of Emily's sagacity."

Let me attempt to describe to you that admirable young woman. She had beautiful brown hair, always kept in perfect order, but without the least attempt to imitate her betters by the addition of frisettes or chignons; her eyes were brown also, and were soft and pleasing; her features, though far from regular, were well shaped; and her expression bright and intelligent. Her dress,

which would, of course, have been the index of her character, told nothing, because she was in mourning.

"I am afraid you have been in trouble, Emily Seton," said I at our first meeting.

"Yes, madam, I have had the misfortune to lose a friend," replied she.

"And I asked no more questions about it. By her making use of the word 'friend,' I naturally understood her to mean her lover, and, though I pitied her, poor soul, I could not help congratulating myself on the circumstance; for when such a misfortune happens, one is generally certain of retaining even a good looking young person's services—so far, that is, as mankind are concerned—for six months or so at least. In these days one can scarcely hope for more. However, Emily remained with me much longer than that, and never once put off her mourning, whether because black wears well, or because she knew that it became her, you shall judge for yourselves when you have heard all.

"To all my questions she gave the most satisfactory replies, and I was about to signify that our interview was at an end, when, with a little hesitation, she observed. 'By the bye, madam, I suppose Mrs. Quiverfull gave you to understand about my hour to myself?'

'Your hour to yourself? What do you mean, my good girl? Mrs. Quiverfull never said a word about it!'

She always allowed it to me, ma'am: one hour, in the middle of the day—or at all events by daylight—to myself; that is absolutely indispensable.'

"I never heard of such a singular proposition, Emily Seton," was my reply. 'You will have your Sunday out, of course.'

"I don't care at all about that, ma'am, thank you," interrupted she. 'I don't wish to go out on Sundays; but one hour to myself every day is what I must have.'

"Oh, I see," thought I; 'this is a Methodist. She won't go out on Sunday, which is a self-abnegation I have never known in one of her class; and she wants an hour a day for prayer and meditation. She must, indeed, be a perfect treasure, for Mrs. Quiverfull, with her High-Church notions, to have kept such a girl in her service.'

"Well, Emily Seton" said I, 'this is an arrangement which I had not expected, and will certainly be very inconvenient, but nevertheless you shall have your hour.'

"As I had done without a parlour-maid for the whole day for six weeks, I could surely do without one, was my reflexion, for a single hour; and then she was in all other respects so exceedingly suitable. My only fear was that, being a Methodist, I should not keep her for six months certain, because of the men. I need not however have disturbed myself with any such apprehensions. So far from encouraging the other sex, she kept them at a great distance, and when I gave my little dinner-parties—which, after six weeks of inaction, during which my friends had been very hospitable, it became necessary for me to do—she steadily refused all offers of male assistance at the table. She begged me neither to ask my guests to bring their footmen nor to hire our greengrocer, though a very handy man, and whom you could never know from a regular butler except for his fingers coming through his Berlin gloves. She could wait on half a dozen persons well, she said, and with the housemaid's help—whom, by the bye, she taught so excellently that, after Emily's departure, she took her place—even on eight, which was the largest number that my dining-room would accommodate. No 'cousin' ever called to see Emily Seton; nor did she ever ask for a day's holiday, nor for those few hours in the evening to visit an aged relative, with which touching request we are all of us so familiar. She was a favourite in the household, though she kept herself to herself in an unusual degree: she never gossiped; never retailed below-stairs the conversation she had heard above, and this was the more singular since not a word and scarcely a look escaped her. Her eyes, her ears, were everywhere, so that no one had to ask for anything to eat or drink. As to talk upon general subjects, I knew that nothing was lost upon her, because she would guide herself both with respect to myself and others by any hint let fall respecting attendance or service, though by no means addressed to or even intended for herself. In a word, then, Emily Seton would have been just perfection as a parlour-maid, but for that inconvenient stipulation of hers—the one hour to herself, from three to four—which she never waived, no matter what the stress upon her services, nor intermitted for a single day. At three precisely, immediately after the kitchen dinner, she went up to her own room and locked the door, and at four precisely she came out again and resumed her business as if there had been no intermission of it. Visitors might call in the meanwhile, or her bell might be rung by some guest staying in the house, but they did not in the least disturb this irrevocable arrangement. She could not be a Methodist, because she went to church, did not mind bringing up hot dinners on a Sunday, and took in one of Mr. Dickens's novels (as I was told by the cook) in monthly parts;

and what she did with herself during that mysterious hour was a question that was *wearing my heart out*.

"I should rather think it was," said all the ladies on the ottoman but two.

"I think I can guess what was her occupation," said Lady Stalkingham, severely. "Your piece of perfection kept a bottle of spirits in her bedroom."

"Lor' bless you, my lady, nothing of the kind; my Emily hated the very smell of them."

"No, no; it was dress," said the rector's wife, nodding. "Your perfect treasure was doing her beautiful hair, and arranging her spotless cuffs and collar against the time when her 'Mr. Right' should come."

"Both wrong," answered Miss Flutter, curtly, a little put out, I think, by these commonplace elucidations of a mystery which had baffled her for so many months; "you would never guess it if you guessed from now till doomsday. The girl was under my own roof, remember—under my own eye—and all the household were equally curious to get at her secret. Drink and dress, of course, occurred to us, but each of those would have had its results; she was as grave and sober after her retirement as before, and there was not the least alteration in her attire."

"For my part, I began to think the poor girl was a poetess, or something queer of that sort; but when I taxed her with writing verses she only replied, with her quiet smile, 'Indeed, ma'am, I wish I could,' which, although not a sensible rejoinder, was so far satisfactory, that it showed she didn't."

"Well, ladies, I don't mind owing to you since we are all of the same sex here, that my excessive curiosity at last got the better of my feelings as a gentlewoman. I was resolved at all hazards to get at the bottom of this mystery, and —"

"You looked through the key-hole of course!" exclaimed Lady Stalkingham, greatly excited.

I tried to look through the key-hole, your ladyship, but she had stopped it up. I listened outside the door, and heard voices talking."

"Ah, that was it, was it?" said the rector's wife. Well, to tell you the truth, I suspected it from the first."

"But it was nothing of the kind, madam," continued Miss Flutter, drily. "Emily Seton was incapable of an impropriety, and both the voices were her own. Unhappily from the same cause that prevented my seeing what she was at, I was unable to catch what she said, and my curiosity was whetted to such a pitch that I determined on a course of action which I blush to relate. There was a cupboard in the room—"

"And you hid there!" ejaculated the rector's wife. Well, it was very natural."

"It was absolutely necessary, madam; if I had not done so I should have had brain fever. Yes; I went softly upstairs to the attics at two-forty-five, and hid myself in Emily's cupboard, and at three o'clock she came into her room as usual and locked the door."

"By that time I was thoroughly ashamed of myself. If she had opened the cupboard she might, I am sure, have knocked me down with a feather, and I felt that I deserved to be knocked down with something much harder. But still, since I was there, it was no use to shut my eyes; and I stared through a crack in the panel at the proceedings I am about to relate, as hard as I could stare."

"In the first place she took down her bonnet and shawl, and put them on before the looking-glass with the greatest care. Then she drew on her gloves, and took up a parasol and a little church-service I had given her, and began to walk slowly round the room. Of course, I then thought she was mad—some sort of religious fanatic, that always prayed with a bonnet and shawl on—and you may conceive my terror when she knocked at the cupboard door with her parasol, and inquired whether I was at home there. Yes: she asked, just as a lady asks of a footman, 'Is Miss Flutter at home?' and I felt my heart in my mouth, and my brains nowhere as she did so. To my intense relief, however, she did not open the door, but sat down just outside (imagine my feelings!) and began to carry on a conversation with me—only she did it all herself—in the following fashion:

"What lovely weather we have been having lately, Miss Flutter!"

"Yes, indeed; it makes me quite long for the country. When are you going out of town?"

"Then, after a pause, 'The Larkinses' (these were friends of mine) 'are going to Brighton, I hear. Where do you think of spending the autumn?'"

"At Torquay, if I can get reasonable lodgings. Everything is so very dear there, however. What a beautiful shawl you have! Is it Indian?"

"Yes; it was a present from dear old General Mulligatawny," &c., &c.

"It was not until she had been going on like this for some time

that I perceived that she was playing, like a child, at morning calls, and that the church-service represented a card-case. Presently, much to my joy, she left my cupboard, and knocked at other imaginary doors, paying at each a most fashionable visit of some duration. Then began a still more singular proceeding. She dragged out her large box into the middle of the room, and placed upon it two towels very smoothly; upon this she put her brush and comb and tooth-brush, and a number of other little articles, which, as I guessed, represented knives and forks, arranged her two chairs round this improvised table, and then sat down to entertain an imaginary dinner-party. I had a little recovered myself by this time, and was better able to appreciate the merits of this second performance. She imitated the conversation of myself as hostess, and that of various friends of mine as guests, to admiration, dilated upon the opera and the theatres, showed herself conversant with the movements of the Court, and even rallied our excellent doctor (one of the best in Bath) upon his opinions, which I have always told him are revolutionary. She pressed upon all their favourite dishes, and at last, when this Barmecide feast had come to an end, she bowed to an invisible lady, and then rose, no doubt, to retire to the drawing-room. Her hour was up, thank goodness! and it was evident that this Cinderella of the attic was about to descend from these imaginary festivities and fashionable dreams to her parlour-maid's work again. She hung up her bonnet and shawl, put back the towels, and with just one look at the glass—to see, I suppose, that all her airs and graces had disappeared—she left the room and tripped downstairs."

"She was mad, of course," said Lady Stalkingham. "How lucky it was you found her out before she smothered you all in your beds."

"So I thought at the time, your ladyship. I dared not tell her that I had stooped to the meanness of having played the spy upon her, nor could I venture to keep so eccentric a young person in my house. So upon the plea of the great inconvenience of that hour to herself, which I was very sure she would not give up, we parted. I was very sorry to lose her, and so were her fellow-servants; and I had afterward reason to think that a bee in the bonnet is not so bad in a parlourmaid as cherry-coloured ribbons. However, as I say, she left me, and I did not see her again for the next five years, when the circumstance occurred wherein lies the gist of my story."

"I had changed my residence from Bath to Brighton, and was sitting one summer afternoon in my little balcony, when an open carriage drawn by two beautiful ponies, and driven by a handsomely-dressed lady, stopped at my door. I was sure that there was some mistake, since I knew nobody who possessed so well-appointed a vehicle, and was greatly surprised when, on the door being answered, the visitor, instead of driving away, got out and followed my servant, bearing a card with 'Mrs. Leslie' engraved upon it, into the drawing-room. I took the card, of course, but, 'Really,' said I, 'I think there is some misapprehension—'

"Not at all," said the lady, smiling; 'I know you very well, madam, and you knew me when my name was Emily Seton.'

"It was indeed my old parlour-maid, although I should never have guessed it, so very much is there in altered attire and the confidence that is begotten by prosperous circumstances."

"You were once very kind to me, Miss Flutter," said she tenderly, "and I always wished to thank you for it; and, moreover, I owe you an explanation for what must have seemed to you very objectless and obstinate behaviour on my part while in your service."

"She little knew why I coloured up and told her that that was not necessary (for indeed it wasn't), and that I entertained nothing but the kindest sentiments with respect to her, and warm approval of her conduct. She insisted on telling me the whole story, which I knew so well, of how she had occupied that hour to herself for which she stickled so peremptorily. 'And now,' said she, when that recital was finished, 'I will tell you why I did so. I had always a conviction that I was "born to greatness;" not doomed, at all events, to be a mere servant maid all my life; and therefore I never lost an opportunity for learning the part of gentlewoman, which I should one day have to play. It would be a great thing for me, I reasoned, if the gentleman who was to make me his wife should have no cause to be ashamed of me as to my behaviour in society, and therefore I cultivated my manners by observing those of my betters with whom I came in contact, and by imitating them to the best of my ability. I paid calls up in my poor attic as I saw your visitors did below-stairs, and practised the hostess after your excellent model, in readiness for the day, which at length arrived, when I should have to do such things in reality and upon my own account.'

"And how did the day arrive, my dear Mrs. Leslie?" inquired I, with unfeigned interest.

"Well, madam, I left your service, as you remember, for that of an invalid lady, whose good opinion I was fortunate enough to obtain. From her lady's-maid I grew to be her "companion."

My manners, my reading—every little advantage I had acquired, in fact—became of use to me in that position; though, so far as dear James is concerned—here she dropped her long black eyelashes, and really looked quite beautiful—“I dare to believe that he loves me for myself alone.”

“But who is dear James?” inquired I.

“Oh, please, ma'am, I forgot,” said Emily, falling inadvertently into her old manner with me. “He was my mistress's nephew, to whom she left all her property, and he has done me the honour to make me his wife.”

“I was afterwards introduced to her husband,” continued Miss Flutter, “and found them a very happy pair. So, though what you were saying, my lady, is doubtless true, about young persons who marry above their sphere, this case was an exception.”

		A moderate demand for Good Medium Grades has been the principal feature of interest on our Tea market during the closing week. Settlements of these amounting to 680 piculs at rates varying from \$18.25 to \$20.00 per picul. Sales of other classes swell the total since the 18th inst. to about 1000 piculs, and arrivals being only limited, stocks shew little increase. The latest advices from America shew the lower grades in best favour, but the arrival of a sailing cargo will probably alter the position. We make no change in the quotations, which are the same as last week.]			
Tea:—					
Common per pcl.	11.00 to 13.00 "				
Good Common	14.00 to 15.00 "

• The dates of Arrival and Departure of the Mitsu Bishi Company's steamers are susceptible of alteration, consequent on the necessity imposed upon the Company—by its contract—of connecting with the steamers of the Pacific Mail.

• No days for Arrival or Departure of the Pacific Mail Company's or Occidental and Oriental Company's steamers having as yet been fixed, we are unable to tabulate them. Each separate steamer's departure from her port will be notified in the Table below, and the day of her probable arrival at her destination.

• Three days are allowed in the P. & O. Company's Schedule for transit of the Mails between London and Brindisi.

• Two days are allowed in the Messageries Company's Schedule for transit of the Mails between London and Marseilles.

JAPANESE TEAS.

IN a partial report on the Tea season of 1877-78, which appeared in the last number but one of this Review, we made some comments upon the careless curing, up-country, of the natural leaf; and also on the anxiety manifested by the natives, to produce both Japan Black Teas, and Uncoloured Japans, packed and fired so as to be suitable for direct shipment by foreign exporters. These are important subjects which deserve further consideration.

The first—the growing inferiority of the natural leaf, noticed as it is brought down, season after season, no doubt arises from the steady decline in price enforced by Yokohama native dealers, who,—finding that foreign buyers will not continue to take inferior quality, year after year, without reducing their offers,—are obliged, for their own protection, to adopt the same course in their operations up-country. Another cause for the evil is, that the shrubs are evidently too closely plucked, and thus is impoverished each succeeding year's crop. The excess gathered produces another bad result—glut of the market: thus, if they would spare a large proportion of common third crop pickings, they would alike benefit the Tea plant up country and improve their own market in Yokohama.

Their attempt to rival either China or India, in the production of Black Teas, we regret to have to condemn as chimerical in the extreme. The Japanese had established a high reputation with consumers in the United States for their own uncoloured leaf,—had, in fact, driven a large proportion of both Greens and Oolongs out of consumption; and with only a little moderation in production, and devotion of their attention to improving picking and preparation, there is no doubt that Uncoloured Japans would have maintained their character and high quotations in America. But no:—patience, perseverance, moderation, are virtues which do not characterize the Japanese peasant cultivator of either Tea or Silk; and the fables of the Dog and his shadow, and of the Goose with the golden eggs are addressed to him in vain. Not content with having largely increased their export, and found a most remunerative market, within a very limited number of years; they grasp at more, and risk losing all. A desire for novelty, for change, for experiment, is also another failing of the national character: and all these defects are reflected in a Notification, recently issued by the Naimusho, urging the preparation of Black Tea, which we quote:—

“Tea is one of the principal productions of Japan, and is a source of considerable wealth to the country. Our method of preparation does not, however, suit the foreign markets, and we must accordingly introduce the same process as that which is adopted in China. At present it is only in America that our tea finds a market, and thus although the production of tea has greatly extended in our country, the price has fallen so low that our increased labours have been productive of no proportionate gain. Commissioners were therefore some time ago despatched

to India and China, in order to learn the best way of manufacturing black tea. It has been found that the method followed in India is superior to that in China, and Indian teas have now obtained a good reputation in Western markets. Some experiments on the manufacture of black leaf have been made in Kôchi Ken, and the results have been found to be adapted to foreign requirements. Now should we at first send an inferior article to foreign markets, our reputation for its manufacture would be ruined and the trade result in ultimate loss. We shall therefore issue instructions as to the best method of preparing black tea (*literally red tea*) in order that they may be strictly followed.”

Of course, no one would blame a nation or its government for endeavouring to stimulate industries of all descriptions; but why not improve, first, to the highest attainable point, the production of Japan's own natural leaf,—before rushing into competition with other countries, where soil, climate, and the nature of their variety of the Tea shrub favour the production of Black Tea? And at what a risk!—that of absolutely destroying a trade which has grown rapidly, and is susceptible of great increase, but which has but one market, which they are doing their very utmost to lose. Is it possible that the Minister for Public Industry is as blind as the Tea dealer or the peasant, and fails to see the danger which impends over the Japan Tea trade? That danger is—that, if uncoloured Japan Teas continue much longer to depreciate in quality, American consumers may take to drinking Black Teas. And if they do, those Black Teas will assuredly not be of Japanese production.

Returning to the attempts to fire and pack tea up country; we have further to advise our native friends, in opposition to their idea: that a large outlay per picul for tea leads, for a better style of boxes and packing, and other expenses, will be necessitated; which, as the tea growers are not, generally, men of such means as the Chinese Tea farmers, or the English Tea Companies in Assam, must be provided for them. Further must be taken into consideration the risk of transport to the port of foreign shipment, and the heavy loss which would be incurred, did a parcel arrive in bad order and require repacking. In China, these risks are greatly lessened by the facilities given by the canals for safe and rapid transit by water-carriage; facilities which this country only enjoys in a very inferior degree.

It is hardly necessary to tell Japanese merchants that their reputation for honesty amongst foreign buyers of produce is at present so low, that they would, assuredly, not find a single purchaser in any open port for their country packed teas, unless every box was opened and inspected. This is another disadvantage under which they labour in their attempt to compete with the Chinaman in growing Black Teas. Consequently, they would have to ship their tea themselves. And the following extract from an Amoy circular, they may think worthy of perusal; as bearing on the question of native packing by amateurs who have not

aproper understanding of the markets for which the goods are designed:—

"FORMOSA OOLONG. The market at Tamsui opened much earlier than usual, the first purchases being made about 25th April. After that date, buying became general, the native packing hong the chief operators; for, on account of the very high prices paid by them, foreigners were almost entirely out of the market. These native packed Teas, although scarcely up to an average in quality, being thin in the cup and many of them badly fired, met with a fair reception on this market; and, a general disposition being manifested to fill first orders, some rather large settlements were made at rates slightly under those paid at the opening of the previous season. The teamen having made good profits upon first sales, sent large orders to Tamsui to secure teas, apparently regardless of cost, and in consequence, a large quantity of badly picked and lightly fired teas, were rushed forward to this market. In the meantime however, Foreign buyers, having satisfied their early requirements, became very quiet, and when the result of the early shipments was wired from New York, a complete reaction set in. During the whole of July and August the transactions reported were unimportant.

"In September, stocks had accumulated to the extent of nearly 70,000 half-chests, chiefly light fired spring tea, and about the middle of this month prices touched the lowest point of the season. The summer crop leaf beginning to arrive, and proving of good quality, caused holders to be anxious about their first crop teas, which were rapidly deteriorating on account of their light fire; and rather better accounts coming from America, a demand set in which was very freely met by the teamen, the result being that the whole of the above mentioned stock was bought up in the space of about a fortnight, on an average decline from opening rates of from \$5 to \$15 per pecul.

"All through October, transactions continued on a moderate scale; well fired full bodied summer teas being in demand and scarce, realized full prices. Towards the end of this month there was a little competition for Finest and Choice kinds for London, and upon these an advance took place of \$4 to \$6 per pecul.

"In November, a fair selection of Autumn crop tea was placed on the market, but the quality was generally pronounced to be unsatisfactory, most of the chops being very thin in the cup and badly fired. All through this month holders continued very firm, although on a few settlements here and there, a decline was established of \$1 to \$2 per pecul.

"During the early part of December moderate settlements took place and prices remained firm, but as stocks were rather large, teamen became anxious to get quit of them before the close of the year, and having at last given way in their ideas of price, some 35,000 half-chests were settled at an average decline of \$1 to \$2 per pecul, thus finishing the season for this description of tea.

"The result to the native packers at Tamsui during the past season, has been a decidedly unsatisfactory one. Their losses are computed at about \$150,000, and not a few of them have become bankrupt."

Precisely the same result may be predicted for the majority of the speculations here, in shipments made, during the current seasons, of uncoloured Japan Teas, native fired, and shipped on native account. The Japanese seem entirely to overlook that, in all things, time and experience are required to ensure success. A thorough knowledge of the home markets is essential; firing in different styles is in fashion in different localities; and teas, which would find favour in Chicago, would hardly suit Canada. How the native Tea-firers up country are to kept posted-up, as to the style in favour at any given date, or in any given place, is a matter difficult to conceive. And there is a natural and recognized antagonism between buyer and seller; there is an equally natural resentment, very easily excited, at any attempt, in an old established trade, to get rid of any 'middlemen' who have a prescriptive right to their share of the profits, which come to them in the shape of brokerages and commissions, for the performance of certain well-defined services—such as inspection of pro-

duce, packing, shipping, landing, sampling, selling. All these services require a lengthy and costly apprenticeship, to ensure their perfect performance, and the labourer in each department is well worth his hire. All this is an illustration of a fundamental principle of Plutonomy—'Division of labour.' Against all these antagonisms, against all these vested interests, against this fundamental principle of the Science of Wealth—the native shipper of produce has to fight. He has never succeeded yet, and he most certainly never will. Indian shippers of cotton, Chinese shippers of tea and silk, Japanese exporters of silk worms' eggs, have all individually and collectively 'come to grief.' Now we see that Formosan teamen have fallen into the same gulf of bankruptcy, and we earnestly warn Japanese teamen to pause upon the brink before they take the same fatal plunge.

To sum up, in conclusion:—the producer has hitherto received full value for his crop from the foreign buyer in Yokohama:—if prices now rule low here, it is on account of over-production up-country, and from the inferior quality of the tea sent down for sale. But the native dealer gets hard cash, on the spot; he runs no risk of bad debts, no danger of his commodity lying for a long time unsold; and he is able to turn over his capital rapidly. Whereas, if the Japanese attempt to fire Tea up-country, they will probably have to export largely on their own account; for, besides the special reason given in another paragraph, foreign buyers would only select such parcels as they knew would suit the Home markets; and many specimens of the native firing, they would hold to be dear at two-thirds of the value of the original leaf before final preparation for export.

Government interference with trade is always bad: as a rule. But Government Notifications seem to be employed in Japan for giving advice as well as orders. And in giving advice in such a form, Government might confer a benefit, instead of doing harm:—if, instead of stimulating an attempt to make Black Tea out of a leaf which will not make it, it would impress on producers the great necessity of giving more attention to the growing, picking, and first preparation of the leaf up-country; secondly, if it would reprobate the practice of mixing together the leaf of various provinces, at least, if not of districts; and thirdly, if it would give encouragement and assistance to teamen to get the crop down rapidly, so as to give it into the hands of foreign buyers, fresh, and thus enable them to complete the process of firing whilst the leaf is in a state most favourable for the process, and likely to produce the most satisfactory results.

MIXED COURTS.

THE difficulties which obstruct the smooth conduct of commercial relations between Eastern and Western races have been hitherto insuperable: no expedient has yet been found which satisfactorily supplies the want of a tribunal to adjudicate upon commercial disputes, or to administer a criminal law, between members of the various nationalities which have clustered round the *emporiums* of Trade; no means of conciliating the prejudices of peoples of different eras of civilization. The '*Lingua Franca*' and '*pidgin*' have bridged over the streams of divergent languages. Even creeds have owned the mild sway of Commerce; and Religion,—the prime cause of so many wars, of so much bloodshed; the excuse for so much oppression, torture, and all the atrocities which rulers have inflicted on its professors—has not interfered with Trade. From the time when the Law was proclaimed on Sinai; onwards to the period when 'not peace, but a sword' was sent as a Divine message to humanity; through all history, up to this last pseudo-crusade of the Cross against the Crescent—for the suffering victims of bigotry and intolerance, Commerce has provided solace. But for the internal

disputes of Commerce itself has been found no common tribunal, and this, because the administration of Law must necessarily be in the hands of the State. The State must supply the machinery and the means to work it: enthusiasts have founded a bench of Bishops; but no maniac has as yet bequeathed a legacy, or given in his life time so much as the price of a halter, towards defraying the expenses of the administration of Justice. Thus Law has always been dependent for its support upon the State, and so remains; though, in nations loving freedom, the administrators of the Law are the chief supporters of the cause of Liberty. Moreover, there is no science so anomalous as the science of Law; so radical in its theory, it is conservative in practice; so consistent to the elementary principles from which it deduces its sanctions, the application of those sanctions diverges on contact with the morality of a tribe; even with the direction of a stream, or with the altitude of a range of hills. *

With certain exceptions, there is no power which admits the establishment of the judicial Courts of one State within the territories of another. These exceptions have been the Factories, established for commercial purposes, whether by treaty or on sufferance, by a civilized nation within the territory of one less advanced. Sir G. Cornewall Lewis, writing on Foreign Jurisdiction, says:—

"Factories have always been allowed to appoint magistrates of their own, and to exercise an independent jurisdiction, from the Greek factory of Naucrates in ancient Egypt, and the factories of the Genoese and Venetians in the Levant, to those of the English East India Company in Hindustan."

And later still, in our more modern settlements in China and Japan. It is true that the situation, in these settlements, differs from that of the factories; in that, in the latter, the privilege was conceded but to one nation in each establishment, which erected therein its own Courts, and "imported" its own magistrates and laws:—while, in the former, we have musters of every nation, each with its attendant Minister and Consul, and each claiming the right of extra-territorial jurisdiction, though—as in some cases happens,—it contributes not one iota to the prosperity of the settlement, or to the advancement of the country: a concourse of feasters that requires no Goddess, no golden apple, to discord.

There are two branches of the legal family in Occidental States: the one springing from the feudal system, and the other from the *jus civile*, (for the so-called 'canon law' was but an adaptation of the *jus civile* to ecclesiastical prejudice,) and in these States, these two branches grow together, and bear their fruit harmoniously. But much wider is the gulf between the Eastern and the Western comity: at present, as we have already shown in these columns, the antagonistic spirit of Orientalism to liberty, and to those rights of man which we have termed 'a give-and-take equality,' will not permit the acceptance of Japanese or Chinese jurisdiction by the citizens of other States: the native courts of Japan, though numerous, are still young; and as minors at present *in statu pupillari*, are incapable of entering upon the inheritance of jurisdiction. They may find the rule of the guardians appointed by the Treaty Powers irksome, but how is the difficulty to be met, how is the estate to be administered, until the period when they shall attain to 'years of discretion'? The expedient of Mixed Courts is submitted for approval; and at the end of a remarkable article from the *Hochi Shimbun* of which a translation appeared in this Review last week, the writer decisively claims for it the powers of a *panacea* for all the evils of Extra territoriality. As this writer will have remarked, we treated the first part of his article with

all due respect; but such could not be conceded to his conclusion, unsupported as it was by argument, and so easily proved to be wrong. The expedient of Mixed Courts is, in fact, insupportable by argument, and experience has shown it to be inefficient.

It is not unlikely that to some of our readers may occur a familiar example of a Mixed Court, that which sits in Shanghai; and its reputation for a fair degree of success may induce quotation of it in appeal from our verdict. But this will only be done by a cursory observer, misled by its name, and ignorant of its nature. This Court is presided over by a Mandarin, with a Consular officer of the foreign power interested in the question, sitting with him as Assessor; and it has been found to work fairly well, whenever it has happened that the assessor is competent in legal knowledge, and determined in character. But the circumstances which necessitated the establishment of this tribunal are entirely different from those which surround the difficulty which has to be conquered here: and surely such a Mixed Court could not be acceptable to the Japanese; for its jurisdiction, there, was given for a purpose exactly opposite from that for which a Mixed Court here is sought. The Mixed Court in Shanghai has jurisdiction over the Chinese, natives of the country in which the Court is established; its jurisdiction is not over foreigners, but over native criminals, for offences committed within the limits of the foreign settlements; and civilly, concerning contracts and property, in which Chinese are defendants, and foreigners plaintiffs. So great was the corruption of the Yamén in the Chinese city, that justice was practically denied to the foreigner. The native criminal slipped easily through the fingers of the runners of the court, greased by the touch of coin; nay, the bandage fell from the eyes of Justice, and she saw that spoiling the Philistine was a virtue—not a crime. And worse than this: when the impoverished scum of the city were no longer able to fee the minions of the Yamén, they were driven out of its walls to recruit their depleted purses in the highways of the foreign settlements. These were the evils in Shanghai which loudly called for cure, and—as we have said above,—the Mixed Court affords a fair degree of relief.

But the Mixed Court which it is proposed to establish here, as an expedient to remedy the confusion arising from our divided *imperia*, is one which shall have jurisdiction over foreign residents. The builders of the Tower of Babel were scattered by the discordant braying of diverse tongues: how do the constructors of the proposed Mixed Courts expect to conquer in their fight against the differences of Law, as well as Language? A tribunal, to command the respect of litigants and the enforcement of its decrees, must be thoroughly efficient: what then, are its essentials? Certainty in its decisions; uniformity in its law; integrity, independence, and experience in its judges; and a strong, efficient staff for the execution of its orders. Will any tribunal yet proposed here, fulfil any one of these requirements? Would they be fulfilled by a Court, formed of learned persons drawn from the schools of every nation, appointed by, and paid by the Japanese Government; a Court, the compass of the scheme of which is to reconcile, if possible the conflict of laws; a Court for the enforcement of whose decisions request would have to be made to the Consular officers who protected the unsuccessful litigant? Surely such a court would command no respect; could acquire no strength: the 'glorious uncertainty of the Law' has already become a proverb; such a Court as this would convert Law into a lottery. The statement of the scheme carries its own condemnation.

Much confusion exists in the minds of laymen, as to the meaning of the term 'Equity.' It is generally assumed that Equity,—as opposed to Law—means Justice: that the harshness of the law will be tempered, by a benevolent equity judge, to relieve an unfortunate litigant from the

* *'Plaisante Justice, qu'une rivière ou une montagne borne ! Verité en deca des Pyrénées, erreur au delà !'* Pascal. Pensées Part. I. Art. VI. §8.

consequences of his own folly. This is not so: Law and Equity march arm in arm; the distinction between them lies in the difference of the remedy which the respective courts will afford; but what is unlawful at law is equally repulsive to equity. Were this not so—the uncertainty of Equity would be indeed ‘glorious,’ and it would be, indeed, as stated by a learned, but rather jocular writer,

“according to the conscience of him that is Chancellor; and as that is larger or narrower, so is Equity. ‘Tis all one as if they should make the standard for the measure ‘a Chancellor’s foot. What an uncertain measure would ‘this be! one Chancellor has a long foot, another a short ‘foot, a third an indifferent foot. It is the same thing ‘with the Chancellor’s conscience.”

No nation that has a bad system of law can produce a good system of equity. But ‘equity’ is a good cry; and a proposition for the formation of a Court to be guided by the equity of natural law, is sure to sleep well in the ears of those who revile law as they find it, and want some system which, if carried out by themselves, would be written fantasy. Yokohama of old, and some less fortunate ports in these latter days, have had experience of the occasional imbecility of Consular Courts; but Consular Courts have, of late, been much improved, and though Consular jurisdiction is still not entirely satisfactory, it is far better—and its decisions, startling though they sometimes be—are less conflicting than would be the vagaries of a Mixed Court. Human nature cannot resist the sympathy which exists amongst members of a family each member of a Mixed Court would become the advocate for the interests of some particular family or race, and the decisions of such a Court would naturally decline into awards instead of judgments; instead of being decisions upon cases arising between individuals, they would become compromises of family disputes. The only class of men who can, fearlessly and successfully carry out the grand principle of Law—that all men are equal before it—is a class of Judges who have been trained in the administration of a fixed and certain system. Let the Japanese instead of casting about for a compromise, set earnestly—and perseveringly—to work, to prepare a judicial system which will command the respect of other nations. They need not expect to satisfy every one; but, so soon as their system begins to command respect, they may please themselves. The claim for Extra-territorial jurisdiction is based upon a principle too firmly established to be yielded for a light cause. It is not a question of Power of the Nation, but of the Right of the Individual. The Consular services of the various nations of Europe are a burdensome expense, necessitated by the present state of law in Oriental states; if all or any of these can, and will, set about the task of reconciling conflicting systems, the Western world will not be slow in recognizing its success. But while awaiting such a revolution, the existing system is the best. A system by which each nation preserves its autonomy can be more easily withdrawn, when time is ripe, than would be the system of Mixed Courts, where the vested interests would be more numerous and conflicting, thereby necessitating the consent of each component part. Then, how disappointing,—were the good intentions of America, England, France and Germany, to suffer obstruction or frustration from the obstinacy or selfishness of a minor power. And, on the other hand, what a mission for Japan,—to lead the van in the march of a new Oriental civilization; to teach Eastern statesmen to construct, from the broken fragments of despots’ thrones, from the ruins of petty principalities, from the incongruous fragments of tribal customs and feudal rights and wrongs—the solid, lasting, time-defying, edifices of constitutional monarchies, parliamentary institutions, and independent juridical systems,—which, the offspring of one, are the best safeguards of both! What a glory would gild this land of the rising sun, if, from her rocks in this far Pacific sea, sprang the

fountains of the dawn of Freedom which shall, in the fullness of time, give fresh life and vigour to the fainting, effete, decaying, Eastern World!

JUDGE GOODWIN.

“Now is done the long day’s work.”

WHY is it that in this distant land, our feet, treading life’s path already toilsomely and wearily enough, should be so often arrested by the aspect of the “shadow that never brightens?” Is it because, living beyond the reach of life’s full tide, every unit of the sum of our little company becomes doubly precious, or is it because long exile from hearth and home draws closer to our hearts those of our countrymen with whom our lot is cast? We cannot tell. We only know that, month by month, and year by year, the record of sorrow and separation grows fuller and fuller; till, too bulky to be closed, its sad pages lie always open before us. One falls at the very threshold of existence, another in the fullness of years, and after the passing messenger has already cast upon him the blight of decrepitude and decay. Yet are we never prepared for our mourning. Could we be there to the end; could we say, like the friend and disciple in the beautiful fable of the Tishbite’s translation:—“As thy soul liveth, I will not leave thee,” and so walk on, side by side, till the chariot of fire parted us; then indeed, the blow might fall more gently. But even this is denied us, and even this in some cases were little potent to console.

For there are those from whom it seems that life and thought should never be reft; men to whom time only brings fuller benevolence and purer philosophy; men at whose feet we are content to sit and be taught like little children. With them the nimbus of knowledge has so hidden humanity, that we forget that they are mortal; nay, perhaps, hear the measure of “non omnis moriar” beaten more truly by their footsteps, than even by the pulsations of our own unsatisfied yearnings. Surely the place they moved in cannot be all darkness; surely the eternal sleep of Endymion cannot be for them!

Yet even while our grief is still bitter, we are glad to have known Mr. Goodwin, and proud to remember that he once lived among us. We might enumerate his works, speak of his University distinctions, and his marvellous archaeological and literary attainments; but his history is beyond the reach of our pen. We prefer to remember him as we knew him; as the unassuming scholar, who, having read far into the ample page of knowledge, had still no scorn for those who hardly deciphered its opening lines; as the just judge, who prized reconciliation above arbitration;

“Not making his high place the lawless perch
“Of wing’d ambitions, nor a vantage ground
“For pleasure; but thro’ all this tract of years,
“Wearing the white flower of a blameless life,”

and as the gentle philosopher, who, with

“that which should accompany old age,
“As honour, love, obedience, troops of friends,”

has joined the immortal majority, in whose ranks only, can we cherish the hope of meeting him again.

EDITORIAL NOTES.

WE have determined to abandon the publication of Reuter’s telegrams, which we have hitherto given to our readers. This is a Review, not a newspaper, and it appears to us that we have hardly the right,—as we certainly have not the wish, to intrude upon the province of daily and weekly journals which amply furnish forth to the public a feast of facts. Another cause operates to push us to this end. Complaint has been made, it seems—and to us, justly—that Yokohama is worse served than her neighbours on the other side of the China sea, by the great *chef* and his *marmitons*. But, in the *Gazette* of Saturday last, we

were told, at the request of Reuter's agent, that the reason why certain *plats* of the *menu* served up in Shanghai are cut out of it when given to us here, *rechuffé*, is that "the total amount of subscriptions is much smaller in the latter, than in the former place" and that "an old adage says something about a coat having to be cut according to the cloth available for the purpose." Now this is all very well; and in ordinary times, we don't mind losing the '*rissoles à la reine*,' or even the '*vol-au-vent*,' provided we get a sufficiency of the Roast Beef of old England. Nor do we crave for a long-tailed coat, if a spencer will keep us warm. But the present is a critical time; markets are sensitive, some men's fortunes may be made or lost—some men's livelihoods almost depend on the determination of the question:—'Peace, or War;—and at such a time, if ever, should M. Reuter be liberal, and gain fresh subscribers by his generosity, instead of losing them by his parsimony. For us in Japan, links are dropped in the continuity of the telegraphic chain which connects us with the commerce and political world of Europe, and it cannot be matter of surprise that mercantile firms here, who spend, yearly, large sums in private telegrams, should, finding the public messages virtually useless, from the occasional *lacune* which occur, consider paying for what is of no use to them, a work of supererogation.

IT is of course unnecessary to say that no one blames Reuter's Agent here, for the errors of the Company or its Agents at the other end of the line. But, on the other hand, he should not retort on subscribers who complain, as in Saturday's *Gazette*. We have had during the past month, very just cause for dissatisfaction. After the fall of Plevna, the rapid advance of the Russians was recorded fairly enough, until the occupation of Adrianople. As telegrams then ceased to record more fighting;—that an Armistice had been arranged, was a logical conclusion to arrive at, and this was supported by the very important message which reached us just as this Review was going to press on the 19th:—

"Austria and England refuse to recognize any separate 'Peace, or one which is contrary to the Treaty of Paris of 1856.'"

But this, and two short messages:—"The Porte has consented to an Armistice,"—received a week before,—and "There is a suspension of hostilities in Bulgaria,"—received two days after the important news of the combined action of Austria and England, and these virtually contradicted, afterwards by, news of further fighting, is all the news that Reuter has vouchsafed to Japan. We were left to learn from China papers, not received here till the end of last week that

"Following the advice of the British Government, the 'Porte has consented to direct Armistice negotiations, and 'both Russian and Turkish commanders have received 'instructions to conclude an Armistice. (London, January 9th.)"

and also that, under date from London of the 14th:—

"Servier Namyk has started for Kezanlik to treat about 'the Armistice.'"

These missing links complete the chain of information: and it is no sufficient answer to subscribers, who complain of their omission, that Japan does not pay as much as China. We could very well have done without the news from the Cape, if something had to be docked from our allowance; but we ought to have been told about the Armistice.

THE news from Europe received during the Week are of the highest importance, and doubtless our readers have all formed opinions respecting them. It is possible, that when prophecy approaches a little nearer to fulfilment, we may hazard an expression of our view of the European situation. But such is hardly within our province, except as bearing on Japan trade, and therefore, for this week, we shall be guided by the aphorism, that though 'speech be silvern, silence is golden.'

WE are informed that the Trans-Pacific Cable Company intends to run its wire along the chain of the Aleutian and Kurile Islands, instead of through a deep sea cable. This would naturally affect part of our argument of last week: but we defer further comment until we have the positive information which the *Alaska* may be bringing to us.

WE take from the *Shanghai Courier* the following memorandum of the career of the late lamented Assistant Judge of the Supreme Court:

"Mr. Goodwin was only in his sixty-first year, as we learn from 'Men of the Time,' which has the following notice of him:—

"Goodwin, Charles Wycliff, son of the late Charles Goodwin, Esq., was born at King's Lynn, in 1817, was educated at St. Catherine's College, Cambridge, where he graduated B. A. in high classical honours in 1838, and was chosen Fellow of his College. He ceased to be a Fellow in 1847, and was called to the bar at Lincoln's Inn in 1848. He edited the '*Anglo-Saxon Life of St. Guthlac*;' the '*Anglo-Saxon Legends of St. Andrew and St. Veronica*;' a '*Greek Fragment upon Magic*;' the '*Copyhold Enfranchisement Act*;' the '*Succession Duty Act*;' and the '*Probate Act*;' is the author of an essay on '*diabetic Papyri*,' in the '*Cambridge Essays*' for 1858; and of '*The Mosaic Cosmogony*,' in '*Essays and Reviews*.'"

"On the establishment of the Supreme Court here he was appointed Assistant Judge, a post which he filled, except when Acting Judge during the temporary absence of Sir Edmund Hornby in England, until the summer of 1876, when Sir Edmund having retired, Mr. Goodwin became Acting Chief Judge; and removed from Japan, where he had been fulfilling his duties during the preceding three years, to Shanghai. During his former residence in Shanghai, he had not only taken a warm interest in whatever was for the good of the community, but he was a most useful member of the N. C. B. of the Royal Asiatic Society. His scientific tastes never left him, and he was a frequent contributor to learned societies at home. So far as his time allowed he continued such labours in Yokohama, and doubtless would have renewed them here. His illness, however, attacked him shortly after his arrival, and he has even been unable for many months to take his seat on the Bench."

Mr. Goodwin died on the 16th instant.

YOKOHAMA: SATURDAY, FEBRUARY 2, 1878.

DEATH.

At Shanghai, on the 17th January, CHARLES WYCLIFFE GOODWIN Esq., Acting Judge of H. B. M.'s Supreme Court of China and Japan.

NOTES OF THE WEEK.

SINCE our last issue, we have received no home mails. The usual coasting steamers have arrived, the *Suminoye Maru* from Hakodate, and the *Nagoya Maru* from Shanghai and way ports on the 28th inst. The *Takachiho Maru* also came in from Hakodate on the 31st ulto. The French mail *via* Marseilles of the 14th December, 1877 per *Volga*, left Hongkong on the 29th inst. at 7 a.m. and the *Malacca* with the English mail of the 21st December, 1877 left Hongkong at noon on the same day. They may both therefore be expected here about the 5th; as to which is likely to arrive first, it is difficult to say, the weather at this time of the year being so uncertain; so that, for those who are inclined to wager on the event, it is almost even betting, with the French mail for choice. The *Alaska* from San Francisco is now hourly expected.

The *Tibre* for Hongkong and Europe, and the *City of Peking* for San Francisco, both left on the 29th. Both take away from the pages of our local directories one or two well-known names: some tired with the hard fight for bread here and seeking

'Fresh woods and pastures new;'

others, with the homeward smile on their faces, neglecting our advice, and going, on a brief visit, to seek, in the homes of their youth, what they are little likely to find.

The *Tokio Maru*, for Shanghai and the coast, left on the 30th ulto. and the *Toyoshima Maru*, for Kobe, on the 31st.

H. B. M. *Sylvia* left us for Kobe on the 28th: she will employ a few days in surveying on the way down, after which she will stay for some time at the Southern port. The French corvette *Cosmao* arrived

on the 31st ulto. to replace *La Clocheterie*: there are no other movements of men-of-war to report.

The P. & O. Co.'s *Bombay* which brought us the last English mail on Saturday the 26th ulto. brought us also the details of a most unfortunate accident, which occurred on board of her on the morning she left this harbour on her last trip down. Mr. Fergusson, assistant surgeon of the *Modeste*, had been suffering from mental disease for some little time, and was being sent down to Hongkong on his way home, under guard—hopes being entertained that change of air and scene would effect a cure. Mr. Wood, assistant surgeon of the Naval Hospital here, was in charge of him, with three men from the *Modeste* as nurses. During the night of the 25-26th Mr. Wood visited his patient three or four times and saw him last between 7 and 8 a.m. on the 26th. He was last seen afterwards by others—a few minutes before eight, in the saloon outside of his cabin. The watch on him was changed at eight o'clock, but the relief, it appears, omitted to look into the cabin to see if the patient was within. A steward, who went in about half-past eight, to ascertain if he wanted anything, found the cabin empty: but naturally, not knowing the arrangements made, thought nothing of the circumstance, and it was not till close on nine o'clock that the alarm was given that he was lost. The unfortunate gentleman had climbed out of the port and gone overboard. This must have happened, as nearly as possible, abreast of Observation Point, Vries Island; and as it was blowing hard, and there was a heavy sea running, it is doubtful if he could have been picked up, had his escape been discovered immediately; but it would have been satisfactory had the opportunity for the attempt been afforded.

A Court of Inquiry was held on board the *Bombay* at Hongkong, which completely exonerated Mr. Wood, who appears to have given every order necessary for due care being taken of his patient. Two of the nurse-men were severely reprimanded, as the orders given were that he should be always kept in sight. How the port, which had been, by orders of Captain Briscoe, securely fastened, was opened, could not be ascertained; possibly by the patient himself.

We are glad to notice that the *Japan Gazette* and *Japan Herald* have started subscription lists for the purpose of providing funds for a reward for such information as may lead to the discovery and conviction of the murderer, or murderers, of William Boorn, whose body was found in the creek, as reported last week, and also to see that this appeal to the public has been liberally responded to:—the *Gazette* announcing the receipt of five hundred and seventy-two dollars already, in a list, headed by H. M. Government, with one hundred dollars. A reward of five hundred dollars is therefore advertised, which ought certainly to stimulate search and bring the culprit to justice, if he is anywhere within reach. But so long a time has evidently elapsed since the murder, which in all probability, was committed on the 2nd or 3rd of January, that we cannot, we confess, feel very sanguine as to the chance of detecting the author of the crime: but none the less imperative is the duty of doing our utmost to achieve such a result.

We must be allowed to express our surprise, by the way, considering the ample legal knowledge and experience accessible to H. B. M. Consul, that the Notification offering this reward which bears his signature should be so loosely drawn up. It is surely usual to offer immunity, as well as the reward, to any accomplice or accessory, not actually the doer of the deed, and the whole wording does not strike us as being the usual formula generally used. It is an accessory before or after the fact who, in a majority of cases where a reward secures the conviction, comes forward to give evidence: but, unless assured of his own neck being safe, an informer is scarcely likely to appear. It would be well to supply this omission as soon as possible. The season, the absolute darkness of our streets on moonless nights, and the total inefficiency of the native police, are all circumstances which favour crime; and if this one is unpunished, the whole community will feel very uncomfortable and insecure. Perhaps, when a Consul, or a Banker, or a leading Merchant gets garrotted in Main Street by a loafer, some determined effort at reform will be made, and will succeed. It is by no means too much to say that such a crime as this could not possibly have been committed in Kobe, where from end to end of its well-lighted streets, hardly a stray cat can avoid being seen by one of the excellent European or Chinese police.

Before passing to pleasanter subjects, we must get altogether quit of the crimes. We have to record a daring burglary, which took place one night last week. The middle tea house of the three on the Homoko side of the New Road, where refreshments are supplied to foreigners, and called the Harukia, was the scene of the robbery; and the time, between two and three in the morning. The inmates, who consist of some six or seven women and one man, were aroused from their sleep by the appearance of four men armed with swords, who immediately began to tie them up, after the invariable Japanese burglar custom, and using savage threats to enforce silence. After this was completed, the usual demand for money was made, some thirty or forty *ryō* were handed over, but with this the ma-

rauders were not satisfied, threatening to kill the mistress of the house, unless she disclosed the hiding place of the rest of her money. She in vain protested she had no more. After questioning the other inmates as to the whereabouts of the hidden treasure, the thieves, not being satisfied with their denials, searched all over the house, under the *tatamis* and every where there was a likelihood of a hiding place. Not finding any money, they proceeded to ease the poor women of their hair pins and corals, one gold and two silver watches, and all the best dresses and clothes in the house. The business part of the night, or rather morning, over, these knights of the road repaired to one of the rooms, reserved for the weary and thirsty foreigner, and lighting four wax candles, proceeded to refresh exhausted nature with the choicest vintage the house could produce. They evidently knew something about the market price of foreign liquors, as, taking a bottle of champagne apiece, they commenced to make merry; after finishing which, and pocketing three more, they departed. The people in the neighbourhood seem to think that the thieves came from Tokio by boat, landing on the Homoko beach, and returning the same way.

We find that in our few remarks, in last week's 'notes,' about the Choral society, we made a mistake in naming Mr. J. T. Griffin as the Secretary of the Association. Mr. H. B. Henley is the Secretary; Mr. Griffin the Treasurer. Mr. Henley will have to try to forgive us. So, indeed, must many others of our readers; a journal of this size cannot, at once, have all its parts brought to perfection by a staff hurriedly recruited, and unaccustomed to work together; enough if, week by week, some fresh evidence of care for improvement is manifest: the errors of the press should be condoned. But our mercantile friends for instance, must have greatly wondered what was meant, in our last Import Table, by such remarks as 'Quick'—'Quick, except ordinary makes'—Quick, saleable at quotations, applied to yarns, grey goods, &c. A market is often said to be 'dead,' but to call it 'quick' is a novelty. The explanation is that the word was misprinted throughout for 'quiet,' and that, through an oversight, the page was not corrected by its proper reader.

But far more serious, and evidently stirring the bile of some susceptible and supercilious sinologue, was the unfortunate slip of 'pacete' for 'tacet' in our 'Notes' of the 19th, when venturing in our ignorance of trans-literation, to write about a 'choching.' So far from holding his tongue or his pen, he descends upon us with threats of 'hoisting' and 'birching'—assuming such a familiarity with the rod, as almost to delude one into the belief that he had been a public-school man. Now, no newspaper, no Review, no book is safe from misprints. Every edition of the Bible contains some *errata*, misprints are discoverable in every week's issue of the 'Saturday Review'—they are even to be found, by no means infrequently, in the leading columns of *The Times*: and in the case of any journal published in the East,—where the type is picked up, and the formes put to press, by compositors and pressmen ignorant of the languages in which the papers are written,—needs must that such errors should be amusingly frequent. Therefore, such *badinage* can never be indulged in with impunity, by any eastern Editor, however 'able'; for the *riposte* is quick and certain. Take for instance, this example. In the very journal put at the disposal of the outraged Tokio classicist, as our whipping block, of the same date as our 'pacete' number, occur,—with three or four others—the following misprints, all crowded together in just three-quarters of a column of "a Floral Calendar." We throw them, for the sake of euphony, into the form of a stanza of simple, touching, pastoral, poetry; thus:—

"How sweet to wander, where the feathered thieves
From 'splitopen' brown seed-pods steal their stores;
Where, 'apoprining' from his 'princeate' leaves
The Dandelion flaunts his futile 'sdores.'"

Verily, old Etonians and their friends who talk vulgarities about 'birching' should make sure that their own breeches buttons are secure.

We notice an announcement in one of the dailies, that Messrs. Thorn and Darwin, who call themselves the 'Famous Illusionists' from England's Home of Mystery, the Egyptian Hall, London, are soon to pay us a visit. Messrs. Maskelyne and Cooke have surely been occupying the Egyptian Hall for some years: but there was a Dr. Thorn, we fancy, who showed there some very extraordinary feats, with the intention of exposing the spirit-rapping imposture. But it seems hardly probable, from what the hand-bills tell us that this is the same man. Should it be, Yokohama will see such feats of real *legerdemain* as she has never seen before. It has always been a matter of wonder to us, by the by, why these peripatetic professors of the art magic, an ill-kinded entertainment, do not perform in a Japanese theatre, and arrange their shows to suit the taste of a native audience. We hardly ever hear of a 'company' going away from Yokohama in any but a dissatisfied frame of mind with the pennywise result of their attempts to amuse foreign residents; while, in Kobe, they can hardly ever get a 'house.' Surely if a

circus, or dissolving views, or a panorama, did succeed in making a hit in Tokio, the enormous audiences they would get in a large theatre there at a low rate of admission, would pay them better than the one or two thin 'houses' they get out of the foreign community. A panorama, for instance, of the journey from Yokohama to Europe, by India and Egypt &c., and back through America, with views of the principal places of interest, to illustrate a lecture in the Japanese language, might be a paying speculation. As a means of spreading useful knowledge, it would deserve, and would probably receive the patronage and support of the Educational Department.

We commend to our readers' attention a description of Will Adams' grave, at Yokoska, which we have received from an occasional correspondent and publish in another column. This graceful act of respect to the memory of an old British worthy by a far-way cousin (we believe Mr. Norman Wiard is an American) deserves to be placed on record.

Our old friend and *quondam* ally, the *Japan Punch*, has given us this week one of the best numbers of his periodical we have had for some time. No. 4 of his gallery of P & O. portraits will be generally thought the best of the cartoons, particularly by the many friends of the very popular gentleman who is the subject of the sketch. The drawing with most humour in it is that of the Japanese chancellor of the exchequer, outdoing Blondin, by walking on a rope, with a debit and credit 'balance' pole, of exactly the same sum at each end. A painful accident to a sportsman's dog furnishes material for another cartoon, and it is scarcely necessary to state that the conductor of this Review is again the target for his shafts. We miss—how sadly—that valued contributor to the old *Japan Times*—'Naso.' Suffering in company is not so hard, as to bear all the brunt alone: and for the sake of the old 'Times,' *Punch* must not sharpen his pencil to too keen a point. On this occasion his compliments amount to flattery: did the portrait of the single individual portrayed in one of his cartoons really represent the party of which this Review is the organ, Japan would have to say with Goldsmith, that

"still the wonder grew, that one small head should carry all he
"knew."

We have the usual allowance of text, and fully agree with *Punch* in his comprehensive 'Review of 1877:—'The less said almost the past year the better,' and we must ask him to thank some unknown friends of ours, for the following reply to some rather spiteful lines on the same subject which appeared in his last number:—

"The *Japan Times* to Charles R.

(Air. *Bid me discourse.*)

"Bid me revive and I'll revive
Thy guiding star to be;
And with thine aid I will contrive
A paying spec to be.

"A paper foremost of its kind
Bright, sparkling, clever, free;
As all mankind will surely find,
When they subscribe for me.

"Bid me revile, I well revile,
Rough or severe I'll be,
Or with soft words dull fools beguile,
Just as thou may'st decree.

"We'll chop and change, and so contrive
To own no policy;
Priscilla's letters will revive,
Which you shall write for me.

"The '*Herald*' taunts we used not fear
The '*Mail*' no dread will be:
For Mrs. Gamp is always near
To pet and coddle me.

"As thou wilt be the master-mind,
The very soul of me;
So just as surely shalt thou find
I live alone for thee!"

We can only take exception to a word or two here. We trust that the epithet 'revile' will never be justly applicable to any criticism of man or measure in this Review—and hardly think it likely that after its views have had development, it can be possibly said that it 'owns no policy.'

The annual meeting of the Chamber of Commerce has been held this week; but we must defer comment upon it till our next. Yesterday, we hear, also, was held an important meeting of the new Jockey Club Committee, the first of one at which the New Rules are to be discussed and settled. The Yokohama Club has also held its annual meeting, and elected its Committee for the year.

The week has not been a favourable one to our friends on the skating rink. Outward mails in the beginning of the week, then a thaw, then on Wednesday such a fall of snow that the Shanghai steamer could barely see her way out, then on Thursday, again a

rapid thaw; all these have been unfavourable omens for their amusement. The skies promise better as we write, and we hope that the Chinese New Year's holidays will not be entirely thrown away for foreign holiday-makers.

CORRESPONDENCE.

 We do not hold ourselves responsible for the opinions expressed by Correspondents.

WILL ADAMS' GRAVE.

(From an occasional contributor.)

[Most of our readers are acquainted with the principal known facts concerning Will Adams, the Englishman buried at Yokoska some two hundred odd years ago, but as we have received a few notes from a correspondent who recently visited the grave; we publish them, hoping they will prove of interest to our subscribers. To most, if not all, will be presented at least one new feature of interest.]

INENDING visitors to the site of Will Adams' grave at Yokoska, or Anjin Tsuka, as it is called by the Japanese, would do well to choose a day when there is a likelihood of but little mud on the roadways; otherwise, there are no difficulties or inconveniences of any kind whatever to be surmounted, or encountered on the pilgrimage. Even the vexed question of 'chow chow' can be as entirely left out of the calculations, as the arrangements for next Xmas dinner. To the ladies of Yokohama, this little excursion is especially recommended, as being free from the so many drawbacks incidental to a trip into the country, a short but stiff climb outside of Yokoska on a good road, is the only hardship. The only practicable route at present is by the Government steamers, which leave the English Hatoba, Yokohama, daily at 8 A.M., 12 M., and 4 P.M., the steamers leaving on the return trip from Yokoska at the same hours. And here, a word of caution; at the very tick of the hour, the order to "shove off," in the Japanese equivalent, is given and 'shove off' it is: if it be the last boat of the day and the intending passenger but two yards from the steamer no mercy is shewn. Time and the Yokoska Government boats wait for no man; on the occasion of the writer's leaving Yokoska by the last boat of the day, a well known Celestial bill collector was observed but two hundred yards from the jetty, putting his best leg foremost with a will, tail streaming in the wind and frantically shouting "*matte, matte,*" but all to no purpose: he got within whispering distance of the departing steamer, some one consoled him by saying "Good-bye John, you stopped too long" and like Lord Ullin 'he was left lamenting.' Neither can any one put off in a sampan to get on board, you can only embark in the prescribed way. At either end of the journey there is a ticket office where you purchase your (saloon) ticket for twenty cents, you pass through a wicket where your ticket is notched, and you step on board from the pier, thus obviating the employment of sampans, which is a great consideration. There are five steamers employed on the service; they are all kept in the most perfect working order, well manned, and are splendid sea boats, the most timid need not have the slightest fear. The saloons are scrupulously clean, evidently being well scrubbed down daily, the seats are wood-work, all cushions, carpetings, and hangings of any sort are dispensed with, which is perhaps an advantage, for reasons well known to everybody. The service, small as it is, is a credit to those under whose management it is placed. The scenery on the passage down, which takes on the average about two hours, is so well known to most Yokohama residents, that it needs no description here, suffice it to say, that it is lovely in the extreme. Arrived at Yokoska, the traveller can repair to Tamahiroya's Hotel, a Japanese tea-house with European appliances, a few hundred yards from the pier. Here are several private dining rooms, with a view across the bay of the Arsenal and Docks, each fitted with a stove, and furnished with chairs and tables, but no carpets or covering to the floor; which is again an advantage; and the floors are kept as clean as the natives, keep their *tatamis*. The cuisine is superintended by a man who knows his business; the visitor can order what he fancies of fish, flesh or fowl, and can rest assured it will be well served and with quick despatch. Fifty cents a meal is the charge, the table linen, knives, forks &c. are nice and clean, good bread, butter, tea, coffee &c. &c.; the hotel has also

limited sleeping accommodation for Europeans, in the shape of beds, bedding, clean sheets &c. at a nightly charge of thirty cents.

The pilgrim will need no guide to the last resting place of Will Adams, or Anjin Tanka (the Pilot's grave) as it is called by the natives. On leaving the tea-house mentioned above, turn to the right and follow the telegraph poles, until you come to the grave, which is about two and a-half miles on the Kanasawa road, it is impossible to pass it by without noticing it. Far away from any habitation, on a lonely hill top, the monument erected by a warm-hearted people to the hapless stranger who was cast upon their shores is approached by a flight of about eighty stone steps, and is therefore necessarily a conspicuous object. And now has to be mentioned what, above, has been referred to as a new point of interest. The writer, on his recent journey to the spot, was revolving in his mind a plan to have the monument of the self-exiled Gillingham pilot in some measure restored, should he find it very much dilapidated and weather worn. His surprise can be imagined, upon approaching the place, to perceive a new bamboo fence enclosing the space dedicated to the grave; the joints of the stone balustrading to the stone platform, on which stand the two memorial columns, as well as the joints of the columns, all freshly cemented; while to the right, on the upright irregular slab of stone was carved the following inscription:—

W. ADAMS TOMB
RENOVATED JANUARY 1878
TO BE MAINTAINED FOR
10 YEARS BY ORDER OF
NORMAN WIARD
ANZO RENNOKI IN CHARGE.

so that a generous foreigner has done single handed what the British community at large ought to have done years ago. But "what is every body's business is nobody's business." However, it is to be hoped that, provided sufficient of the needful has been funded to carry out the order on the tomb, succeeding decades may still see some liberally disposed European willing to put his hand in his pocket, to keep in good preservation the last resting place of this pioneer of foreign trade to the land of the Rising Sun. That he was well treated by the people amongst whom he was thrown, that he married here, had a family, and lived to a good old age as a Hattamoto, on revenues granted to him by Iyeyasu, we know; but what his thoughts were we know not; or what the motives which led to his being interred on that lonely knoll on the broad mountain side, far away from home and temple. It may have been a favourite spot of his to roam to, for here is a glorious view; the sound of the thundering rollers of the Pacific can be heard beating on Segami's shore, while all around is solitude. It may be that as old age crept on him, this was the spot where the poor old wanderer loved to sit, and think of the home he should never see again, and the friends of his youth by whom he had been long forgotten. There he might see

"The mountain wooded to the peak, the lawns
And winding glades high up like ways to Heaven,
The slender coco's drooping crown of plumes,
The lightning flash of insect and of bird,
The lustre of the long convolvuluses
That coil'd around the stately stems, and see
Ev'n to the limit of the land, the glows
And glories of the broad belt of the world,"

Or, perchance, loved to sit and listen to

"The myriad shriek of wheeling ocean-fowl,
The league-long roller thundering on the reef,
The moving whisper of huge trees that branch'd
And blossom'd in the zenith"

And here perhaps, the gentle Japanese, associates of his manhood and old age, obeying his expressed wish, or following their own artistic inclination, dictated by a generous impulse, buried their stranger friend on the spot he loved so well.

THE TIMES OF TAIKO.

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GOYEMON.

Chapter V. A VICARIOUS HEIR.

NAKATSUKASA Taiyu, the only living representative of the house of Tamaru, had reached his thirty-fourth year, and as yet neither wife shared his pillow, nor child his likeness. Always from his youth he had been bowed by a withering disease, and nothing had ever lain closer to his heart than the hope that some day he might be able to look up at the sky without pain. Bitter to him too was the thought that the gold ilx leaf, which during four centuries had glittered over his lintel, might ere long be replaced by some alien device, and this feeling, not strangely, distressed him most on those days when he felt his disease most plainly stealing away the relics of his life.

On such a day it was that Kuramoto, the chief comptroller of Tamaru, paying his usual morning visit, asked permission to introduce his niece Taka.

A man of wondrous craft was Kuramoto Jinnoyemon. One of the first conceptions his youthful mind had fully grasped was the happy fancy of "wrestling in other men's small-clothes," and well had he practised the principle of this old saw, for not one of the inevitable falls his many plots and schemes entailed, had ever soiled his own garments, so that with an income of five thousand measures of rice and a fair name, he was envied by not a few and loved by none.

But Kuramoto, like his master, was heirless—in truth the only point of resemblance between the two—though, unlike his master, the idea of his treasure falling into other hands, never seemed to bring him any trouble. Some supposed that the great selfishness of the man made him careless of any chance lying beyond the limit of his own life; some that the temple of Suitengo was destined to be dowered with his wealth—the temple of Suitengo, where the incense always smoked, and the gold leaf always hung, before the cenotaphs of seventy ancestors of Tamaru and forty-three of Kuramoto.

However these things might be, none could say but that Kuramoto Jinnoyemon was a man of fair parts and happy fortune, as with deferential step and courteous smile, he led his niece Taka into the presence of the Lord of Tamaru.

To a man who is constrained to look at life with the tired eyes of sickness, the gentlest beauties are the sweetest. The pensive lily speaks more kindly to him than the lusty bloom of the hydrangea, and the timid pink of the pine-shoot reminds him less of his broken manhood than the living bloom on a healthy cheek. Thus Nakatsukasa's vision had so often interfered with his resignation, that it was with some feeling of impatience he allowed himself to glance for a moment at the face of Kuramoto's niece. He did not take much note of her figure, nor yet of her complexion, but he saw that her mouth was always waiting to break into such a smile as would have shamed the three thousand beauties of Rikku,* and he thought that if he could only see that smile often, he might yet find a pleasure in life.

So Taka became mistress of Tamaru castle. Some hoped no harm might come from an alliance with the crafty Kuramoto, and others prayed that an heir might be born, but all were glad, for every man in the village of Iwamura loved his lord Nakatsukasa, and pitied his lonely life.

After seven months a son was born, and Nakatsukasa, in his absorbing delight at such an event, forgot to observe that the lusty shouts of the lad differed from the puny wailings of a seven months child, so the rejoicings were unmixed, and Kuramoto grew sleeker and goodlier in his grand-uncleship to the heir of Tamaru.

But there was among the vassals of Tamaru a certain Shozayemon, in whose family the surname of "faithful" had lived for generations, and he, having twice warned his master that Kosaku was Kuramoto's child, and Taka the comptroller's mistress, and having found that his words only brought him disfavour, repeated them in a last testament and then committed suicide. Like all guileless men, however, Shozayemon was incapable of measuring the strength of evil,

* In the days of the Emperor Genro, the ladies of the court (Rikku or the "six palaces") numbered three thousand, and were supposed to comprise the most beautiful women of Japan. Preeminent amongst them all was the Empress Yohiki, whose charms are described in a well known ode by the poet Hakurakuten. F. B.

and when that last testament (which, confirmed by his "faithful" servant's blood, would assuredly have opened Nakatsukasa's eyes) was handed to Kuramoto by the coroner, one of his own creatures; one might well have said, "the roots of crime strike sometimes deeper than the reach of judgment."

"When you conquer, tighten your helmet strings," says the proverb. Mayhap if Kuramoto's own fingers had not piled the living charcoal round the ashes of that blood-stained letter, no triumphant smile would have crossed his well-disposed features, as he reported to Nakatsukasa the news of his old vassal's intestate suicide. However this may be, that smile so changed the comptroller's wonted expression, that in his altered lineaments Nakatsukasa suddenly recognized the likeness of his son Kosaku.

The knowledge harassed him continually. The sunny glance of Taka and the subtle smile of Kuramoto looked in through all his dreams like the grinning of demons, and as his disease grew daily heavier under the burthen of his thoughts, he seemed to himself to be about to die a lonely death and leave behind him the memory of an imbecile. Hard indeed was it to believe that the bright face, which for the nonce had lightened his sombre days, was the mask of a harlot, and that the baby's fingers, which had drawn him back from his willing journey to the grave, were clutching at his gold and pointing to his disgrace: but the belief would not be repelled. He felt sure that the comptroller's plot had already received the countenance of many of the Tamaru vassals, for Kuramoto was too prescient a man to imperil success, for lack of allies. He knew not where to turn for help. The discovery of treachery, among those so near and so trusted, made him naturally suspicious of all that surrounded him. A misplaced confidence would be of all mistakes the most pernicious; it were so easy for his enemies to accelerate his end, already imminent, and then achieve their treason, undisturbed. He thought of Kinya, Shozayemon's son, but though the young man was constantly at the castle, Nakatsukasa, timid of observation and cautious beyond measure, never found a favourable opportunity for conversing with him, and attributing this also, in the phantasy of disease, to the wiles of Kuramoto and Taka, he unconsciously drew the bonds of his difficulty tighter, and drifted further and further from the end he sought.

At last one morning, looking out at the snow piled on a cedar spray that touched the eaves, a sudden presage whispered in his ear that ere the green escaped from its white covering, a cerement would be clinging to his own mouth and an incense stick burning beside his head. His vacillation vanished. He determined to commit Kuramoto's crime to writing, and then to kill the comptroller with his own hand.*

The sun was still faint and the morning young, as his quick pen addressed to Kinya, a letter denouncing the whole plot, and conjuring the son of Shozayemon to be true to the title his forefathers had bequeathed him, and save the house of Tamaru.

Shozayemon had been too loyal a man to whisper, even to his own family, the secret of his lord's disgrace. The Gods had not suffered his last moments to be tormented by any doubts, and dying fully persuaded that his blood would be fruitful of remedy, he would fain have hidden from the world the disease that had sprung up in the house of Tamaru. To this end, he had framed his testament so as to be intelligible only to Nakatsukasa, into whose hands it never came. Thus it fell out that Kinya was entirely ignorant of the truth. Summoned by a special messenger, he hastened to the castle, but had only time to receive the letter his lord had written, when Kuramoto arrived to pay his morning visit. At the announcement of the comptroller's name, Nakatsukasa, drawing his short-sword, hid it under the silk coverlet, and without any further words of explanation, signed to Kinya to leave the room.

So the young man kneeled beyond the threshold, perplexed and uneasy. He had seen that morning, for the second time in his life, the yearning mystery that looks from the eyes of a man who watches his end coming, and shares his watch with none. Shozayemon's eyes had worn the same look, as he kneeled before the altar of Buddha, on the last evening that his lips were ever stirred by prayer or greeting, and since the import of these unearthly tokens is learned only by association, Kinya, made wise by memory, felt his heart

stirred by a second sorrow, as, receiving his lord's letter, he met for a moment the gaze of its writer. Thus, as he waited without, his hand clutched the paper hidden in his bosom, and all his senses strained themselves painfully to interpret the sounds issuing from the sick man's chamber.

At first nothing was audible but an indistinct murmur in which the different speakers' tones were scarcely discernible. Presently there was an interval of silence, broken at last by the voice of Nakatsukasa, now excited and upbraiding, as rising gradually to a strength that belied the man's mortal illness, it sent even to the ears of Kinya waiting without, such words as "deceit," "disloyalty" and "disgrace." But despite the force that launched these accents, they fell fraught with such a depth of desolate despair that Kinya, holding his breath, rose on one knee and had almost left his post, when there came a sharp sound like the contact of metal with metal, afterwards the rustle of garments, a fall, a quick footstep as when a fencer lunges, and then — silence; silence it might be for half a dozen beats of the heart, when a faint whisper seemed to float above Kinya's head, and immediately he bowed his face on the mats, for that whisper was "Namu Amida Butsu,"* and the voice that whispered was the voice of Nakatsukasa.

Breathless with apprehension, Kinya sprang into the room. What he saw was Nakatsukasa's right hand hand upraised, the fingers working convulsively, while Kuramoto kneeling on his body, held a short-sword buried to the hilt in his bosom.

Unarmed as he was, Kinya leaped upon the comptroller and seized him by the throat, but the other, a man of great strength, easily shook off the boy, and drawing the weapon from Nakatsukasa's bosom, turned upon his assailant. Then Kinya saw that blood was trickling down Kuramoto's face, and remembering the sword concealed under the coverlet, knew that Nakatsukasa's attempt to punish had resulted in his own murder.

He had little leisure however to think of anything but his own peril, for he became suddenly aware that Kuramoto had seized his wrist, and was forcing the hilt of the bloody sword into his hand. The unhappy boy detected at once the comptroller's cruel design, and struggled with all his force to free his hand, but the other held him with a grip of iron and now began to shout for assistance.

There are hazards that destroy the power of reason, even in the stoutest and most experienced. Kinya was only eighteen years old, and trusting as he was guileless. At the sound of Kuramoto's voice, his heart leaped so wildly that the very nature of his danger became indistinct, and all his soul was absorbed by an agonized longing to escape. He remembered afterwards that people had come running into the room, that to his surprise Kuramoto had pushed him violently against the paper sliding doors, and then suddenly released him, that he had fallen from the veranda, run across the garden and thrown himself headlong into the river flowing under the castle wall.

When all this became a reality to him, he was clinging to the bars of a water-gate before a rice-store far down the river. The snow flakes were falling so thickly that he could scarcely see across the stream, and somewhat reassured by this happy chance, he scrambled up the bank, gained the road at the back of the store, and ran off at the top of his speed.

But as he ran some vague hope began to visit him. At first he attributed this feeling merely to the assurance of present safety, but soon the outlines of his idea becoming more distinct, he asked himself whether there was not some proof, some token, which might rescue him from Kuramoto's artifice. Yes, yes! Nakatsukasa's letter! He stopped, he almost shouted for joy. That letter in his lord's own handwriting would surely clear up everything. He had been a fool. Why had he fled at all? But here instinct answered, that had he sought to remain, Kuramoto would have killed him, and accused him when there was none to refute. It was better then as it was. Now he could go back, prove his innocence to his friends and get them to present the letter—but even as he framed his design, he put his hand in his bosom, and—the letter was gone.

At the castle, meanwhile, Kuramoto's wound and Kinya's flight, had amply sufficed to obscure the truth. The comptroller had entered, he said, just as the murder was committed, and only partially parrying, by means of the brazier, a blow aimed at himself, had been so blinded by blood as to

*It was a very common thing in olden times for a noble to kill a vassal with his own hand. This was called "o te uchi," and was considered a severer punishment than an order to commit suicide. F.B.

*The names of three divinities. These words are the invariable formula of a dying Japanese. F.B.

be unable to achieve the murderer's capture. Everything corroborated this story. Even the brazier bore the mark of the sword-cut, for it was in truth with the brazier that Kuramoto had warded off Nakatsukasa's feebly falling stroke.

It only remained therefore to take all the measures necessary for the legal investiture of the heir. Of these the most critical was the visit of an Imperial Delegate,* for if at his inspection of the body, he should discover the true cause of death, the result would be delay, and investigation leading possibly to the confiscation of the Tamaru estates. Here two circumstances aided Kuramoto—the season, and the distance from the capital. The latter, by interposing at least six days between the death of Nakatsukasa and the arrival of the Delegate at Iwamura, would justify the presentation of the corpse for inspection not only in its coffin, but also packed in cinnabar, while the former, by multiplying the number of shrouds † would impede minute examination. For the rest, unless mischance selected as Delegate a man of more than usually austere morals, his complaisance could be purchased under any conditions. And it was upon this hope, apparently, that the comptroller leaned most, for without unduly expediting the transit of his official report to Kiyoto, he spared no pains to secure the speedy return of a courier carrying information of the Delegate's name. To this end he despatched a number of mounted messengers, with orders to post themselves along the road at such intervals as a man might ride without drawing bridle, thus forming the links of a chain along which the news he desired might be transmitted with the least possible delay.

The issue, however, of this arrangement, though sufficiently prompt to answer the comptroller's purpose, was a little retarded by the disappearance of one of these living links, for amongst them was Matsuyama Raitaro, formerly captain of the Shudzugatake bandits, and now borne on the roll of the Tamaru adherents as Masaki Kentaro. Sewed into his belt he carried the letter that Nakatsukasa had written on the morning of his death, and which he, Raitaro, had found in the garden after Kinya's flight.

A few hours after the news of Nakatsukasa's decease reached the Capital, an Imperial Delegate travelled outwards from the castle gates. The pomp and circumstance of his progress was perhaps a little in excess of his mission's importance, for fifteen armed gentlemen walked on either side of his palanquin, five stentorian voices cleared the road before him, and his horse, as pure blooded a bay as ever crossed the borders of Nambu, was scarcely held by two finely clad grooms, and beat his flanks into foam against two massive silver stirrups. In truth, had Kuramoto's fortune granted him the election of the Imperial Delegate, he would assuredly have chosen Fukuhara before all others, for Fukuhara's conception of his office reached not a whit beyond the homage it entitled him to exact, while his idea of a fool pictured nothing more absurd than "one who gives himself a headache about his neighbour's lumbago."

It was therefore altogether improbable that the circumstances of Nakatsukasa's death would receive too close a scrutiny, and the comptroller, confident of a happy issue, made ready to receive Fukuhara with more than usual pomp and hospitality.

There is not in all the Western provinces a wilder spot than the valley of Katase, where the fragments of thirty shattered torrents shed themselves unceasingly upon the sinuous path below, and nurture everywhere dank mosses, that roof the homes of the centipede and beetle, and hide the trail of the death adder. Huge caverns, eating their way into the heart of the mountains, breathe upwards a ghastly vapour that never goes out to meet the sunlight, but creeps sullenly behind the rocks and under the blanched arms of the dying pines, as though it shrank from the advent of those mighty blasts that often, leaping the crests of the hills, wrench the hollow willows from their barren beds, and change the hush of the valley into a deafening howl.

* At the death of a noble, a species of official investigation or inquest used formerly to be conducted by an officer specially despatched from the court. This was imperative, however natural the death or valid the claims of succession. The investigation, however, seems to have been often conducted in a very perfunctory way, and was of the many recognized occasions for the employment of that *pietre d'achoppement* of justice, "Milanion's golden apple." F.B.

† The body of a noble after death generally lay in state for 2 days (24 Japanese hours), after which it was placed in the coffin, and sometimes quantities of cinnabar were packed round it to prevent decay. In summer, the corpse was shrouded in two or three garments of the finest grass cloth, but in winter as many as eight or nine robes of white silk were used. F.B.

The road, winding round the shoulders of a huge rock within forty paces of the entrance to the glen, leads the traveller suddenly up to a stony plateau, looking down from whence on the gloomy passage that lies before him, many a wayfarer would fain give half the contents of his purse for the presence of even a mat-covered shed to welcome his halting feet. And never more unhappy was the absence of such shelter than on the evening when Fukuhara and his retinue saw the sombre shape of the "Black Cliff" bending over their path in the misty gloaming: for the sodden earth was mottled with patches of half melted snow; and a rising wind, carrying up from the east drifts of icy vapour, swept away all the pomp of the Delegate's procession. No longer did any voice issue from the numbed lips of the criers: the Nambu steed, passive in the hands of a single groom, paced dully on with drooping ears; the thirty gentlemen, girding up their loins and knotting their kerchiefs round their heads, splashed through the mud and sludge, seeking one another's footsteps, and the bearers of the palanquin staggered and slipped amongst invisible ruts and holes.

Fukuhara, pulling his wadded cloak over his head and shrinking back from the touch of the raw vapours, lay dozing in the corner of his palanquin. He dreamed that the glowing blush of a hundred charcoal logs was reddening all the air around him, and that the dimpled fingers of Somé, the fairest dancing girl in Kiyoto, were daintily filling his cup with mulled wine, while from the streets below echoed the cries of the macaroni and chesnut sellers. Presently, disturbed by some quicker motion of his bearers, he awoke to find that although the voices of the chesnut vendors were only the renewed shouts of his own criers, the charcoal glow, and perhaps the fumes of the mulled wine, were realities—realities as incredible as they were delightful. For, drawn back from the stony plateau just sufficiently to escape the vapours that swept outwards from the glen, two rows of stout pine poles laid their heads together in a nook of the cliff, and held up towards the scudding clouds triple folds of comfortably plaited rice-straw. Within, a splendid profusion of charcoal gleamed and crackled in the centre, filling the hut with delightful waves of warmth, and summoning from the huge kettle, that seemed to float in the undulations of heat, a song sweeter at that moment to the Delegate's ears, than even the musical laugh of Somé herself.

Fukuhara and his followers, filled as they were with astonishment and gratitude for such an unlooked for happiness, were little disposed to cavil at the incivility of the host's greeting or the paucity of his utensils. The Delegate himself, perhaps because he was loth to hasten his followers by waiting without, perhaps because he desired to realize in part the fancy of his dreams, actually condescended to enter the rough shanty and graciously signified his readiness to taste the contents of three fat casks that stood carefully straw-swathed in the corner.

"Poor wine, I'm afraid you'll find it, gentlemen," said the gruff old host, as he drew the spigot of the topmost cask, but poor as it is, it would never have been here except for your coming."

"Indeed," said the Delegate, "did you expect us?"

"Yes, Sir, I knew that you could not fail to pass this way, and fourscore customers in three or four days are enough to warrant a little preparation. Yes," repeated the old tapster with much emphasis on his numerals, "fourscore customers in four days is not a bad beginning for a hostel at the back of the 'Black Rock.'"

"Not a bad beginning by any means. But where do you expect to get the second half of your number, seeing that we only give you the first?"

"The first now, but the second on your journey back, Sir, for I suppose you will return by the same route. That is, if the gentlemen do return so soon, for to be sure one never can tell now long business may detain one. Business is as uncertain as a wife; always going wrong when one least expects it."

The latter part of this speech was delivered rather in the form of a soliloquy than a remark, and the tone of the grey-head's speculations about his visitors' return, and theories concerning the similitude of business and wives, was so mysteriously hypothetical, and his whole air so much at variance with his hostship, that under different circumstances, suspicion might have been aroused. As it was, the effect was only to awaken concern about the safe exit.

of the steaming wine-bottle from the bowels of the black kettle; for this, becoming under the old man's indifferent management, a doubtful event, was watched with breathless interest by every one of the travellers; from the Delegate to the grooms.

And what wine it was, to be sure! How strange and yet how grateful its fine flavour in those mountain wilds, and how, as cup after cup slipped down with a touch smoother than velvet, each and every one of the company found the passage of the inhospitable glen become a more and more remote idea! How ingeniously did they avert the silence that suggests departure, by discovering new methods of extolling the aptness of the black kettle and the staunchness of the log hostelry, and how the breath of every fresh brew exhaled some novel excellence of bouquet or vintage, till at last the sweet features of Somé began again to look out at Fukuhara from the red heart of the charcoal, and the sound of the drifting sleet grew fainter and fainter to the ears of the thirty nodding gentleman!

But even more inexplicable than the presence of the log hut and its peerless wine was the conduct of the old host at this juncture. He seemed to be suddenly possessed with the liveliest solicitude, lest his guests should be benighted in their passage through the valley, and at the same time tacitly dismissed as perfectly untenable all idea of their passing the night in his hostel. He even permitted himself to tell the Delegate that it were better he turned his palanquin back to Kiyoto than suffered the sunset to find him in the gorge of Katase, and showed so much disinclination to tap the second tub of wine, that Fukuhara, little disposed to brook advice from any, and still less from the keeper of a mountain inn, swore that if the old man was so anxious about their safety, he should either guide them through the glen, or carry his bill back to Kiyoto for payment. Strange to say, not the slightest opposition was offered to this tyranny by the host, but, merely remarking that as he had neither neighbours nor visitors, he wanted no caretaker, he left the charcoal fire and the two remaining tubs of wine, and set out at a sturdy pace in front of the procession.

(To be continued in our next.)

NOTES AND QUERIES.

QUERIES.

Qy. I. Can any experienced woodman, or analytical chemist, favour the community with a disquisition upon charcoal? Is there any method of getting rid of the free carbonic acid gas which rises from it—before burning, or of any portion of the same? Do different woods give off different volumes of vapour, and if so, which is the safest to use in a bath room? (Unanswered.)

J. T.

Qy. 2. Where can I find any account of the ceremonies in use on the occasion of birth, death, or marriage, among the Japanese? Do any of the French, Dutch or German works on Japan contain such: I fail to find any information on the subject in English books. A work like Sir John Davis' "The Chinese" is a great desideratum in Japan. (In process of answer.)

B. H.

Qy. 3. Can any of your readers give me information respecting the comparative value of money in Japan five centuries ago, and at present?

Were the actual incomes of the Nobles larger or smaller then, as represented by their official rent-rolls, and have they now, as a matter of fact, more money to spend on themselves, than they had in old times? (Unanswered.)

N. or M.

Qy. 4. To what amount of restraint was a Noble subjected by the supervision of the 'karo.' Could he, for example, go out alone, or with only a favourite attendant?

(Unanswered.)

N. or M.

Qy. 5. Dwellings on the Bluff are much more susceptible to the motion of the earthquake wave, than those on the Settlement. Why so? is the object of this Query.

One would think that, considering the magnitude of the causes at work, the few feet of elevation of the Bluff from the Settlement would make no difference at all in the perceptible motion of an earthquake; for the same reason it would appear childish to suggest that the weight of the various constructions on the Settlement would have the effect of steadying, as it were, the earth's crust; however it is a fruitful matter for conjecture, though by no means a pleasant one. (Unanswered.)

JISHIN.

Qy. 6. What is 'Curling'?

JACK FROST.

THE JAPANESE PRESS.

ON ABANDONING THE USE OF LEATHERN BOOTS FOR JAPANESE SOLDIERS.

(From the *Hochi Shimbun*.)

TO curtail unnecessary expense is the earnest wish of our Government, and our strongest endeavours are being directed to the diminution of foreign imports. So that, should the Government propose any change in these directions, which, leaving fulfilled the requirements of Government and people, would do no harm in any other way, we shall urge its at once adopting such reform. But such reform we should not advocate on merely theoretical grounds, but require it to undergo practical experiment. Should such practical experiment prove useless, no one would object to the rejection of the theory.

The custom of our soldiers wearing leathern boots originated with the military systems of Europe, but it is found, in actual service, that Japanese soldiers gain more advantage by rejecting than by wearing them; and though they may be ornamental in time of peace, has it not been shown that, in time of war, which is the real duty of soldiers, they become entirely useless?

This was actually seen at the beginning of the South Western war, last year. Although our soldiers, obeying the Regulations, proceeded to the seat of war, wearing their leathern boots; the disadvantage of these foot-coverings was so great, that defeat was hazarded. They at once discarded their boots, and wore straw shoes. And through during more than half a year, over uneven or level land, in three provinces; officers, soldiers, and even coolies entirely dispensed with leathern boots and wore straw shoes. Now, can it be that—straw shoes being used in time of fighting—there is any advantage in wearing leathern boots in time of peace? Is it because leathern boots, in time of peace, are less expensive than straw shoes, or only because straw shoes do not look well, that boots are employed? Although this is at first sight a small matter, it seems to us to be worthy of discussion.

The real duty of soldiers commences when war breaks out, and the training they undergo during peace is only to prepare them for war. Therefore their practice in peace time should be as closely alike as possible to the reality. So, to alter equipment used in peace directly war breaks out cannot be good. When, on experiment, it has been proved advantageous to change a rule or a regulation, such should be changed to meet actual requirements. Surely, anything found advantageous during actual warfare, must be worth adopting, and any old rule or regulation to the contrary it would be well to revise.

War is the real, peace the temporary employment: is it right to prepare for reality, or temporary imitation? We have heard of a temporary expedient being changed when a permanent institution was established; but never of replacing a permanent establishment by a temporary device. War is the body, peace the shadow. We know that the shadow is cast by the body: but we have never heard of a body and its shadow being distinctly different. Apply this to the argument we have set forth above. Besides, straw shoes are convenient in use, and cheap in cost; and, further, altho' the manufacture of leathern boots is already being carried on in our country; still the material for them has to be imported. By dispensing with leathern boots worn by so many thousand soldiers, a portion of the imports from foreign lands would be cut off, and the general amount of imports may be lessened.

If, however, it be argued that leathern boots cannot be dispensed with on account of their appearance, then we reply that this argument is fallacious. If appearance be a necessity, then cloth would be necessary for clothing, instead of cotton; and further, a better and better kind of woollen cloth would be required; until there would be no end to the expense.

Again, it may be argued that straw shoes, which are so generally worn by our people must be replaced by leathern boots, because, on account of their wearing out so readily, the total expense of shoeing the soldiers is greater than by means of leather. Should this be the case, greater care should be taken in the manufacture of straw shoes, and they should be made more strong and durable than at present: then they would not so readily wear out, and expenses would be largely reduced. Even if expenses were not appreciably diminished; but if the cost of the straw shoes amounted to the same as that of leathern boots; still the advantage of diminishing the imports from foreign countries are so great as to recommend the change.

Should the above arguments be found complete and correct, we shall have the satisfaction of knowing, that by dispensing with the leathern boots hitherto worn by our soldiers, the wish of Government to curtail unnecessary expenses will be realized, and also the desire of the people to protect themselves from foreign importations; and that the use of straw shoes, while in no way harming the Government, will afford great advantages to all.

We have no doubt that the department immediately concerned will, from the actual experiments made, and referred to by us, compare the advantages of both methods of shoeing our soldiers, and immediately take the proper steps in the matter.

EXTRACTS.

THE CHEFOO CONVENTION.

(From *The Times*.)

It has been already stated in these columns that our visitor, Kuo Sung-tao, the Chinese Envoy who came here with a letter to the Queen expressing the regret of his Imperial master for the murder of Mr. Margary and the attack on Colonel Browne's party, has now received letters accrediting him Envoy in permanence from the Emperor of China to the Court of St. James's. The first Minister ever authorized by the Chinese Government to remain as its permanent diplomatic representative in any foreign capital has accordingly commenced his residence amongst us.

The critical period in our relations with China which began with the death of Mr. Margary, a most promising member of the British Civil Service, would thus seem definitely closed; and the moment is opportune for a review of the situation and the circumstances which led to it. Ample materials for this purpose are afforded by Sir Thomas Wade's last despatch, written since his arrival in England, and published in part by the Foreign Office. It is a careful summary, by the one Englishman who has most thoroughly studied the singular intricacies of Chinese policy, of events in which he himself took a principal part. The section of the report which relates to commercial affairs may be assumed to be still before the Government of India: At all events, it has not yet been published. Its general drift is, however, to be inferred from the commercial portion of the agreement signed at Chefoo on the 13th September, 1876, by Sir Thomas Wade, and Li, the Senior Grand Secretary of the Empire, who is also Governor-General, or Viceroy, of the metropolitan Province. Earlier reports from our Minister also throw much light upon the subject. It will be observed that the true authors of Mr. Margary's fate have never been brought to justice. The Chinese Government offered victims—savages to be beheaded, and mandarins to be degraded. Sir Thomas Wade justly rejoined that the punishment of persons of whose innocence he was convinced would be considered in England an aggravation of the offence of the Chinese Government, and the punishment of the really guilty appearing all but hopeless, he declined the mock satisfaction of a vicarious atonement.

As to what he did accept in the way of reparation, as to his decision to close the case on the condition that the Chinese Government agreed to certain terms which appeared to him to guarantee improvement of the relations of China with us, and as to the true value of the conditions he demanded, we have not yet gained the knowledge resulting from actual experience which is necessary to support a conclusive and definite opinion. The following points, however, appear beyond dispute. The closing of the Yunnan case coincides with a new and almost revolutionary

acknowledgement of the relations of China to the Western Powers. Since the indignation which Mr. Margary's murder excited in Europe came to strengthen the hands of Sir Thomas Wade, proclamations throughout the Empire, which inform the inland Provinces of facts long jealously concealed from them as to the privileges and respect which Western barbarians are entitled to claim and able to command. An indemnity, purposely restricted in amount, has been paid to the family of Mr. Margary and to the British Government. A settlement is arrived at of certain questions relating to trade, administration of justice, and diplomatic intercourse. The whole of this agreement, indeed, is subject to the approval of our Government, and their confirmation is more or less dependent upon the assent of other Powers in treaty relations with China. That the consideration of these Powers should be invited was one of the conditions on which Sir T. Wade agreed to report the Yunnan case as closed. We cannot doubt that however much may remain for us to effect, so much as has been done will be found to conduce to the improvement of our relations with China.

Our intercourse with that singular Empire, the seat of a civilization which has grown up independently of our own, and is still full of surprises for us, began in Queen Elizabeth's time. Later the East India Company established itself at Canton. In 1834 a Superintendency of Trade, with Lord Napier as its chief, superseded the Company. Lord Napier's position might have been regarded by us as diplomatic; in the eyes of the Chinese he was but a chief of the barbarians who came humbly to their shores to purchase tea, silk, and rhubarb. Up to the year 1842 foreign trade, other than contraband, was restricted to the one port of Canton. After the war of 1849 Sir Henry Pottinger's Treaty threw open the five ports. Lord Elgin's Treaty, ratified in 1860 at the end of a war, opened 10 more ports. Since the signature of the Chefoo Convention, which has already been acted upon in China, four more ports, making 19 in all, have been opened to the foreign merchant, for purposes of trade or residence; and foreign steamers are, in virtue of the same Convention, permitted to touch at six points on the Great River for the purpose of shipping and landing passengers and goods. The Ministers of five or six nations reside at Peking, and the right to residence there is secured to representatives of all Treaty Powers. The exports are worth £28,000,000 annually, and the imports are valued at £27,000,000. England carries on over 70 per cent. of the whole international commerce, and, aided by an efficient foreign staff, the Chinese Government derives from the Customs on foreign trade £4,000,000 annually, no insignificant contribution to an exchequer which is but slowly recovering from the effects of 20 years' disorder.

All this commercial intercourse, so beneficial to her in a pecuniary sense, has been thrust upon China. To hold relations with the foreigner is in defiance of the moral convictions of its educated men, not merely of its mandarins, but of a large proportion of the millions who are trained in the history and philosophy of their country. Nothing has been so far obtained in China by what we call pacific negotiation. As the Chefoo Convention was conceded out of fear that if the decision were left to the British Government a far heavier penalty might be extorted by its arms, so the Treaty which marks the preceding epoch of foreign intrusion into China was exacted by Lord Elgin at the close of four years of misunderstanding and hostilities, in which were included two wars, the partial occupation of Peking, and the destruction of the Summer Palace in special retribution for an act of the gravest treachery. Lord Elgin's Treaty of Tientsin, signed in 1858 and ratified in 1860, is the basis of the existing political arrangements.

By the ninth article of that Treaty, foreigners are free to travel through China with passports; and in pursuance of this right, as well as in accordance with the memorials of several British Chambers of Commerce, it was resolved in 1874 by the Governor-General of India in Council that a mission headed by Colonel Browne should travel from Burmah by the overland route through Yunnan into Western China for the purpose of exploring the country and observing its capacities for trade. Sir Thomas Wade obtained passports for four Englishmen, and sent Mr. Margary to meet Colonel Browne. Mr. Ney Elias and Dr. John Anderson accompanied Colonel Browne, and the mission was afterwards joined by Mr. Allen, a consular interpreter who had been sent round by sea, in case Mr. Margary should not reach Burmah before its departure. Mr. Margary, provided with a passport, passed from East to West through China by a somewhat shorter route than that which Mr. Grosvenor took the following year, and by the road which Colonel Browne's mission would nearly have followed on its way into China. Mr. Margary, meeting with great civility on the journey, made his way safely to Bhamo, in independent Burmah. Here he joined Colonel Browne's party, and they all set out together for the east. They left Bhamo on the 6th February, 1875; and, on the 18th, travelling very slowly, came to the last Burmese guard house on the western Bank of the Nam-hpong,

which separates China from Burmah. Here a Burmese met them, and told Colonel Browne that all was right at Manwyne, the frontier town of Chinese territory. To his own countrymen, however, he said that Li-hsieh-t'ai had joined with a certain chief to prevent the entrance of the foreign mission into China. This Li held rank in the Chinese service corresponding to a captaincy or majority, and was charged with the duty of keeping order on the frontier. He is half Chinese, half Burmese by birth, and had done good service to the Empire in putting down the Panthay rebellion. Mr. Margary had met Li-hsieh-t'ai on his way to the west, and had been received by him with the greatest courtesy. He ridiculed the idea of Li's hostility. As Mr. Margary knew the Chinese officials from his office of interpreter, it was arranged that he should go forward and make inquiries. He started early on 19th February, and expected to reach Manwyne the same night. From Tsarai, a mountain village six hours' journey from the starting-point and about six miles short of Manwyne, he wrote in good spirits that the road was reported clear and that the people were very civil. He made his way to Manwyne and was murdered there next day by an armed force under orders from Momein, the capital of the Sub-Prefecture. The scene of the crime was afterwards pointed out to Mr. Grosvenor and the officers of his escort. It is a shady spot near the river and the hot spring, called "under the banyan trees." Mr. Margary was bathing, or about to bathe, there, when he was assassinated. Five of his Chinese servants were also murdered. The sixth, a relative of Li-hsieh-t'ai, escaped. These appear to be the facts of the case. They depend upon the statements of several independent witnesses, chiefly but not entirely Burmese. The story is not admitted by the Chinese, but they admit facts which point to the correctness of its main features and the rival version which the Chinese Government had prepared was found, on investigation on the spot, to be full of inconsistencies.

Colonel Browne, after receiving on the 20th Mr. Margary's letter from Tsarai, pushed on to within a day's easy journey of Manwyne. The debatable land between China and Burmah is occupied by Kachyen chiefs, who levy black mail on travellers. Their fees had been duly paid, but when, on the 21st, Colonel Browne wished to continue his journey, these men made difficulties about the baggage. After waiting some hours, Colonel Browne, with his English companions and 15 Sikh policemen who acted as guard, went on as far as Tsarai, whence they saw the white cliffs near Manwyne. Colonel Browne had thoughts of proceeding at once to the town, the scene of Mr. Margary's murder. But the manner of the chief of Tsarai awakened his suspicions. He went back to camp resolved to wait for the morrow's news. In the morning he found himself all but surrounded by a large force of armed Chinese. A friendly chief of the debatable land arrived with the intelligence of Margary's murder at or near Manwyne, and said that 4,000 men had been assembled by the Chinese officials at Momein to annihilate the English mission. The advance guard which was now threatening the camp consisted, according to this mountaineer, of 800 men. Immediately after Colonel Browne had received his communication the Chinese began to fire. The 15 Sikhs, however, made a brave resistance, and fortunately they were armed with guns the range of which astounded the Chinese. The Burmese escort, about 130 in number, gave their "moral support" to the English by shouting, beating gongs, and firing their muskets or matchlocks in the air. At a critical moment Colonel Browne offered the chieftain who had informed him of Margary's fate a lakh of rupees to burn the jungle through which the main body of the Chinese were advancing. The wood was successfully fired, the Chinese rushed out in confusion, and finally retreated, leaving some dead men in the jungle. Colonel Browne thereupon made the best of his way towards Burmah, and was not again attacked. Before leaving the field of battle one of the savages cut off and brought to the English leader the head of a Chinaman whom he had found killed. A chieftain thereupon remarked, "You see it is the big Chinese, and not Shans or Kachyens, who are opposing you."

The circumstances of this double outrage proved that it was committed by premeditation, and many facts conspired with the experience of previous events to lead to the inference that it was premeditated by high authorities. When Sir Thomas Wade applied to the Chinese Foreign Office for Colonel Browne's passports in 1874, he had been somewhat surprised that, except a half-jocular observation that Yunnan was better reached from the east than the west and a passing reference to its recently disturbed condition, nothing like opposition was raised on behalf of the Chinese. Mr. Margary found the people at every point save one remarkably civil. The one exception was ascribed to anti-missionary feeling. As he approached the frontier, whether in the country recently recovered from the Mahomedan rebels or westward of it, he saw nothing to alarm him. A tribute mission from

Burmah was passing upward a short distance to his left as he descended from the Chinese district capital Momein. Such a mission would have been easily pounced upon by banditti or by the wild tribes of the border had the Chinese Government been unable to protect it. Messengers came and went between Mr. Margary and the Government of India's agency at Bhamo, in Independent Burmah, without hindrance. After the news of Mr. Margary's murder and the repulse of the rest of Colonel Browne's peaceful mission had come by telegraph to Shanghai and so to Peking, a short correspondence ensued in which the Chinese Foreign Minister, the Prince of Kung, made a recriminating allusion to the recent acquittal of a British subject who had been tried for homicide. It was not till seven days had elapsed that Chinese officials came to inform Sir T. Wade that next day the matter would be laid before the Throne. Sir T. Wade demanded, among other things, that his delegates should be present at the investigation which was to be held in Yunnan. But this reasonable proposal was strongly objected to, and it was only when threatened to withdraw the Legation that passports for Mr. Grosvenor and his party were granted. Great delay ultimately ensued in commencing the inquiry, and Sir Thomas Wade several times reported that he thought he was being trifled with. The Prince of Kung occupied time in complaining of the bearing of the British Envoy and requiring direct communication from his superior in England. Lord Derby's reply was a despatch to our Minister expressing firm support and approval of his proceedings. Li-hsieh-t'ai, who was early incriminated, was sent on a complimentary mission to Burmah. Meanwhile the telegraphic information of the murder was rendered doubly significant by the arrival of Colonel Browne at Shanghai with fuller reports. It then became established that a month before the expedition advanced from Bhamo a Chinese dealer had brought information from Momein to Bhamo that a large body of troops was in readiness to oppose its entrance into China; that Colonel Browne had been met as he moved forward by rumours that he would be attacked; that the same rumours were current in Mandalay, the capital of Burmah, six days before the attack was made; that on the 21st, the day before the attack, Colonel Browne had observed Chinese reconnoitring his position; that the Chinese who made the onslaught shouted friendly warnings to his Burmese escort while specially directing their efforts to the destruction of the other foreigners. Not the least remarkable incident was this, that immediately after the attack some Burmese attached to Colonel Browne's party received in his presence two letters from other Burmese, petty officials acting as the King of Burmah's cotton agents at Manwyne, to the effect that Mr. Margary had been killed by Chinese; that subordinates of the Momein authorities had arrived from Momein; and that a large body of troops were surrounding Colonel Browne preparatory to setting upon him. The second of these letters stated that the warning it conveyed was forwarded by direction of three Chinese sent to Manwyne by the Chinese authority at Momein. The Burmese were exhorted in these letters to separate themselves from the English.

Mr. Ney Elias had taken another route, intending to join Colonel Browne later on. He was stopped on the way by Li-hsieh-t'ai and by the chief of a reclaimed tribe, who stoutly declared that, passport or no passport, he should not enter China by that road. He had, accordingly, to turn back.

The Commissioners afterwards appointed by the Chinese Government to inquire into the Yunnan outrage made a remarkable admission. They stated in a memorial to the Emperor that, according to the evidence of Li-hsieh-t'ai, the notables of Momein having heard that a large foreign force was to enter their country, had therefore called out their trainbands for the protection of their persons and property. According to the memorial, the Sub-Prefect, Wu, affirmed that he knew nothing of this but Sir T. Wade appears to have had evidence that the committee room of the notables who issued orders for the armed opposition to the travellers was actually in the office of the Sub-Prefect, who could hardly, therefore, have been ignorant of the proceedings. The papers forwarded by Mr. Grosvenor from Yunnan leave no doubt that a meeting of notables was held, and that they made a requisition to Li-hsieh-t'ai to act as their executive officer. Li appears from the correspondence to have by no means taken the initiative, but to have obeyed the orders of this Council or Committee with a full sense of the seriousness of the risk. The Chinese Commissioners themselves state in their official memorial that Li-hsieh-t'ai had forwarded to the Acting Governor-General of Yunnan, Ts'en Yü-ying (but after the attack), two letters addressed him by the notables of Momein, and had added on his own account that he was actively preparing for the defence of the frontier. Ts'en replied that he was to keep the people quiet.

Among the papers forwarded by Mr. Grosvenor from Yunnan

were the depositions of Wu, Sub-Prefect of Momein. In these he mentions the receipt on the 21st of December, 1874, of a despatch of instructions from the Government of the Province upon the subject of Mr. Margary's errand. These instructions open with the precise words with which the notables commence their first letter to Li-hsieh-t'ai. The purport of the letter which begins with this remarkable coincidence is as follows: the notables write that they have just learnt that the British Government is despatching three Commissioners from Burmah into Yunnan, and that Mr. Margary has been sent from Peking to meet them. Orders have been received from the authorities that Mr. Margary is to be safely escorted on his way. But foreign intercourse is objectionable, as bringing with it annexation of territory, establishment of religious missions, and trade. The people of Momein, who had fought the rebels for nearly 20 years, would now further prove their loyalty by excluding the foreigners. Mr. Margary should be sent out of the country in safety, but when he returned mobs should assemble and hem him in tumultuously. He should be exhorted with righteous argument, and intimidated by hints of danger.

The letters which contained these instructions were put forward by the Chinese government as authentic, and it is noticeable that they represent Chinese officials deliberately proposing to inspire popular excitement against foreigners. Sir Thomas Wade traces the source of inspiration to a higher point than the local notables of Momein. He is convinced that whatever happened was done, if not by the direct order, at least with the approval of the central Government. This conclusion, he argues, is justified not only by the circumstantial evidence collected in the Yunnan case, but by the conduct of the Chinese Government in other cases within his experience. Momein is the capital of a sub-prefecture of the province of Yunnan. The Governor of the province of Yunnan, Ts'en Yü-ying, was one of the most ruthlessly severe officials who ever trampled out a rebellion. At Tali, by his orders, 50,000 of the Panthays, men, women, and children, were massacred. Mere cruelty in suppressing a revolt is no reproach in China. When Yeh in 1855 beheaded 70,000 persons in Canton, many of whom had been surrendered by their own relatives, the decapitation of 500 prisoners a day seemed to shock no one. Ts'en, however, was accused of massacring many who were not guilty of rebellion, and he was actually in danger of impeachment for his merciless severity. Such a man was not to be trifled with. His subordinates trembled at his word. He was in possession of letters from the Chinese Central Government enjoining the protection of Mr. Margary. The Sub-Prefect Wu had knowledge of these instructions. It is incredible, says our Minister, that the Sub-Prefect should have ventured on a course at variance with the Governor's instructions unless he had authority. The Governor must have received and passed on separate and secret instructions. Such is the inference of our Minister. Orders in so many words to drive Colonel Browne back *vi at armis* would not have been given by the Central Government. In a despatch from Shanghai, written in August, 1876, Sir Thomas Wade indicated the mode of procedure likely in such a case to have been adopted:—

"The utmost length that the Central Government would have gone would have been to issue an Imperial Decree reminding the Governor that this mission from India was without precedent; that, as Governor of a frontier province, it behoved him to see that the Empire did not suffer, yet always so that the Government should not be embroiled with foreign nations. State papers that have from time to time fallen into my hands are my authority for the assumption that, if it moved at all, the Central Government would have moved by these means. What I advance is, no doubt, hypothesis, but I cannot ignore the past."

The Governor-General of Yunnan, Ts'en Yü-ying, who, independently of the inferences here suggested, was by his official position responsible for any grave crime the scene of which was within his provincial jurisdiction, was never brought to trial. On the contrary, it is amazing to find that he was one of the three Commissioners appointed to investigate the outrage. It will not surprise anyone after this to learn that the Court contented itself with censuring and degrading minor officials, and with condemning to death 11 unfortunate savages, kidnapped in the debatable land, who were feigned to have murdered Mr. Margary for the sake of plunder. The Prince of Kung, the Chief of the Chinese Foreign Office, strove hard to evade the production of the Governor Ts'en at Peking. Note after note demanding his presence there was left unanswered, and Sir Thomas Wade quitted Peking without a definite reply on this subject and without any assurance on which he could rely that the conditions which he was prepared to accept in lieu of judicial satisfaction would be fulfilled. His abrupt departure from Peking on the 14th of June alarmed the Chinese Government. The Grand Secretary, Li Hung-chang, was invested with special powers to treat with him, and in due time the two Ministers met at Chefoo. Sir T. Wade broke ground by requiring either the production of the Governor Ts'en Yü-ying or the reasons why he should not be produced. The Prince of Kung

did at last give his reason. In the absence of tangible evidence against him, Ts'en could not be summoned. But this evidence Sir T. Wade declares that he was unable to give until all the parties for whose production he had pressed should be in Peking. After some further *pourparlers* he determined therefore to waive his demand for the trial of Ts'en. On the other hand, he insisted on the concessions in general practice for the future embodied in the Chefoo Convention. Of course, he stipulated that the miserable savages whom it was proposed to murder judicially should not be put to death; and in the proclamation approved by Sir T. Wade, which was to be posted throughout the Empire, telling the story of the Yunnan outrage, it was expressly stated that the evidence against the accused was insufficient, and that their punishment was therefore declined, the English Government preferring security for the future to vengeance for the past.

Before the Margary outrage the necessity for a re-adjustment of our diplomatic and commercial relations with the Chinese Empire had become painfully apparent. The domestic troubles of China and the long minority of her Sovereign had prolonged the period of forbearance. A second Regency of the two Empresses, destined probably to be a long one like the first, began in January, 1875, when an infant Emperor was chosen. Our Minister had given special notice of his intention to require from the Chinese Government such security for improvement as he might be able to report as satisfactory; but being temporarily occupied in conference relating to the emigration of Chinese to Cuba he had taken no further step when the telegraph brought the intelligence of the assassination of Mr. Margary. Thus it came to pass that the exaction of guarantees for improved diplomatic and commercial relations was attached to his demands for reparation for an act of treachery and violence. The Chefoo Convention, the document which embodies the agreement come to as to these three objects, is naturally divided under three heads—(1) settlement of the Yunnan case; (2) official intercourse; (3) trade. A special article relates to the coming Mission to Tibet. We have already published the text of this Convention. The commentary on it in Sir T. Wade's report is full of interest. He utterly repudiates the inference, drawn from the fact that it aims also at other objects, that vengeance upon Mr. Margary's murderers had been bartered for blood money in the shape of commercial advantages. From the beginning he had fought for an improvement in our relations on three grounds—first, that we had specific matters of complaint; secondly, that before the Yunnan outrage he had given notice to the Chinese Government that an amelioration was required; thirdly, that the Yunnan atrocity was but a consequence of a policy of which the restrictions embarrassing foreign intercourse in trade or otherwise were both a cause and a symptom. More detailed observations on the subject must be postponed.

YOKOHAMA MARKET REPORT.

FEBRUARY 2ND, 1878.

IMPORTS.—Only half a week's business has been done. The Old Japanese Calendar (still universally observed by the Chinese) has not yet entirely given way in Japan to the European. The *inaka* or up-country merchants, who still keep to the ancient date, settle their accounts now and have generally returned to the provinces for the purpose. Exchange of native currency against dollars has also been against them, and consequently, the native merchants in Yokohama have had no means of immediately moving on goods bought from foreigners. Business has therefore been mainly confined to speculative purchases "to arrive."

YARNS. The, at present inexplicable, demand for these goods for arrival,—still continues, heavy contracts being reported. Sales for immediate delivery are not large. For all details we refer our readers to the Tables.

COTTON PIECE GOODS. Light shirtings are wanted at our quotations, but there is no stock: other varieties dull. As will be seen from our sales column, the business done is unimportant.

Of business in fancy goods, we may make the same remark, and refer to the tables for all details.

IN WOOLLENS, we have only to report sales in Mousselines de Laine as per table quotations, finer qualities command rather higher rates. For other goods there is either none or little demand. Our quotations for blankets are obtainable, but we have not heard of any transactions. The whole Woollens market is naturally affected by the same cause as mentioned above, in reporting on Cottons.

EXPORTS:—SILK. During the week but little change has taken place in this market. About 350 shipping bales have been received for inspection into foreign godowns; but it is impossible to say how much of this will actually be settled.

Prices are a trifle easier; say \$10 per picul for medium and inferior qualities of Hanks; but higher classes are getting scarcer and scarcer as the season advances, and are consequently more firmly held.

The slight fall in prices we have noted above is hardly to be taken as an indication of any disposition to give way in these grades on the part of native dealers: they are kept as well informed as ourselves of the state of affairs in Europe and act with the same caution; but exchange ruling so much in their favour, they can afford to take \$10 less than a week ago for the same goods, and yet receive for them actually the same return in *yen*. For Quotations, refer to tables.

TEA.—Business in this Staple gives but little matter of interest to comment on.

Settlements for the closing week amount to some 850 piculs consisting almost without exception of Medium to Good Medium Grades which, as stock in hand is limited, continue very firm.

Arrivals come in very slowly and native dealers declare that with the exception of "Fine Grades" the stock up country is all but exhausted.

EXCHANGE:—A considerable amount of paper chiefly exchanged between the banks and banking merchants, was sold on Hongkong and Shanghai for the steamers which left early in the week. Hardly anything has been done in sterling, both Import and Export markets being quiet: the bulk of the sales in the former being 'to arrive' and the Chinese New Year Holidays interrupting work in the middle of the week.

We quote:—London, 6 months Bank 3s. 11d. Private 3s. 11½d. Hongkong Demand Bank ¼ per cent disc. 10 days sight Private ¼ per cent disc. Shanghai Demand Bank 7½ 10 days sight Private 7¼. BULLION. Gold *yen* 385 Kinsatsu 424.

* To connect with the *Oceanic*, O. & O. S.S. sailing Feb. 10.

*. The dates of Arrival and Departure of the Mitsu Bishi Company's steamers are susceptible of alteration, consequent on the necessity imposed upon the Company—by its contract—of connecting with the steamers of the Pacific Mail.

*. No days for Arrival or Departure of the Pacific Mail Company's or Occidental and Oriental Company's steamers having as yet been fixed, we are unable to tabulate them. Each separate steamer's departure from her port will be notified in the Table below, and the day of her probable arrival at her destination.

*. Three days are allowed in the P. & O. Company's Schedule for transit of the Mails between London and Brindisi.

*. Two days are allowed in the Messageries Company's Schedule for transit of the Mails between London and Marseilles.

Yokohama, January 1, 1878.

ADVERTISEMENTS.

PHENIX FIRE INSURANCE CO., OF LONDON.
(ESTABLISHED 1782.)

The importance of the transactions of the Phoenix Fire Office may be estimated from the fact that its payments in satisfaction of Claims for Losses by Fire have exceeded

TEN MILLIONS STERLING.

THE MANCHESTER FIRE INSURANCE CO.,
(ESTABLISHED 1824.)

These Companies will accept Risks for large amounts upon Buildings, Furniture, Goods and Merchandise of all descriptions, at current rates of premia :

Claims will be paid immediately proof of loss is tendered to the Agents.

HIOGO—Sub-Agents,
PHENIX Co., Messrs. HECHT, LILIENTHAL & Co.
MANCHESTER Co., CHAS. BRAESS, Esq.

KINGDON, SCHWABE & Co.,
General Agents in Japan.

Yokohama, January 1, 1878.

NORWICH UNION FIRE INSURANCE SOCIETY.
ESTABLISHED 1821.

This Society, originally established in 1797, and re-organised in 1821, offers advantages to the insuring public which other companies of more recent standing are unable to do.

In case of Fire, the Agents are authorised by special powers from the Directors to adjust the claim.

RATES FOR YOKOHAMA.

Gedown, First Class.....	12 Months.....	1½ Per Cent.

THE STAFFORDSHIRE FIRE INSURANCE CO.

The Undersigned having been appointed Agent to the above Company, is prepared to issue Policies at Current Rates at Yokohama and Tokio.

E. L. B. McMAHON.

Yokohama, January 1, 1878.

SCHOOL FOR CHILDREN IN SWITZERLAND.

MADAME A. JAQUEMOT (née Dogny) proposes to establish at Geneva, Switzerland, a Boarding School for Girls, and for Boys under 12 years of age; where they will have the advantages of a sound education and sedulous domestic care.

Boys over 12 years of age may be committed to Madame Jaquemot's charge as boarders, and parents can thus secure for them the comforts of a home, with the opportunity of attending one or other of those educational establishments for which Geneva is so justly celebrated.

Madame Jaquemot proposes to go to Europe by the French Mail of the 10th February, and parents wishing to avail themselves of sending children home under her personal charge, must address themselves at once to her, at No. 170, Bluff.

DISAFFORESTATION.

THE evils of disafforestation are felt more or less in nearly all countries, for in nearly all has the mistake been made, of unduly and unscientifically clearing the land of old timber, without educating new; but in no country has the evil been worked to such an extent, nowhere are its disastrous consequences so clearly marked, as in the huge neighbouring Empire of China: and with such an example before her, so clear, so forcible—the blindness of Japan, if the same errors be committed here, will be little short of ‘judicial.’ In the Chinese Empire, the rapacity of officials, who have had to fill long purses during a short tenure of office; the frequency of rebellions, during which vast tracts of land have been ruthlessly devastated; and the necessities of an ignorant, untaught, teeming population, which has been utterly reckless in the destruction of growing timber;—all these causes together, in the absence of any governmental supervision of forests, have finally resulted in the absolute disafforestation of provinces, whose area in square miles has to be reckoned by the million; until it positively pays to import timber from far distant places for the use of the builder, the joiner, the carpenter, —even of the charcoal burner. While to this lamentable error may be mainly traced, as their primary cause, the successive years of scarcity, of increasing severity, which have at last culminated in famines, as wide in their extent as they are hopeless of relief. Instead of handsome and valuable woods, clothing the hill sides and varying the monotony of the plains: affording shelter for man and beast, and providing nutriment for the ground—one of Nature’s best proofs of the truth that the Useful and the Beautiful are one—there is not the least vestige of a forest, not a solitary tree; even the shrubs have been cut down and used as fuel, and in all its desolation is indeed left visible ‘the nakedness of the land.’

The process and effects of disafforestation may be briefly described. In the gorges of the hills, where the tiny rivulets first spring into life, but where the clouds, intercepted by the hill-tops, often let fall a deluge which turns these rivulets into roaring torrents; here we find nature clothing the steepest hills with an ample mantle of wood and herbage, whose matted roots grasp in close embrace the soil necessary for their own existence, and also hold in bondage the dislocated rocks and boulders which would otherwise descend into the watercourses below. The leaves and branches of the trees break the force of the falling rain, and protect the soil from being washed away; they shield it from the too ardent rays of the sun, and also from the biting frost, thus rendering more equable the temperature beneath them. Fallen branches, twigs and leaves decompose rapidly, forming a large quantity of vegetable mould, a compost of exceeding richness and value, always easily accessible to the horticulturist; and of which a part is discharged, during heavy rains, into the valleys below, where it assists in fertilising the soil. And, by no

means the least benefit, the hills, thus protected by Nature, absorb much moisture, retain it long, and give it off gradually, thus furnishing an almost never-failing supply to the rivulets which feed the streams; or by percolation, give their waters to springs, in the far distant valleys below.

Comes the wood-cutter. Having already devastated the plains and valleys, he climbs upwards through the gorges, on to the hill sides, and makes him a timber slide, or perhaps a flume. Then, all the long day, the woods resound to the ruthless axe, the trees fall, the hill side is bared of its covering; for the destroyer, having a facile means of moving his timber, cuts every stick worth carrying, and shoots or floats it, down his slide or flume, into the nearest river. Then he goes; and leaves behind him a hideous scar of desolation. Straightway Nature takes her revenge. The bare hill-side is exposed to the full blaze of the sun, to the unbroken torrent of the rain, to every blast of the storm. The stumps, the matted roots, the tender undergrowth decay, crumble, melt; and, as one by one are loosed the bonds which held it together, the steep hill literally topples and falls. The disintegrating action of alternate rain and frost; which there is now nothing to intercept, comes into full play; the soil is washed away to become silt, the rocks split, crumble, granulate; landslips occur. Down go hundreds of tons of hill-side into torrent beds, whence, broken into fragments, which undergo a continual pulverization in their passage down the streams, they are carried to the plains, and supply the material for the shingle and sand banks, and finally for the ‘bars’ which ruin the navigable rivers into which, before disafforestation commenced, only rivulets of useful water were used to flow.

The consequence of this fall of solid matter into the rivers is that their beds are raised, the streams overflow their banks, and cut, to right or left, a new channel through the softer arable or pasture land, leaving behind them their old courses, chaotic masses of boulders, sand and shingle, worthless for cultivation. Naturally, this new water-way is inferior to the ancient one in many respects: it is wider, but far shallower, sometimes little better than a water covered marsh; the least obstacle sufficing to turn it, it is more sinuous; and so the river loses its capacity for navigation, and many times the area of ground is lost to the country, than the measure of the original geologic rift through which it anciently flowed.

Should, however, the ground be under cultivation, and valuable, and should the population in the district affected be sufficiently dense; then, at great cost of labour, the construction of artificial banks is resorted to. But these have to be continually cared for and regularly raised; for, year by year, each winter disintegrates the hills, and the gorges discharge material for choking the river beds. As the banks are raised, they have to be widened at their bases, for no earthwork of the kind will stand, except at a low angle from the horizontal; and so year by year, good land is filched away from the farmer by the never satisfied stream,

When this has been going on for many years, the bed of the river is actually raised high above the level of the land, and the width of the base is measured by furlongs, instead of yards: as in the instances so familiar now to foreigners, on the railway line between Kobé and Osaka; where the permanent way is actually carried through tunnels of considerable length under the beds of these rivers. Indeed, along these eighteen or twenty miles of railway, the whole process of disafforestation and its consequences may be seen in its various stages. The wood-cutter at his deadly work; the ancient river bed, dry and choked with boulders, or an arid waste of sand; the stream meandering through the plains, so shallow, that when a man is tired of paddling a canoe, he steps out and walks; the embanked river, with its *levées* in various stages of development, from the early one where the railroad is carried over by a bridge, to the later—where, as we have said, the bed is pierced by a tunnel.

But this is only one of the results of reckless clearing of timber from the hills and gorges. The rain storm, descending upon the bare hill, runs off more rapidly than formerly; the trees, undergrowth, and herbage,—and the soil which supported them, and which their roots held together,—are no longer there to retain their proportion of the rainfall; from both these causes, consequently, the flood waters are discharged in greater volume; and, unless successfully prevented by the process of continually raising their banks, the rivers overflow the plains. On the other hand; in the dry season, under the uninterrupted rays of the sun, evaporation goes on more rapidly on these bare, desolate hills; the valley springs no longer get their supply; the rivulets no longer creep through beds of moss, shaded by stately trees, or run merrily through little rifts or clefts in the rock, miniature gorges, where the ferns are trees, and a leap of six inches is a waterfall. Trees, moss, ferns are all dead and gone; the rills expire under the fierce heat, nor furnish to the stream their tiny contributions of which its volume is the sum: the river shrinks to a mere thread, in the midst of a parched or fetid waste, and will sometimes even die away and disappear, before it reach the sea.

These are the effects of disafforesting the hills. In the plains, the work has generally been done before, though here we must be understood to refer mainly to China; for by a happy chance, the religious cult of Japan, and we are also glad to believe, some innate love of the Beautiful, have preserved here, almost universally, groves and clumps of trees, which generally, but not always, give shelter to an image or a shrine; avenues to temples, even single large trees, remarkable for their beauty, which may be observed, almost everywhere, standing in solitary state amid the waving corn. The main highways are also bordered with trees, which, under the Tokugawa dynasty at least, were protected, cared for, and, as they fell, replanted. (We notice with regret that, since the Restoration, this important duty has been neglected.) But where, as in China, the plains have been denuded of their natural growth of timber, mischief almost incalculable has been done. There are always in such localities, some portions of the land, which from irregularity of surface, or other cause, are unsuitable for cultivation, and it is here that never-wasteful Nature plants. But here, the greed of the official, and the ignorance of the farmer—each looking only to the present, and neither to the future, have marred her work. The plains are denuded of their wood; and then the destroyer, mounting to the hills—as we have described,—completes the work of ill. A few short years—one may write ‘months’—and the cultivator begins to feel the evils his unconscious enemy has wrought.

They are not a few. A heavy compulsory tax upon his labour to keep up the river banks; continual loss of his land by their encroachments on the fields; occasional de-

vastation by floods, alternating with dessication from want of supply to the springs and streams; deprivation of leaf-mould compost for his ground, of shade and shelter for his beasts. He feels the want of fuel and building material; the game the forests sheltered is driven away; mast, acorns, chestnuts, and other forest fruits no longer supply him with food for himself or his pigs; and, by no means an inconsiderable deprivation—especially to the Japanese—no longer does the grateful, tender green of the foliage of spring, the deep, grand, restful masses of the summer trees, or the brilliant, changeful tints of autumn give their welcome beauty to his tired eye: nothing relieves the pitiless glare on the arid, monotonous expanse of stony hill and sandy plain; and one chief component of ‘the Joyous Life’ has gone from him for ever.

It would lengthen this essay too much to push our argument farther: but there are books, easily accessible, which go on to show how, in the course of decades, climate rapidly changes under the effects of disafforestation; and how, under the pressure of change of climate, races and nations deteriorate, decay. But this is foreign to our purpose: which is to warn, not to discourage. It is fortunate for Japan, that—though signs of partial disafforestation are already too visible throughout the land; though it is evident that the wise old laws, regulating the cutting and planting of timber, have fallen into temporary desuetude;—yet enough remain of her ancient forests to form sufficient nurseries for new. How these should be developed; how her bare hills may be reclothed; how her deserts may be made to ‘smile, and blossom as the rose’—in fine, how Japan may re-learn “Forestry,” which seems to be a forgotten, or wilfully discarded science—this we propose to show in the next number of this Review.

SANDALS *versus* BOOTS.

A MODERN essayist has declared that the ‘dress centre’ is the necktie; and that, given this one element, and a due knowledge of the comparative anatomy of habiliments,—a man’s costume may be predicated. Such an extravagance is excusable in an essayist who writes only to amuse, but an exaggeration it remains. There is none, however, in applying the principle to soldiers’ dress in a different manner. ‘Give them plenty to eat, and set them well on their pins, and you’ll have no stragglers’ was a *dictum* of the Duke’s; and his great opponent, Napoleon, was said to have won as many battles with his soldiers’ legs, as with their arms; and it is incontrovertible that, next to his stomach, the feet of a soldier require most care. Nothing is so fertile a source of embarrassment in a campaign as sore feet, and it has always been a source of wonder to us that the English War Office should cling so obstinately to the old conventional ‘ammunition boot;’ instead of seeking for some form of foot gear which will give full play to the muscles without chafing the skin, and permit the men to walk as anatomists tell us they should, with the axis of the big toe pointing to the centre of the heel.

This condition is perfectly fulfilled by the sandal; and when the Japanese, whose feet have been, for many generations, unspoilt by confinement, adopted the European ‘high-low’ and the ‘butcher boot’—for the sole reason, it would seem, that their army should approach in appearance, as much as possible, the armies of Europe; they made a great mistake. They could never hope to find recruits with feet adapted for wearing leathern boots. At the age of fifteen, the shape of the foot has been already determined, and up to this age, most Japanese drag about heavy wooden pattens, which, besides giving an ungraceful protuberance of knee, inevitably produce flat soles and spreading toes. How can the twenty-six pedal bones of such a subject find space for free action in a stiff, galling, leathern case, whose normal size, from the manufacturer’s,

or Commissariat point of view, is a question of length, instead of breadth? We hold that they have made other mistakes in the same direction,—and not only in army-clothing; and shall take an early opportunity of expressing an opinion on the whole question. This in parenthesis: the special point of the boot is of such importance that its consideration should not be delayed for a week, and it is a fortunate thing for the native army that reform can be made in this particular without incurring the smallest loss; for boots being perishable, all that need be done by the War office is to stop buying or making them, and to get ready a more useful form of foot-gear to replace the useless and injurious one as it wears out. The machinery they have in their boot factories can be easily adapted to the manufacture of sandals, and any stock of leather they happen to have may be used in this, or may be put to other purposes.

Of course, though our attention has long ago been drawn to this subject, our immediate incitement to write on it to-day is an article from the *Hochi Shimbun*, of which a translation appeared in the issue, last week, of this Review. Apart from the 'protectionist' nonsense which disfigured it, the article was a sensible and practical exposure of an evil; and it is only because it was not exhaustive—in that the writer failed to suggest a complete and practicable cure; that we supplement it now from our own wider knowledge and larger experience. The gist of it is in the following sentences:—

"The custom of our soldiers wearing leathern boots originated with the military system of Europe, but it is found in actual service, that Japanese soldiers gain more advantage by rejecting than by wearing them; and though they may be ornamental in time of peace, has it not been shown that, in time of war, which is the real duty of soldiers, they become entirely useless?"

"This was actually seen at the beginning of the South Western war, last year. Although our soldiers, obeying the Regulations, proceeded to the seat of war, wearing their leathern boots; the disadvantage of these foot-coverings were so great, that defeat was hazarded. They at once discarded their boots, and wore straw shoes."

Precisely what happened to that horrible instrument of torture, happily for some years discarded, the black 'stock' which used to torment the British soldier. The first thing he used to do, on going into action, was to throw it away. It is recorded of a private soldier, a witness before a Parliamentary Committee, or some other examining tribunal: that, being asked what he considered the most suitable costume to fight in, and which he would himself prefer; he replied:—"Fight!—In me shir-rt sleeves, and widout me braces, yer honner!" And his homely phrase spake volumes. In the case of the Japanese soldiers last year, we read that 'defeat was hazarded' by adherence to the War Office regulation boot. A strong statement to make, but by no means, we are assured, beyond the truth. As for their being 'ornamental' that is purely a question of taste,—to the European eye, the Japanese infantry soldier is anything but ornamental, and his ill-fitting, unblacked, boot is almost the ugliest part of his slovenly uniform. But now comes the question: what should be substituted in its place?

There is no doubt that man walks most steadily and comfortably on his naked feet, as the peasantry, in all countries where McAdam has made good roads, prove by their proceedings when going to fair or market. Your Irishman walks with his brogues slung over his shoulder, on his shillelagh; your decent Scotch lassie ties up her shoes and stockings in a bundle, and only puts them on just before entering the town. And a very pretty sight it is to see her washing the dust from her feet in

'the burn that wimples thro' the clachan;'

even your English tramp walks down barefooted, to Epsom, on the night before the Derby. But campaigns

are not carried on upon macadamized roads, and some protection is absolutely necessary for the sole of the foot; especially in such a country as this, where special dangers exist, familiar to every sportsman:—the sharp bamboo, the treacherous point of the cane stump; one may almost add, the spikelets of the rice stubble. The sole of the foot and the toes, therefore, must have some protection, and this can be perfectly given by a modified form of sandal. Not by the *waraji*, the native straw sandal in use on roads or paths in Japan, however improved it might be in plaiting, or thickened by use of more straw, as the writer in the *Hochi Shimbun* appears to think might be done. A straw sandal, when quite new, may shield the foot from the dangers we have enumerated, but the moment it becomes wet, anything will pierce it, and it becomes useless. A minor objection is that it will not, as made now, last out a day's march, though we grant that the Intendence could generally supply *waraji* by local requisition. But its failure, when wet, to afford the necessary protection, is completely and sufficiently condemnatory.

The Romans and the Greeks were indubitably the best, most perfectly appointed, and most successful soldiers of the ancient world; and Xenophon and Cæsar both tell us of marches that could never have been made without proper foot-gear. The Roman 'solea' has always appeared to us, theoretically—for, unfortunately, we only know it from drawing or description—the most nearly approaching to perfection. The sole was of stout leather, tanned or untanned, as the circumstances of country or campaign dictated. When possible, it was studded with hobnails. Its method of attachment, similar of course in principle to that of the *waraji*, was more secure, resembling that in use in Cashmere. All sandals must have the toe-thong and heel loop, but the deficiency in the *waraji* is that has but one loop on each side of the foot. In the better type, which is in use in the mountains of Cashmere and the Alpine Punjaub, there are two, one before, one behind the ball of the foot. They incline slightly towards each other, and the thong passes through, and connects, all together. It appears to us, therefore, that the Cashmere method of attachment, grafted on the Roman 'solea' would constitute the perfection of foot-gear for the Japanese army. It would be more durable than the boot, which, on a campaign, will never wear more than ten days at most; it is far more easily packed and carried; on emergency the soles can be made from raw hide, which is easily procurable where tanned leather cannot be got; it is much cheaper; can be altogether manufactured in the country; is by no means unsightly; and finally—fulfils best the object of foot-gear, by being perfectly innocuous to the foot and the easiest of all pedestrian encumbrances. Another advantage is that, in summer at all events, the sock may be dispensed with—and the sock is an absolute necessity when the foreign boot is worn;—and, in winter, when additional clothing may be necessary for the foot, the Japanese *tabi* may be worn, which will last five times as long on a sandal, as a woollen sock does in a boot. Some slight adaptation of the *tabi*, such as converting it into half-hose, leaving the form of the toe the same, and having it dyed of different colours according to regiments, or universally black, would make the whole foot covering everything that could be desired on parade. There is only one small improvement left to recommend. Unless the sole is thick enough to raise the foot well from the ground, some slight protection for the toes would be necessary. This might be got in two ways: by slightly prolonging the sole, and turning it upwards, or by adding a toe case of leather. It would probably be always an advantage to have the whole 'solea' made rather in excess of the area of the sole of the foot. The former is the cheapest, and would have to be adopted on service, when the soles were cut from raw hide on the march; the latter the most sightly, and might be the

regulation pattern. During the Indian Mutiny, when our soldiers had to make long forced marches through jungle, they 'razeed' their boots (to use their own slang) into just such a sandal as this: cutting away the upper leather, leaving a little of the toe of the boot, and then adding the Cashmerian attachment of loops and thong.

We strongly recommend the article in the *Hochi Shimbun* to the attention of the Japanese War Office. And if the *Hochi Shimbun* would return the compliment we have paid it, by extracting and translating this supplementary article from our columns, it would strengthen itself in its striving after reform. And the Government should seriously consider the question, which is of no mean importance. Not merely is the efficiency of its soldiery lessened by the use of the foreign boot; but from the army, its use is spreading to the ranks of the civilian population. Nothing but inexorable fashion, and the fact that adult European feet are so deformed by the use of the boot from childhood, that they are not fit to be seen, prevents Europeans from throwing it off. Is it possible to imagine anything more beautiful, anything better adapted to the purpose for which it was designed—Nature's idea of the Beautiful—than an infant's rosy foot. Who can wonder at a young mother, in her baby-worship, kissing the quivering little toes as young mothers do. And can anything be imagined more hideous than the foot of an old beau of the Regency,—callous, distorted, deformed, and writhing under the knife of the chiropodist? Happy Japan! whose people suffer from no corns, no bunions—the *argot* of whose language possesses no equivalent for:—'How are your poor feet?'

MUNICIPALITY OR MURDER?

SO hopeless has been thought the task, that scarcely any journalist in Yokohama has written of late years in favour of the re-establishment of a Foreign Municipality; for what he wrote there was but small chance of his inducing any one to read. But the murder of William Boorn should surely rouse us to action; and, though it seems selfish to say it, should that action lead to a successful result, the man will not have died in vain. Or must we wait, as suggested in our last week's 'Notes' till a consul, an eminent merchant, or a banker has been garrotted in the Main Street, to see this community rouse itself from its apathy, and clear Yokohama from the stigma of being what it is at present, the worse managed settlement in the East?

Seven years is the full life of a generation here, and it cannot be expected that present residents should have the needful acquaintance with the history of municipal mismanagement. But this history is on record, and when called upon, the writer can undertake to place it before the public. Meanwhile, as shortly as possible, we wish to make a proposition for reform. It is simply that the system which has been found so successful in Kobé should be adopted here, viz: that the Governor of Yokohama and the Board of Consuls should sit as *ex-officio* members of a Municipal Council, with a due proportion of non-official colleagues, elected from and by the inhabitants of the foreign settlements. That this body should have the entire municipal control of the settlement, appointing an executive officer—a secretary or Municipal Superintendent to attend to the proper execution of the work ordered to be done by the various sub-Committees; should raise and pay a strong and efficient police force officered by Europeans or Americans; should revive the old scavenger corps which did its work so well, or reorganize the existing, which does it so badly; should have power to raise loans for permanent improvements, and as security, to hypothecate their revenue—and, without recapitulating more details, to exercise, in fine, all the functions of a Town Council. The funds to be pro-

vided in the same way as at the Southern port: viz. by the whole of the ground rents being paid to them: the Council paying to the Japanese Government the ordinary land tax on the acreage covered by the Bluff and Town Settlements.

This system has been found to work perfectly well in Kobé: there is nothing in it new or strange; the admixture of the official and non-official elements is perfectly familiar to at least English residents all over the East,—*testo* the Legislative Council of Hongkong and other similar Councils in the Indian Presidencies and other Crown Colonies, where Parliamentary institutions do not receive full development. They are not fully satisfactory to us, of course—because the official element always preponderates, and the Governor of the Colony has great influence over the official members, who are all,—except the representatives of the Majesty of the Law—in other capacities his official subordinates, so that they dare not oppose the measures he supports, and he virtually carries a majority in his pocket. All which is distinctly repugnant to Englishmen bred under representative institutions, and whose ancestors certainly did not die in the fifteenth century, that their descendants might be 'poll-taxed' in the nineteenth. But here, the Town Council would be, not a legislative, but simply an administrative body. And many of the official members, unpaid consuls for the minor Treaty-Powers, being also merchants, their sympathies would naturally be divided between their official and non-official colleagues; and by judicious management, the non-official members, on all questions which did not trench upon political relations, might therefore secure a working majority and thus—actually, though not ostensibly, we should enjoy the benefit of those representative institutions which are our birth-right. It is hardly necessary to say that mutual forbearance and the exercise of common-sense would have to be shown by all the members of such a Council to enable it to work harmoniously. But that such harmony is attainable has been fully proved by the success of the experiment at Kobé,—as shown by its six or seven years' records,—which, though not complete, has been as nearly so as could be expected. The Consuls there have accepted as a truth, that the proper guardians of the public purse are the representatives of those who contribute to fill it, and by an unwritten rule, the Working and Financial Committees, or majorities of them, have always been drawn from the non-official element. And, on the other hand, the elected representatives of the Land Renters have always had the good sense to vote into the Police and Cemetery Committees, the official members of the Board.

One great stumbling-block in our way has, within the last month or two, been happily removed. To all petitions, or memorials, or representations hitherto made to the powers that be, one objection was always ready to their hand:—'what are you to do with the Chinese?' Now the Chinese have a Consul, who would be an *ex-officio* member of the Town Council. Hitherto, also, advocates of Municipal Reform have been too ambitious. With the example of Shanghai before us, we have sought to get the power to tax; and though Sir Edmund Hornby wrote a memorandum in our favour, it did not turn the scale. We must avoid now committing the error of asking too much. It can be easily shown that our settlements can be lighted, policed, and otherwise cared for, by means of the ground-rents, less the merely nominal land-tax payable to the native Government; and taxation is not necessary. The ground-rent is such a large percentage upon the present assessed value of property, indeed, that taxation would be resisted. But even if it were impossible for us to do all that we wish with our annual income, we could do something, and that something would be infinitely better than the nothing now done by the native Government.

There is one more argument to add, to complete this outline, or fore-shadow of the scheme. Why should our co-nationals at Kobé enjoy advantages of which we are deprived. Does not the 'most favoured nation clause' include a 'most favoured port' clause? The greater generally contains the less. Why should Englishmen, owners of land in Kobé, have their ground rents spent on the settlement, and their lives and property secured by efficient police and lighting; and their comfort consulted and their tempers spared from exacerbation by having good streets, good drainage, and a public garden provided for them; and have the spending of all this money in their own hands;—while here, Americans, French, German, and men of all other nationalities are exposed to be knocked on the head for want of a policeman, or to fall into the creek for want of a gas-lamp? Nothing but the selfish apathy which is expressed in the popular saying that 'what is everybody's business, nobody does' has hitherto prevented our taking the necessary steps to obtain protection for our property. Now that a life has been lost, and the choice is offered to us of 'Municipality—or Murder?'—it is possible that Yokohama may awake.

EDITORIAL NOTES.

WHEN Pascal, to point his sarcasm, quoted in a note to the article on 'Mixed Courts' which appeared in this Review last week, instanced the difference between the legal systems of France and Spain, he took an example which, if not the one best known to himself, would be most familiar to his readers. The British Isles would have afforded him a stronger example still; in England the Common Law, founded on the feudal system, which was itself not yet extinct; beyond the Tweed the law of Scotland founded on, almost copying, the *jus civile* of the Romans; beyond the hills the Highlanders recognised no law but—well, we will not rake up the little failings of the ancestors of many of us. The *jus civile* has provided a legal system for nearly the whole continent of Europe; but the Common Law of England extended over a wider range, has become the foundation of the system of the United States and of the Australian Colonies, and has been found, when necessity has urged a change, both comprehensive and compressible. In Hindustan, applied at first only to the residents in the Factories, the law of England has allied itself to the *jus civile* and the system thus formed has gradually spread over the land. In all cases, have the tenures existing in different districts been respected, so that there are to be found as many systems of tenure as there are tribes. From the fee simple of Bombay, to the eccentric law of inheritance prevailing on the 'Oromandel coast, all find interpretation in the courts established in India. The law of England prevails; but while administering that law, courts give every recognition to established customs; no expense of money or learning has been spared to perfect this tribunal to administer the law: and though Sutte and the horrors of Juggernaut have been stamped out, all customs which do not outrage universal morality have been respected. Thus has grown a system which claims respect from Native and European. By considering these well-known instances of the adaptability of legal systems, and by studying the lessons taught by English rule in India, Japan may learn what errors to avoid in attempting to make a tribunal for the nations around her, even if she does not find an immediate solution of her difficulties.

THE mystery of William Boorn is another instance, if one were wanting, of one of the difficulties attending the mixed jurisdiction of the Consular staff in Eastern ports; and of the stumbling-block which the mutual jealousies among foreign representatives place in the way of effective police and municipal regulation. Whilst the Consul is responsible for the punishment of offenders, he is powerless to regulate the police staff of the Settlement, and is absolutely without means of detecting the perpetrators of a crime. The native police are actively employed in protecting useless lamp posts and unsightly telegraph poles from despoilment by drunken sailors, whilst the valuable life

of man remains unprotected, because the diligence of the police is bounded by the curb stone. That it has been possible in a small settlement for one of its residents to walk out of the inn in which he had taken a room, into the dim obscurity of oblivion, until—weeks afterwards, the discovery of his tragic fate recalls the recollection of his existence, is in itself a matter for wonder, if not for reproach. There is another point, too, which calls for notice, the responsibility of the Consul for the fellow-citizens entrusted to his charge. Does the interest of the Consul cease with payment of the poll-tax called registration fee? Are Consuls exempt from the universal rule which requires a man to render an account of his trusteeship? We think not. But it may be said, that this man was unregistered, that he had not paid the needful tax, and so no trust had been created. There was a doubt about his nationality; a lapse, during which the various Consuls sought, not the honour of protecting his corpse or avenging his death, but an excuse to shift the burden of enquiry on to other shoulders. This man was a bird of passage, the poll-tax was not required of him.

Again, does the fact of service under the Japanese Government exempt a man from payment of this tax? Is he thereby, while at the same time that he is unrecognised by his Consul, relegated to his just privilege as an Englishman:—the right to be taxed only by his peers?

SINCE the article 'Municipality or Murder?' was in type, we have seen a letter addressed to the *Japan Gazette* by M. Degron. Two or three irrelevant and offensive paragraphs cut out, the remainder of his letter is sensible enough. To-day he receives from us the answer to his question. The French have always been remarkable for their administrative power, and we are glad to believe that M. Degron's compatriots agree with him upon the question of necessity for a Municipal establishment, and that we shall have their aid in our attempt to get it in the manner we have suggested. M. Piquet's name is well remembered by old residents as that of one of the most active and useful members of such a Municipal Council as we had in his time: we doubt not that the French community here can furnish us, at need, with a worthy successor.

WE hope that the community will not read our third article to-day and then—lay down the paper and do nothing. A Public Meeting should be called by the Consular Board for discussion of the question, and a requisition, signed as numerous as possible, should be at once sent to them requesting them to summon it. Who will take the initiative?

That we are not tied, hand and foot, and delivered over to native municipal neglect, is clearly shown by the following paragraph, which we quote from a letter addressed by Mr. Sydney Locock, then Secretary to the British Legation, on the 6th November, 1867—when communicating to a Committee of Land Renters the terms of the arrangement under which we now suffer:—

"H. M. Minister further directs me to inform you that the arrangement now concluded with the Japanese Government is not a permanent or unalterable one; on the contrary, should experience at any future time show that its revision is desirable, it will be in the power either of the foreign R. R. or of the Japanese Government to call for a re-consideration of the question." (Mr. Locock to "Mr. MARSHALL, President of Committee of Land Renters.")

No one will venture to deny, we think, that 'revision' of this arrangement is highly 'desirable.'

THE Japanese author of an article on soldiers' boots in the *Hochi Shimban*, which appeared in our last number, will see that we altogether endorse the practical part of his essay, in an article to be found in another column of this Review, and supply him, for future argument, with various illustrations and examples, the outcome of military experience, ancient and modern. Had he confined himself to the practical question—'leathern boot *versus* straw sandal'—he would have done excellently well. But his work is disfigured by an excrescent growth of theory; and this we must cut away.

He urges, as an inducement to the use of straw shoes, instead of leathern boots, that thereby, in some degree, will be lessened the importation of foreign goods, towards

which, he says:—‘our strongest endeavours are being directed’ and that thus will be realized ‘the desire of the people to protect themselves against foreign importations’; and, scattered through his article, are various other phrases, all repetitions of the same thought. Notably, he objects that, though the manufacture of leathern boots is being carried on in Japan, still the material for them has to be imported; and he would, if he could, see these manufactory shut up; their machinery sold for old iron, the workmen and workwomen employed deprived of their livelihood, and the use of boots and shoes altogether dispensed with—because foreign-tanned leather figures as a small item in the import trade returns.

Now we must, perforce, ask our friend of the *Hochi Shimbun* one or two of the most elementary questions in the primer of Plutonomy—the science of the Laws of Wealth—which he has probably heard of before under the misnomer of Political Economy, such as:—What constitutes the wealth of a nation? What evidences the wealth of a nation? Which is the best market in which to buy the commodities you want? We answer them for him:—1o. The real wealth of a nation lies, not in a reserve of coined bullion, (which is ‘accumulated wealth’ such as Japan makes no pretension to)—but in its producing power, and the amount of commodities that power can produce:—2o. The best evidence of a nation’s wealth is its purchasing power, as evidenced by the foreign commodities it can get, in exchange for its native ones—and thus, as a corollary—the imports of a nation form the readiest measure of its wealth:—3o. The best market to get your commodities in is the cheapest.

As Captain Jack Bunsby, of the *Cautious Clara*, remarks of his oracular deliverances:—“Whereby, why not? If so, what odds? Can any man say otherwise? No. Awast, then! *The bearings of this observation lays in the application on it.* That ain’t no part of my duty. Awast, then, keep a bright look out for’ard, and good luck to you!”

WHY will not some of our ‘supercilious Sinologues’—instead of wasting their time and their brains over the comparative values of f and h, turn their acquaintance with the vernacular to some fruitful account, by addressing letters to the Japanese Newspapers? We commend to their attention,—as well as to that of our readers,—the farrago of nonsense which we translate to-day from the *Hochi Shimbun*, on the subject:—‘Preparation of the Interior for the admission of Foreigners.’

It will be seen, as the publication of this Review progresses, that our selections from the native press will be generally chosen with the intention of showing to advantage the growth of native thought: but this growth will, of course, be constantly pushing in wrong directions, constantly breaking out into unhealthy excrescence; and, so far as our influence extends, it will be continually exerted in guiding native opinion into the right path; in gently, but firmly rebuking its error. But in the columns of the foreign press, how ineffectively can this be done! To what good end can argument, satire, expostulation, ridicule be used, with a deaf disputant? And deafness and the ignorance of any common language are identical.

This article from the *Hochi Shimbun*, which—it must be stated—is an editorial effusion, is really very valuable to us at the present moment, when we know that Revision of the Treaties and Tariff is under discussion between native statesmen and foreign Ministers. For it indicates the current of opinion of at least one section of Japanese society. It is evident that the writer is earnest and honest, though so woefully wrong. Would it be too much to ask that some of the young gentlemen in the various Legations, whose daily task it is to translate such articles for the information of their chiefs, should be told off to give this well-meaning, but mistaken, patriotic old Tory a few simple lessons in Plutonomy? To tread still a step or two farther on delicate ground, may we be permitted to suggest to the Committee of the Japan Branch of the Asiatic Society, that they might do real service here by an occasional change of front. Instead of educating Europe into a proper appreciation of Japanese classics, could not some of the members find time to translate, and could not the Society afford to publish, translations into Japanese of simple, elementary, works on Trade and Finance; or,

more ambitious attempt—to render into the vernacular some of the earlier papers contributed to the archives of the Cobden Club? Surely such work would bear more ‘fruit’ than attempts to reconcile half-a-dozen linguistic systems of literation,—some cognate, some divergent,—for the purpose of translating—for common use—books which when they are translated, are of no earthly practical value.

EXCEPTION has been taken by some pedants, to our use of the convenient word ‘sinologue’, to indicate a student or master of the Japanese language. We demur to the objection, and shall continue to use the word. For, in the first place, no one can study the Japanese language to advantage or with hope of success, without being a ‘sinologue’ proper—a Chinese Scholar; and, secondly, the English language permits the expansion of meaning in such a term of modern coinage. ‘Orientalist’ or ‘Eologue’, or ‘Oriental Scholar’ would probably be the best general term to use, in speaking or writing of the men who devote themselves to the study of Eastern languages:—but ‘sinologue’ was originally coined by themselves to indicate the *species* of this *genus*, which devotes itself to grubbing in the unspeakably unremunerative field of Chinese literature; it is a word constantly used by themselves to denominate those working, on the other side of the hedge, in Japan; and may fairly be used to classify students of any tongue cognate to, or under obligation to, Chinese—and, in spite of pedantic purists, we shall continue to use it.

We trust that those sinologues who have put their acquirement of difficult languages to the practical use of giving us ‘dry light’ in the shape of dictionaries and grammars; or ‘fruit’ in histories, archæological works, intelligible records of travel, or descriptions of the manners and customs, superstitions, cults, ceremonials, costume, trades and manufactures of China and Japan—or who have conversely, and more generously, because with no hope of fee or reward, given to the Chinese and Japanese our Scriptures, and classical text books on various subjects, in their own vernacular—we trust that none of these will fall into the error of imagining that our satire is directed against them. To such the greatest respect is due and is universally paid. Such names as Legge, Morrison, Davis, Huc, Williams, Hepburn, will never be mentioned otherwise than reverentially in this Review. But the ‘supercilious sinologue’ who pitches on a misprint, and gloats over an omitted accent; whose review of a brother student’s book is a catalogue of his omissions of accents or insertions of superfluous dots; who reprobates almost as crimes, methods of spelling names of men and places, which, six months before, he was perfectly content to use himself—this is the sinologue for whom we entertain contempt, as a more than usually useless creature, because, having acquired a power, he puts it to a petty use. He is the bird that can sing, and will only whistle. And to him we shall have not the least hesitation in addressing, on occasion, the objectionable ‘tace’—*maskee* (another barbarism) his futile anger at our ‘unpardonable rudeness.’

FEW subjects of so slight moment have been so fully discussed as that of Boots, which we have taken as the text of one of our essays this week. Since the days when Robert the Horned first pointed the pikes of his crackowes,—or those of Richard II. when men used to tie their twisted shoe-toes to their knees by chains of gold or silver,—or the epoch when, as Chaucer tells us, people cut copies of the tracery of Late Decorated Church windows in their upper leathers,—and passing the only comfortable period, the 16th century, when the shoe was fully expanded and gave free play to the toes;—down to the era of deep-thinking Germany, and the somewhat smoky lucubrations of the great Professor Teufelsdröckh, foot gear has evoked clerical anathema, has had fulminated against it papal bulls, has been excommunicated, descanted on in philosophic essay and legislated for by Act of Parliament; and, until recently, slovenly old gentlemen and comic nigger melodists who wore boots with a superfluity of turned up leather at their toes, were perhaps violating the laws of the land; for an unrepealed statute was till then in existence, forbidding, under pain of due fine or imprisonment, the wearing of boots with toes turned up more than two inches. What tyranny! A poll-tax is bad enough, but this counts heads only—but a penalty on boots

'uplifted like the petal of a flower' would of course be indicted in duplicate. One-legged Greenwich or Chelsea pensioners would, in such a case have indeed an advantage over their contemporaries.

WHILE this number of the *Japan Times* is being made up for the press, we receive the *Gazette*, with a letter in it from 'Municeps,' containing an alternative proposition to that which we make, ourselves, in another column. This he divides into five heads, as follows:—

- 1.—"That a meeting should be secured of a representative member of at least five of the chief nationalities resident in Japan.
- 2.—"That the whole question of the present system of Japanese municipal direction should be prepared in the form of a paper to be laid before the meeting; and that a second paper, embodying the outlines, and such details as may suggest themselves, of the proposed reformation should also be drawn up for the information of the preliminary meeting.
- 3.—"That the meeting should frame certain resolutions setting forth reasons why the present system should be abandoned and another adopted; and that then, if necessary, a public meeting should be called for the purpose of ascertaining the sense of the community.
- 4.—"That the resolutions passed by the meeting should deal, in a concise yet comprehensive manner, with the question of finance; and that they should leave nothing in doubt in respect to the advantages to be derived from the new system, and the liabilities, if any, to be incurred under it in addition to ground rent.
- 5.—"That when the wishes of the majority are ascertained, the members of the first Committee should wait upon the proper authorities to support the request of the community for the establishment of a Municipal Council."

He refers to the failure of an attempt made, a year or two ago, to get a *quorum* for a Public Meeting, to consider the subject of Municipal Reform: and predicts a similar failure on the present occasion. 'Municeps' writes with an evident knowledge of his subject; but we venture to suggest that there was no such stimulant then as an undiscovered murderer to spur the community into action: and also to ask him how he would have his first clause carried into effect? Who is to elect the 'representative member' of each of the five nationalities who are to form the preliminary committee; and who is to prepare the 'papers' to be laid before this committee on the occasion of their first meeting?

We have the interest of this community so much at heart; we take—from old associations—so great an interest in the subject of Municipal Reform; and we are so deeply impressed with the conviction that something must be done, and done at once;—that we should have no hesitation in abandoning our own proposal in favour of any other which seemed likely to attain sooner the common object. If 'Municeps' will communicate personally with the conductor of this Review, it may be possible for us to give additional proof to the adage that two heads are better than one.

THE JAPAN TIMES.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN TIMES must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

YOKOHAMA: SATURDAY, FEBRUARY 9, 1878.

NOTES OF THE WEEK.

OF the three home mails nearly due when we issued our last number, the *Alaska*, from San Francisco, was the first to arrive, on the 5th inst., followed at intervals of a few hours, first by the P. & O. steamer *Malacca* with the English mail of the 21st December, and then by the M. M. Co.'s *Volga*, bringing us London

dates of the 14th idem, the English steamer four days ahead of her contract time, the Frenchman two days behind his.

As for the *Alaska*, she left San Francisco on the 3rd of January and consequently took thirty-three days coming across. She is a most remarkably strong-built and comfortable boat, but she belongs to the past generation of steamers, and we would recommend the Pacific Mail Company to place her in their coast line. For the *City of Peking* and *City of Tokio* to make fast passages between ports, and then be followed by such sluggards as the *China* and the *Alaska*, robs an efficient ocean postal service of much of the praise which is justly its due. The usual China and coast steamers have arrived and departed, and an inward and outward mail from Hakodate have come and gone. It would seem that the Mitsui Bishi Company had determined on a more regular service to the Northern ports than heretofore, which is to be commended, not that there is much of a 'roaring trade' carried on between here and the Northern Islands, but that it is so satisfactory to know that the service is there if required. No homeward mail has necessitated the burning of the midnight kerosene up to the time of our going to press, but the *Oceanic* is advertised to leave for America with the mails for Europe, &c. on the 10th inst. As far as cargo is concerned, we believe she could leave on Saturday morning; but anyhow, as she goes on Saturday night or Sunday morning, there will be none of that desecration of the Sabbath which we were thinking about denouncing.

We ought not, while recording the movements of the mail steamers, to fail to note that the *Oceanic* made the trip up from Hongkong in five days and seventeen hours. Coming up against the monsoon, this is splendid time, and shows the advantage which these large, long steamers have over a vessel like the old *Bombay* (now happily taken off the line) and which, in the Formosa channel, for instance, would lose a couple of days dancing about 'like a billy-goat in a furze-bush'—to use a happy simile furnished to us by a nautical friend.

But on a long sea line, like the Pacific voyage, it is a doubtful question—(not in the least degree doubtful to the writer, as our readers will see presently) whether any special advantage is to be got from speed. What constitutes Happiness? Excitement, hurry, rapid motion? Certainly not. Rest, repose of body, freedom of care, from sense of responsibility, from anxiety—a healthfully quiet mind. Now on such a vessel as the *Oceanic*, a passenger can hardly fail to identify himself with the ship and her reputation, he shares the anxiety of her officers that she should make a faster trip than her last, or should beat some rival steamer; that very reprehensible practice, betting on the extent of the day's run, is encouraged; and when the sun is 'taken' at noon and the lat. and long. ascertained, the dreadful announcement that she has only made 385 miles, instead of 390, disturbs every body's digestion. Then again, every thing is sacrificed to speed; such a ship is almost always a screw; long, narrow and low, she rolls, gets her decks wet, has her galley fire put out now and then, and inflicts all sorts of minor miseries on her passengers. But her main fault is that she goes at such a pace that those on board of her have no time to get acquainted with each other, or to enjoy each other's society. Why, 'tis hardly worth while unpacking your clothes, far less unbosoming yourself!

Telegraphic communication having been interrupted, we have had no later news from Europe since the date of our last, until Thursday afternoon, when from China we got some of M. Reuter's messages. They tell us nothing that we did not know. Peace is clearly being arranged, though one message says that the Porte had no official notice of an armistice having been signed. No explanation is given of the mysterious report of Lord Derby's resignation, which is, to say the least of it (with Mr. Bantam) 're-markable'; nor is any fresh light thrown on the bare announcements made some days back indicative of Austria, France and Italy having united with England in a joint policy.

How difficult it is to refrain from writing on the 'situation in Europe'! And yet how little to the purpose we should write, if we indulged in the easy task. And how our local subscribers would bless us! As for our readers at home—

Changes are to occur here in high place. General Van Buren's immediate return to Yokohama is announced, where his numerous friends will be very glad to see him. What a valuable member he will be of the new Municipal Council. Mr. Russell Robertson's approaching departure on leave is also announced: he will go as soon as all British subjects have paid up their 'poll-tax.' And Don Emilio Ojeda, First Secretary of the Spanish Legation, has the enormous slice of good fortune sent to him of being ordered to Rome. The usual few gaps in our private circles are being made by the outgoing mails, and we hear of the approaching return of one of the first pioneers of trade in Japan—but these changes concern their business and private friends, and not the public.

A short story by M. Rudolph Lindau, translated from his bro-

ther's paper *Die Gegenwert*, has appeared in the *Herald*. The scene as usual, is laid in Japan and the hero is an English merchant. We regret that we have not space to say something anent this, and about translations generally: but we are obliged to be brief. There is only one point, the finish, which we must comment on slightly. The poor man, having lost all his money and owing seven thousand odd dollars, breaks down and dies of a broken heart. Why could he not have gone on living and working till he had paid it? If there were many men of 'Mr. Cooper's' fibre here, what a terrible mortality there would be in mercantile circles in Japan.

Un secret de Polichinelle! We have taken, as an extract this week, a beautiful piece of writing by one of our best English writers. And we have not given his name! We expect to be accused of plagiarism now, as well as threatened with the birch for false Latin. We trust none of our readers will betray our confidence.

CORRESPONDENCE.

 We do not hold ourselves responsible for the opinions expressed by Correspondents.

To the Editor of the 'Japan Times.'

Dear Sir.

Will you allow me to correct two errors which have, I see, crept into the foot-notes of Chap. V. of "The Times of Taiko."

1st.—The three thousand ladies of Rikkin ought to be described as "the most beautiful women of China," not 'Japan.'

2nd.—The formula "Namu Amida Butsu" is an invocation to two divinities not three.

I am

Yours truly

F. Brinkley.

Tokio, 5th February, 1878.

NOTES AND QUERIES.

QUERIES.

Qy. 2. Where can I find any account of the ceremonies in use on the occasion of birth, death, or marriage, among the Japanese? Do any of the French, Dutch or German works on Japan contain such? I fail to find any information on the subject in English books. A work like Sir John Davis' "The Chinese" is a great desideratum in Japan.

(In process of answer.)

B. H.

Qy. 3. Can any of your readers give me information respecting the comparative value of money in Japan five centuries ago, and at present?

Were the actual incomes of the Nobles larger or smaller than as represented by their official rent-rolls, and have they now, as a matter of fact, more money to spend on themselves, than they had in old times? (Unanswered.)

N. or M.

Qy. 4. To what amount of restraint was a Noble subjected by the supervision of the 'karo.' Could he, for example, go out alone, or with only a favourite attendant? (Unanswered.)

N. or M.

NOTE II. CURLING.

CURLING is a game played upon ice, and is peculiar to Scotland, or rather to Scotchmen; for whithersoever Scotchmen emigrate, and whither do they not?—if ice is attainable, there Curling may be had. As good a short description as can be given of it is:—that it is the good old English game of bowls played upon ice, with stones instead of wooden bowls, with a fixed, instead of a moveable 'jack' and with the additional scientific advantage that a 'bias' can be given to the stone to either side, and modified at the will of the curler, by his method of delivery; instead of the player having to depend, as in bowls, upon the mere dead 'bias' of lead put into his bowl by the maker. But some there may be so sunk in ignorance as not to know 'bowls,' except in its cramped, degenerate, form in a 'bowling alley'—which is quite another thing; so a more detailed description of Curling may be deemed desirable.

To give it then: an expanse of ice, some sixty yards by six, is first swept clear of snow; and this should be carefully done, and so as to leave no uneven little lumps detached from boot-heels, which would interfere with the passage of the curling stones. It is convenient to bank the snow a little at each end. On this 'rink,' at two spots, one at each end of it, and forty-two yards apart, the point of one leg of a large pair of wooden compasses, (such as sergeants use when drilling 'awkward squads' to measure the men's steps,) is set, and with the other point are described two or three concentric circles, the inner a yard, the outer four yards in diameter. These circles are for convenience of measuring. In the centre of each circle is set up a small wooden pin, like an exaggerated chess pawn, called the 'tee.' Twelve yards from the 'tee' down towards the centre of the 'rink' is drawn a line across it, called the 'hog line,' and six yards behind each 'tee' is drawn another, called the 'base' or 'roaring-line.' Then the 'rink' is ready for use. The implements required are:—1°, for each player, two 'curling-stones' which weigh from thirty to forty pounds each, which are very like a flattish cheese in shape, (exactly like the 'cheeses' we used to make out of marbles when schoolboys) and which are, for choice, made from pieces of Ailsa Craig, but which may be made from any granite or other stone which will take a high polish. There are as many fashions in curling stones as there are in coats: and there are dandies in each department: but when the writer last played curling, the latest approach to perfection was an Ailsa Craig stone, with the slightest, hardly perceptible departure from the absolute plane, in the direction of the sphere applied to the bottom of the stone. In the hand of a 'deacon of the craft,' such a model could be propelled with greater certainty and power to its mark, than one resting on a base which was absolutely flat. The means of propulsion is by a handle which rises from the upper face of the cheese, so shaped and placed that, when grasped, the knuckles of your four fingers almost touch the stone. 2°, for each player a broom, made of gorse, the use of which is to sweep from before an advancing stone any small particles of snow or crushed ice which might stop its way:—and 3°, a couple of 'cramp plates,' pieces of thin roughened iron, on which the players stand when delivering their stones. These, I believe have now altogether superseded the old 'cramps' or 'sparrow bills,' which used to be fixed upon the players' boots. In an adjacent hut, or on the pile of gorse or 'broom,' repose a basket of outcake, with a glass without a foot, and a fat stone bottle of whiskey; and the rink is ready for the curlers.

Probably the best way that can be chosen to make oneself understood by those unhappy readers of the *Japan Times* who have never curled, is to describe an imaginary game; or rather, to draw upon memory for a description of a real one played ah! how many years ago! before I crossed the Line, and learnt that ice was a necessary of life, and that Christmas festivities might be utterly marred by its absence, claret-cup being undrinkable, and butter so losing its consistence that it might be spread on bread with a camel's-hair pencil!

(To be continued in our next.)

(We are extremely sorry to interrupt our correspondent in his interesting Note, but pressure on our space compels us to hold over his account of a day's curling till next week. As Wednesday last was the coldest day we have had this season, and it is freezing hard as we write, we may fairly hope the ice will bear as well next Saturday as it promises to do to-day.—Ed. J. T.)

THE TIMES OF TAIKO.

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GYEMON.

Chapter VI. A VICARIOUS DELEGATE.

AS for the Delegate's men-at-arms and the other members of his suite, they carried away from the Kokuseki inn, unequivocal evidence of its hospitality; for, though a few wrapped their hoods about their heads and made some

show of adjusting their rain-coats, the main part, despising all such precaution, gladly offered their flushed faces to the buffets of the drifting mists, and staggered merrily off, laughing uproariously at each other's muddy mishaps, or breaking into snatches of song that came mockingly back to them from the rocky reaches of the glen. But soon the road, sometimes overhanging abysses, where nothing but fog and darkness was visible, sometimes retreating into quiet little spring-fed nooks, descended rapidly and yet more rapidly, offering but scant security to the erring feet of the thirty gentlemen. The roar of the snow-swollen cataracts, muffled now by some massive barrier of cliff, broke out anon with a startling din; and as each step left the ruddy fire and warm wine of the hostelry farther and farther behind, gaunt trees and half withered shrubs twined themselves more and more thickly over the narrow pathway. Gradually the weird desolation of the prospect, and the disordered tumult of tempest and torrent, chilled the careless laugh and checked the half finished song on the lips of escort and equerry, till at last, those in front pausing, and those behind hastening, the whole procession shrunk together, and crept silently through the gloom.

The wind had by this time gathered a steady force, and was pushing the raw air into every corner and crevice of the glen, while large drops of rain and sleet fell heavily among the half melted snow and dimpled the face of the slimy mud. It was impossible to exclude that bitter vapour. In vain the Delegate hid himself away among his cushions and wrappers; colder and colder grew the air, and at every breath he inhaled, the wind seemed to rush down his throat and tear his heart with an icy grip, till at last he gathered his feet under him, and bowing his head upon his knees, almost groaned aloud. They had now reached the very depths of the glen, and were so encircled by mist and gloom, that under any other circumstances a moment's halt would have been intolerable, yet Fukuhara's agony was so keen that he had opened his mouth to call for aid, when suddenly two of his bearers, reeling forward, fell on the ground, and instead of attempting to rise, lay writhing and twisting in the mud. Fukuhara had scarcely time to observe that more than half of his followers were staggering like drunken men, before he heard a sound of voices coming, as it were, from the mists overhead, and bitterly then did he curse that halt on the plateau of the "Black Rock" for he knew that the wine had been poisoned, and that he had seen Somé's face for the last time in the pictures of the charcoal fire.

Not one of the thirty gentlemen was capable of drawing his sword. Like the Delegate, they had apparently struggled to the last against the effects of the poison, but now, some prostrate, some bent double as they stood, they were all so occupied with the consciousness of coming death, that they scarcely recognised their host of the plateau in the leader of the bandits who now swarmed down the rocks on either side of the road. Full thirty years of his age had the host shaken off since he set out as the Delegate's guide, and the words that he now addressed to Fukuhara had no sound of decrepitude.

"Sir," he said, coming close to the palanquin, "little as you will value my apologies, I am none the less constrained to make them. I sincerely regret this deed, which, for the rest, will no doubt be one day amply avenged." Then addressing the Delegate's half unconscious followers, "Gentlemen," he cried, "pray excuse the indignity we are obliged to put upon you, but we have imperative need of your clothes. My men here will assist you to disrobe."

A pleasant night and a pleasant place, in truth, for such a performance, but even a naked encounter with the icy wind could scarcely enhance the misery of the Delegate and his followers at that moment. Passively they suffered themselves to be stripped, and an hour later the sleet drifted over the faces of forty naked corpses in the glen of Katase, while five new criers cleared the way before the host of the Black Rock Inn, as he lay back among the cushions of the palanquin.

Meantime, the castle of Tamaru was busy with preparations for the reception of the Delegate. Men who are on the eve of a great fraud are more than commonly careful of circumstance and arrangement, and Kuramoto, knowing the character of the man he had to deal with, and conscious also of the character of his own dealings, spared

no pains to place between himself and enquiry every possible obstacle of ceremony and hospitality. Before the vestibule, an ample square of freshly plaited rushes waited to receive its first impress from the Delegate's foot, and from its outer edge a triple line of handsomely bordered matting led to the court-yard gate, beyond which two heaps of newly dredged sand stood ready to construct a virgin road for the honoured visitor. No sooner did the Delegate's palanquin appear in sight than a hundred hands scattered this sand in semi-circles, throwing it always inwards, lest any grain might be trodden by inferior feet, and over this, through four ranks of foreheads bowed to the ground, the Delegate passed to the gate, and thence to the vestibule within.

It might have occurred to one who watched this pageant without being himself concerned in it, that the Delegate's face expressed more amusement than gratification, as he received the profuse salutations of Kuramoto and the chief officers of Tamaru, and possibly also such an one might have judged that the rules of etiquette were as studiously abridged by the visitor as they were exceeded by the visited; but Kuramoto took little note of these things, for his nature being to give everything that costs nothing, and exact the largest possible return, he was always glad to have a balance of any sort in his favour. So the reception passed off very comfortably, and the comptroller felt that his part had been successfully acted, as, looking up for a moment after his last bow at the threshold of the Delegate's room, he saw Fukuhara's eye resting with much appearance of satisfaction on a little parcel that lay beside his tea-tray; a little parcel very neatly wrapped in paper of blue and silver, and having a tiny piece of dried "sea-ear" inserted beneath the deftly tied knot of red and white floss that encircled it.

"Yakeishi," said the Delegate to one who seemed to be his chief attendant, and who never ceased smoking except to fill his pipe, "Yakeishi, just untie this thing, and see what it contains."

Yakeishi, laughing quietly, and plainly persuaded that the contents of the packet were not perishable, ripped it open with one slash of his dirk, and displayed three comely rouleaux, each inscribed with the letters "Hiyak'kin" (100 riyos). The two men looked at one another for a moment and then the Delegate said:—

"Yakeishi, I must confess that this is the first time I have had the pleasure of performing the duties of the office I hold to-day, and perhaps for that reason I find myself a little puzzled by this package. How does it appear to you?"

"Good money, Sir; good money, and better now than it ever was when Kuramoto had it," replied Yakeishi, designedly obtuse.

"Yakeishi," said the Delegate, "you may be an excellent judge of coin, but you are certainly a poor actor. Suppose however that you were Fukuhara, would you take this or would you return it?"

"Take it or return it, Sir! Well I should be inclined to think of that after I had spent it."

"Hum! Does it not then occur to you that when a man buys a thing for three or six times its value, he may be bidding for the good will of the owner as well as the possession of the article?"

"Yes, Sir, but it occurs to me also, that when a man pays his bills with stolen money he cannot well question the items."

"Yakeishi," said the Delegate laughing, "you are the very man to be Fukuhara's adviser. Just order some supper, and let us try what sort of wine they keep at Tamaru. We'll discuss the question of the three hundred riyos, when we get back to Shidzugatake."

So Yakeishi ordered supper, and in doing so found himself visited by a great many brilliant ideas. He remembered that the Delegate had the greatest partiality for eel pasties, sturgeon cutlets, omelettes, tender cuttle fish, sea-weed jelly, and a host of other delicacies, and moreover that it was Fukuhara's habit when away from home always to sup with his gentlemen and attendants, and see them partake without restraint of the same food as himself. Yakeishi delivered himself of this information more in the garb of fortuitous reflection than interested suggestion, interspersing his conversation with sundry wondrous

histories of the Kiyoto *cuisines* in general, and his master's *chefs* in particular, so that the Tamaru seneschals were constrained to enlist the resources of all the *restaurants* in Iwamura for the preparation of the visitors' supper and Kuramoto hoped, as the sounds of revel came louder and louder from the state apartments, that no feeling of indigestion might trouble the Delegate's serenity at the inspection of the body on the morrow.

The quantity of wine that was consumed that evening in the castle of Tamaru has long ago come to be regarded as a pleasant fiction, and need not therefore be detailed now; more especially as it appears to have been almost entirely without effect upon its consumers; for the Delegate's handsome face was scarcely flushed as he bade his followers good night, and walked into his sleeping room after supper.

There, lighting his pipe and throwing open the rain shutters, he sat looking out into the noble garden that surrounded three sides of the castle. Despite the frosty air, he watched the moon creep many feet above the camelia shrubbery, and heard the cry of the watchman often repeated without the gates, before he stretched out his hand to close the slides. "A cold spot that valley of Katase," he muttered to himself, his eye troubled by a cloud of pity and remorse, "a bitter spot in truth, and a wild place to lie without a coffin. I wish it could have been otherwise, but on this road there is no halting."

Another moment and the shutters had been closed, when, from behind the camelia shrubbery, there came a sound which to an unpractised ear might have been the quick sliding of a sash, but to the Delegate declared itself at once as the stroke of a sword upon wood. Listening a moment, he knew that some one was cutting a passage into the garden within a few yards of the place he was sitting, yet he neither shut the door nor changed his position, but merely looking round to see that his sword was within reach, sat quite still in the broad path of the moonbeams. Once and yet once again the strokes were repeated, and then a little mist of snow flakes was shaken from the camelia leaves as the figure of a man pushed its way through. A mere boy he seemed, of some seventeen or eighteen summers, his face emaciated and deadly pale, but rigid with an inflexible purpose, and in his hand the naked sword whose strokes had cut him a passage. Scarcely had he advanced five steps when he stopped astonished, for the Delegate was speaking to him in a very gentle but determined voice:—

"Young man, I have no doubt that some good reason induced you to adopt this curious fashion of entry, but you may now put up your sword and announce yourself, I think."

Thus addressed, the lad, quickly sheathing his sword, bowed his head to the ground and answered:—

"Sir, my name is Shozayemon Kinya. I have no words to apologize for my rudeness in breaking in thus like a common robber. It is not the certain forfeit of my life that deters me from seeking admission at the proper entrance, but the knowledge that after my death, my father's suicide and my master's murder must remain unavenged. By their memories I conjure you to hear my story, and help me to fulfil the trust that alone makes my life valuable."

"Kinya," replied the Delegate compassionately, "before you say any more, come in and sit down. You look cold and tired."

But these words seemed utterly to confound the young man. He looked up at the Delegate with a wild glance of uncertain hope, the blood flashed for a second into his pallid face, and staggering in his attempt to rise, he had fain rested his hands upon the ground, when he found himself supported by a strong arm and almost lifted into the room. He was conscious of being seated on a wadded quilt beside the brazier, of seeing the moonlight and the frost shut out, of hearing the Delegate call for food and wine; and then, the return of the hopes that starvation and misery had expelled from his heart, the comfortable fire breathing on his frozen limbs, the kind, strong voice of the Delegate, bidding him eat and forget the past, and telling him that his story was already known and his father's memory honoured—all these things breaking down the barriers of his manhood, he dropped his head

upon his hands, and had no power to restrain his happy tears.

After a time, the Delegate showed him Nakatsukasa's letter, and told him that the whole extent of Kuramoto's crime was already known, and would be fully punished. But the comptroller, ignorant of all this, slept with Taka's fair head resting on his arm, and cast up the totals of many princely revenues in his dreams.

When the sun had climbed the hills and looked in a second time on the corpses in the glen of Katase, all the principal vassals of Tamaru assembled in the hall of state to prepare for the Delegate's inspection. Before the alcove stood the bier of milk white pine, supporting a large urn, within which the body had been placed in a sitting position and so completely packed in vermilion that only the head was visible. The urn itself, some four feet high and twice as many in circumference, was enclosed in a thick case of the same wood as the bier, and over the whole a pall of white silk was drawn. The chief vassals knelt in two lines, extending from either side of the bier to the threshold of the room, but the place of honour, nearest the pall on the left, waited to be occupied by the comptroller after he had escorted the Delegate to the coffin.

The true cause of death was only understood by a few, and so important was it deemed to limit this cognizance, that even the pursuit of the supposed assassin had been relinquished. For the rest, Nakatsukasa's debilitated condition had been sufficiently well known at court to exempt him from the military service imposed on all the nobility at that time by the war with Corea. Such a combination of caution and circumstance seemed surely strong enough to control the event.

The Delegate, accompanied by Kuramoto and a few attendants, all treading softly, as men are wont to do in the presence of death, entered the room amid a solemn silence, which the rustle of the bowing vassals' robes alone disturbed. Arrived at the side of the bier, the comptroller retired to the vacant seat at the head of the rank of retainers. On his right, swathed in white silk and almost within reach, lay the short-sword* that had wrought the mischief, and, reminded thus suddenly of his crime, his attention was for a moment fascinated by the weapon. When he looked up he saw that the Delegate was observing him curiously.

At a sign from Fukuhara the pall was raised, and the Delegate, after gazing for a short time at the head of the dead man, rendered shockingly livid by its vermilion environment, turned and fixed his eyes so long and so steadfastly on Kuramoto's face that a stir of astonishment passed through all the vassals.

"Kuramoto," he said at last, "what was the nature of the lord of Tamaru's death?"

Now although the official report, signed by the three chief vassals of Tamaru, had ascribed Nakatsukasa's decease to his constant malady, and although, presumed, the Delegate had seen that report, it was very natural that before the bier he should demand some solemn confirmation of the facts. Yet the comptroller betrayed no small emotion as he answered.

"We have already had the honour to report that his death was the result of an illness from which he had been long suffering."

Thereupon the Delegate, turning so as to face the two ranks of vassals said:—

"You have heard the chief comptroller's statement. Do you all confirm it? I ask you because your master's face is the face of a man who has died, not of disease, but of a wound."

These words, spoken with all the assurance of certainty, excited so much astonishment in those who were ignorant of the truth, and so much consternation in those who had concealed it, that for a time no one found voice to reply. At last an old vassal, advancing his seat a little before the line of his fellows, said:—

"Sir, I fear that what I say may have the appearance of contradicting your opinion, but our master's illness had long been known to us all, and that he died of it is a fact

* The short-sword was the only weapon placed beside a corpse lying in state. F. B.

beyond question. We hope and pray therefore that you will find it in your power to sanction the succession, and spare us the disgrace of delay or suspicion.

"It results then," replied the Delegate, still keeping his back to Kuramoto, "that if we both persist, I in my statement and you in your contradiction, the only course will be to examine the body, a witness that will certainly establish things little to your credit. But I hesitate to take this step, for I have no wish to bring disaster upon the House of Tamaru, and ruin to all its adherents. At the same time, if I falter in the discharge of my office, I incur grave peril myself. Possibly you may discover some means of resolving these difficulties. I shall expect your answer presently, for I cannot remain here beyond noon."

All this had but one import; and the Delegate, satisfied apparently that there could be no miscomprehension, took his way back through the lines of bowing vassals, accompanied by the comptroller, who even while he exulted in the knowledge that his deadly peril had drifted harmlessly by, was still pale to the lips from its momentary encounter.

"Kuramoto," said the Delegate, when they found themselves at the threshold of the guests' apartment, "I have a document here that will, I think, help you to determine your conduct." Saying this he unfolded a copy of Nakatsukasa's last letter and handed it to the comptroller.

Kuramoto, as he read, laid the paper on the ground before him, for his hand shook so that the characters became undiscernible. He neither spoke nor raised his head, but great drops of agony rolled down his brow, and all his fertility of expedient, yielding to the instinct of desperation, his fingers twined themselves mechanically round the handle of his dirk.

But the Delegate, seeing his disorder, said gently:—

"This is between you and me, Kuramoto. No other need see it, and I only show it to you with the object of assuring you that the wound in Nakatsukasa's breast has not been made known to me by the expression of his features alone." Then folding the letter, he placed it among the burning charcoal in the brazier, adding: "I preserve the original, until I know the nature of the arrangements you propose to make."

Not small was the measure of Kuramoto's thankfulness for the happy chance that had selected so sensible a Delegate as Fukuhara. Combining all the gold he possessed or could raise himself, with the money found in the Tamaru treasury, he succeeded, before noon, in collecting a sum of four thousand riyos. Of this one half was handed to the Delegate, and the other distributed among his followers.

The bribe was enormous,* but not in excess of the occasion. Once more a solemn inspection of the corpse was made, and the Delegate publicly acknowledging that he now recognized the death to have been natural, declared Taka's son Kosaku, heir to all the titles and lands of Tamaru.

Meanwhile Kinya had remained in the Delegate's sleeping chamber, to which only Yakeishi had access. Ignorant of all that had occurred, but in his helplessness content to be trusting, he was easily persuaded to conceal himself in a huge wicker case that formed part of Fukuhara's baggage, and so was carried from the castle that afternoon. He remarked that after a short time the rate of progress was trebled, and his bearers so repeatedly changed that almost everybody in the procession must have been employed in the relays. About an hour after night-fall, however, he began again to move slowly, and presently for the first time felt himself lowered to the ground.

He waited some moments, expecting that the case would be opened or the journey resumed, but finally, astonished at the utter silence that reigned around, he raised the cover of his hiding place, and looking out, found himself alone, in a mountain pathway entirely unknown to him. Suspended from the bearing pole of the wicker case were a lamp, a box of provisions, and a parcel. Opening the last, he found that it contained a hundred riyos, Nakatsukasa's letter, and a paper with these words:—

"Go to Kiyoto, and as soon as Kuramoto shall have confessed Nakatsukasa's murder, lay before his judges your master's letter. Preserve this paper also; you will need it. Above all, do not act prematurely."

* The sum (4,000 riyos) would now be equivalent to fifty-seven thousand six hundred yen. F. B.

It was only when, ten days later, after weary wanderings and endless detours, Kinya saw the walls of the castle at Kiyoto gleam out in the setting sunlight, that he began to believe he was not the victim of some elfish trick. He was still completely perplexed about the import of the letter found hanging from the bearing-pole, for the day after its receipt, he had been able to assure himself that Kuramoto's position at Tamaru was better assured than ever. What then was he to understand by the confession spoken of, and where could he hope to lie concealed until the advent of an event apparently so remote?

Pondering over these things, he turned into a little hostel by the road side, and was in the act of seeking some information from the landlord about the inns at Kiyoto, when the sounds of a passing cavalcade attracted his attention. He looked out and saw, first some equerries, then some mounted officers, and finally a party of men-at-arms guarding six travelling chairs, of which one was occupied by Kuramoto, another by Taka, and the rest by four of the chief vassals of Tamaru.

Kinya, following the cavalcade, had little difficulty in ascertaining that Kuramoto and his fellows, charged with the murder of Fukuhara, whose corpse had been found in the valley of Katase, were now on their way to Kiyoto for examination.

Three days later, he learned that the comptroller, when put to the torture, had confessed, not indeed the murder of the Delegate, but that of Nakatsukasa, as well as the illegitimacy of Kosaku and the intrigue against himself, Kinya. Then, seeing that the indicated time had arrived, Kinya obtained access to the officers charged with the conduct of the examination, laid before them Nakatsukasa's letter as well as the paper he supposed Fukuhara to have written, and described all the circumstances of his own escape from Tamaru. The officers, unable to extort from their prisoners any confession of complicity in Fukuhara's murder, had begun to suspect that the guilt could not be imputed to Kuramoto. This suspicion was confirmed by Kinya's evidence, but many a year passed before men knew that the false Delegate had been—Ishikawa Goyemon.

Kuramoto and his mistress Taka were crucified outside the castle gates, while the fief of Tamaru was declared forfeit, and all the vassals deprived of their revenues, except Kinya, to whom the estates of the comptroller were granted in perpetuity.

If there be any light amid the darkness of Ishikawa's crimes, it is surely in part reflected by the gratitude of Shozayemon Kinya.

(To be continued in our next.)

THE JAPANESE PRESS.

JUDGES IN JAPAN: THEIR POSITION AND PAY.

(Correspondence of the 'Hochi Shimbun'.)

DISCUSSION is being carried on in all the newspapers respecting the proposed revision of the Treaties with Foreign Powers, arising from patriotic feeling in the nation, and, I believe, conferring more or less benefit on the parties concerned. Broadly divided—this discussion may be separated into two parts:—on Customs Rights, and on Jurisdiction.

Putting aside the question of Customs duties; as regards the Right of Jurisdiction, every one is of opinion that our law is incomplete and too strict; and that, unless it be revised and made lenient, foreigners could not be induced to place themselves under it; and not a few of the disputants in the newspapers are becoming aware of the value of the right of liberty of the individual; are expressing regret that this right should be utterly ignored, as in the case of arrest without evidence, long detention before trial, &c.; and are wishful for revision of the law. But I think myself that such disputants are of those who, seeing the first step to be taken, are ignorant of what the second should be. A good system of Law is of course what we want; but good administration of it is much more urgently needed. Because Law does not act by itself, but is administered by man; therefore, though the laws may be good, if they be not administered by competent men, the effect of their working will be the contrary.

For instance, compare the laws of England and France; they are certainly not alike, but, from the protection they give to the people, and from the way in which they maintain the right of individual liberty, it would appear as if both nations were under one Government.

The only reason of this is, that the laws are there administered by competent men. It may be asked:—"Do you mean to say that our present Judges are not competent men?" To this I would reply:—"Consider a little." In doing any business, it cannot be conducted precisely, justly, wisely, and expeditiously,—unless the mind of him who conducts it is at ease, and his body at leisure. The Judges who are the busiest at the present time are mostly below the 10th class* in rank, and are liable to discharge or removal during their term of office. How then can their minds possibly be at ease? They have to adjudicate from five or six, to ten or more cases daily.

How then can their bodies possibly be at leisure?

From what I hear, the expenditure granted for the Judges in the whole country does not amount to 1,300,000 *yen* per annum: nearly as much is allotted to the police in one *Fu*. Thus it is necessary at present, to divide the salaries of the judges into a great number of classes, and to make them much less, as compared with the officials engaged in the Works, and other Departments; and also to curtail the number of the Judges.

This is the reason that our rights of person and property are obliged to be entrusted to officers mostly below the 10th class, who are very busy, and bustling almost beyond description. Arrest without evidence, long detention without reason, &c. are of course infringements of the rules of justice and civil rights. Or is it that there is no law? But if judges have not the time to administer it with due care and attention, a law is an idle thing. So, however, well a law may have been drawn up, whether its effect is good, is impossible to know. If profoundly learned men are employed to frame a law, any law may be framed: but unless it is properly administered, by competent men, no good result can be gained. With such a state of things we ourselves would not be satisfied: how then would foreigners be satisfied? What then can we do? We must select competent men, raise their position, increase their salaries: and thus let their minds be at ease:—increase their number, and thus put their bodies at leisure.

Again, it may be argued:—"At present, when the money for the necessary expenditure of the country is so insufficient; how is the allotment for the Judges to be increased? This is confounding the end with the beginning." I reply:—Is not the object of our paying taxes to the Government, to obtain protection for our rights of person and property? and who should be first provided for by Government, whose duty it is to protect the peoples' rights,—before the Judges? If, therefore, a sufficient sum were allotted for the administration of justice from the Government income (and although the outlay of the country is so great, it might be curtailed otherwise) although the law be not yet revised, its practice would no doubt be greatly improved; and if then we were to set about revising the law, it would not be too late. I therefore maintain that, though a good system of law is desirable, a good method of administering it is still more needed at present; so I do not agree with the opinion of the majority of disputants. I write this in order to elicit the opinion of learned men in Japan.

PREPARATION OF THE INTERIOR FOR THE ADMISSION OF FOREIGNERS.

(From the 'Hochi Shimbun'.)

OUR interior affairs must be first put in order, before we take up foreign affairs; and in our intercourse with foreigners, this is what chiefly concerns the people at present.

The restriction of foreigners from travel in the interior, and intermixing with ourselves, our Government has no wish to prolong; but it is simply that we shall have time to regulate our home affairs first. Without such restriction, we should not be able to resist the pressure of foreigners: and in this period of "Meiji," it is only the existence of this restriction which enables us to live in

safety. But this has been so repeatedly argued in these columns that we do not think it necessary to repeat it.

But some rude disputants may ask:—"what is meant by regulating our Home affairs? Does it mean that we are to improve our interior condition by means of our own wisdom? Then, as we grow in knowledge one degree, foreigners would also advance in the same degree. We have already taken them as our teachers; how can we hope to surpass them? Even should we, failing in this, succeed in reaching to the same point as they, still we could never say that we had regulated our Home affairs. Therefore, the idea of preparing the interior for foreign intercourse will be a vain one for all future time."

Alas! those who are anxious to advance rapidly, tired of waiting for the opportunity when the interior of the country shall be so prepared, but wish at once to jump to equality with foreigners, may be misguided by such delusive arguments. But we assert that this improvement of the Interior is no such impossible thing.

Consider how England gained her wealth, which is the origin of her strength and power all over the world. What has given most wealth to England is her "Cotton manufactures." Englishmen having got hold of this one thing, have thereby greatly deprived Oriental countries of their wealth. Indeed, what we most suffer from in the total amount of our Imports is the Cotton goods manufactured in England; and it is Cotton which is depriving Japan of her wealth, and taking it away to foreign countries. And Cotton, which gives such strength to her trade, is not a production of England.

The first introduction of cotton into Europe was by the Saracens, but this does not seem to have originated the manufacture in England. In 1585 the Prince of Parma having taken Antwerp, the workmen there, in order to escape from his despotic government, fled to England; and among them were a number of workmen skilful in the manufacture of cotton. These, having all taken up their residence in Manchester, the officials of that town treated them well, and thus commenced the manufacture of cotton in England. But two hundred and fifty years elapsed, before the manufacture became flourishing; let us now consider and ascertain what changes it has passed through, down to the present time.

As the use of cotton goods became extended, and the hands of the workmen were inadequate to meet the demand, machinery was invented by degrees. Since Wyatt invented the simple spinning machinery, Arkwright, Hargreaves, Crompton &c. made several inventions at different times, and establishing great manufactories, made it quite a settled business; but still it could not be said to be at the point of its highest prosperity.

About 1770, Watt's locomotive engines were first employed in the cotton manufactures, but still, until it had undergone several more improvements it did not attain to its present state; i.e. that labour being greatly lessened, the cost of production is little, and so all the requirements of the public are met.

From what we have above described, it will be seen that even this one manufacture of cotton has required the lapse of many hundred years, and necessitated the inventions of many men in order to bring it to perfection, and to give the trade the strength it has attained. But in our country cotton is produced. And we need not wait for the appearance in Japan of a native Wyatt or Arkwright, nor for the invention of steam engines by a Watt. The method of manufacture, and the best spinning machines are in the possession of foreigners, and we have only to borrow them. So, if we can afford to employ these, we could not fail in imitating them, and manufacturing the same class of goods which they do.

This is the age of imitation; no more invention or contrivance is necessary. Thus such an argument as 'if we advance one degree, they will advance in the same proportion, so that we shall never attain to equality with them' can only be called a delusive one. If we try, and can afford to borrow their machinery, it is no difficult matter for us to place ourselves in as good a position as they.

Therefore, again we say, that to improve our interior condition all that is wanted is that we should be able to afford to borrow their machinery.

Then, so soon as our requirements are fulfilled, and the art of imitating their manufactures fully understood; then, indeed, will be the time when we shall be in the same

* Our Government officers are classified into seventeen classes, commencing with the Prime Minister at the head.—Translator.

position as they are, and then we need not distress ourselves if the Interior is thrown open to foreigners.

So the idea of internal reform is not "a vain one for all future time."

EXTRACTS.

THE DAUGHTER OF LEBANON.

DAMASCUS, first-born of cities, *Om el Denia*,* mother of generations, that wast before Abraham, that wast before the Pyramids! what sounds are those that, from a postern gate, looking eastwards over secret paths that wind away to the far distant desert, break the solemn silence of an oriental night? Whose voice is that which calls upon the spearmen, keeping watch for ever in the turret surmounting the gate, to receive him back into his Syrian home? Thou knowest him, Damascus, and hast known him in seasons of trouble as one learned in the afflictions of man; wise alike to take counsel for the suffering spirit or for the suffering body. The voice that breaks upon the night is the voice of a great evangelist—one of the four; and he is also a great physician. This do the watchmen at the gate thankfully acknowledge, and joyfully they give him entrance. His sandals are white with dust; for he has been roaming for weeks beyond the desert, under the guidance of Arabs, on missions of hopeful benignity to Palmyra;† and in spirit he is weary of all things, except faithfulness to God, and burning love to man.

Eastern cities are asleep betimes; and sounds few or none fretted the quiet of all around him, as the evangelist paced onward to the market place; but there another scene awaited him. On the right hand, in an upper chamber, with lattices widely expanded, sat a festal company of youths, revelling under a noontide blaze of light, from cressets and from bright tripods that burned fragrant woods—all joining in choral songs, all crowned with odorous wreaths from Daphne and the banks of the Orontes. Them the evangelist heeded not; but far away upon the left, close upon a sheltered nook, lighted up by a solitary vase of iron fretwork filled with cedar boughs, and hoisted high upon a spear, behold there sat a woman of loveliness so transcendent, that, when suddenly revealed, as now, out of deepest darkness, she appalled men as a mockery, or a birth of the air. Was she born of woman? Was it perhaps the angel—so the evangelist argued with himself—that met him in the desert after sunset, and strengthened him by secret talk? The evangelist went up, and touched her forehead; and he found that she was indeed human, and guessed, from the station which she had chosen, that she waited for some one amongst this dissolute crew as her companion. He groaned heavily in spirit, and said, half to himself, and half to her:—"Wert thou, poor ruined flower, adorned so divinely at thy birth—glorified in such excess, that not Solomon in all his pomp—no, nor even the lilies of the field—can approach thy gifts—only that thou shouldst grieve the Holy Spirit of God?" The woman trembled exceedingly, and said, "Rabbi, what should I do? For behold! all men forsake me." The evangelist mused a little, and then secretly to himself he said, "Now will I search this woman's heart—whether in very truth it inclineth itself to God, and hath strayed only before fiery compulsion. Turning therefore to the woman, the Prophet‡ said, "Listen: I am the messenger of Him whom thou hast not known; of him that made Lebanon and the cedars of Lebanon; that made the sea, and the heavens, and the host of the stars; that made the light; that made the darkness; that breathed the spirit of life into the nostrils of man. His messenger I am: and from Him all power is given me to bind and to loose, to build and to pull down. Ask, therefore, whatsoever thou wilt—great or small—and through me thou shalt receive it from God. But, my child, ask not amiss. For God is able out of thy own evil asking to weave snares for thy

* *Om el Denia*:—"Mother of the world is the Arabic title of Damascus. That it was before Abraham—i. e., already an old establishment much more than a thousand years before the siege of Troy, and than two thousand years before our Christian era—may be inferred from Gen. xv. 2; and by the general consent of all eastern races. Damascus is accredited as taking precedence in age of all cities to the west of the Indus.

† Palmyra had not yet reached its meridian splendour of Grecian development, as afterwards near the age of Aurelian, but it was already a noble city.

‡ *The Prophet*:—"Though a Prophet was not therefore and in virtue of that character an Evangelist, yet every Evangelist was necessarily in the scriptural sense a Prophet. For let it be remembered that a Prophet did not mean a Predictor, or Foreteller of events, except derivatively and inferentially. What was a Prophet in the uniform scriptural sense? He was a man, who drew aside the curtain from the secret counsels of Heaven. He declared, or made public, the previously hidden truths of God; and because future events might chance to involve divine truth, therefore a revealer of events might happen so far to be a Prophet. Yet still small was that part of a Prophet's functions which concerned the foretelling of events; and not necessarily any part.

footing. And oftentimes to the lambs whom He loves, he gives by seeming to refuse; gives in some better sense, or" (and his voice swelled into the power of anthems) "in some far happier world. Now, therefore, my daughter, be wise on thy own behalf; and say what it is that I shall ask for thee from God." But the Daughter of Lebanon needed not his caution; for immediately dropping on one knee to God's ambassador, whilst the full radiance from the cedar torch fell upon the glory of a penitential eye, she raised her clasped hands in supplication, and said, in answer to the evangelist asking for a second time what gift he should call down upon her from Heaven, "Lord, that thou wouldest put me back into my father's house." And the evangelist, because he was human, dropped a tear as he stooped to kiss her forehead, saying, "Daughter, thy prayer is heard in heaven and I tell thee that the daylight shall not come and go for thirty times, not for the thirtieth time shall the sun drop behind Lebanon; before I will put thee back into thy father's house."

Thus the lovely lady came into the guardianship of the evangelist. She sought not to varnish her history, or to palliate her own transgressions. In so far as she had offended at all, her case was that of millions in every generation. Her father was a prince in Lebanon, proud, unforgiving, austere. The wrongs done to his daughter by her dishonourable lover, because done under favour of opportunities created by her confidence in his integrity, her father persisted in resenting as wrongs done by this injured daughter herself; and, refusing to her all protection, drove her, whilst yet confessedly innocent, into criminal compliances under sudden necessities of seeking daily bread from her own uninstructed efforts. Great was the wrong she suffered both from father and lover; great was the retribution. She lost a churlish father and a wicked lover; she gained an apostolic guardian. She lost a princely station in Lebanon; she gained an early heritage in heaven. For this heritage is hers within thirty days, if she will not defeat it herself. And, whilst the stealthy motion of time travelled toward this thirtieth day, behold! a burning fever desolated Damascus, which also laid its arrest upon the Daughter of Lebanon, yet gently, and so that hardly for an hour did it withdraw her from the heavenly teachings of the evangelist. And thus daily the doubt was strengthened—would the holy apostle suddenly touch her with his hand, and say, "Woman, be thou whole!" or would he present her on the thirtieth day as a pure bride to Christ? But perfect freedom belongs to Christian service, and she only must make the election.

Uprose the sun on the thirtieth morning in all his pomp, but suddenly was darkened by driving storms. Not until noon was the heavenly orb again revealed; then the glorious light was again unmasked, and again the Syrian valleys rejoiced. This was the hour already appointed for the baptism of the new Christian daughter. Heaven and earth shed gratulation on the happy festival; and, when all was finished, under an awning raised above the level roof of her dwelling-house, the regenerate daughter of Lebanon, looking over the rose-gardens of Damascus, with amplest prospect of her native hills, lay in blissful trance making proclamation, by her white baptismal robes, of recovered innocence and of reconciliation with God. And, when the sun was declining to the west, the evangelist, who had sat from noon by the bedside of his spiritual daughter, rose solemnly, and said, "Lady of Lebanon, the day is already come, and the hour is coming, in which my covenant must be fulfilled with thee. Wilt thou, therefore, being now wiser in thy thoughts, suffer God thy new Father to give by seeming to refuse; to give in some better sense, or in some far happier world?" But the Daughter of Lebanon sorrowed at these words; she yearned after her native hills; not for themselves, but because it was there that she had left that sweet twin-born sister, with whom from infant days hand-in-hand she had wandered amongst the everlasting cedars. And again the evangelist sat down by her bedside; whilst she by intervals communed with him, and by intervals slept gently under the oppression of her fever. But as evening drew nearer, and it wanted now but a brief space to the going down of the sun, once again, and with deeper solemnity, the evangelist rose to his feet, and said, "O daughter! this is the thirtieth day, and the sun is drawing near to his rest; brief, therefore, is the time within which I must fulfill the word that God spoke to thee by me." Then because light clouds of delirium were playing about her brain, he raised his pastoral staff, and pointing it to her temples, rebuked the clouds, and bade that no more they should trouble her vision, or stand between her and the forests of Lebanon. And the delicious clouds parted asunder, breaking away to the right and to the left. But upon the forests of Lebanon there hung a mighty mass of overshadowing vapours, bequeathed by the morning's storm. And a second time the evangelist raised his pastoral staff, and, pointing it to the gloomy vapours, rebuked them, and bade that no more they should stand between his daughter and her

father's house. And immediately the dark vapours broke away from Lebanon to the right and to the left; and the farewell radiance of the sun lighted up all the paths that ran between the everlasting cedars and her father's palace. But vainly the lady of Lebanon searched every path with her eyes for memorials of her sister. And the evangelist, pitying her sorrow, turned away her eyes to the clear blue sky, which the departing vapours had exposed. And he showed her the peace which was there. And then he said, "O daughter! this also is but a mask." And immediately for the third time he raised his pastoral staff, and pointing it to the fair blue sky, he rebuked it, and bade that no more it should stand between her and the vision of God. Immediately the blue sky parted to the right and to the left, laying bare the infinite revelations that can be made visible only to dying eyes. And the daughter of Lebanon said to the evangelist, "O father! what armies are these that I see mustering within the infinite chasm?" And the evangelist replied, "These are the armies of Christ, and they are mustering to receive some dear human blossom, some first-fruits of Christian faith, that shall rise this night to Christ from Damascus." Suddenly, as thus the child of Lebanon gazed upon the mighty vision, she saw bending forward from the heavenly host, as if in gratulation to herself, the one countenance for which she hungered and thirsted. The twin-sister, that should have waited for her in Lebanon, had died of grief, and was waiting for her in Paradise. Immediately in rapture she soared upwards from her couch; immediately in weakness she fell back; and being caught by the evangelist, she flung her arms around his neck; whilst he breathed into her ear his final whisper, "Wilt thou now suffer that God should give by seeming to refuse?"—"Oh yes—yes—yes," was the fervent answer from the Daughter of Lebanon. Immediately the evangelist gave the signal to the heavens, and the heavens gave the signal to the sun; and in one minute after the Daughter of Lebanon had fallen back a marble corpse amongst her white baptismal robes, the solar orb dropped behind Lebanon; and the evangelist, with eyes glorified by mortal and immortal tears, rendered thanks to God that had thus accomplished the word which he spoke through himself to the Magdalen of Lebanon—that not for the thirtieth time should the sun go down behind her native hills, before he had put her back into her Father's house.

ARE WE CONSUMING OUR CAPITAL?

(From the 'Economist'.)

I.

THE main question put in Mr. Rathbone's very interesting letter which appeared in our columns (see *Economist* of November 24, and reprinted December 1), is the one placed at the head of this paper. Are we consuming our Capital? Are we spending more than we produce? Are we only living on the accumulated stores of former years? Whichever way we put it, the meaning is identical. If this is the course the nation is embarked upon, the result, whether long deferred or not, must eventually be the same. Sooner or later, the exhaustion of our national resources must follow.

It is well to look this firmly in the face, for no inquiry more important, from a material point of view, can be put before the inhabitants of any country. Should it be the case, it means sooner or later the abandonment not only of all progress, but even of our present position. It means that the condition of the people must slowly but surely drop below the present standard. It means that poverty, with all its attendant trials, must make itself felt in every city of the Empire. It means even more than all this; it means the loss of our present standing in the councils of Europe. The Englishman abroad has sometimes, in the course of his travels, happened to pass through the streets of some half-deserted city. As he has surveyed the lines of dilapidated dwellings, the buildings which once were palaces, but now scarcely afford shelter to their pauper occupants, as he has observed the proofs of power passed away, of industries which have ceased to exist, of commerce once flourishing and now diverted to other channels, he has said to himself, "How unlike England!" And indeed, though every village and town in this country has not uniformly prospered, though the evidences of misdirected enterprise stand here and there, gaunt spectres, among the busy scenes of active prosperity, yet, on the whole, how difficult it is to us to call to mind a single English city with grass-grown streets and decaying structures!

But this, and more than this, is before us, if it be the fact, as expressed in Mr. Rathbone's letter, "that the country as a whole has been extravagant, and has overspent to an extent which is 'reducing its capital and eating into its savings,' unless a timely economy comes to the rescue, and preserves us from the otherwise inevitable results. Let us examine into the matter a little, and

see whether we can ascertain the truth. The vast proportions which commercial enterprise has attained in this country, the enormous amount of capital invested in almost every conceivable form of industry, the immense riches of our great capitalists, and of the representative men of our noble Houses, all these constitute or imply such gigantic masses of wealth, that it seems impossible to suppose there can be any commencement of decay among us. Add to this, that the recent great outburst of apparent affluence in this country occurred during a period when the increasing development of scientific skill seemed to render man more independent of the resources of nature, and the further extension of mechanical forces seemed to render it more easy for the labourer to earn a livelihood, and tended to hide from us the fact that an increasing population can only be supported by increased efforts on its own part. All these things have assisted to obscure the real questions at issue from our view. The proportion on which things are carried on among us is so vast, that it is almost impossible to find any adequate basis on which to found an estimate whether prosperity is continuing or waning. Nor is this to be wondered at. On a far smaller scale the same class of events not unfrequently occurs. Men engaged in the larger forms of commercial operations have sometimes, it is said, and we believe truly, found it difficult to frame a balance-sheet from year to year, and to know whether they have made money or not during the preceding twelvemonth; and to arrive at a knowledge of the similar facts in the case of a whole country, especially one combining so many and such varied elements as Great Britain, is more difficult still. But we may put together a few rough hints, which may assist our readers to draw their own conclusions.

The point from which Mr. Rathbone starts is the vast increase in our Import trade, while the value of our Exports has greatly diminished. Mr. Rathbone explains that he does not mean, of course, to revive the exploded fallacy that the prosperity of a country depends on the excess of its exports over its imports; but that is, as he justly remarks, "a different question from the one 'raised by a very rapid and unprecedented increase in the 'disparity between the aggregate value of our imports and the aggregate value of our exports.'"

Mr. Rathbone is far too good a Free-Trader to imagine for one moment that the mere fact that our Imports exceed our Exports in any given proportion matters in the slightest degree, but the questions he asks are practically these,—are our Imports more than we can pay for without trenching on our capital to pay for them? Do they take the form of unproductive expenditure? Are we, in fact, spending more than we can afford?

YOKOHAMA MARKET REPORT.

FEBRUARY 8TH, 1878.

IMPORTS.—But a small business has been done this week. There have been large arrivals of Yarns, and the natives seek to take advantage of the fact: therefore though 16 to 24 and ditto Reverse are in good or fair demand, the low rates offered check sales. In other counts we have nothing to report, and refer to our tables.

Grey Shirtings are very quiet, and indeed the whole market for cotton goods is dull—holders being by no means eager to accept the drooping quotations offered for their goods. For sales and prices see next page.

A little better report may be made of the Woollens market. Stocks of inferior Orleans having been reduced, purchasers have not been difficult to meet with at quotations. Scarlet Mousselines have been in good demand and we report exceptional sales of choice parcels at a higher figure than our general quoted price.

EXPORTS:—SILK. Very little was done in this market on Saturday last, or in the early part of the current week. During the last forty-eight hours, however, business has been much brisker. Holders have shown decided signs of weakness, and prices may be quoted \$10 to \$20 lower all round, than when we last wrote. In spite, also, of the purchases made during the last two days at this reduction, natives seem willing enough to meet buyers and the market is decidedly weak. The amount of purchases made we estimate at from 350 to 400 native bales. Stocks may be called 3,300. The *Bombay* took 47 bales for London.

TEA.—In consequence of the arrival of recent telegrams from the States, announcing that no steps will be taken in Congress this session towards carrying out the President's proposed imposition of Tea duty; our Tea market has collapsed, and operations since we wrote last have been nominal, not exceeding 260 piculs. Prices remain quite unchanged, and Stocks on offer are very limited.

In **SUNDRIES** we have only to mention the sale of the *Iris*' cargo of New Crop Formasan Sugar at the price we have quoted. Nothing doing in other goods and prices the same as last week.

EXCHANGE.—Business has been trifling: the quietude of both Import and Export markets naturally limiting the legitimate transactions, and no speculative financial operations having taken place.

We quote:—London, 6 months Bank 3s. 11½d. Private 3s. 11½d. Credits. 3s. 11½d. Docts. Hongkong Demand Bank ½ per cent disc. 10 days sight Private ¾ per cent disc. Shanghai Demand Bank 72 10 days sight Private 72½.

*. The dates of Arrival and Departure of the Mitsu Bishi Company's steamers are susceptible of alteration, consequent on the necessity imposed upon the Company—by its contract—of connecting with the steamers of the Pacific Mail.

*. No days for Arrival or Departure of the Pacific Mail Company's or Occidental and Oriental Company's steamers having as yet been fixed, we are unable to tabulate them. Each separate steamer's departure from her port will be notified in the Table below, and the day of her probable arrival at her destination.

*. Three days are allowed in the P. & O. Company's Schedule for transit of the Mails between London and Brindisi.

*. Two days are allowed in the Messageries Company's Schedule for transit of the Mails between London and Marseilles.

SCHOOL FOR CHILDREN IN SWITZERLAND.

MADAME A. JAQUEMOT (née Dogny) proposes to establish at Geneva, Switzerland, a Boarding School for Girls, and for Boys under 12 years of age; where they will have the advantages of a sound education and sedulous domestic care.

Boys over 12 years of age may be committed to Madame Jaquemot's charge as boarders, and parents can thus secure for them the comforts of a home, with the opportunity of attending one or other of those educational establishments for which Geneva is so justly celebrated.

Madame Jaquemot proposes to go to Europe by the French Mail of the 10th February, and parents wishing to avail themselves of sending children home under her personal charge, must address themselves at once to her, at No. 170, Bluff.

THE JAPAN TIMES.

CHINA.

THOUGH Japan enjoys the advantage of insular position in the midst of a vast ocean, her good fortune in this respect by no means exempts her from the dangers, or frees her from the responsibilities which oppress nations, as they do individuals. The isolation which she once so jealously maintained is a thing of the past, blown into the limbo of lost illusions by steam, electricity and gunpowder, and her existence as an independent nation depends on her ability to construe and accept the phrase of Terence:—

‘Homo sum: humani nihil a me alienum puto.’

The contraction of space and the annihilation of time have made the nations of Europe and America her near neighbours: Russia threatens her on the North, and on the West she has, in China, a doubtful ally. She has lately sent thither a resident Embassy, and, more recently has thence received one; but her Treaty was the outcome of a compromise which only just saved her from a war; her relations with Liukiu and Corea may at any time lead her into discussion and dispute; and it therefore most seriously behoves Japanese statesmen to make themselves thoroughly acquainted with the condition and resources of a neighbouring State, of which we are convinced that they now know even less than ourselves.

It is perhaps fortunate for the rest of the world that China so little knows her own strength, and that so large a class of her rulers think it to their interest to keep her weak. The Abbé Huc demonstrated the danger to mankind which would ensue from the rise to power of a great military genius in this gigantic empire, capable of utilizing the vast armies which could be raised; and with ambition to lead them, disciplined and armed as they could be, to the conquest of Asia. But, if we recollect aright, the writer contented himself with frightening his readers; we may now do somewhat to allay their fear by sketching the actual state of affairs existing in the Empire. Without attributing to any of them the thought of aggression, it is a fact that the foremost, the most intelligent and most advanced of Chinese statesmen have long seen that centralization of power has become of the first necessity to the Empire, absolutely indispensable to the dynasty. But they recognize, or are recognizing the fact that however strong the need, it cannot now be met. So vast is the extent of the country, that its population consists of different races, bound together, it is true, by the ties of a common history and a common language, and owing allegiance to a common centre of sovereignty in Peking. But so great are the differences between men of the North, South and West, in customs, dialects, and original blood, that they feel no common interests. Divergences of creed, of course, exercise also their separating effect. This extreme looseness of bond is even shown in provinces actually contiguous; each being perfectly indifferent to the needs or condition of the other, and even manifesting a dislike, which frequently

culminates in hatred. When Canton was besieged and taken by the allied forces in 1858, the neighbouring provinces gave no assistance to Yeh, in either men, arms, or money; and when, in 1860, Tientsin was occupied and the Capital lay at our mercy, its Tartar guards were left alone to attempt its defence, the population of the surrounding country and the provincial army of Chihli showing an absolute indifference to the event; the country people quite cheerfully, indeed, complying with the requisitions of the invading troops. Occasionally, it is true, in the case of internal rebellion, the Governor of one province detaches troops and munitions of war by Imperial order to assist in reducing the disturbance in another; but such instances to the contrary are rare, and the general fact remains that each province of China manages, and cares only for, its own affairs. The taxes collected are not remitted to the central Government, nor even accounted for, a trifle only, beyond the land-tax and the salt *gabell*, being sent for the expenses of the Court, and the struggle is perpetual between the provinces and the Capital, as to the amount of this tribute. Government by de-localized officials, with all the disadvantages which we pointed out as attaching to the system, in the first number of this Review, originated in the anxiety at Peking to squeeze as much as possible out of the provincial treasuries: but so universally has spread the cancer of corruption, that this device has long failed of effect; and as, under long minorities, and palace intrigue, the Central Government has been growing weaker and weaker, the provincial governors appear to deem that unable to punish, which is powerless to defend, and sending, year by year, fewer taels and more excuses, virtually set it at defiance. And if in accord on no other point, on this the prefects have the complete sympathy of the people. A profound impression has been made by the impact of foreign force, upon popular opinion. The news that ‘barbarian’ troops had taken and held for a year Canton; had threatened Peking and burnt the Summer Palace; and later, had invaded Formosa,—and that in each case, the Central Government had to buy peace with sycee—have naturally enough excited a feeling of contempt little compatible with allegiance in the minds of the people who are no more to be deceived by the *Peking Gazette* than ourselves.

Of late years, too, the physical aspect of the country has been changing, and its resources shrinking, to so great an extent, that it is more than doubtful whether the Government can be strengthened, the Dynasty preserved, or the Empire itself saved from dissolution, by the only means of doing so—moderately centralizing the power. Instead of the reserve of thirty million of taels, which used to lie in the bullion vaults of the palace at Peking, the treasure has dwindled to a fourth or fifth of the amount, wasted under stress of foreign indemnities, rebellion, and famine. And the supplies which it should have augmented have been entirely cut off, as

provinces have been desolated by invasion, disafforestation, increasing difficulty of irrigation and consequent distress.

The famine which for four years past has been slaying the people by millions is no result of a single eccentricity of Nature, such as the failure of a monsoon or a great flood; but is the inevitable sequel of years, of centuries, of misgovernment and neglect. It has reached its climax, but it is a climax from which there will be no descension. From 1869 to 1877, out of the eight years' harvests, six have been bad in varying degree. Shensi, Honan, Shansi and Chihli are now in the frightful condition depicted in the Rev. Mr. Richards' too graphic letter; Kansuh is but little better off; in Shangtung, two-thirds of Kweichow, one third of Anwei, and in Yunnan, the dearth is not universal, but suffering is great: Fokien and Chekiang have but one-half to two-thirds of a crop, the two Kwangs two-thirds of an average crop: in the west coast provinces and even in Szechuen, the garden of the Empire, the crops are also short. And these failures are not of the rice crop only: corn, peas, millet, all that could be used as substitutes for the people's common food, have suffered with the rice. And scarcity begets famine, for the people eat the seed corn, the leaves, the bark of trees, and each year sees the evil grow. There seems little reason to doubt that the whole of North and North Western China will, in a very few years, become like Central Asia, a dessicated, tree-less, stony waste, with a few oases, supporting but a sparse population. Nothing but a complete and comprehensive system of water storage, tree-planting and irrigation, can restore, after a long period of persevering toil, vigour to the land or mitigate the climate: and for this, where is the directing mind, whence are to come the means? The economic distress, therefore, of the Empire being so great as to be past remedy, totally incapacitating it from resisting invasion from without, or repressing rebellion within; and the Government being unable to give appreciable relief to its own starving people;—the idea of any danger from China's newly formed and modern armed army and navy can be but chimerical. If the dynasty can be saved by a change of capital to some more central city further south, a movement generally and openly discussed at present in Peking,—the change being availed of to inaugurate the centralisation policy advocated by Tseng kwo fan, the great reformer of the epoch, his pupils Shên pao chên, Li hung chang, Tso t'sung t'ang, and others;—and if the Empire be strengthened by contraction, the North and North Western territory being left alone for a time, and the poor remnant of their populations removed to more fertile districts: then, but not otherwise, might China become a formidable power.

Such contingencies are not impossible. The abandonment of the Northern provinces appears to be an event looming in a near future, and the transfer of the capital would then follow of necessity. Should this be accompanied by the inauguration of the policy of the reformers we have named, we should have grave reason for disquietude: for unfortunately, in the minds of these great statesmen, is associated, with the hope of saving China from dissolution, that of at the same time expelling foreigners and foreign trade, and reclosing China, peaceably or forcibly, into her ancient isolation from the rest of the world. It is to this unhappy error that is not remotely due much of China's present distress. Had the Treaty of Tientsin been frankly accepted by her rulers, and foreign enterprise and capital freely admitted into the interior of the country, eighteen years' work at the development of her mineral wealth and improvement of internal communication would,—so keen and accurate are the commercial instincts of her industrious people,—have in all human probability saved her from her present agony. A thousand miles of railway would have enormously facilitated the exchange of com-

modities and greatly modified provincial prejudices; have enabled a strengthened Government to have checked, at small expense, riots which, swollen into rebellions, have depleted its treasury; would have carried food to people afflicted by transient scarcity, which would have prevented their devouring the seed for the next year's crop; would have cheapened goods all over the country, and greatly increased her export and import trades and, consequently, the Customs Revenue. The opening of her coal mines would have given China a new and valuable article of export and would have saved her from disafforestation, the cause, more than perhaps any other, of the desolation of some of her fairest provinces. The money spent on obsolete artillery, and small arms of a dozen different patterns, with its ammunition *not* to match; or for arsenals and building yards, and their costly products, to defend her against nations who sought to bombard her only with bales of yarn; might have been spent in afforesting her denuded hills, clearing her choked streams, restoring her ancient canals, storing her wasted wealth of water, and converting deserts into rich and smiling fields.

But these things were not to be. The not unnatural dread of a despotic government, of alien race, with so loose a hold on its subject population,—that commerce and freedom of trade would sow the seeds of representative institutions and liberty of thought;—two lengthened minorities; feminine jealousy and intrigue; the fear of entrusting power to any master mind, such as Tseng or Li, lest he should prove a Cromwell rather than a Washington; the opposition of corrupt provincial officials to the efforts of patriotic reformers; and mainly the unfortunate misdirection of effort of the reforming party itself;—these causes have all combined to bring China to its present state of helplessness and hopelessness, for which we must confess our inability to suggest any applicable remedy. Her future prospects can hardly be forecast at the end of so long an essay on her present condition in the pages of a weekly Review. But her present condition, and the causes that have brought her to it are by no means without interest to foreign merchants, and surely deserve careful study by Japanese statesmen who so love their country as to be anxious to take warning by China's errors; and who have it now in their power to so guide Japan that she may not have to share her fate.

AFFORESTATION.

NOTHING so easy as to destroy. A torch, in the small white hand of a woman, as when Thais,

'Like another Helen, fired another Troy,'

suffices to lay a palace in ashes: the little rift in an embankment, through which drop at first what a poetic fancy might deem tears for the misery to come, in one short hour is the bed of a raging torrent, through which sweep the contents of a reservoir, with Death and Devastation riding on its waves. We have shown how disafforestation works in what,—measured by the period of a nation's life—is an interval of time almost as brief: our task to-day is to show the Japanese Government how they can learn to repair its ravages by afforestation, and how prevent further evil by reviving, and re-inforcing,—with modern foreign experience to aid them—their own old Forest Laws.

For, reference to the Legacy of Iyeyas * shows clearly enough that legislation for the regulation, preservation and growth of forests is no new suggestion in Japan. In Cap. LXVI:—'Regarding thoroughfares'—the 'great sea road' is said to have thirty-six feet as its proper width,—'but, including the trees on either side, it should have an uniform width of one hundred and twenty'—thus providing an ample margin on each side of the avenue of forty-

* We quote Lowder's translation—the earliest and, collated as it was from several copies, in our opinion the best.

two feet for the spread of the roots. Eighteen and sixty feet are the corresponding measurements given for the 'small sea road'; and twelve feet and thirty for 'cross-roads and horse roads.' And this is said to be 'an ancient regulation handed down from Oinos'ke, an ancestor of the Tokugawa.'

Two succeeding sections of this valuable document we quote in their entirety:—

"CAP. LXVIII.—Dwellings shall not be erected on "ground under cultivation by husbandmen, as the growth "of bamboos and trees round the walls is prejudicial to the "crops.

"When disputes arising from a question of new and old "plantations is referred for decision, the test is in the "height of the trees forming the enclosure of such planta- "tions.

"If they are seen to be three feet high, the plantation "may be known to be an old one; if they are not three feet "high, the plantation is a new one, and the trees should be "cut down, and the party in the wrong confined to his "house for one hundred days.

"CAP. LXIX.—If the boughs of large trees in the "immediate neighbourhood of villages in which the houses "are built consecutively, become so large as to interfere "with the drying of grain, or to interrupt the payment of "annual tribute, in the first place the branches shall be "cut off; and if that is not sufficient the whole tree shall "be cut down.

"Overshadowing branches should be lopped off an- "nually."

These extracts show clearly enough that in and before the time of Iyeyas, timber was properly cared for in Japan. Had the art of Forestry been neglected in Europe, we should have suffered in proportion to the amount of our neglect; fortunately it has been fostered for many ages. In Germany, the first attempts at systematic planting were made in the fourteenth century; in England the earliest effort appears to have been made in the sixteenth; in Japan systematic planting must have existed in the fifteenth, for many of the avenue trees in the Nikko and other districts show an age of 384 years.

At the present time in Europe, we find that there exist forest departments under the governments of Germany, England, France, Russia, Austria, Italy and Switzerland. Forest legislation and organization vary in the different countries, but they all tend to the one common end, viz., the production and conservation of the largest possible amount of forest; we accordingly find that the various soils, climates, aspects &c. are intently studied, with a view to the growing of timbers most suitable to the requirements of the country, the welfare of the peoples interested therein, and lastly with a view to direct profit.

The forests in Europe are either governmental, communal or private; but all are subject to a certain amount of legislation. They are technically designated as either pure forest, with natural reproduction or without; mixed, or coppice with or without standards. The mixed plantations are the most successful in England, they are more economic, the lengths of rotation varying within wide limits, according to the variety of trees, climate, soils and aspects. These being carefully observed, result in highly productive forests or plantations. For example, the 'spinnies' near Haslemere, in Surrey, whence is got wood for hoops of casks and similar purposes, where toughness and strength have to be combined with flexibility and durability, pay close on £10 sterling per acre, whereas the total cost per acre is only eighteen shillings—not counting, of course, interest on capital while the wood is growing.

Now the organization of a Forest department in the Empire of Japan, ought not to entail much expense on the Government of the country. The construction of a map, shewing the area, age, value, and variety of all the forest lands in the Empire; the division of the Empire into Forest districts and sub-districts; an addition to the map

showing the area, soil, and aspect of all the waste lands, (designating all land as waste that is not either under cultivation, forest or pasture), and the framing of a suitable code of Forest laws, are preliminaries which should be commenced without delay. For this purpose the Government have, we believe, at hand all the necessary staff and materials. Any direct tax on cultivators or conservators of forests should be at once removed; in order to stimulate private enterprise to the utmost. If communal forests are in existence, the formation of nurseries in each locality should be insisted upon, in order that planting, where necessary, should be commenced with as little delay as possible. Of course in some districts, a great deal may be done by natural reproduction, but almost invariably it requires to be supplemented by planting. Information should be collected from all parts of the Empire, as to the cost of planting; say at *per* thousand *tsudos*, giving the variety planted, method of planting, age of seedlings and all other details. Judging from English figures given above, and considering the lower cost of labour in Japan: the expense of all this should be but trifling—while the benefit to the country, to say nothing of the direct pecuniary return, would be enormous.

Regulations should then be made to protect the existing forests against denudation, fire, and insects. Instructions should be issued in a popular and easily intelligible form, detailing the various methods of planting in Japan; the foreign modes of pit planting and slitting, both in the **L** and **T** and **X** forms, with descriptions of the special implements employed. A list should be given of the most valuable woods in Japan, with information on natural reproduction, the cultivation of seedlings, and the necessity of planting them strong enough to outstrip the natural herbage, and to withstand heavy snow or wind storms. The construction of fire-paths and forest roads, drainage and thinning should be explained, and also the relative advantages of high, mixed, and coppice forest. The cultivation of bamboo and osier beds for the protection of river banks would also find a fitting place in such "Instructions." The introduction of exotic trees should be discouraged, as bountiful Nature has already given to Japan all that she wants, without her people's time and money being wasted on experiments always costly and nearly always resulting in failure. Examples of forest zones should be quoted; as Tsuruga Gulf shore, from Numadzu to Oomaisaki;—Nantaisan (Nikko); the forests of Fusiyama, &c. The 'Instructions' should also contain chapters on forest administration, working and transporting the timber by land and water. In other chapters should be explained to the people the absolute necessity of legislation, even in the cases of communal or private forests, for the purpose of averting from the forester and cultivator the inevitable evils attendant on disafforestation and neglect. On the other hand should be clearly shown the advantages of afforestation. The disadvantages which attend the present barbarous system of burning the grass-clad hills, and the necessity for enforcing remedies for the same by legislation, should also find a place in such a volume; as should advice to eradicate bamboo scrub and plume grass, and keeping their growth, for the purposes of thatching, basket and bag work, within stated reserves. And especially should be expounded the indirect advantages to the whole Empire,—(advantages which may be easily enumerated by reference to our article last week on disafforestation, for the converse evils detailed) by preserving forests which, though they would not pay to work for timber, yet confer on the landlord, the farmer, the hunter and the fisherman, the joiner and the carpenter, the manufacturer and the merchant,—even on the housewife,—manifold and great benefits. And amongst these might be enumerated, and by no means to unsympathetic readers, the charm of their ever-changing beauty. For the Japanese farmer, even the

poor labourer, loves his native tree-clad hills, and is the happier for their loveliness; and even in the humblest cot, on screen or panel or scroll, may be seen some counterfeit presentment—of waving tress of wisteria, bunch of plum blossom, or branchlet of the many-tinted maple when Autumn has shorn 'their green honours from the tranquil trees.'

To return to practical utility. As an example of what is in actual process in another part of the globe, we will quote the case of the British Empire in India, where various large sections of the country had been cruelly disafforested, previous to coming under our sway. These are now placed under the Forest Department, and are in process of afforestation. Ultimate success is certain, but afforestation requires the expenditure of much time, patience and perseverance. The result will however amply repay all, for districts that are now arid deserts, will become smiling gardens, capable of supporting large populations; forest reserves, replacing the wastes, will give forth their wealth to the cultivator, in the form of pure springs, rich loam, shelter, cheap fuel and forest food, while the community at large will benefit by the cheap production of timber, dyestuffs, gums, resin, medicines &c. and by the improved climate and more equable temperature.

Meanwhile, the Imperial Government of Japan, which represents the wants and cares, the hopes and aspirations of some thirty millions of our fellow men, has before it the pleasing task of ministering to these wants, of aiding the realization of these hopes. In this particular instance of Forestry, they have to consider the objects of Forest Legislation. They have to determine:—first, what lands it is absolutely necessary to replant and keep under forest:—secondly, they have to organize a proper system of control of the communal forests:—and thirdly, they have to decide upon and adopt the best and most lasting means of stimulating private enterprise in the direction of forest culture. If they fail in, or ignore their task, they simply cast an almost everlasting blight upon the ultimate prospects of their native land. Farewell to bountiful rice harvests of round well-filled grain, to brilliant silk, to perfumed tea! As the soil of Japan becomes denuded of its timber, its steep hill-sides will slide into the valleys, its rivers will discharge their lithic contents over the plains, and the clustering myriad isles of Dai Nippon, now among the fairest gems of Amphitrite's crown, will be converted into howling wildernesses. The whole interior will cease to afford means of support to population. Landlords, farmers, peasants—merchants, traders, artisans,—their occupations gone, will have ceased to exist, and round her desolate coasts will be scattered a sparse fringe of rude, impoverished, humble fishermen—humbled by adversity, roughened by hard, prosaic, unlovely toil.

Already are visible the evil effects of partial disafforestation in the islands of Hondo, Sikok, and Kiushiu, and in the archipelagoes of the Inland Sea. Where, in these regions, is there a river, or stream, with a navigable bar? Where is the river that has not, again and again, overthrown its embankments, and discharged, its stony contents broadcast over the land, to the dismay, often the ruin of the cultivator? The same catastrophe is to be observed in the volcanic island of Sicily and also in Calabria, dry river beds of rolling stones and shingle in all their ugly desolation. Elsewhere we quote from a great authority another instance in France. In all, cause and effect are the same; and in Japan, at least, it is evident that the remedy has never been thought of. Why do we see narrow-minded Engineers pottering about the mouths of the various rivers; for instance, the Shinanogawa, at Niigata, the Osaka river, and elsewhere, seeking for a means of clearing their ever accumulating bars, while the primary cause of the difficulty,—so obvious,—remains without an attempt to check it? First plant your hills, and thereby prevent the perennial

flow of the material which creates the bar; then clear and control your river channels; thirdly and lastly, disperse the materials forming the bars,—which will then be an easier task, natural forces having done part of it, so soon as the Engineer had set them to work along the river's course. In the island of Yezo—now called Hokkaido,—where Nature still holds her sway, we have an example of what she does if not interfered with. We have the Ishicari river with a *minimum* of twelve feet of water at its mouth, the Ookatchi with nine. Neither of these have the watershed, or the volume of water of either the Shinanogawa or the Osaka river, yet the bars of these latter are impassable at low tide for anything drawing four feet of water.

The root of the evil is disafforestation, and its cure is certain, inexpensive, easy and immediately apparent. It cannot of course be expected that, in these columns, we should attempt to teach the sciences of restoring either rivers or forests in all their details: this is to be done in the college lecture room, on the mountain side, in the river's bed: our duty ends when, as we have done, we have broadly diagnosed the evil and shown how it may be redressed.

MUNICIPAL REFORM.

THE gentleman who addresses the *Japan Gazette* under the pseudonym of 'Municeps' is a disputant with whom it is a pleasure to argue: a type of newspaper correspondent exceedingly rare in this part of the East. He sees two roads to a common goal, and prefers one; but, recognizing another's right of choice to the other, does not think it necessary or advisable to justify his own selection by ridiculing or vilifying his opponent. It is too much to hope that the *Japan Gazette* and the *Japan Times* will be able to set the fashion of arguing thus, in the manner of the European press; but—followed or not—it is something to our common credit to have given an example.

'Municeps' differs from us on a vital point:—he would have the Council entirely representative of the rate-payers, whether property-owners or property-occupiers, without admixture of the official element, except as represented by the Governor, or Vice-Governor of Yokohama. And he astutely seeks to enlist the Consuls themselves on his side, by pointing out that we propose to increase their already sufficiently onerous and insufficiently rewarded duties. This position of his we shall proceed to attack; and think we can carry it by showing that such a Council as he would wish to see formed has never and can never be made to work; (and we may remark, in passing, that we think the Consuls would have more trouble and larger addition to their labour, if his scheme could be carried out, than under the system we prefer);—and finally, we hope to convince him and the public, that the alternative proposal we advocate will give us a form of Municipal Government that will work, and work well. We have the immense advantage that experience is wholly in our favour, and against him.

In proving this latter point, we shall have to trespass on our readers' patience, by recapitulating the whole municipal history of Yokohama: but, as we shall do this succinctly, and as the record should be before all those whom the writer hopes to see soon assembled, in public meeting, for the consideration of the Municipal question, the time given to writing or reading it will not be thrown away.

The times before 1862 are pre-historic, and no archaeologist has given to the world a palimpsest of their records. A dim tradition lingers yet of an attempt at Municipal Government by some half-dozen out of the score of foreign residents; but there being nothing to govern, nor any means of governing, it shrivelled into naught before the inextinguishable laughter of the remaining fourteen. In 1862, arose Mr. Kingdon, the first Municipal Reformer,

who having made a small beginning, by cleansing his own compound and bund frontage, gradually induced the other residents to pay him small subscriptions, which he managed to stretch sufficiently to cover the mere scavenging of the place fairly enough. As *ginrikishas* then were not, as no one had a carriage, and every man had a pair of thigh boots, the spaces between the irregular lines of compound palings called streets were good enough for us; and as for lighting, we had twenty 'chochings' to one 'sinologue' and every resident with the least respect for himself spent a *doo* or two per month in maintaining a feeble oil lamp over his gate. The 'joyous life' still existed for our Japanese neighbours, trade was brisk, and profits were large; there were no impecunious burglars, and consequently, no police. This happy state of things continued during '63 and '64; a scavenger *corps*, under the command of the celebrated Rokonoski being formed, and Messrs. Macdonald and Piquet efficiently assisting Mr. Kingdon in the care of the settlement. Yokohama, however, having meanwhile attracted a larger foreign population and a more fastidious, the state of the streets, which, on the occasion of a very wet summer, were about eighteen inches under water for a week, attracted the attention of Mr. Winchester, H.B.M. Consul. This estimable gentleman hit upon the happy expedient of making moats round each block of buildings, totally unconnected with each other, and which had no fall or outlet whatever; but which certainly served the purpose of holding the water which would otherwise have continued to cover the roads. These he was pleased to call 'drains.' They served a purpose very foreign to that for which he designed them. The native builders and carpenters perambulated the settlement, watching with a stealthy joy the foundations of houses and godowns being sapped; and their contentment attracting the attention of property-holders, while the presence of a fleet and garrison, and the establishment of grog-shops, having meanwhile suggested the creation of some better police than a corporal's patrol, the first serious attempt at self-government was made by the community.

From the point of view of traditional facetiousness, they chose an unlucky day for its inauguration; for the first of April 1865 witnessed the election of the Yokohama Municipal Council. The 'wisdom of our ancestors' was proved by the event. A Colonel Fisher, then American Consul, conceived the most unhappy idea that 'proportionate representation'—an error into which 'Municipes' falls, we remark—was indispensable. Portugal, therefore,—then represented by a Consul, a compositor in a printing office, a *valet* and a flag-staff,—was taken as the unit, and a cumbrous representative body of eleven Englishmen, four or five Americans, three or four Frenchmen, and other representatives of European races in proportion, amounting altogether to twenty-six, assembled for deliberation in the only place big enough to hold them, the British Consulate court-room. Mr. Fisher was supported by his colleagues in this foolish proposal, against the repeated and urgent protests of the Land-Renters, who wanted a working body of seven members, elected irrespective of nationality. It is hardly needful to say that, in such a Council, with such a very little work for them to do, there was much talk with no results. The *Japan Times*, we must confess with regret,—(it was then in the 'salad days' of its existence)—so burlesqued its extremely funny debates, in which propriety *Puich* was its accomplice, that the question of 'gagging the press' by excluding our reporter, himself a conscript father, took precedence of a debate on the Budget, and a Council meeting too often degenerated into 'sound and fury, signifying nothing.'

Yet Finance was the *crux*. Prior to the election of the Twenty-Six, the Consuls, through their *Doyen*, Mr. Winchester, had informed the Land-Renters that Twenty *per centum* of the ground Rents was to constitute the Council's

income. A minority of his auditory—'tis always the minority which detects these blots—had strongly protested against the acceptance of any such proposition, but in vain. In vain the sensible and practical minority—pointed out that the ground rent paid to the Japanese Government was more than thirty-seven times as much as that paid by our fellow-merchants across the water to the Chinese. That, in consideration of receiving this most exorbitant ground-rent, the native government stood pledged, according to the Land Regulations of 1860, and subsequent Conventions, to "keep in thorough order the streets, roads, and jetties," to "make when necessary sewers or drains;" and to provide a "Police for the maintenance of security and order within the Foreign Settlement of Yokohama." That, having signally and notoriously failed in fulfilling these engagements, they should not have been permitted by our Consuls, the legally constituted guardians of our rights, to make such an excellent bargain for themselves as retaining four-fifths of the money for mere rent, leaving us with the totally insufficient one-fifth wherewith to do all the work. And that sixty *per centum* was the lowest figure at which the duty should be taken over. Mr. Winchester informed us that we were called together to receive the income and the responsibility, not to argue about it: but, for our comfort told us, that the twenty *per cent* of two years' back rents would be handed to us, in addition to the percentage of the current year.

We started gaily enough: formed our Finance, Police and Sanitary Committees and requested them to report. The first reported that 20 *per cent* on Ground rents of \$27,000 being \$5,400 and license fees from taverns and groggeries amounting to \$4,300, we had \$9,700 to spend. Out of this, the Police Committee wanted \$12,000 and the Street and Sanitary \$7,800, altogether close upon double our income. Actually, they spent about \$12,000. It can readily be conceived that at this rate—and with a great falling off in our income from grog-shops' licenses, in consequence of reduction of the foreign military and naval force, our reserve fund was rapidly exhausted. The population was meanwhile growing, and an attempt to put on a house-tax and wharfage-dues being resisted, we found our estimates for 1867 \$18,000, while our assets were only \$8,000—and incontinently resigned. A meeting of Land-Renters was held, at which the 'faithful few' fought hard to get the grant of money increased to 60 *per cent*, with which business could have been carried on; but a stupid majority again beat us, and control of the settlement was abandoned by foreigners.

In November, 1867 Mr. Sidney Locoek, Secretary to the British Legation, announced to us the arrangement come to between the Foreign Ministers and Native Government, closing his despatch with the paragraph quoted last week, which reserved the power of again changing this arrangement, should it not be found to work well. It worked extremely badly, and after an ineffective remonstrance in 1868,—in May, 1869, a Memorial was sent in to the Foreign Ministers, quoting Mr. Locoek's promise of revision if necessary, elaborately showing the necessity, and giving as an Appendix a Draft Budget, showing how, with an income of 80 *per cent* of the Ground Rents, supplemented by about \$5,000 of license fees of various sorts, the place could be efficiently lighted, drained, paved and policed. The arguments were not to be refuted, the figures were admitted correct; but we asked for a Charter, and we asked that the Municipal Government should be wholly in the hands of residents, unless a Consul or two were elected on his merits, not *ex-officio*:—and this condemned the scheme, which was accordingly shelved.

Another reason for the failure of this attempt to regain self-government was that,—the Restoration party having hardly had time to show their metal, a feeling was general

that they ought to have a chance. They began to use their new brooms well enough. They gave us drains, promised us gas-lamps, sold us the Bluff and repaired our streets and roads with some of the purchase money. But as foreign villas began to spot the hills, native burglars began to try the strength of door and window fastenings, and a number of very impudent and leisurely executed robberies, both there and in the settlement having proved the total inefficiency of the native police, in 1874 another attempt was made to regain Municipal control on the basis of the Memorial of 1869. But as the large majority of the residents had not been robbed, the intelligent minority again failed to get a hearing and at a 'thinly-attended' meeting, finally 'threw up the sponge.' Is it likely that any better result will attend this new agitation for Municipal Reform?

We fully explained the views of this journal in our last:—and, the history of the subject we have just sketched showing clearly that to get Municipal Government on the Shanghai basis is hopeless;—is it not worth while trying to get it on that of the Osaka Convention? Surely an afternoon might be spent to advantage in discussing the question. The writer has in his possession all the records which any meeting, or any committee, can want for reference, and would willingly undertake the labour of preparing a draft budget for the debate. Proper Municipal Government certainly appears to us a very desirable object; and there seems no reason why foreigners should be worse treated in Yokohama than in Kobé. The only question for settlement is the finance; and if it can be satisfactorily shown that, under the Kobé system, the ground-rents of Yokohama will suffice to give us a good system of Municipal Government, some better reasons must be adduced by 'Municipes,' or A. B. C., or X. Y. Z., before we shall be convinced that we must perforce live here under what is, virtually, no government at all.

EDITORIAL NOTES.

OUR foreign readers will have to excuse us, and our native readers ought to thank us, for devoting so much of our space to the important question of Forestry. We know of none more vital, directly to the interests of the country and—in consequence, indirectly, to foreign trade. Japan has her warning of the evil results of disafforestation plainly before her eyes in the deplorable state of her neighbour China; we summarized them in a form, we hope sufficiently clear, in an article in last week's Review, and—this week—we indicate the path which the Government should pursue to repair past losses, and check future disaster. We cannot too strongly insist upon the necessity of immediate action and—aware of the little influence which it is possible for an anonymous writer in a so young a journal as this to exercise; we summon to our assistance two of the greatest living authorities to support and confirm our statements and our predictions—Elisée Reclus and Engène Viollet-le-Duc. M. Reclus, in his great work, "The Earth, a Descriptive History of the Life of the Globe" writes thus of the effect of disafforestation upon the rivers whose watershed are the French Alps:—

"There is probably no country in the world where this devastation goes on more rapidly than in the French Alps. The mountains of this region, and especially those which enclose the basins of the Durance and its tributaries, are in general composed of very hard rocks alternating with other beds, which easily give way under the action of the water; in every place we may notice immense cliffs resting upon bases without any solid consistence. The marls, the disintegrated schists, and the other friable matter are gradually washed away, and their fall precipitates that of the compact layers at the summit, which suddenly fall down or glide slowly into the valleys. It is, however, the improvidence of the inhabitants, and not so much the geological constitution of the soil, which is the principal cause of the devastating action of the streams. In the

mountains of Dauphiny and Provence, the slopes, most of which are now so bare, were once covered with trees and various plants which kept back the surface-water resulting from the rain or melting of the snow, by absorbing a great part of the falling moisture, and thus retaining the coating of vegetable earth over the beds of crumbling rock. During the course of centuries, the trees have been cut down by greedy speculators, and by senseless farmers who wished to add some little strips of land to the fields in the valleys and to the pastures on the summits; but when they destroyed the forest they also destroyed the very ground it stood on.

"The rain or snow, being no longer kept back upon the slopes by the roots of the trees, descends rapidly into the valley, driving before it all the *débris* torn away from the sides of the mountain. The tooth of the goat and the sheep helps to lay bare the rootlets of the herbaceous plants and the brushwood; bit by bit, the whole of the thin coating of vegetable earth is removed, the bare rock shows itself, and deep ravines are hollowed out in the cliffs and are traversed in the rainy seasons by furious torrents which once did not exist. The water which used slowly to penetrate the earth, conveying fertilising salts to the roots of the trees, now serves no other purpose than that of devastation. When the forests are gone, great furrows of erosion may be noticed opening out at intervals on the slopes; these furrows often correspond to ravines situated on the other side of the mountain, and in a comparatively short space of time, they ultimately sever the ridge of the mountain into distinct peaks, uniformly surrounded by a slope of rocks or fallen earth: summits of this kind are being formed every year. In some localities, there is not a single green bush over a space of several leagues in extent; the scanty grey-coloured pasturage is scarcely visible here and there on the slopes, and ruined houses blend with the crumbling rocks that surround them. The stream in the valley is generally nothing but a scanty rill of water winding among the heaps of stones; but these very heaps of shingle and rock have been carried down by the torrent itself in the days of its fury. In many parts of its course, the Haute Durance, which is generally not more than 30 feet wide, seems lost in the midst of an immense bed of stones, a mile and a quarter wide from bank to bank. The Mississippi itself does not equal it in dimensions.

"The devastating action of the streams in the French Alps is a very curious phenomenon in an historical point of view; for it explains why so many of the districts of Syria, Greece, Asia Minor, Africa, and Spain have been forsaken by their inhabitants. The men have disappeared along with the trees; the axe of the woodman no less than the sword of the conqueror have put an end to or transplanted entire populations. At the present time, the valleys of the Southern Alps are becoming more and more deserted, and the precise date might be approximately estimated at which the Departments of the Upper and Lower Alps will not longer have any home-born inhabitants. During the three centuries that have elapsed between 1471 and 1776, the *vigneriers* of these mountainous regions have lost a third, a half, or even as much as three-quarters of their cultivated ground; and the men have disappeared from the impoverished soil in the same proportion. From 1836 to 1866, the Upper and Lower Alps have lost 25,000 inhabitants, or nearly a tenth of their population. At the present time, in an area of 3,860 square miles, embraced between Mont Thabor and the Alps of Nice, there is not a single group of inhabitants which exceeds the number of 3,000 individuals. Barcelonnette, a most considerable place, has more than once been in danger of being carried away by the stream, the bed of which is higher than the streets of the town; the latter certainly would be still less populous were it not that the numerous functionaries necessary in every sub-prefecture tend to give it an artificial life. Without the *employés* and the custom-house officers, who almost consider themselves as exiles, the whole extent of a great portion of these mountainous regions would be nothing more than a gloomy solitude. It is the mountaineers themselves who have made and are seeking to extend this desert, which separates the tributary valleys of the Rhone from the populous plains of Piedmont. If some modern Attila, traversing the Alps, made it his business to desolate these valleys for ever, the first thing he should do would be to encourage the inhabitants in their senseless work of destruction. Is it necessary that man must ulti-

mately rid the mountains of his odious presence, so that the latter, left to the kind offices of beneficent nature, may again some day recover their forests of fir trees and their thick carpet of flower-studded turf?"

IN a country like Japan, where so many varieties of the *conifera* flourish so well, the remarks which follow, on the peculiar value of these trees, have a special worth. They are from M. Viollet-le-Duc's recently published work "Mont Blanc." It appears to us that translations of this and of M. Reclus' book, quoted above, would be of infinitely greater use than the translation of 'Wheaton's International Law'—as we hold Afforestation to be a subject of far greater moment to the people than Tariff Revision. This is what M. Viollet-le-Duc has to say on the use and value of the *conifera*:—

"Conifers would seem to have been created with a view to the purpose they serve on the slopes of the mountains. Their branches, which exhibit a constant verdure, arrest the snows, and are strongly enough attached to their trunks to enable them to support the load they have to carry. In winter we may see layers of snow eight inches or a foot thick on the palmated branches of the firs, yet which scarcely make them bend. Thus every fir is a shelf which receives the snow and hinders it from accumulating as a compact mass on the slopes. Under these conditions avalanches are impossible. When the thaws come, these small separate stores crumble successively into powder. The trunk of the conifer clings to the rocks by the help of its roots, which, like wide-spread talons, go far to seek their nourishment, binding together among them all the rolling stones. In fact, the conifer prefers a rock, settles on it, and envelopes it with its strong roots as with a net, which, stretching far and wide, go in search of neighbouring stones and attach them to the first as if to prevent all chance of their slipping down. In the interstices debris of leaves and branches accumulate, and a humus is formed, which retains the waters and promotes the growth of herbaceous vegetation.

"It is wonderful to see how, in a few years, slopes, composed of materials of all shapes, without any appearance of vegetation, become covered with thick and vigorous fir plantations; i.e. if the goats do not tear up the young shoots, and if a little rest is left to the heaps on which they grow. Then the sterile ground is clothed, and, if an avalanche occurs, it may prostrate some of the young trees and make itself a passage, but vegetation is eager to repair the damage. Does man ever aid in this work? No; he is its most dangerous enemy. Among these young conifers he sends his herds of goats, which in a few days make sad havoc, tear off the shoots, or hinder them from growing; moreover, he will cut down the slender trunks for firewood, whereas the great neighbouring forest would furnish him, in the shape of dead wood and fallen branches, with abundance of fuel."

THE age we assign to certain trees in Nikko, 384 years, is neither a guess nor a misprint. A few months ago, a large number of these trees were felled and their *annuli* were counted by three independent observers, who afterwards compared their notes. These exactly tallied, and the ages of the trees were found to be all 384 or 385 years.

DISUNION in the community will probably prevent any attempt at Municipal Reform being successful. What can be hoped for in a town, where an evidently intelligent and well-educated man writes to a newspaper and deliberately rejoices in his success in 'stumping' the place, and getting a majority to agree to try to keep things in the disgraceful state in which they are; before opportunity has been given to proposals for reform,—good-humouredly and moderately suggested—to be explained to the citizens? So Gryllus might have 'stumped' the stye to persuade his companions to resist Ulysses' motion to rescue them from Circe's enchantments!

No reform was ever effective and satisfactory that was carried without some amount of compromise; and we must confess our surprise that a community of men of business, who never carry through a single transaction without 'splitting a difference' in some way or other, cannot carry this sound commercial principle into politics. In this Review has been proposed a scheme which is, of course, not faultless, but which has at all events in its favour the *prestige* of eminent success elsewhere. In the

Gazette are proposed two alternative programmes. Instantly Gryllus goes grunting about, and gets a 'majority' to refuse to give either proposal a hearing. We should certainly have imagined that the visitation of cholera last autumn, and the apparent certainty of its return with the hot weather; re-inforced by the occurrence of a robbery and murder—would have induced Yokohama to split its differences into such little pieces that they might be all pounded up into a common good.

What a comfort it is to be able to think with the banished Coriolanus:—

'There is a world elsewhere!'

OF far greater importance to Englishmen, at all events, than either of our leading articles, which have but a comparatively local interest, is an Extract from the London *Economist* which we publish to-day: "Are we consuming our Capital?" We had only space, last week, to print the introduction: we shall go on extracting the remainder, as we receive it from London. Mr. Rathbone, an eminent Free-trader, pointed out in a letter to the London financial organ, which we strongly recommend our readers to refer to—(it appeared on November 24 and was reprinted December 1) the alarming discrepancy between Imports and Exports of the United Kingdom for 1876—the former exceeding the latter by nearly a hundred and twenty millions; and asking whether, therefore, we were not necessarily paying for what we bought with some of our immense accumulated wealth? The answer of the *Economist* is most interesting and instructive, filing down as it does, little by little, this debit balance, and showing how, in item after item, it is imaginary. We await the conclusion of the article with pleasurable feeling, and fully expect to have it proved to our perfect satisfaction, not only that what remains of it will only be *interest* on our capital; but that England might spend a great deal more without feeling it. An extremely comforting conviction for an Englishman who is perfectly free from any *plethora* of accumulated wealth of his own.

DEATHS.

At Shanghai, on the 3rd February, JOHN BROADHURST TOOTAL, in his 59th year.

At Shanghai, on the 2nd inst., FREDERICK GEORGE WALSH aged 64 years.

On the 11th inst., at No. 24, the infant son of GAVIN PARKER NESS.

YOKOHAMA: SATURDAY, FEBRUARY 16, 1878.

NOTES OF THE WEEK.

THE old after-dinner East Indian toast of 'A lass! and a lac a day' might be parodied by Yokohama correspondence clerks 'Alas! and a mail a day' since the last number of this Review had to be pushed into premature birth to make room for a Mail Summary. The *Oceanic* and *Tanis* left respectively for America and Europe at their appointed time, and a northern and southern coasting steamer have been despatched as usual. Of inward mails, we have to record the arrival of the *Tiber* on the 14th inst., with the Marseilles mail of the 20th December last and the *Saikio Maru*, with the Shanghai mail of the 6th inst., while the *Belgie* is hourly expected from San Francisco, having left her port on the 19th ult. She has already made a long passage for a 'White Star' liner, so she must have met with exceptionally rough weather. The *Sunoh*, with the English mail of January 4th, left Hongkong on the 11th inst. and may therefore be expected here by Thursday next. For the movements of other mail steamers we refer our readers to our shipping tables.

We take this opportunity of explaining to our subscribers the use and meaning of the Table IV. which we have recently added

to our Mail Steamers' Register. The writer of a letter in England or America, to some friend in Yokohama, naturally wants to know when his letter ought to reach Japan, and also when it does. If he has the sagacity to take in the *Japan Times*, he finds out by reference to this table that his letter, sent on such and such a date, will be due here on such another. He waits till the happy day when he receives the next number of this Review, then turns to the Shipping tables on the next page, and ascertains whether or not the vessel which carried his remittance or his love-letter had arrived. If she had, which he will generally find to be the case, he fills in the date in the blank column of 'Arrivals' and then, besides having the opportunity of blessing or cursing the steamer for making a quick or slow passage, has in addition the elevating sensation of becoming a contributor to the paper.

The interruption to telegraphic communication having been repaired, we began to receive news from London again three days ago. And extremely interesting these news are. Fancy being condemned to vegetation in a miserable hole like this, where people have not spirit or enterprise enough to resist a Poll Tax, or support a crossing-sweeper—while such events are passing in Europe! Perhaps this afternoon the heralds stood on the steps of the Royal Exchange and the Declaration of War was proclaimed and 'Britain's one sole God' will no longer

"be the millionaire :

No more shall Commerce be all in all, and Peace
Pipe on her pastoral hillock a languid note,
And watch her harvest ripen, her herd increase,
Nor the cannon bullet rust on a slothful shore,
And the cobweb woven across the cannon's throat
Shall shake its threaded tears in the wind no more."

A vote of confidence in Lord Beaconsfield's ministry, six millions voted for munitions of war, and the Ironclad squadron anchored under the Sultan's windows, with Gortschakoff telegraphing defiance, look very like battle. Russia, as usual, has to score another diplomatic victory, for only by the connivance of the Turks could her troops have occupied the *enceinte* of Constantinople. We, with Austria and other Powers, had virtually guaranteed Constantinople from occupation: but it will be remembered that a chief cause of Abdul Aziz' deposition was his listening to Ignatieff's propositions for 'protection' of Turkey by Russia. The old 'palace party' would appear to have made the *coup* which then failed.

But here we are—drifting into European politics, of which we can necessarily know nothing. *Revenons à nos* Shanghai sheep!

The mystery of William Boorn remains as dark as ever, and the attempt to prevent a recurrence of such an outrage, by lighting the settlement, licensing the grog shops and controlling the 'loafer' population by the establishment of an efficient foreign police, is *dashed* with such cold water that it seems hopeless to persevere in it.

The other crime, a burglary at Homoko, which we referred to at the same time when we last mentioned Boorn, has been detected and punished. A policeman in the Takashima-cho, perceiving a man wearing some female garments under his own masculine habiliments, questioned him, and not receiving a satisfactory explanation, took him to the police station. The officer in charge there, being of course cognizant of the robbery at the Homoko tea-house, sent for the landlady, who immediately recognized the clothes as part of those stolen from her house. The three comrades of the robber were afterwards captured in Ishikawa, but whether or no through information supplied by their companion after *gentle pressure* by the authorities, our informant sayeth not. They were all Yokohama *belongers*, and it is to be hoped that they will not have a chance of indulging in the 'sparkling grape' for some time to come. A few years ago only they would have been dead men ere this. We believe that most of the wearing apparel stolen was recovered; the watches, hair-pins and corals being more easily disposed of, were of course required to fill the flowing bowl and to gladden the eye of beauty. The remark is threefold, but the aptitude displayed by the native police in recovering property stolen from the native, and the inaptitude to detect the perpetrators of offences against the foreigner is remarkable. These men are caught in a fortuitous way, but where is the murderer of William Boorn? Would that the Japanese would take a lesson from the native police in Shanghai, where the recovery of property stolen from the foreigner is oftener the rule than the exception; and that too, with the settlement in close proximity to the city of Shanghai, with its thousands of tortuous circuitous streets and blind alleys, and with its swarms of vagabonds whose only livelihood is to prey on their neighbours.

On Monday last was celebrated, by salutes in the harbour, and a holiday in the public offices, the 258th anniversary of the accession to the throne of Jimmu Tenno, the first Mikado. It is a

curious coincidence, rather, let us say, a happy omen for Japan, that Jimmu Tenno and *Japan Times* have both the same initials. 'There is a river in Macedon, and there is also moreover a river at Mon mouth . . . and there is salmon in both.' We shall fire a salute when we register our 2538th subscriber.

The War Department's accounts of the expenses of the Satsuma rebellion have been made up, and the total, the *Nichi Nichi Shimbun* tells us, is close on 50,000,000 *yen*. They fight more cheaply in Japan than in Europe. Not that the figure is not large enough, and a heavy burden on the country. It is sad to think of the loss that cannot be replaced, of the brave men who fell on each side. The *Gazette* by the way, has been publishing a translation of a most remarkable document, 'Saigo's dream,' which we recommend our readers to peruse. The hero is supposed to have an interview with Jimmu Tenno, who calls on him for an explanation of his behaviour, which he is proceeding to give, when the Censor of the Press stops him in his unfinished tale. Though we do not think the native press yet fit to be trusted with full liberty, we think the Government makes a mistake in this particular instance of repression. They achieved a splendid and complete victory, and the vanquished have a proverbial right to scold. But is more than probable that the Government knows its own excitable people better than we foreigners can, and rumours of attempts to relight the dead embers of rebellion justify them in being careful.

The strong probability of a return of the cholera epidemic to our misgoverned town has sent the foreign consuls looking about for a site for a new hospital elsewhere than in the middle of the now crowded bluff. We do not hear of their being successful, and can well imagine how difficult must be their task.

It seems by no means unlikely that trouble is impending between Corea and Japan. It is reported that a Corean embassy is to be sent shortly to request the temporary suspension of the clause in the recently-made Treaty which provides for the residence of a Japanese Ambassador in the capital of Corea. The rumour has been semi-officially denied, but it is by no means improbable. The Chinese Ambassador, here, on the other hand, appears to be anxious to cultivate friendly relations with his colleagues. He entertained the Foreign and some of the Japanese ministers at the Shiba palace on the 8th instant. The birds' nest soup was exceptionally good.

We are sorry to have to notice the demise of the little *Kinshin Times*, of Nagasaki. Its articles on Coal would have been extremely useful, as contributions to a paper with a larger and wider circulation. Its editor makes a graceful bow to his audience from an imaginary stage, rings down his curtain and turns off his gas. He has referred twice or thrice to the fact that the *Japan Times* and *Kinshin Times* were twin brothers, having been born on the same day. *Absit omen!*

CORRESPONDENCE.

We do not hold ourselves responsible for the opinions or sentiments of Correspondents. No notice can be taken of anonymous letters; whatever is intended for insertion under this heading must be authenticated by the name and address of the writer; not necessarily for publication, but as a guarantee of good faith.

PARAPHRASE NO PLAGIARISM.

To the Editor of the *Japan Times*.

Dear Sir,

The *Japan Mail*, in an article entitled "Killing No Murder" in its issue of the 9th of February, expresses its "unfeigned regret that it finds itself compelled by the "prominence lately given to this unfortunate production ("The Kagoshima Affair") to criticise it with some "severity."

When, Sir, it became your duty to undertake the 'defence of the dead,' and your criticism evoked the reply which has disgraced Eastern Journalism, and which would have sullied the page of any journalism, even of the lowest type; then the sympathy of all brave men was on your side. The use of coarse, violent language, now that Law and Society combine to punish and condemn personal chastisement, is an act, morally in the same category with the assault by a hundred of armed guards upon three defenceless men and one tender woman.

What leads the *Mail* to "criticise with some severity" this pamphlet on 'The Kagoshima Affair'? It was obvious to any candid mind, endowed with reasonable intelligence, that with that pamphlet, *except so far as it was quoted in the*

'Tokio Times,' your article had nothing to do. Your criticism was directed against the sentiments of a journal which professes to represent the opinions of a party, and not against a pamphlet which, whether anonymous or not, very few people had read. What has the *Mail* brought, to what it says would be the "no difficult task, after proper preparation, of refuting the able plea for the defence" of a cowardly assassination? In addition to your arguments, it has produced one little idea—that Mr. Richardson was a mild, as well as an honourable man. For the rest, by an elaborate paraphrase of your leader of the 26th ult. it has produced a very readable article. The official records are referred to as the only reliable source of information; the interpolation of 'suppositions,' founded on 'loose rumours,' collected by the American Minister, is denounced; the proper value is placed upon the conduct of the followers of the 'high-souled Satsuma hero,' who, in cold blood, mutilated our dying countryman; a just comment is made upon the dishonesty of a historian who ignores the evidence of the Japanese woman, who witnessed this crowning outrage; an inference is drawn from the fact that as Mr. Richardson was accompanied by a lady, he would be less likely to be guilty of the insolent conduct charged against him. *Voilà tout!*

As the *Mail* has produced a very readable, though not original article, it would not be fair to find fault with it, but for the cool touch of self-sufficiency which occurs at the end thereof. Of course, a writer must pick his facts, if not his ideas, from some fount, and why not from the work of a brother journalist? But the writer in the *Mail* commences with a palpable historical blunder in placing the murder in 1872; * then, as I have shown, paraphrases your argument; throws a compliment on the literary ability of the author of the "Chapter of Japanese History" as a sop to Cerberus; characterizes the language of the *Tokio Times* as a "tone of reply which we feel bound to condemn" (a pleasing rebuke against the use of such language!); states his opinion that "the British case was not in strong hands"; and concludes with this startling peroration:—

"The murders of foreigners in Japan admit of no palliation. But they were the fruits of a ferocity artificial rather than natural, and we are confident that very few Japanese at the present day share the sanguinary views of the 'Satsuma officer' mentioned in the pamphlet with apparent approval. The moral responsibility of assassins is not, therefore, to be measured by the atrocity of their deeds, and involves questions requiring much more careful consideration than we are for the moment prepared to give them."

I cannot therefore help asking which of the minor sins has tempted the writer? Or, is he sarcastically giving a few easy lectures on the art of Journalism made Easy? Perhaps, as he thinks that your Review is not read by the same, or so extensive a class of readers as the *Mail*, he was anxious that your arguments should be brought before a wider circle; but, then, there is a way of doing this, without infringing the etiquette which is universally received among Editors who know their business. I am not myself much acquainted with the mysteries of the *sanctum* of the editorial room; but I have heard, and I believe, that to abstain from constant bickerings between themselves is for the true welfare of the journals they conduct, if they respect the dignity of the craft above the occasional applause of a thoughtless public; and I think it would have shown better taste in the *Mail*, under all the circumstances, to have let the matter rest; or, if it were not satisfied with the strength of the "British case" as you had left it, to have waited till it had time and opportunity to give a 'more careful consideration' to the subject.

The subject itself is not a pleasant one; it is deeply distressing to those who knew and esteemed the victims: the "Affair" was almost forgotten, it has now been raked up again by a self-constituted advocate and adviser of Young Japan. *Cui bono?* Certainly not of his constituents; for the "Affair" whether assassination, murder, or revenge, reflects nothing but opprobrium on the perpetrators: certainly not of the writer in the *Tokio Times*, for his reply to criticism has shocked even his friends. Certainly not of the readers of the *Mail*, for its article, were it original, would leave the public in the dark, as to

whether it supported the conduct of the agents, and the language of their advocate; or whether it intended merely to find a bad award, in a cause in which it ought to have thrown its weight and used its influence on the side of fellow countrymen.

I am, Sir,

Yours faithfully,

ARBITER.

Yokohama, February 14th, 1878.

NOTES AND QUERIES.

Qr. 3. Can any of your readers give me information respecting the comparative value of money in Japan five centuries ago, and at present?

Were the actual incomes of the Nobles larger or smaller than as represented by their official rent-rolls, and have they now, as a matter of fact, more money to spend on themselves, than they had in old times? N. or M.

NOTE. Perhaps "N. or M." may be able from the following data to answer the first part of his own question. Only one of the items here given goes back as far as five hundred years. They are taken from a manuscript compiled a year or two since at the Okurashô, and are I think worthy of reliance:—

- 1.—One hundred Kobans (i.e. riyôs) of the Keichô period (1596-1615) contain
Gold 401.226 Momme.
Silver 44.774 "
- 2.—One hundred Kobans of the Kenji period (1275-1278) contain
Gold 210.73 Momme.
Silver 39.27 "
- 3.—One hundred Kobans of the Genroku period (1688-1674) contain
Gold 273.063 Momme.
Silver 202.937 "
- 4.—One Oban (10 riyôs) of the Keicho period (1596-1615) contains
Gold 30.0377
Silver 12.4629
Copper 1.6

Taking for granted that the qualities of the metals employed now and at those periods are the same, it would not be difficult to calculate the difference in values. But I am afraid that any theory based in such a calculation would be delusive. Judging from the *Kingindzusetsu* (a book which, by the way, will be found of the greatest use to any one interested in Japanese Numismatics) it appears that there has never been a standard of coinage in Japan. Coins struck in the same reign will be found differing in size, and in the weights and qualities of the metals employed. There does not seem to have been any Mint; coins were made by independent individuals who obtained leave to do so.

With reference to the second part of "N. or M.'s" question, I believe it will be found that the Official Lists of the Daimiô's revenues were the assessed values of the total production of the provinces, and were very far from being correct. Thus we read that the Lord of Kaga had a revenue of 1,200,000 Koku, which means that the officials who assessed the taxes, which he was to pay, calculated that his province *ought to produce* 1,200,000 Roku; and this it never did. The Daimiô received a certain portion, varying according to the tenure (generally a fourth or a third, called *yotsu* or *mitsu mononari*) of what was really produced.

Seeing this, one can easily imagine that under the new régime (at least before the reduction) the Daimiôs have had much more money for their own use; and I am informed by a Japanese gentleman, who has good means of knowing, that this is really the case; but he says that some have squandered away their pensions, and are not in an opulent condition just now. X.

Qr. 4. To what amount of restraint was a Noble subjected by the supervision of the 'karo.' Could he, for example, go out alone, or with only a favourite attendant? N. or M.

NOTE. I do not think a Daimiô was subject to any restraint from his *Karô*, other than that which strong and experienced minds would exercise over weak and ignorant

* Obviously a misprint. Ed. J. T.

ones. In theory at least the Karô were as absolutely subject to their Daimiô's will as the other vassals; but very frequently, in practice, the Daimiô was a *roi fainéant*, while the Karô was a *mare du palais* who possessed the real power, of which his master had only the shadow. This state of things is common at some time or other in almost every country in the world, but especially amongst Oriental nations.

The incident of Kaga Sôdô shows a Karô unable to restrain, however much he lamented, the conduct of his lord.

These remarks have no reference to the *Han* system.

X.

THE TIMES OF TAIKO.

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GOYEMON.

Chapter VII. THE PRIME MINISTER.

ONE spring evening in the year 1575, when the merry sun sketched upon slope and parterre grotesque portraits of tall roofs and gracefully curved gables; or, thrusting his rosy arms under granite and argillite bridges, aroused from their afternoon siesta burly carps and gold fish, a man sat reading in the "Palace of Pleasure" at Kiyoto. He was in the prime of life, fairly fashioned and of noble mien, but busy people did not love to look long in his face, for though his features were handsome and eminently aristocratic, they were marred by a veil of listlessness and *ennui*, so thick that its shadow touched everything around him. This was Hidetsugu, Prime Minister of Japan.

Nephew and adopted son of Taiko, regent and generalissimo of the whole empire within the four seas, he had with little pains reached the splendid position he now filled, and which was still but the earnest of fuller dignity in the future, for he was heir presumptive to all the titles and offices of his father Taiko.

Looking at the room where he was seated—the ceiling of pictured cedar—the alcove with its pillars of marvelously fantastic ivy stems and shelves of ebony—the walls covered with flowered brocade, and the floor mats with figured damask—the window frames of frosted iron, with alternate ribs of gold and silver—the veranda, with its ample slabs of strangely grained woods, touching columns of lustrous lacquer, and overhung by a long row of bronze lamps each inwrought with some mystic history—the vases of priceless porcelain, resting on stands of jade and enamel from the palace of the Corean Emperor, and supporting many-armed branches of red and white coral—or glancing across the silk tasselled blinds, here at vistas of velvet turf and level lakes, mirroring long tressed wisteria, or drooping cherries; there at forests of richly foliaged trees and shrubs, shading bronze figures of fabulous monsters, and huge rocks water-carved into weird creations of a century's patient effort:—looking at all these things and then at the man who, sitting among them, took so little note of them, one could easily divine that some cloud had crept between him and contentment.

Less than two years before, the Regent's concubine, Yodo, had borne him a boy in his old age. Taiko's long career of sagacious bravery in the field and impartial probity in the cabinet, afforded no precedent to justify his adopted son's disquiet at this event. It was little likely that the Regent, who, having discovered his mother's portrait in Hidetsugu's face, had deliberately chosen the boy as his successor, and gradually raised him to the highest post in the empire after his own, would now thrust him aside, and permit the world to say that a caprice of consanguinity had perverted a great man's judgment. Nor did Hidetsugu at first anticipate any such result. On the contrary, eager to witness and share the Regent's gladness, he had himself carried the news of Hideyori's birth to Nagoya, where Taiko was at that time detained by the Corean war, and the relations between the uncle and nephew were never more intimate, than when Hidetsugu left Nagoya after the performance of this graceful action.

But an unhappy accident occurred shortly afterwards. On the evening of his return to Fushimi, the Lady Yodo presented his infant son to the Regent. There were present, at the time, the Prime Minister and Ishida Mitsunari, one of the five Councillors. Taiko, taking the child in his arms, had remained for a moment silently gazing at its tiny features, when Ishida, speaking as though he interpreted the Regent's musings, said:—

"Clever a child as the young prince surely is, he can scarcely yet dream of the future that awaits the ruler of all the empire within the four seas."

At these words the Lady Yodo started visibly; a look of happy pride brightened her face, but almost immediately changed to one of vexation as her glance, wandering from the Regent, fell significantly on the figure of his nephew and adopted son.

Not a shade of the mother's unspoken feeling escaped Hidetsugu, and he returned that evening to Kiyoto an altered man. A shadow had fallen upon his life. Dare he hope that his uncle's self-imposed obligations would survive the constant recital of a mother's hopes, seconded by the promptings of paternal affection? He asked himself what he would do were he in the Regent's place, and found little reassurance in the answer. Had fate never shown him so fair a prospect, he had not known this bitterness of disappointment; and angry with the world, angry with his own too sanguine confidence, the hitherto zealous Minister became a brooding idler, haunted by a constant sense of loneliness and helplessness apprehension. But he was too young, and physically too gifted, to suffer long passively. Life had other things to offer besides rule and fame, and soon, in the society of women, he sought to replace the love his cousin's baby hands had stolen from him. The result is easily conceived. One of the handsomest men of his time and possessing almost unlimited power, inclination pandered to his fancies no less than interest, so that, before two years were past, his household numbered forty girls chosen indiscriminately from all ranks and classes, the only conditions of election being beauty and accomplishments.

For a time, soft caresses and sunny smiles, made the present too precious to be disturbed by forebodings, but in the end Hidetsugu began to remember that every night's debauch brought him nearer the things he feared. He had now to dread not Taiko's caprice, which was unlikely, but his justice, which was certain, and finding the solace he had sought insufficient, he was overtaken by the lassitude of men who, with their self esteem, have lost the power to be ambitious.

Sitting thus in the midst of such unheeded splendour, all hopes of happier issues seemed to be fading from his heart like the twilight from the pages of his book, when the door opening, disclosed a little page kneeling on the threshold and holding a salver with a card on it. Another page, who had been sitting perfectly motionless within, received the salver and carrying it to the Minister's side, presented it, kneeling. Hidetsugu did not touch the card, but raising his eyes read the superscription, "Ishida Mitsunari, Councillor," and then made an almost imperceptible sign, which however the well-trained page apparently comprehended, for, bowing low, he retired to his former position, and in the same voiceless fashion conveyed some directions to those without. Presently the door again opened, this time displaying five kneeling figures, on the right and left two pages, and in the centre a man of about the same age as the Minister, but in other respects altogether different, for his eye, bright with hope and expedient, seemed fixed upon things beyond the reach of catastrophe, and his motions were as the overflow of an exhaustless spring of vigor.

"Come in, Ishida," said the Minister, "it is some time since we have had the pleasure of seeing you here."

"Yes, your Excellency," replied the Councillor, "I have been daily promising myself the honour of waiting on you, but business has held me fast at Fushimi. I must apologize for calling so late this evening."

"Not at all," answered Hidetsugu, "on the contrary, your visit is most opportune. The *ennui* of these spring evenings is insupportable."

"Your Excellency's *ennui* is most probably the result of too severe attention to your public duties," said the Councillor, looking curiously at Hidetsugu's hands which,

hanging listlessly over his reading stand, were toying with the tassel of an elbow rest.

A slight tinge of colour visited the Minister's cheek at this remark of which, for the rest, he took no notice, and a moment of somewhat awkward silence ensued, broken at last by the visitor, who said:—

"I have taken the liberty of bringing a runlet of wine, which I hope your Excellency will do me the honour of tasting. It has come to me with some strong recommendations of quality."

"I shall be very glad to do so, provided you keep me company," replied the Minister:—for the first time displaying a slight evidence of interest. Then, turning to the page who sat at the door, he said:—"Let the runlet be taken from the Councillor's people and carried to the banquet hall. We shall go there presently to taste it."

Ishida, bowing low, displayed an almost excessive satisfaction at the delivery of this order, but the Minister, relapsing again into his old apathy, took no notice of his visitor's demeanour. "Is there anything strange at the Regent's court?" he asked, after the page had left the room.

"No," replied the Councillor, "since Sir Yukinaga brought news the month before last that peace with Corea was at length arranged, people discuss nothing but the probable result of the ambassador's visit."

"Indeed," said the Minister, "castle planning and treaty framing must keep the Regent pretty busy. But what do your speculative folk find to anticipate in the terms of a peace already digested?"

"Nothing in the terms, but your Excellency has no doubt heard of the form of the preamble."

"No," replied Hidetsugu "I should think the preamble was not a matter of much moment."

"Your Excellency does not then know that, according to Yukinaga's report, the Chinese intend to address the Regent as king of Min."

"Which no doubt will be very satisfactory to Taiko, seeing that he has always proposed to reach Min by stepping on Corea," observed the minister.

"Yes, your Excellency, but the Regent may insist on more than the title."

"And what then?" asked Hidetsugu carelessly.

"He might then find it necessary to cross the sea and lead the troops himself," said Ishida, looking keenly at his host.

"If he did, I presume the government could be safely carried on his absence, for there would be few left here to rebel," answered Hidetsugu, interpreting the Councillor's look. "But the night is growing chilly, and your wine awaits us."

Saying this, he rose, and led the way to the banquet hall. There the Councillor found large store of delicacies served in vessels and cups of the finest porcelain. The ewers were of pure gold, as also were the flagons, and massive candlesticks of silver stood all round the circle of the feast. At one side of the room, mounted on lacquered trestles, the Councillor's portly runlet reposed, its' plaited covering of snow white rice-straw as yet unviolated. But Ishida scarcely observed these things. His whole attention was riveted on the attendants, twenty beautiful girls, who, kneeling here and there beside the apparatus of the banquet, displayed a marvellous fertility of graceful device in their essays to prove their presence essential. The Councillor scanned their fair faces one by one, rather with an air of enquiry than admiration; and as his eyes fell upon the last, a slender girl of fifteen or sixteen, who sat timidly beyond the glare of the candles, a look of disappointment crossed his features. But at that moment two little children dressed in red, with girdles of white and gold, and clusters of cherry blossoms in their hair, advancing to the Minister's side, the one presented him with a cup which the other filled with wine. Hidetsugu, emptying the cup, dipped it into an ewer, and returned it to the child, who receiving it on her open hands, carried it to the Councillor.

After this, the banquet began. Hidetsugu, each time he drank, passed the cup to some one of his attendants, and received it from her again, so that presently the cheering beverage brought back the colour to his face and the light to his eyes, and when, after a time, five blind musicians were led in, and a group of winsome girls began to mark the measure of harp and haut-boy with woven paces

and airy gestures, the Minister forgot his dejection and applauded delightedly.

Ishida, who seemed to have been awaiting this moment, now addressed his host:—

"By your Excellency's kindness," he said, "I have seen a picture of beauty and skill such as, until this evening, I had pronounced unequalled."

This somewhat equivocal speech excited many glances of astonishment, and for a moment the wine cup paused in its passage.

"Has the Councillor then been already inspecting the resources of Kiyoto?" asked Hidetsugu disdainfully.

"Not so, your Excellency. The treasury of accomplishments is to be found at the Palace of Pleasure only, but "heaven is hearsay" as the proverb has it, and from what men say, the "dance of the goddess" has been eclipsed at the Prime Minister's court. If this were not so, I might now say I had seen perfection."

Ha! Ha! laughed Hidetsugu. "I see you have not forgotten the art of eloquence in the marshes of Chosen. But you shall judge for yourself," and thereupon he gave some directions to one of the little cup-bearers, who quitting the room, returned in a few minutes, accompanied by Ochika, at that time the minister's first favourite.

Chika was one of those rare beauties on whom gazing only begets the wish to gaze, like some fair prospect whose whole perfection the eye can never exhaust. One of the many odes her charms inspired says, that "no man could quit her presence without a trouble at his heart." As she entered the room, moving with a grace that seemed to interpret the cadence of some secret harmony, the quick blood flashed for an instant into Ishida's face, and then left it pale as death. An equal trouble visited the girl's features, but her long reverence to the Minister and his guest sufficed to conceal her emotion, and not once afterwards during the whole evening did she permit herself to look towards the Councillor. Not so, however, with Ishida. Whether Ochika danced, as she presently did with such a finished excellence, that the music seemed to follow rather than direct her movements, or whether her white fingers glancing among the harp strings, awoke melodies that her voice made doubly melodious, his eyes never ceased to seek her, till, at the conclusion of her song, Hidetsugu, beckoning her to his side, placed the wine cup in her hand, and filled it himself as a mark of special favour. Then the Councillor's rapturous gaze, turning from the girl's face to her master's, changed to a glance of mortal hatred.

Shortly afterwards, he begged leave to retire, and took his way back to Fushimi. Riding along though the shadowy lustre of the moonlight and the fragrant breaths of the damine and plum blossoms, memory carried him back to the time when ambition had not yet matured into action, nor success showed itself barren without sympathy. He remembered how, when men first told him the story of Chika's loveliness, strange longings and forebodings had stirred his heart; how one glimpse of her face had changed his careless dreams of escape from poverty and obscurity, into a fevered craving for opulence and rank, on which to found a claim to her hand; how the undeviating singleness of his purpose had conquered fate and bridged the chasm that separated him from eminence, and how, when almost within reach of his hopes, the whole fabric of his fortune had crumbled into worthless dust at the news of Chika's union with the Baron of Kwannonzan. Then had come an interval of aimlessness and inaction, out of which he had suddenly started with fresh resolves to master his ill-fate, whatever weapon the contest demanded. Elected Councillor, and raised to the rank of the nobility with a rental of two hundred and forty thousand measures of rice, but, above all, powerful as the favorite of the Regent, and the accepted lover of the Regent's mistress Yodo, a few subtle schemes had easily achieved the ruin of the Baron of Kwannonzan, only however again to prove his labour fruitless, for Chika had passed into the hands of Hidetsugu, the Baron's friend and patron. He might then have been content to abandon an apparently impossible pursuit, nay even might have succeeded in mastering his passion, had he found in his life any happier sentiment than the belief that she once loved him. But it was not so. The eminence he had reached seemed to him a barren mountain peak, unceasingly visited by bitter blasts of loneliness and remorse, a height far indeed above the heads

of his fellows, but farther still from the pleasant valleys of affection and content. He felt that his achievements were not yet the full measure of his capability, and with this conviction shaped a resolution, destined to bear large store of poisonous fruit. He determined to see Chika once more, and if he found her indifferent, to abandon all thoughts of recovering her; but if, on the other hand, he saw that his aspect still awakened some emotion in her heart, then casting aside distinctions of evil and good, faith and perfidy, he would suffer death to be the only interruption of his purpose. His visit to the Palace of Pleasure was the first-fruit of this determination, and he carried away not only the assurance that Chika had not forgotten him, but also a new sentiment, a consuming hatred for Hidetsugu, whose disgrace and ruin became thenceforth the single aim of his life.

The next morning he waited on the Lady Yodo, whom he found as usual nursing her little son. Ishida seldom allowed a day to pass without enquiring for the child, and generally, fondling it or playing with it, made it the ostensible object of his visits. On this occasion, however, he did not take the slightest notice of it, so that Yodo, piqued by his evident neglect, asked him at last whether he had forgotten the boy.

"No, Madame," he replied, "though sometimes I almost wish I could do so."

Yodo looked at the Councillor in astonishment, but, finding that he offered no explanation of his strange answer, said:—

"What can you possibly mean by that, Sir Ishida?"

"Madame," he answered, "your son's future is so dark, that its shadow is cast upon me, who love him and would fain give my life to avert the sorrows that await him."

"The sorrows that await my son!" repeated Yodo with a blanched face;—"pray explain yourself, Sir Ishida. The mystery of your words causes me more concern than their import."

"The Councillor shook his head sadly. "I had not thought to tell you my fears, Madame," he said, "but I feel that to conceal them longer were a fault. And yet I cannot believe that the Regent's age and the Prime Minister's excesses have not already caused you some uneasiness."

"I have often indeed wished," replied Yodo, "that Taiko might live to direct Hideyori's childhood; but the Regent has already arranged to give the castle of Fushimi to Hidetsugu and that of Ozaka to my son, and no doubt he will take care to remove all future difficulties before he dies. As for Hidetsugu's excesses, I know nothing of them. Why do you speak of them in conjunction with the Regent's age? I confess I cannot understand you."

"You do not then know, Madame, that the Minister's life of lust and debauch is a subject of marvel to all Kiyoto; that he compels every woman he fancies to enter his harem, careless whether she be already betrothed or even married, and without any regard to her social position, and that he passes his nights in revel and his days in idleness?"

"No," said Yodo amazed, "I know nothing of all that. But surely if it were so, the Regent would deprive him of his office?"

"The Regent, Madame, is equally ignorant; which proves that even Taiko may sometimes be mistaken in his judgment," said the Councillor significantly.

"Well, but," persisted Yodo, "I cannot see in all this any cause for uneasiness on my son's account."

Ishida remained silent for a few moments, and then speaking with evident reluctance, said:—

"Lady Yodo, when I compare the distress my words may cause you with the misfortunes your action may avert, I am surprised at my own silence. If the Minister puts so little restraint on himself during the Regent's life time, what will his conduct be when he irresponsible? Even were he a just and upright man, is it likely that he would prefer your son's claims to those of his own children, and being what he is, can we expect anything but persecution, misery, and perhaps a violent death for this poor boy, instead of the rank and power to which his birth entitles him?"

Before Ishida had ceased speaking, Yodo's tears were falling fast upon her baby's face. Straining the child

passionately to her bosom, she looked up at the Councillor and said almost angrily:—

"How can you quietly prophesy all this to me, without suggesting a remedy? From you at least I could scarcely have expected this."

"The remedy lies in great part with yourself, Madame," answered Ishida quietly but firmly. "It is necessary that the Regent should be convinced of these things, and you should be his first informant."

"I scarcely recognize your wonted sagacity in that advice, Sir Ishida," said Yodo, after a moment's consideration. "Taiko is too impartial to credit charges laid by Hideyori's mother against one who stands between her son and fortune."

"On the contrary, Madame, it is just because the Regent is himself impartial, that he will give you too the credit of impartiality. But surely the urgency of the affair ought to preclude such disingenuous reluctance! It is not a question of impressions, but of civil strife and the people's welfare. If the death of the Regent leaves Hidetsugu Prime Minister, and Hideyori his ward, all Taiko's loyal servants will have miserably failed in their duty, and most certainly the hardly achieved unity of the empire will be again resolved into elements of riot and ruin. Do not fear to find your action unsupported, Madame. Neither I, nor those to whom the country's interests are dear will fail to corroborate your words, but it is necessary that you should speak first, for, as you know, Kimura and Maino are officially attached to the Prime Minister in the capacity of monitors, and so long as no report comes from them, it is impossible for us to move. Yet should it happen that your son's future and the welfare of the State have less weight with you than a chimerical imputation of partiality, I at least will not shrink from my fealty, whatever the cost may be, and however remote the likelihood of success without your aid."

Dictated by a feeling that had absorbed all his energies and aspirations, the Councillor's words were earnest and impressive, while on her side, Yodo's alarm began to be replaced by delight at the anticipation of removing the only obstacle to her son's precedence.

"I will follow your counsels, Sir Ishida," she said, "but I hope I may count on your aid; for Taiko will not be easily persuaded to depose his nephew."

"Madame," replied the Councillor, "I have but one promise and that is pledged to you. Were I to remain idle, while there is a possibility of Hidetsugu's succeeding to the government, I should be a traitor."

With these words, Ishida, satisfied that his object was attained, took his leave.

Oh, most terrible of terrible weapons, the human tongue! Swords have been forged to which armour was as pith, and glaives tempered to which hauberks were as straw, but of all things forged or tempered, the keenest is that which severs the ties of blood and divides the joints of friendship!

A few days afterwards, Taiko called his Council together to discuss some details connected with the visit of the Min' ambassadors. The business of the meeting having been concluded, the five officers sat expecting a signal of dismissal, but finding that the Regent remained silent, began to look enquiringly at one another. Ishida alone did not raise his eyes, for he felt instinctively that he was about to witness the first result of his own schemes.

"Since my return from Nagoya," said Taiko, avoiding accuracy even as to the date of his information, "I have heard some rather discreditable rumours about Hidetsugu's manner of living. Has any thing of the sort come to your ears?"

Now from the time of Ishida's visit to Hidetsugu at the Palace of Pleasure, the Minister's excesses had formed a topic of ever widening comment at the Regent's court. Hence, though Taiko's enquiry elicited no reply, it was easy to see that the silence of the five Councillors arose from reluctance rather than inability to answer.

"My Lords," resumed Taiko presently, "from the moment I determine to consult you, reserve is not compatible with your duty. Is it necessary that I should repeat my question?"

But Ishida, who knew that the Regent generally attributed inaction to incapacity, deemed it wise not remain any longer silent.

"The rumours you mention have reached us too, Your Highness;"—he said, but we held it expedient to trace them, as far as might be, towards their source, before reporting them to you. We have only however attained the certainty that half Kiyoto is busied in discussing the Prime Minister's reputed excesses. Men say that his harem includes women of the lowest classes, and that in some cases the obligations not only of betrothal but even of marriage have been violated. But we do not find it possible to credit things so disreputable. The Prime Minister has monitors of known probity. In their silence, I for my part, find the best refutation of these evil reports."

So spoke Ishida. With all the air of one who extenuates, he had, in a breath, magnified, insinuated and condemned. He was followed by his friend and confidant, Nagamori, with words no less subtle.

"As Ishida reports," he said, "we have sought to find these things false, but without success. Now that they have reached the Regent's ears however, we hope that the Prime Minister's monitors will have an opportunity of re-establishing His Excellency's character. If but a small part of what fame says were left uncontradicted, it would be a stain upon Your Highness' administration."

Of the other three Councillors not one appeared disposed to speak, though all could see that Taiko would gladly have welcomed any vindication of his nephew's conduct.

"I gather, my Lords," said the Regent, "that you attach more importance to this than I had done myself. Let Sir Yukinaga therefore be despatched at once to Kiyoto with authority to seek an explanation from Hidetsugu himself, and let the vice-comptroller Kumagaye visit the Minister's monitors for a similar purpose. I will consult with you again when I know the result of these steps."

With these words, Taiko dismissed the Councillors, who proceeded to carry out the directions they had received. Ishida however, excusing himself to his colleagues, returned immediately to his own house, and taking a choice sword forged by Nagamitsu, and a parcel of gold pieces, sent them to his friend Seta Kamon. Apparently the receipt of this present was a preconcerted signal, for within an hour Kamon set out for Kiyoto.

(To be continued in our next.)

THE JAPANESE PRESS.

THE KWAZOKU AND SHIZOKU.

(From the *Choya Shimbun*.)

THAT the especial protection given to the *kwazoku* and *shizoku* would result to their hurt, rather than to their benefit, we have already often argued. The Government should regard all the four classes, (officers, farmers, artisans and merchants) as equal, and there should be no difference in rank between them. And what is the cause of the Government's special support of the *kwazoku* and *shizoku*? It may be that the former, being aforesaid either '*kuge*' (H. I. M. Court attendants,) or *shiki* (nobles) were then possessed of certain dominions or pensions, but are now unable to retain them,—the latter being relieved from military service, and the former's pensions being turned into bonds. (Indeed there are not a few who have no means of livelihood for the future.) Can this be right? There are, besides the *kwazoku* and *shizoku*, others deprived of their means of livelihood by lapse of time and change of things—such as the members of trade-guilds, which, being suppressed, all the commission merchants are almost ruined. Also certain castle towns having fallen into decay, the trades-people in these towns have no hope of future prosperity.

Such people ought also to be equally supported by Government, if its obligations towards the four classes of people are to be similar.

It is said that "the cause of the Government's partiality towards the *kwazoku* is because there are a number of *kwazoku* in the cabinet, and that its partiality to the *shizoku* is because the Government officers are nearly all *shizoku*." We cannot agree with this argument. But it is further said that the Prime Minister and Chief of the Kunaisho (Imperial Household) being *kwazoku*, their relatives and friends are also of the same rank, and consequently their feeling towards them must be different from that which they entertain towards the other classes. And as among

their own class, there are many who are unfit for or unacquainted with public affairs, or ignorant and without knowledge of Economy &c. and as they conjecture that respect for the *kwazoku* might finally be lost, and their means of living also and so disgrace fall on their names; thus affecting the reputation and power of the monarchy—so the Prime Minister and Chief of the Household, by giving them special advantages, have encouraged them to establish the Club, the School, the Bank, &c. in order to put them into the right direction as to their future means of livelihood, and to enable them to retain their wealth and position. And that this is the cause of the *kwazoku*'s favouritism for people of their own class.

So, they say, with the *shizoku* also. About seven or eight tenths of the officers in the Central or Provincial Governments are *shizoku*; and though these are individually provided with means of livelihood by the salaries they receive;—yet these, knowing the condition of their relatives, friends and neighbours in their native places, who have commuted their pensions, but have since lost all the money they received, on account of the unfavourable state of business; some who, retaining the bonds, are getting uneasy as to their future prospects, and turn to servants or cart-drivers and suffer generally from want of sufficient means of livelihood—those in office consider that the *shizoku* formerly, in the old time, were fighting men only and lived without labour, and also that the Government having deprived them of their pensions and released them from their service, should now protect and afford them means of livelihood. Moved by these considerations, they distribute the Government mountainous or uncultivated lands to improve among *shizoku*. And this because the *shizoku* in office compassionate the men of the class to which they belong.

It is further argued:—"should the special protection given by Government to *kwazoku* and *shizoku* arise from these causes,—as the responsibility of the Government is to maintain and advance the happiness of the people in the whole country, with what show of reason can they make such a difference between the various classes."

According to a popular saying:—"if a Prime Minister had been a weaver, he would protect the manufacture of cottons before anything: if he been an actor, then he would do his best to promote the prosperity of the theatres." We cannot but call this a selfish and partial system. But in the West there is a saying that "laws for the intercourse between men and women having been made by men, they were made for men's convenience."

We conclude by giving as our opinion that the present Government, which consists of *kwazoku* and *shizoku*, should carefully direct its efforts towards caring for the whole public, and not let fault-finding people say that, being composed of officers, it favours too much the people of their class.

EXTRACTS.

ARE WE CONSUMING OUR CAPITAL?

(From the 'Economist'.)

The best plan to enable our readers to see the facts clearly, will be to commence by placing the actual official figures of the Imports and Exports for the last ten years before them:—

AN ACCOUNT showing the VALUE of the IMPORTS into and the EXPORTS from the UNITED KINGDOM, in each Year from 1867 to 1876 inclusive.

Years.	VALUE.			
	Imports (not including Bullion).	Produce and Manufactures of the United Kingdom.	Foreign and Colonial Merchandise.	Total Exports.
	£	£	£	£
1867	275,181,137	180,961,923	44,840,606	225,802,529
1868	294,693,608	179,677,812	48,100,642	227,778,454
1869	295,460,214	189,933,957	47,061,095	237,015,052
1870	302,257,493	199,588,222	44,493,755	244,080,577
1871	331,015,180	223,666,162	60,508,538	283,574,701
1872	351,636,691	257,257,347	58,931,487	311,588,834
1873	371,287,374	255,161,663	55,840,167	311,004,576
1874	370,082,701	249,568,121	58,992,343	297,650,464
1875	374,299,557	223,495,663	58,143,660	281,612,323
1876	375,154,703	200,639,204	56,137,398	256,776,602

If we deduct the value of the Exports from the Imports in each year during the period under consideration, we arrive at the following results:—

EXCESS OF IMPORTS OVER EXPORTS, as Shown by the Official Returns.

1867	£ 49 millions.
1868	67 "
1869	58 "
1870	59 "
1871	47 "
1872	40 "
1873	60 "
1874	72 "
1875	92 "
1876	118 "
1877 (estimated)	142 "

This table is of value as showing us the date at which the excess of our Imports over Exports became marked in what we may call an excessive degree. We may place this date about the year 1875. Two more tables will be necessary, in order to separate the figures with the exactness needed to enable us to comprehend their exact bearing and the progressive increase or decrease in the volume of business transacted. These tables give the increase or decrease in the amounts of the Imports and Exports over those of the year immediately preceding during each of the last ten years:—

INCREASE OR DECREASE OF TOTAL IMPORTS in Year Stated Over the Year immediately Preceding.

		Imports.
Increase over year preceding in 1868	£19,510,000
" " " " " 1869	767,000
" " " " " 1870	7,797,000
" " " " " 1871	27,758,000
" " " " " 1872	23,678,000
" " " " " 1873	16,594,000
" " " " " 1874	1,205,000
Decrease " " " " 1875	3,857,000
Increase " " " " 1876	1,215,000
" " " " " 1877 (estimated)	19,000,000

INCREASE OR DECREASE OF TOTAL EXPORTS in Year Stated Over the Year immediately Preceding.

		Exports.
Increase over year preceding in 1868	£ 1,976,000
" " " " " 1869	9,237,000
" " " " " 1870	7,065,000
" " " " " 1871	39,494,000
" " " " " 1872	31,014,000
Decrease " " " " 1873	3,584,000
" " " " " 1874	13,354,000
" " " " " 1875	16,038,000
" " " " " 1876	24,836,000
" " " " " 1877 (estimated)	2,000,000

As both these tables agree in placing the first decided growth both in Imports and Exports in the years 1871 and 1872, we shall do best to make a further supplementary calculation, and taking the average of the first four years in the statement before us—the years 1867 to 1870 inclusive—as a basis to examine into the excess of the Imports and Exports in each year, commencing with the year 1871, over what we may call the normal amount, that is to say, the normal amount estimated in this manner.

The average sum of the Imports for the four years in question (1867-1870) is 292,000,000l., and the excess over that average was in the year:—

EXCESS OF IMPORTS OF Year named over Average of Years, 1867-70.

1871	£ 39 millions.
1872	62 "
1873	79 "
1874	78 "
1875	82 "
1876	83 "
1877 (say)	102 "

The present year thus seems likely to show a much larger excess than any of its predecessors over what may, for the purpose of this enquiry, be taken as a normal amount of imports.

The average amount of the Exports for the four years in question (1867-70) is 234,000,000l., and the excess over that average was in the year:—

EXCESS OF EXPORTS OF Year named over Average of Years, 1867-70.

1871	£49 millions.
1872	80 "
1873	77 "
1874	63 "
1875	47 "
1876	22 "
1877 (say)	20 "

The amount for the present year thus shows a slight diminution, as compared with that of the preceding year. Still, the great increase in the value of our Exports commencing seven years ago has not yet been altogether lost.

It must not be forgotten, before proceeding further with this enquiry, that the depression of trade in this country has caused a diminution in the value of the goods exported, which has thus assisted in turning the balance against us.

These figures show very clearly that while the impetus given to our Export trade in the year 1871 had already diminished by the year 1875, and had grown till less by the year 1876, the impetus given at the same date to our Imports is still maintained, and indeed continues distinctly to increase in power.

The evidence of the previous tables unites in marking the years 1871 and 1872 as those in which the great enlargement of our trade, taking both Imports and Exports into consideration, first began to operate.

While the information obtained from an examination of the quantities and values of our Imports and Exports, as stated in the Returns of the Board of Trade, is of the greatest service to us, as affording trustworthy data on which to base an estimate of that description which we desire to form, some other points also must be taken into consideration in order to arrive at the real facts of the case. Thus, the Imports are valued at their destination, the Exports at their port of shipment. The Imports are valued at their cost when landed on our shores, that is to say, their nominal value includes the freight upon them. The Exports, on the other hand, are valued at their cost when they leave England, that is to say, without the freight which will have to be paid for them. The Exports also are valued at the price which the manufacturer puts upon his goods, not at the value of the goods which the shipper hopes to receive in exchange for them in return. Thus the Import side of the account is weighted both with freight and more or less of the importer's profit. The Export side is stated without either one or the other. Beyond this, as Mr. Stephen Bourne* mentions, in the very careful paper on "The Growing Preponderance of Imports over Exports in the Foreign and Colonial Trade of the United Kingdom" to which Mr. Rathbone alludes in his letter, there are other circumstances which must be included, if the calculation is to be a correct one. Thus there are the freights earned by British ships trading between foreign ports. These have to be remitted to our shores, either in the form of goods or of bullion. There is the profit on the trading in the goods which form the imports and exports themselves. There are the ships built in this country and sold to foreigners to be taken into consideration. A large vessel or a large steamer is a very costly affair, and represents a considerable amount of British material and the value of a great expenditure of British labour sent abroad, which do not figure in the list of our exports at all. Besides these things, there is the interest for our capital invested abroad. There is not only the interest on the money invested more or less well in the public securities of foreign countries, but there is also interest on the many industrial concerns which have been established and maintained by British capital. And there are the returns from investments in our own Colonies. The amounts due in this manner from India to England, and from America to England have been estimated by competent authorities as something like £30,000,000 annually, which may be taken as instances of this class of remittance. All these sums form in the aggregate an immense amount, which has annually to be sent to England in some form or other. And in making up the amount of the balance of the bullion received or exported, the difference in amount between the bullion sent to England and that which is sent away from England must also be taken into consideration. We give the following figures, which show that though the tide has turned against us in the course of this year, yet that the balance, on the average of the last 11 years, is largely in our favour.—GOLD and SILVER BULLION and SPECIE IMPORTED and EXPORTED,

Years 1867 to 1876.

		Imports.	Exports.
1867	£23,821,000	£14,325,000
1868	24,852,000	20,220,000
1869	20,501,000	16,378,000
1870	29,456,000	18,920,000
1871	38,141,000	33,761,000
1872	29,608,000	30,336,000
1873	33,599,000	28,899,000
1874	30,379,000	22,854,000
1875	33,265,000	27,628,000
1876	37,057,000	29,464,000
1877 (11 months)	33,612,000	37,626,000
Total	334,231,000	280,411,000

Excess of Imports, £50,880,000l.

—or at the rate of five millions a year, which corresponds fairly closely with the amounts supposed to be employed in manufactures, fresh coinage, &c., in the country.

Nor must we lose sight of the fact that the value of our Exports has during the last two or three years especially been estimated at the lower prices current among us in consequence of depressed trade, while the Imports have undoubtedly been, in some instances at least, estimated at the higher prices which have been in some measure the result of our own enhanced demand.† It is not values, in all respects, but quantities, which ought to be compared and the quantities of goods exported, which have probably set in motion as much industry at home, are not unfavourable to this country in anything like the same degree. To turn again for a while to the Imports. The Custom House classification of the Imports under their chief heads during the last three years will aid us in this part of our inquiry. It is as follows:—

		IMPORTS—Value.		
		1874.	1875.	1876.
In a raw state to be used for manufacture.....	£146,632,933	£139,047,483	£136,178,430	
Partially manufactured.	30,129,753	28,563,266	30,276,326	
Wholly manufactured....	37,493,430	39,552,176	40,410,984	
Of food, including condiments and stimulants.	152,068,131	162,274,950	163,457,312	
Not properly belonging to any of the foregoing heads	3,768,440	4,496,697	4,831,651	
	370,082,701	373,939,577	375,154,703	

* "Statistical Society's Journal," March, 1877.

* The dates of Arrival and Departure of the Mitsu Bishi Company's steamers are susceptible of alteration, consequent on the necessity imposed upon the Company—by its contract—of connecting with the steamers of the Pacific Mail.

* No days for Arrival or Departure of the Pacific Mail Company's or Occidental and Oriental Company's steamers having as yet been fixed, we are unable to tabulate them. Each separate steamer's departure from her port will be notified in the Table below, and the day of her probable arrival at her destination.

* Three days are allowed in the P. & O. Company's Schedule for transit of the Mails between London and Brindisi.

* Two days are allowed in the Messageries Company's Schedule for transit of the Mails between London and Marseilles.

TREATY REVISION.

TRREATY Revision is a misnomer for the changes in their relations with the outside world conscientiously desired by a large majority of our fellow-men, natives of these islands. The abolition of the Extra-Territoriality clause in Japan's bargain with Foreign Powers is, we believe, no longer demanded by her diplomatists. They are astute men, and have accepted the position that for some years, at least, it is useless to raise the question. In the second number of this Review, we nearly exhausted the subject—reserving only, for future amplification, when the time seemed to us ripe for their development, certain points of detail; in the fourth, we disposed of the cognate subject of Mixed Courts; and, having thus cleared out of the way collateral and disturbing encumbrances of our equation, we approach, with a certain amount of confidence, the difficult question of the Revision of the Tariff.

For Revision of the Tariff is the only change for which, according to the Treaties of 1858 and subsequent years, any of the parties to these agreements can ask. Supplementary Treaties may be made—generally called Conventions,—abrogating particular clauses of, or adding fresh ones to, the original; but until that original has been so patched, that the best way to amend it is to exchange it for a brand-new one; or until an act of war violently shatters it into fragments; so long it remains in force, and no one party can withdraw from any of the obligations imposed, without the consent of all the others. We say 'all the others' because the 'most-favoured-Nation clause,' providing, as it does, against every possible omission or commission, gives to the Foreign Power which brought out the first edition of the Treaty with Japan, all the additional advantages gained by that which published the fifteenth. If we were not fully persuaded that all the Treaty-makers had at heart the interests of Japan, as well as those of their own countries, and fully recognized the truth that, in a Commercial Convention, as in any other commercial transaction, the only sound and safe basis is the common benefit of both parties, we should be inclined to pity Japan, and to strike in on her side, as the weaker, and as having no full appreciation of the sanctity of Treaties as estimated by her visitors, or perhaps of the obligations, and their consequences, which she was taking on herself. But the case being as it is, all that her foreign friends in the press can do is to discuss, in a spirit of perfect fairness, and with our more extended knowledge of Plutonomy, Trade and Finance, the Revision of the Tariff in its details. This cannot be done within the narrow limits of a single essay in a weekly Review; this article is therefore only prefatory, and will be devoted to an explanation of the obligations incurred by Japan in making her Treaties at all.

The end and purpose of Treaties between independent States is to obtain a reciprocity of mutual advantage.

This is especially the case, or rather this quality is most prominently displayed, in Commercial Treaties, or Conventions, as they should more correctly be called. For Treaties proper, of peace and amity, made at the termination of, or for the purpose of bringing to a close a war, confer merely the passive good of terminating strife; Treaties, offensive and defensive, made between two or more States, for mutual aid—in view of impending or possible encroachment by a stronger Power,—confer more positive and apparent advantages, inasmuch as they give that feeling of security which is derivable from the possession of increased means of defence; but it is reserved for Commercial Conventions to bring into operation benefits to both parties which are immediate, fruitful, and most distinctly visible, because they are measurable by a money standard.

Of course,—though for convenience we have formulated a distinction in terms, the difference between the Convention and the Treaty is apparent, rather than real. It lies more in the right or opportunity of breach, than in the principles applicable to making or interpretation. For—as a Treaty of Peace and Amity is but a manner of settlement of a dispute between two nations, by which the stronger imposes its view of the case for a time, upon the weaker, and exacts surety for the performance of the conditions imposed; or such damages and costs,—in international law called 'indemnity,'—as shall effectually prevent a speedy appeal to arms:—so it may be fairly held to redound to the credit of a nation, rather than to cast a stigma of disgrace upon it, that it should, as soon as possible, by husbanding its resources, pay its damages; and, prepared for taking its revenge, and recouping itself, declare itself unwilling to be longer subjected to such an engagement. Thus Russia, bound by the Treaty of Paris of 1856 to limit the number of her fleet and to respect Turkey's command over the Straits of the Dardanelles, took advantage of France's defeat by Germany in 1870, to declare herself no longer bound by the articles of an irksome and humiliating engagement; and if she had then enforced, instead of merely asserting, what she considered her rights, the practice and opinion of international law and of European diplomacy would have been in her favour. The diplomatic victory she has just gained, by draping her ambition in the standard of religion and the robe of philanthropy, is not so legitimate, and is little likely to be fruitful.

Again, Treaties of guarantee, or offensive and defensive alliances, are frequently broken when the parties to them are called on to fulfil their pledges. When the occasion arises, to meet which such a Treaty was originally made, the bond of amity may have been loosened by misconduct of the other parties, or conflicting interests may have severed the cord which bound the fagot, and the weaker power is left to be broken alone.

The principles regulating the breach of both such classes of Treaty obligations are self-interest and power—as power and self-interest were the motives to the agreements. Moral

obligation and legal sanction have no place in them:—the absence of the first accounted for by want of conscience in the diplomatist, and the deficiency of anything in international relations answering to what, in an individual State, is called 'Public Opinion':—of the second, from the inability of any known tribunal to enforce an award. But the other class of Treaties,—Commercial Conventions,—stand on a different basis; the difference being, as we have said, in the circumstances which may palliate a breach, not in the principles which regulate observance. Commercial conventions are for the furtherance of the welfare of the world: primarily, of course, for the benefit of those immediately concerned, the nations between whom they are made; but ultimately—and by no means remotely—of all mankind. Commerce and Conquest have been personified by the poet as 'armed twins' sowing broadcast the 'grain of freedom.' The image was most happy, but the Platonist can amplify it: for in the wake of Commerce, tread science, knowledge, and the love of man; and after these follow wealth and culture. Commercial Conventions, then, may claim this superiority over Treaties, that they have the sanction of moral obligation. But their rank has its own responsibilities. '*Noblesse oblige.*' In all cases, where the principles and stipulations contained in a Commercial Convention can be maintained, without prejudice to—we had almost written without the absolute ruin of, one or both of the contracting parties, it becomes the duty of each party to carry out its own obligations, trusting to earn the blessing promised to the just man who 'swaereth to his own hurt, and changeth not.' Or, in the event of the Convention being a temporary one; then, from time to time, to renew its obligations, with only such changes of detail as may be necessary, but always with due observance of the basis of principle originally laid down. The prosperity of individual nations, the necessities of particular industries, fluctuate with advancing time and accumulating knowledge; and thus it becomes needful, from time to time, for commercial communities to revise and renew their mutual obligations; but Credit is the life of Commerce, and in all such cases it is essential to its preservation, that the principles of the ancient covenants should be upheld.

When Japan, therefore, seeks to revise the Treaties she has made; she must first show how she is damned by adherence to her obligations; then, how she would be benefitted by their rescission; and, furthermore, must demonstrate that the scheme she proposes for rescission or alteration will not retard, but rather advance, the general interests of humanity. Now, by the Treaties of 1858 and subsequent years, all framed in almost identical terms, Japan accepted and adopted the principle—not of free commercial intercourse between her people and those of other States—but of conceding certain privileges to those peoples, for the purpose of 'facilitating commercial intercourse.' And, to carry that principle into effect, she covenanted to allow mutual trade in manufactures and products, at the ports which she opened for their ingress and egress. Ancillary to these Treaties were Tariffs and Trade Regulations. The scale of Customs duties under the Tariffs was originally adjusted on the principles:—of admitting the necessities of life or trade at a moderate and uniform rate; luxuries at a fair, but increased figure; and of placing on alcoholic liquors a heavy duty, in a proportionate ratio to that which they carry among Western nations. Thus coin, books and stationery, clothing and furniture for personal use were duty free:—articles for building and equipping ships, provisions, coal, timber, machinery, lead, raw silk, cotton and woollen manufactures were placed in a second class, and subjected to an *ad valorem* duty of five *per cent.*; Class III. consisted of intoxicating liquors at thirty-five *per cent.* (with opium altogether prohibited); while under Class IV. were victimized all

goods overlooked and not enumerated in the other divisions, by an imposition of twenty *per cent.* On Exports was placed a uniform duty of five *per cent. ad valorem.*

Difficulties naturally arose in working the new scheme: disputes occurred between importers and Custom House officers, due partly to native ignorance of the goods imported, and the officers' want of familiarity with the posts they were suddenly called upon to fill;—and partly, we have to confess, from foreign attempts to take advantage of native deficiencies. Feelings of mutual mistrust were soon engendered, by distaste of the work on one hand, and well-grounded suspicion of official integrity on the other. Obstructions placed upon dealings between foreign and native merchants without the interference of officials,—especially in connection with the payment or receipt of foreign coin—the capricious character of parts of the Tariff, and the ease with which *ad valorem* duties were adjusted to the prejudice of the Government, and the profit of its servants, by the facile corruptibility of the latter;—all these and other minor causes made the working of this Tariff for mutual benefit practically impossible. In 1868 therefore, a farther Convention was agreed to, the preamble of which recited, among other things:—that the Japanese Government were

"desirous of affording a fresh proof of their wish to "promote trade, and to cement the friendly relations which "exist between their country and foreign nations" and that, according to article IX.,

"In conformity with the treaties . . . all restrictions on trade and intercourse between foreigners and "Japanese, alluded to in the said Notes (certain arrangements therein recited) have been entirely removed, and "proclamations to this effect have been already published "by the Government of Japan.

"The latter, however, do not hesitate to declare that "Japanese merchants and traders of all classes are at "liberty to trade, directly and without the interference of "Government officers, with foreign merchants, not only at "the open ports of Japan, but also in all foreign countries, "on being authorized to leave their country in the manner "provided for by Article X. of the present Convention, "without being subject to higher taxation by the Japanese "Government than that levied on the native trading classes "of Japan in their ordinary transactions with each other."

This new Convention was signed by the Commissioners appointed to revise the Tariff by the high contracting powers—Japan, Great Britain, France, the United States, and Holland; and thereby the present Tariff was fixed on a 'general basis of five *per cent* on the value of all articles imported or exported.' To the class of Free Imports were thereby added:—animals for food or draught, anchors, coal, tea-leads, grain and salt provisions. The export of rice, wheat, barley, and meal made therefrom was prohibited. This prohibition is important, as bearing on the proposition we have enunciated:—that Commercial Conventions are for the benefit of mankind. For it is a legitimate inference from the fact,—that while Japan adopts the principle of free trade in grain, *quid* imports, she rigidly excludes the exportation thereof,—that her food supply is not fully equal to the support of her population. The remission of taxation on this import is, therefore, to her advantage, while she opens a market to foreign holders of surplus produce. The years of home scarcity and foreign aid since 1868 proved these points clearly enough. Of course, with the Government's relaxation of the prohibition of rice for its own profit, we have at present nothing to do.

It does not come within the scope of the present essay to compare the Japanese Tariff with those of other nations. We have endeavoured to show that, in the original Commercial Conventions of 1858, and in their subsequent re-arrangement, the Tariffs were intended to be based upon the principles we have enunciated:—common advantage of the parties to the agreements in

the first place, and collaterally, general benefit to the rest of the world. Enough for us to say now, that, in any future revision, Japan is bound to continue carrying out the principles to which she stands pledged, and from which the general interests of mankind demand that she should not recede. It has been said and written by unthinking or prejudiced men, that by her Treaties she is absolutely bound, without hope of redemption; but this is not so, either by the theory or practice which govern the interpretation of Treaties in general, or by the conditions of her own particular engagements. There is nothing to prevent her proposing a revision of the Tariff; but any scheme of revision which she may propound, must preserve intact the principles to which she has pledged herself by solemn pacts and contracts. Or she must show that the provisions of her scheme are logically deduced therefrom. By a morganatic marriage she has joined the family of nations. She is not received on equal terms within the circle of Western States, for these nations still claim rights of extra-territoriality and participation in the settlement of property; and on her side, she excludes foreigners from free access to the interior of her country and from free intercourse with her people. And as one of the consequences of this half-and-half state of relationship, the West claims a voice in the management of her commercial affairs, and a care of her credit. She has pledged herself to the principles enumerated above:—a fair Tariff on a fixed basis and freedom of intercourse, within certain territorial limits, between her people and ourselves, without governmental interference. From these principles she cannot go back.

PROPERTY IN MONEY.

A SUGGESTION was rather playfully made in a late number of this Review:—that foreign students of the Japanese language might with great advantage employ a portion of the time they now give to the study of ancient Japanese literature, to guiding the modern Japanese Press into right grooves of thought. It assumes a more serious aspect as a practical proposition, to foreigners who—not having acquired the power of reading the native journals in the vernacular—have to trust to the few translations of articles and letters from the metropolitan press which appear in foreign newspapers for their estimate of the progress made by native publicists towards intelligent criticism of their own and other politics. When we consider the really enormous circulation which these native papers enjoy, and the magnitude of the class of pensioned educated gentlemen which has abundant leisure to read and write in them—with little other occupation, indeed;—putting aside for the moment the busy workers who yet seem able to spare time for intelligent perusal of their columns; it is impossible to shirk the conviction that the infant press of Japan is fast growing into a great power that will soon take rank, as with us, among the other Estates of the Realm. Its importance, therefore, as a factor in the problem of Japan's political future, ought not to be underrated, and a considerable fraction of the space at our disposal in these columns will always be given to translations of, and criticism upon, the work of Japanese journalists. The Government, it appears to us—though not formally announcing any relaxation of its Press Laws—has certainly, of late, shown a most wise indisposition to enforce their harsher clauses. Reports of suppression of papers, or of imprisonment of editors, are becoming infrequent; while, on the other hand, opposition writers are becoming bolder. Government has defenders, too, and finds the pen a more effective weapon than the chain; and its assailants, fighting on even ground and equal terms, show now that the virtues of courtesy and

chivalry are not extinct in Japan, though the sword is laid aside. The ingenuity in argument of many of these contributors to the native press cannot have failed to attract attention, though their constant stumbles into little pitfalls of fallacy, and over blocks of fact, may have amused; and though the grace of their style is lost in translation, its lucidity remains. But, as we contemplate their work, Pity becomes so near akin to Love as to be found his twin; and regret grows into grief, as those, whose daily duty brings foreign and native intelligence into contact,—by the medium of translation—find how that medium sometimes distorts, and how wide is the space over which has to be thrown the light of European science to aid Japanese gropers after Truth. Surely those who have overpassed the gulf, might do better service, both to Japan and Europe, by carrying than by fetching.

Two articles appear in these columns to-day, translated from the *Hochi Shimbun*, one advocating the establishment of Co-operative stores as a means of checking the foreign import trade; the other on the question of Property in Money. The former we touch more lightly in another place: the latter appears to deserve serious consideration. For it is possible that, as the writer asks for information on his subject, he may look in the columns of the foreign press for a response, and thus an opportunity is afforded for inculcating sound views on a part, at least, of the great question of currency and coinage. And if we can but get the native press into the habit of translating from foreign papers as we translate from its own, we shall establish a means of communication of considerable value to us all.

The author of the article in question takes as his text, a Notification of the Council of State, dated January 19th, forbidding all tampering with the current coin in the following stringent terms:

"It is hereby notified, that any attempt to deface, or otherwise make unfit for circulation, the coins in current use by either melting or defacing them, is strictly forbidden."

The italics are ours, and we give prominence to the word 'melting,' because it is the one important point in the Notification on which the writer in the *Hochi Shimbun* seeks for light. And the light we can give him is clear and 'dry': he is perfectly right—the Government absolutely wrong. We say 'absolutely' because, by enacting a statute forbidding the melting of coin, it is reviving an error of the European feudal system of very ancient date. Throughout English statute law, which is as good authority on the whole subject as can be referred to, runs a series of enactments for the protection of the coin, stamped with the image and superscription of the monarch. But these are, with only two exceptions, to which we shall presently refer, directed against the offence of diminishing the weight or value of the current coin, by clipping, piercing, 'sweating' (reducing by attrition) or lightening it in any other manner; or against counterfeiting the coin in any way, whether by imitating it in baser metal, or by colouring or 'washing' (i.e. gilding or silvering) coins of a lower denomination, so as to give them the appearance of those of a higher. Also, against importing counterfeit coin, native or foreign; and against 'uttering'—putting into circulation—any such base, counterfeit, lightened or diminished coin of any description whatsoever. But it is clear that the Statutes are all directed against the fraud contemplated or executed, and that the idea of contempt, or treason, by defacing the image or crest of the monarch, had no place in the minds of the lawgivers who enacted them. And we may, we think, in the same way put aside this idea as influencing the *Daijokoro* in the present case. There remains then, only, as a reason for the injunction against the coin being melted, the objection to the diminution in any way of the metallic currency.

In our own history we find two corresponding instances. By statute 9, of Edward III. no sterling money was to be melted down, upon pain of forfeiture thereof; and by the 13th and 14th of Charles II. the offence of melting down any current silver money was made punishable by forfeiture of the same, and also the double value; and in addition, by disfranchisement, if the offender were a freeman of any town; if not, by six months' imprisonment. Now, on both of these occasions in English history, the taxgatherer was particularly active, and the people were striving to save their money from him, by converting it into untaxable plate. Edward III had just overrun Scotland, and was preparing for his first French War; and Charles II was in such distress for money, that he could not pay the wages of his sailors, and was dependent in great measure, for his personal expenses, on a pension received from the French King. But all these statutes have since been revised. The majority of them were repealed by the statute, 2 William IV. c. 34, when the laws relating to coining, &c. were consolidated, and, again, the whole law has been since reviewed, in the direction of mitigating the penalties, by the 24th and 25th Victoriae. c. 99. Melting coin is no longer an offence against English law.

Nor can it be reasonably considered an offence here, or anywhere. The author of the article in the *Hochi Shimbun* enunciates one of the grand truths of Plutonomy, when he writes:—"Money is merchandize." It is merely, as Mill happily calls it, 'an accident of language,' that people are said to buy and sell *with* money, instead of buying and selling money. When a man exchanges a coin for a piece of meat, both parties to the transaction are buyers or sellers, as they elect to call themselves; and it is as correct to say that the moneyed man sells his coin, as that he buys his meat. And to follow still further the *Hochi Shimbun's* argument, he has just as much natural right to melt his coin, and so utilize it to make a button, or a pipe, as he has to convert it into a mutton chop, by the process of selling it. All that modern statutes respecting coin are directed against, in States where Plutonomy is studied and understood, is the protection of the subject against rogues who clip, deface, lighten, or imitate coins, and try to sell them for mutton chops, deluding the butcher into the belief that they are good coins, which he can sell again for boots. A Government very properly reserves to itself the right of coinage. It thereby ensures the standard intrinsic value of coin being kept steady, and, by the confidence which its people have in this being preserved, helps to steady trade. It makes a profit out of the coinage, as payment for its fulfilment of this duty, which is an indirect form of taxation never felt by the people. When coining bullion sent into the Mint by private persons, it makes its profit direct by charging a royalty, or out of the alloy which it adds to the gold or silver to bring the metal down to standard touch; and it makes a large profit on all subsidiary coins turned out, which are considerably below standard. It should also make a third profit on the sale of excess of acids &c. which it has to manufacture for its own purposes. And in a well-managed Mint, all these profits together ought to pay the expense of turning out the standard coin. It would lead us into a different field of argument to show how, in the particular case of the Japanese Mint, it might legitimately make a large profit by becoming a money-making machine for the conversion of American bar-silver into coin for the China trade. This we may do on another occasion.

At present, all we have to consider is the injunction against 'melting' coin in the *Daijokuan's* Notification. Besides the fundamental offence in it which Plutonomy denounces, as an invasion of the rights of property; and besides the error involved in it as a Governmental interference with trade; it is a mistake from another point of view. It is

an indication of uneasiness, which, in a delicate market like that in which money is bought and sold, is very contagious. The Government's motive is clear enough to our minds, and it is to be regretted that the *Daijokuan* is not better advised. The rapid fall in value of the paper currency, coming on the back of some years' steady export of coined bullion by the foreign Banks, has alarmed the cabinet. It is quite possible, too, that during the South Western rebellion, much coin was hidden, and so withdrawn from circulation, in view of possible anarchy, or of a change of government. Coin becoming scarce, the *Daijokuan* seeks to check its decrease by every means, and this is one. A quite ineffective one, because, as the *Hochi Shimbun* points out, only rich men could afford the luxury of such a losing game as melting coin. The true remedies for the present unhealthy condition of Japan's finance are to be sought for in quite other directions.

MUNICIPAL REFORM.

OUR friend 'Municeps' of the *Gazette* has good reason to complain of our confusing him with 'A. B. C. and X. Y. Z.' and others "who seek to convince the foreign residents in Yokohama that they 'must perforce live "under what is, virtually, no Government at all.'" The error was palpable, and that it was also inadvertent, was evident from the tenor of the first paragraphs of our article, wherein we formulated our own policy as differing from his; and from an Editorial Note in another column, specially devoted to A. B. C. He will, we are sure, forgive our carelessness, and accept our apology. The other point which we stated against him, to which he takes exception:—that a Council without the official element 'never had been, nor ever could be, made to work'—clearly applied to Yokohama; and his instance of the Shanghai municipality cannot be brought into a parallel line for comparison. The Shanghai community was differently constituted; its *status* in face of the Chinese Government, and the relations between Chinese and foreigners were different to those existent here; the foreign Ministers in China were resident in Peking, a long distance off, and left the matter to be arranged mainly between the Consular Board and the residents, whose relations were of a most friendly character,—not, as here, embittered by disputes to which we have no wish to refer; and notably, Shanghai—at a most critical moment of its municipal life, was happy in the possession of an official, independent of both Ministers and Consuls—Sir Edmund Hornby—who gave its infant municipality his countenance and material support.

Yokohama has never been so fortunate; our demands for equal rights with the Shanghai community, though backed by Sir Edmund, so far as he could back them, have been ignored with that quiet indifference which is so specially irritating; and it is because we are thoroughly convinced that any renewed request of the same character would be simply shelved, as they were, that we characterize 'Municeps' scheme as hopeless of success. On the other hand, the Kobe system was the Ministers' own; official dignity is satisfied by the numerical preponderance of the official element at the Council Board,—while, practically, the government is actually vested in the lay representatives of the community. We advocate its adoption here, because it has none of the qualities which make the other scheme so objectionable to those with whom decision rests, and because experience has shown that—common sense and mutual good-feeling aiding—it has worked well elsewhere, and no good reason can be shown why it should not work just as well here.

But,—'Municeps' argues, with great surface show of reason a Council composed on the Kobe model would be a 'cumbrous representative body'; that it would have sixteen official members, and therefore,—when the necessary

number of lay members were added to it,—would be too large a body for the work it had to do. But the real work of the Council would be done by the sub-committees, and the whole number of members would never attend the monthly meetings, except on such occasions as meetings to receive the Annual Reports, or for the election of officers. Besides, there are always in the Consular Board a certain number of absentees, and of Consuls who 'double' parts,—and as a matter of fact, we are strongly of opinion that, as in Kobé, it would often be difficult to get together a *quorum*. We should be glad to accept his suggestion that only paid Consuls should be *ex-officio* Members of Council and that merchant-consuls should only sit as lay representatives, taking their chance of election with other members of the community;—but is it likely that such a scheme presented to the Consular Board, would find favour there? It would be the best possible thing for the United States if universal suffrage could be done away with, and her intelligent classes know it; but with what hope of success could a motion for their own disfranchisement be put before the ignorant majority?

The *Echo du Japon* has devoted five columns to the subject, but we fail to find in its two long articles any practical suggestion such as we might have reasonably expected from a French journal. The writer dwells much, and with great justice, on the disinclination of the Japanese Government to consent to the administration of municipal affairs being now taken out of its hands. But he totally ignores the important fact that they were entrusted with this administration merely as an experiment (*vide* Mr. Locock's letter to us) and that the decision on this point—the experiment having failed, by no means rests with them. And he advises the re-installation of a municipal Director, in the post lately vacated by Mr. Benson, with a consultative committee of advisers, to be named by the Consular Board, or elected by the community. We need hardly perhaps point out how unlikely it is that any man, whose advice would be worth having, would consent to become one of the 'advisers'—nor how more than unlikely it is that any Municipal Director, paid by the Japanese, would listen with the least attention to their advice.

We retire from the subject for the present. The *Gazette*, by an accident, published a letter to the Consuls from the community, which was still under consideration, and had not been circulated for signature; inasmuch as there was a good deal of preliminary work to be done before it could be submitted. But that letter contained the pith of the proposition for Municipal Reform advocated by this Review; and, though quite willing to accept sensible modification, or indeed to abandon it altogether in favour of any other, of whose success any Reformer can give us better promise,—until such a proposition is made, we shall continue to advocate the Kobé system, which has worked well in the Southern port, and would be as efficient, we are convinced, in Yokohama.

EDITORIAL NOTES.

THE news received by telegram during this week from Europe are of the greatest importance. Before summarising them, we must take occasion to point out how completely justified have been the complaints recently made against M. Reuter's Agent in Shanghai for his neglect of foreign mercantile interests in Japan. Take these messages, which the Agent here tells us, were delayed, owing to late interruption of the telegraph line:—

"The Greek army has been ordered to stop the invasion of Turkish territory.

"The Powers have promised to protect the northern Greek provinces.

"In accordance with the terms of the armistice, the Turks have evacuated the lines and fortifications of Constantinople. Russian troops have entered the lines.

"There was excitement in the House of Commons. Sir Stafford Northcote, in reply to a question, partially confirmed the statement that the Russians had advanced.

"The death of Pope Pius IX is announced."

Is it too much to ask of M. Reuter's Agent in Shanghai, that—when the line does break down—he should, as soon as repairs have been effected, wire to us the dropped messages, instead of leaving us to receive them by steamer?

NOW that we have the complete line of telegrams, it is possible for us to make sense of them, and to get a more or less vivid idea of what has taken place in Europe during the past week or two. First it is clear, as we suggested in the last number of this Review, that the 'old palace party' in Constantinople has got the upper hand in the cabinet. A change of Ministry has taken place. This new Ministry—very properly distrustful of the Gladstone-deluded England which had left Turkey to fight alone, has accepted Russia's overtures to make a separate peace. As a preliminary necessity, to satisfy the *amour-propre* of the Russian people, a small body of troops was admitted into a redoubt within the lines of Constantinople. Part of the arrangement made was that, notwithstanding this breach of the Treaty of 1856, which provided against any such separate arrangement, by Europe giving Turkey a guarantee of autonomy, the Sultan should continue to hold the Dardanelles against the British fleet. Therefore he protested against its approach to his capital, and the fleet had to '*forcer l'entrée*.' Whereupon Gortschakoff telegraphs that he would move up more Russian troops, and occupy the lines in force—but retires his corporal's guard from the redoubt—and the British fleet retires to Besika Bay.

The fact of silk merchants in Yokohama holding their commodity for higher prices, at the tail end of a season and with native currency drooping, is about the best augury for peace that we can discern. As good, in fact, as Prince Bismarck's announcement of his belief that there would be no European War.

M. REUTER'S agent here might do worse than point out to his Shanghai colleague, or to his chief in Europe, that—unless merchants in Japan are better served than they have been during the past month, they may possibly help themselves. An extremely facile method is open to them. As soon as telegrams are published in a newspaper, they become public property. What is to prevent a body of subscribers in Yokohama arranging, with some one in Shanghai, with the Manager of the *North China Daily News* for instance, to wire over to a newspaper here, all the messages published each morning there? A good deal might be saved by the use of a code, as in many cases we do not want the actual text, and an intelligent man would discriminate easily such messages as must be sent *verbatim*. The *Yokohama Chronicle* would be charmed to undertake the task, for nothing, of printing and circulating the messages among subscribers—on condition of being allowed, half-an-hour afterwards,—to publish an Extra containing the news.

DO not the brains of Platonists, (they have no bowels) yearn towards the author of that article on Co-operative Stores which appears in another column of this Review—translated from the *Hochi Shinbun*? How right he is, in his main principle, and how wrong in his deduction! Is there no sinologue who will tell him that demand regulates supply, and that, if foreign goods are fancied, foreign goods must be had? That, in a month after the establishment of his Co-operative Company, its Directors would be telegraphing to Manchester for foreign goods? It is curious to observe how these Japanese half-grasp an idea. Nothing can be sounder than this writer's proposition to bring manufacturer and consumer into closer contact, nothing more rotten than his deduction that the foreign manufacturer will be thereby excluded from competition with the native.

Another interesting point in these native publicists' work is their sublime indifference to details. This gentleman, for instance, writes simply from the point of view obtainable from Tokio. It is the 'us' of the capital who are to be supplied at nearly cost price with *Hakatayori*, *Yukitsumugi*, *Yonezawa-hachijo* and other fineries: all the middlemen may go hang. And how entirely he overlooks the fact that, in a country like this, the bagman he proposes to send round to *ajq* factories, to buy direct, would simply take to himself

all the profits of the various middlemen, instead of giving the benefit to his masters of the Co-operative Company. Before any scheme of this sort could be successfully put into practice in Japan, the nation has to learn the lesson that 'honesty is the best policy.'

WE have to acknowledge with thanks, receipt of the 3rd Annual Report of the Minister of Education for the 8th year of Meiji, which reaches us "with the compliments of the Senior Vice-Minister of Education, Jushii Tanaka-Fujimaro Sama. We shall give due notice to it in the next number of the Review.

THE JAPAN TIMES.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN TIMES must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

YOKOHAMA: SATURDAY, FEBRUARY 23, 1878.

NOTES OF THE WEEK.

WE do not wish to alarm any one, but it is useless to evade facing the strong probability that something more than head winds keeps the *Belgic* out of port. The statement made by an evening newspaper that she did not leave San Francisco until the 25th is not confirmed by the Company's Agent, and is contradicted by the fact that telegrams of earlier date were received by a local Bank announcing the shipment of treasure. Bankers are not in the habit of keeping dollars for five or six days on board of a vessel in port, and the receipt of the Bank's telegram may be taken as pretty conclusive evidence of the imminent despatch of the ship. We expect that we shall not be found far out in a guess that her machinery has broken down. Otherwise there is no cause for alarm, as she is well supplied with sailing power, and is an extremely well-built, strong, staunch vessel. We wish her a safe and speedy arrival in port.

The *Sunda*, with the London mail of the 4th of January arrived here yesterday morning. The *Suminoye Maru*, from Hokodate, and the *Tokio Maru*, from Shanghai and way ports, arrived on the 19th and 21st inst. respectively. The *Malacca* left with the outward home mail on the 19th, due in London on the 8th of April. The *Saikio Maru* left on the 20th for Shanghai and coast ports, without taking the American mail as was expected, due by the *Belgic*. The *Volga* leaves on Tuesday morning at daylight with the French mail, and the *Alaska* is advertised to leave for San Francisco on the 28th. It is to be hoped that she will have better weather, and make better time on her return voyage, than on her last trip hitherwards.

The whole community will hear with great pleasure that the Choral and Dramatic Societies have united to give us an entertainment, when both the Arts they cherish will furnish material:—a comedy and some of Arthur Sullivan's beautiful music. The performance will be in aid of the China Famine Relief Fund: and thus, in another sense than that in which Shakespeare cast the thought, will be shown how 'the quality of mercy is twice blessed'; we shall have a charming evening's amusement, and the Chinese will get a number of dollars.

The case of the Japanese Government *versus* Hartley, for alleged smuggling of opium, has gone for the present in favour of the defendant. We cannot of course publish the report *in extenso* unless we were to give a supplement, which the existing resources of our office do not enable us to present to our readers. But proper notice shall be taken of the case next week.

We hear by private telegram from Shanghai, that Mr. Thorburn is the successful candidate for the post of secretary to the Municipal Council. There were a large number of applicants, some dating from Japan, but Mr. Thorburn's long residence in Shanghai and the advantage of being on the spot, has enabled him to obtain the post. We hope we shall be soon able to announce the appointment of an equally good man to a similar post here. But we have first to get our Municipal Council; and, at our present rate of motion, this event will not probably soon take place.

A good example of its necessity may very soon be afforded, in the extremely likely contingency of an accident happening some night to a mat shed, where Mr. White's acrobats are now performing. We do not wish to interfere with Mr. White's getting a livelihood; indeed, we have shown, by an extremely lengthy notice recently given of his exhibition, that we wish him success in a very spirited endeavour; but we can't risk a repetition of the 1866 fire; and certainly the proper place for matsheds or circuses &c. is on the open ground in our rear, not in our midst

among thickly crowded houses and godowns. We agree with the *Herald* in begging the interference of the Consular Board, as we have no Municipal officer to order the removal of the danger.

On Tuesday next, a meeting of subscribers to the new Race Club is called, to take place in the Gaiety Theatre, when a code of Rules will be presented which have been most carefully drawn up, discussed, argued over, revised, re-revised, and finally passed by the joined representatives of the two extinct Clubs recently appointed a committee to do the work. It is much to be regretted that the presence in this community of a few cantankerous men who oppose, for the mere sake of opposing, and write abusive letters to newspapers, have prevented the committee publishing their Rules before the Meeting takes place. It is quite possible that a fresh eye, cast over them, might have detected some error or omission, which will surely pass unnoticed in a crowded general Meeting. That nothing of importance has been forgotten we can assure our readers, and also that, generally, the Code does credit to its framers, and ought to give satisfaction to all sportsmen. On one vital point the *Japan Times* will have to join issue with the Committee, but we defer further reference to it until after the publication of the Code.

While on the subject of sport, we have to note that two accidents, one rather serious, occurred to foot-ball players last Saturday. Last year a man broke his thigh, down in Kobe, and a friend from London enumerates a number of similar disasters occurring there, culminating in one unfortunate breaking his neck. Football is a splendid game, but it is too dangerous for bankers and merchants to play at. Boy's bones are more or less elastic and tough,—and there are any amount of boys,—but as men advance in life, especially in the East, their bones get brittle and accidents such as these occur to merchants and bankers, of whom the supply does not always exceed the demand.

This is the bulletin of last Saturday's casualties:—

"One gentleman had the small bone in his leg broken, and another had the skin taken off the whole length of his nose, as well as receiving a nasty kick on the leg. Kicks were accepted with good temper; and tumbles were the order of the day, being both numerous and severe."

The Chinese compradores and other Celestial residents of Yokohama, have come forward nobly (at the instigation of their Minister and Consul) with subscriptions for the relief of their unfortunate fellow-countrymen now suffering from famine. Over \$10,000 have been already subscribed. It is with extreme regret that we express our conviction that very little, if any, of the grain bought with all this money will ever reach the famine-struck districts. Our means of informing ourselves on the state of China are special, and reliable, and we know that the grain sent for relief is stopped and stolen *en route*, as it approaches the people for whom it was intended. The only method of relieving them is to bring them down to the food, not to take the food to them.

To turn to a more agreeable subject connected with China. We have received from Hongkong the 25th half-yearly report of the Hongkong and Shanghai Bank. Twelve years ago, when this institution was in its infancy, this journal hailed its establishment with commendation of the principles on which it was started, and prophesied its success. That it should have surmounted, and left behind it disasters which must have killed a Bank with less vitality, or founded on a less sound basis, was to be expected: but that it should so rapidly have recovered its high credit and position is a proof of the excellent management, both at head-quarters and at all its branches, which now distinguishes it. A profit of \$539,000 for the half year's work from June to December, 1877 during a period of European War and general depression of trade, is indeed remarkable and justifies our ancient prediction that the Bank would rapidly take the lead in financial circles in this part of the world. Its success too in bringing out the China Loan will not be unmarked by Japanese statesmen.

We remark that Hoshi Toru *san*, a Japanese gentleman who has been called to the English bar by the Benchers of the Middle Temple, has during the week been admitted to practice in our branch of the Supreme Court. It is possible that such men as he may, by perseverance and study, qualify themselves to constitute in Japan a satisfactory Court to which foreigners, hereafter, may not object to submit.

NOTES AND QUERIES.

Qy. 3. Were the actual incomes of the Nobles larger or smaller than as represented by their official rent-rolls, and have they now, as a matter of fact, more money to spend on themselves, than they had in old times?

N. or M.

NOTE. X's answer to N. or M.'s question about the actual incomes of Nobles in the *Japan Times* of February 16 is

confusing. He speaks of 'official lists of the Daimiōs' revenues,' and then in the same breath tells us that these were 'the assessed values of the total production of the provinces, and were very far from being correct.' After informing us that the 'lord of Kaga had a revenue of 1,200,000 koku' he says that 'his province ought to produce 1,200,000 koku, and this it never did.' Finally, he winds up with the statement that "the Daimiō received a certain portion, varying according to the tenure (generally a fourth or a third, called *yotsu* or *mitsu mononari*) of what was really produced." In the first place, it is incorrect to speak of 'official lists of the Daimiōs' revenues.' No such lists exist. The figures which we find in the *Bukan* are the total estimated yields of the various fiefs, that is to say, the amount estimated in koku of rice, of all the crops grown in the fief. *Taka* is the Japanese term for this assessed yield, and includes the profit of the farmer, as well as the share of the produce paid to the lord. Dr. Dickson, in his book entitled "Japan," calls these assessments 'revenue,' and the error once rooted in the minds of foreigners, is very hard to eradicate. Even X. appears to have thought now and then during the writing of his note, that *taka* was revenue; but if he will look at any Japanese book on the subject of rent-charges, he will find that *taka* means assessed yield.

Before the Tokugawa period, each fief was required to furnish a certain number of armed men in proportion to the amount of food which it was expected to produce, and this was probably the reason why assessed yield, and not revenue, was used as the measure of the value of fiefs.

That the assessed yield was 'far from being correct, is quite true, but not in the sense which X. intends. It was usually under the mark, and became so more and more as time went on, because the farmers gradually reclaimed waste land, which was not taxed at all, and never assessed. But X. seems to think that the assessment was in excess of the actual yield, for he says that the province of the lord of Kaga "ought to produce 1,200,000 koku; and this it never did."

There is an error here, which must be got rid of before we proceed any further. The assessment of the Daimiō of Kaga was 1,022,700 koku, not 1,200,000. No doubt X. intended his figures to be in accordance with the native authorities, and he meant to say that the province of the lord of Kaga "ought to produce 1,022,700 koku; and this it never did." There was, however, hardly a single Daimiō whose fief did not yield from 20 to 25 per cent more than the assessment, and the Daimiō of Kaga was certainly not one of them.

Of the total estimated yield, the lord of the soil took a certain proportion, to which the word 'revenue' would be rightly applied. In the dominions of the Shōgun, the lord usually received four-tenths, and this is what is meant by *yotsu mononari*; *mitsu mononari* would mean three-tenths (not a third as X. says). But in the dominions of the Daimiō the rent-charges were generally higher, and not infrequently reached seven and even eight-tenths. I have not met with any Japanese works on the subject which give information concerning the rent levied by Daimiōs, and any authority on that point is only verbal; but there is a large amount of information about this and other related matters in native printed books.

STUDIOSUS.

Qy. 3. Can any of your readers give me information respecting the comparative value of money in Japan five centuries ago, and at present? N. or M.

NOTE. I surmise that "N or M" by "comparative value of money 500 years ago and at present" means a comparison between what could be bought for a certain sum of money then, and what the same sum would procure at present. But perhaps he also means the comparative value of ancient and modern Japanese coins.

The latter question may easily be solved by a simple analysis of ancient coins, and "X" in your last issue gives some information on this point, which however in more than one respect is inaccurate. Let me first state, that neither *ōban* nor *koban* existed 500 years ago; they were for the first time coined by Nobunaga in the period *Ten-shō*, (1573-1591). The *Kenji-koban*, which "X" mentions as coined in the *Kenji* period (1275-1278) has nothing whatever to do with that epoch. The *ōban* in question was coined in the 7th year of *Hō-yei* (1710), and

as it was stamped with the letter 乾, *Ken*, it was called *Ken-ji koban* (*Ji* meaning letter). In the period *Ken-ji*, 建治, referred to by "X", the only coins in use were copper "cash".

We have much later calculations at our disposal than those given by "X". The figures quoted by him are those found in a Government notification from the 4th year of *Kei-ō* (1868). At that time, however, the Japanese were not in a position to make an exact analysis; and later assays made at the Osaka Mint, and published by the Okunashō in a notification dated Mei-ji 7th year, 8th month, (August 1875) differ considerably from the former calculations. Thus, to confine myself to the instances given by "X", we have:—

- 1.—One hundred *Kei-chō koban* (coined 1601) contain
Gold 405.31793 Momme
Silver 67.40320 "

Compared with the present currency, one *Kei-chō koban* is therefore worth (intrinsically) Yen 10.25.

- 2.—One hundred *Ken-ji koban* (coined 1710) contain
Gold 207.26366 Momme
Silver 41.12966 "

Consequently, one *Ken-ji koban* is worth Yen 5.25.

- 3.—One hundred *Gen-roku koban* (coined 1695) contain
Gold 266.81741 Momme
Silver 204.28726 "

Consequently, one *Gen-roku koban* is worth Yen 7.00.

- 4.—One *Kei-chō ōban* (coined 1601) contains
Gold 29.60506 Momme
Silver 12.95221 "

and is intrinsically worth Yen 76.15.

All of the above contain a very small *pro mille* of copper and other metals, but as those figures are of no significance in estimating the value of the coins I have left them out.

The ancient coins of Japan are so numerous, that it would take too much space to enumerate the values of them all; besides, I do not think that was what "N or M" wished to know.

To compare the worth of Japanese money generally in ancient days and at present, is extremely difficult. I have tried to form an idea on the subject in the following way:

Say that in the year 1598 one *Riyō* Gold (one *koban*) bought $3\frac{1}{2}$ *Koku* i.e. 350 *Shō* of rice.

Further remember that the measure called "*Shō*" then was equal to about 1.04 of the present *Shō*.

Take one *koban* of that time as equal to Yen 10.25.

Calculate the present price of rice to be, say 13.5 *Shō* for 1 Yen.

We then get:

1 *koban* = Yen 10.25 = 350×1.04 *Shō*, that is, in the year 1598 the equivalent of 1 Yen bought about 35.5 *Shō*,
whilenow, 1 Yen buys about 13.5 *Shō*,

or in other words, a certain quantity of coined metal would in the year 1598 buy more than two and a half times the amount of rice it now does.

A calculation of this kind is, however, almost useless, owing to the arbitrary way the weight and quality of coins were formerly fixed in this country. Thus, in the year in question, one *ōban*, i.e. a Ten-Riyō piece,—which should of course be equal in intrinsic value to ten *koban*,—actually only contained Gold and Silver amounting to the value of about seven *koban* and a half; and yet it would in commerce pass as equal to 10 *koban*; hence it is clear, that if the above calculation had been made on the quantity of rice obtained for one *ōban*, instead of one *koban*, the result would have been greatly different. When I further consider the way coins were repeatedly reduced in size and purity, without anything like a corresponding rise in the price of land and grain, I can only look upon all Japanese coins prior to the issue of the present currency, as a kind of "satsuma," with quite an arbitrary and nominal value—but with a little more "*kin*" about them than the modern "*kinsatsu*."

For the sake of those who are in the habit, when hearing of "*riyō*" to think of "*yen*" and consider these terms identical, I may point out that the above calculation shows, that a man possessing a hundred *riyō* in the year 1598, owned more than ten times as much "coin" as a

person having one hundred *yen* nowadays; and further, that the former for his 100 *ryō* could buy over twenty five times as much rice as the latter can buy now for his 100 *yen*.

WILLIAM BRAMSEN.

THE TIMES OF TAIKO.

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GOYEMON.

Chapter VIII. THE TEA-DRINKERS.

GROWING on Southern slopes or in sheltered gardens, and owning no beauty but its undying verdure, there is a lowly bush whose leaves distil an essence the most soothing and the most domestic in all nature's nursery. Centuries ago, when the arrow and the sword were the tokens of power, and the fame of strong rulers was proclaimed by the death-cries of their victims, the godlike attributes of this shrub were acknowledged with no less enthusiasm than to-day, and the successful evocation of the spirit that dwells among its foliage, constituted an art scarcely second to the poet's or the painter's. The sovereign of this science was one who having fairly and bravely finished his allotted portion of life's toil, raised himself out of the turbulent tide of human pains and passions on to the shores of some flower-peopled island visited only by the cuckoo and the nightingale, and there, building him an ungarnished cottage of knotless wood and comfortable thatch by the margin of a moon-lit mere, peacefully awaited his end, weaving wreaths of the four virtues his creed inculcated, refinement, courtesy, moderation and frugality.

Such was the ideal master of the art, while its technical professor was one skilled to subtlety in the concoction of a cup of tea!

More than natural, indeed, were the qualities attributed to this divine beverage, and many are the illustrious names associated with the science * to which it gave its name, but it had no more eminent or devoted patron than the regent Taiko.

In truth, to one like Hideyoshi, who had heard nothing through all his years but the clamour of factions and the din of battle, from the afternoon on which, a poor errand lad, he fled with six pieces of gold† entrusted to him by his

* This science (*cha no yu* or *chado*), though its name merely points to the art of tea-making, involved, in reality, the study of æsthetics, and comprised a philosophy founded on the teachings of the spirit that seems to dwell in everything beautiful and fair. This philosophy owes its existence in part to the "Zen-shu" sect of Buddhism. It is said that the tea-plant was brought from China to Japan a thousand years ago by Kisen Hoshi a priest of Kiyoto. Its use, however, remained unknown during two centuries and a half, when Senko kokushi, a devotee of the Zen-shu faith, made a voyage to China and recognizing in the pure, soothing beverage he there tasted for the first time, a type of the creed his sect professed, constituted himself a teacher of tea-making on his return to Japan. Thus the infant essence was by accident born at once into a graceful atmosphere, with which, however, the Epicurean ideal of the Japanese would probably sooner or later have surrounded their domestic divinity. What ameliorations has not the household recipe undergone, since the disciples of Senko, at their temple of Shofukaji in Chikuzen, cast the half-cured leaves into an iron cauldron, and evoked their balm and bitterness together with a decoction of Salt and water! F. B.

† Kiku, the wife of Yasuke, a poor farmer who lived at Nakamura in Owari, after some years of childless wedlock, dreamed that in answer to her prayers a sun-beam hid itself in her bosom and subsequently assumed the shape of a son, whom she called Hiyoshi. Eight years afterwards the boy's father died, and his mother became the wife of Chikumi, a retired man-at-arms. The church was at first proposed as a profession for Hiyoshi, who was accordingly entrusted to the care of the priests at a temple called Komiyoji. But reflection convinced the lad that priesthood and mendicancy were cognate pursuits, and though he evinced a wonderful aptitude for any thing savouring of arms, his mind seemed utterly incapable of all theopathy, and he directed his strategic abilities so successfully to the persecution of his holy guardians that they gave him the nickname of Sarunosuke (Monkey.)

History says that when the priests had finally decided on sending Hiyoshi home in disgrace, the boy, then only 10 years old, obtained possession of a sword, and made himself so unpleasant to the reverend gentlemen that they consented to equip him handsomely, and restore him to his step-father with letters of eulogy.

After various unsuccessful essays in menial positions, Hiyoshi finally went to the province of Totomi and there became the servant of a yeoman called Matsushita. This time the youth's abilities seem to have been appreciated. He was well treated, and after a time his master commissioned him to purchase a suit of armour in Owari, where men wore a form of cuirass that Hiyoshi described as particularly convenient. But when the young man found himself in possession of six gold pieces, it occurred to him that he would be more than unwise if he allowed scruples of honesty to prevent him from seizing this, his first opportunity of equipping himself and becoming a soldier. He accordingly purchased a sword and a shirt of mail with Matsushita's money, and entered the service of Nobunaga. It is said that when he became Prime Minister, he sent for Matsushita, then a white-haired old man, and in the presence of all the Court confessed the theft, and restored the six pieces of gold in the form of a revenue of ten thousand measures of rice. F. B.

master, to the time when the brightest reputation in Japan showed pale beside his own, there must have been something peculiarly charming in the tea-drinker's gentle philosophy, something exquisitely attractive in a creed that found all the essentials to happiness in a quiet retreat, sheltered from the breath of winter and the gusts of ambition, where life, cheered by draughts of the never-palling nectar, and moving to the measure of nature's harmony, might be itself a reflection of the æsthetics and poetry that constituted its study. But in addition to its fascinations for the tired veteran, this philosophy also promised the astute ruler no small aid in his efforts to restore the social equipoise, at that time gravely disturbed by a spirit of intrigue and discontent. If men's tastes could be turned from the passion-stirring wine to the genial coterie, where art was discussed amid objects that exemplified its chastest forms, and luxury confined to novel and delicate methods of preparing the balmy infusion, the sword might at last find rest and the headsman a sinecure. These, as Taiko himself declared, were the motives that persuaded him to become a disciple of Sen no Rikiu, the sage of tea-drinking sages.

Sen no Rikiu's circumstances introduced him to the world as Naya Yoshiro, the fishmonger, but his tastes, like the poet's wings, raised him far above the atmosphere of the mart and abacus. He had already become a magnate of the art he loved, when the Regent's generosity made him an independent gentleman with ample means * to indulge his refined inclinations, and, in the sad end, one of the three cardinal crimes of his patron's career afforded him an opportunity of proving that courage had no cause to dread enervation in the placid pursuits of the philosophy he obeyed. For the apparatus of Rikiu's science, the miniature kiln, the iron urn, inornate but faultlessly symmetrical, the white-wood ladle, the polished caddy, the air-tight casket and the ebony salver, were all tended by a daughter with features the type of her father's philosophy, restful, winsome and chaste. Hardly discerning the tenderer aspects of humanity across a cloud of projects and solicitudes, the Regent visited and revisited Rikiu's house, heedlessly watching Kiyō's graceful services, until the light of her loveliness, stealing into some vacant corner of his heart, began to glimmer before his eyes at strange seasons in the camp or cabinet. Rikiu, however, faithful to a promise which the Lady Yodo's jealousy had exacted, and true to the continent tenets of his own creed, refused to grant the girl to Taiko's asking, and the Regent, who found nothing more unwonted than a denial, came no more to visit his friend.

But the philosopher loved his patron too sincerely to be happy in their separation, and trusting much to the results of prayer, made a pilgrimage to the most distant shrines of Japan. In his travels he reached the province of Bishu, and at the temple of Komiyoji found the school where the Regent had studied penmanship in his early years. Here, among their most valued treasures, the priests preserved a little desk, dirty, notched and ink-daubed, with the characters 'Sarunosuke' scrawled or carved upon its unvarnished surface. This Sen no Rikiu purchased and carried carefully home, partly prompted by unreasoning affection, partly hoping that in the presence of such a souvenir, the Regent's thoughts might travel back to the threshold of his life, and so, in passing, light upon the footprints of their former friendship. But Taiko, believing that the object of this act was to insult him by reminding men of his ignoble origin, in an ever-repentant moment sent an order desiring Sen no Rikiu to commit suicide. "Tell the Regent," said the philosopher composedly to him who carried the order, "that I am glad to give my life in exchange for the pardon he will presently grant me." Then having set his house in order, and prepared himself a last draught of the nectar he loved, he turned his face towards the palace of his friend, and holding the dagger half buried in his body, wrote these lines;—

"The biting cold, the blighting heat,
"The shrewdest pains we here discern,
"Shall they be known within the urn
"Or felt when pulses cease to beat?
"Then all the tears our daughters weep
"Shall nurse no blossom of regret,
"Nor mirth of friends that soon forget
"Disturb our long unbroken sleep."

* The Regent gave Sen no Rikiu a revenue of three thousand measures of rice. F. B.

Sen no Rikiu had seven pupils, and amongst them none was reputed to have inherited a larger portion of his master's art than Seta Kamon. Whether it was chance or fatality that made this pupil the favorite of the Regent's nephew, as the master had been the Regent's, Kamon found ready access at all times to the Palace of Pleasure, and now, intent upon the mission Ishida had entrusted to him, made his way without any difficulty to the Prime Minister's Tea Pavilion, just as the shadow of the weeping willow was beginning to creep eastward over the surface of the lake.

Hidetsugu, while obeying three of the tea-drinker's philosophical doctrines, had certainly neglected the fourth in the construction of this pavilion, for extravagance may be attained by the elaboration of elements, however simple, just as the most fanciful of brilliant beauties is sometimes represented in a group of pure ice-spangles under easterly eaves at sunrise. The ceiling was divided into nine squares by gnarled and strangely contorted saplings of rare trees, and each square, closely ribbed with bamboos of various ages and varieties, from the slender mat-rush to the giant-jointed "moso,"* exhibited a marvel of rustic elegance and mechanical skill. The walls, of a rich brown tint, receded at one side into two alcoves of pearl gray plaster, wherein were enshrined gems of thought in sages' autographs, or curiosities of ceramic and anaglyptic art. Even the little door with its arched top, carried on a glossy white surface exquisitely moulded flowers and landscapes modelled in coloured clays, while perhaps the most admirable part of all was the verandah and its far projecting roof, for neither pillar, trave, nor rafter bore any trace of saw or chisel, but each seemed to have grown into the other as naturally as the wisteria that climbed along the eaves beyond.

Yet nothing within the pavilion seemed in excess, when one passed without, where the flute-like notes of the mavis blended with the babble of a miniature rivulet, that twined its white arms round mossy rocks, or crept softly in and out between clusters of iris and lotus. There, the daintiest feet were tempted by winding lines of stepping-stones, slabs of close-grained granite or highly-polished shales, some slate-coloured, some green, some streaked with milky veins of quartz, and the shape of each so craftily adjusted to its neighbour's outlines, that the whole might once, it seemed, have formed an unbroken band of rock, until the turf, stealing across at uncertain intervals, had converted its continuity into a chequered series. In corners where the cedar and the pine cast their deepest shade, stood two smaller pavilions, disposed so as to escape the touch of the declining sun-beams. Looking from the one, across intervals of well trimmed tea-bushes, and between mountains of azalea, where billows of brilliant hues climbed upon each other, the eye discovered a landscape of ever augmenting loveliness in the distant gardens of the palace, while beyond the other, which perfectly represented a farmer's cottage, stretched a rustic scene, where design made itself forgotten, so natural were the watery rice-fields, the deep-loamed upland and the dreary stretch of sedge, so dreary that one waited unconsciously to hear issue from it the bittern's boom. But above all, there brooded among these creations such a spirit of perfect art, that the tone of every component, even while preserving its faultless individuality, melted sweetly into the harmony of the full chord, and the eye seemed to carry from each portion some impression that enhanced the charms of its neighbour.

Often as the grace of these things had entranced Hidetsugu, a passionate lover of everything beautiful in nature or art, he always seemed to find there some fresh excellence, some new proof of life's inestimable value; and now sat gazing with that exquisite appreciation that is frequently prophetic of loss. Seta Kamon, on the contrary, devoted his whole attention to the collection and disposal of sundry equipage and apparatus, which, whether to be found in the alcoves, or drawn from a cellaret that lay basking in the sunbeams, Kamon assembled and arranged with all the precision of long habit, and the fussy assurance of one who knows that he has acquired ability to command success.

First there was a model of the "peerless mountain," in all its graceful majesty from the summit to the sea; the rivers

* A species of bamboo that attains a very large size, and has peculiarly graceful foliage.

and curved bays that bathe its feet as well as the snows that sparkle on its crest, crystallized into frosted silver, the forests and hamlets depicted in embossments of chiselled gold, while the gray cinder ridges and black scoræ were aptly reproduced in the roughly crusted iron that formed the ground work of the whole. Nor was the reality of the delineation impaired, when Kamon built up a pile of glowing charcoal in the bosom of the volcano, and the steam of boiling water began to issue from the crater's mouth, for this metal Fujisan was but the furnace and urn of the tea service. Then there was a pitcher of jade, a bronze lion exhaling breaths of fragrant incense, a little ladle, its cylindrical end and long handle one piece of snow white china, a bamboo whisk, some cups of almost transparent porcelain, and various other paraphernalia, all of which Kamon handled with a deference addressed to their owner, and an indifference demanded by his own qualifications.

His preparations completed, he did not risk the offer of his nectar to an uncongenial mood, by interrupting the Minister's reverie, but wrapping himself in a complacent quiet, suggestive of leisurely achievement, awaited the moment when Hidetsugu, unsolicited, transferred his attention from the features of spring to the cosy equipage his visitor had so skilfully disposed. That was the moment for the crowning display of Kamon's science. With a miraculous celerity and yet no semblance of haste, he removed the cover of the caddy, and almost before one breath of the delicious aroma had escaped, transferred a modicum of tea-dust* to the conveniently placed cup. A slight matter indeed that transfer, and yet in the skill that so unerringly estimated the capacity of the cup, the quality of the tea and the size of the spatula, years of study and practice were concentrated. Then followed the services of the china ladle; once, twice and almost a third time, it poured its steaming contents over the dilating dust, and then the whisk, plunging into the turbidity, compelled every lurking atom to surrender its essence.

"Has it ever occurred to your Excellency," said Kamon as he handed the sweet-smelling beverage to Hidetsugu, "that the history of a tea-leaf resembles the story of human life? The shrub in the garden, producing at first nothing, and yet demanding care and nurture, represents childhood; the plucking of the leaf, its manipulation and curing, on which in so great a measure depends the perfection of the flavour and bouquet, are the exercises and lessons whose outcome is the patriot or the poltroon; the moisture and mildew that rob the choicest "Uji" of its perfume and excellence, are the breaths of envy and slander that tarnish the fairest reputation, and the bitterness that exudes from the dust left too long steeping, is the rust of old age that corrodes the once vigorous judgment."

"Truly, Kamon, your simile is excellent," said the Minister, "but if you allow me, I think I can complete it by adding that tea made as you make it, and separated from the dust at the exact juncture of maturity as you separate it, represents the consummate victory of science married to address in some vital crisis, while the absorption of the perfect beverage finds its parallel in the death of a noble man before decay has touched his vigour. It is scarcely just to deprive your divinity of his most romantic attributes, Kamon," added Hidetsugu laughingly.

But Kamon, who while his host was speaking, had busied himself tilting his cup and looking with a certain embarrassment at the capricious curves of the dregs, showed no disposition to share the Minister's merriment.

"Your Excellency suggested the simile," he replied gravely, "and might therefore well supplement my imperfect statement."

"And which phase of the many that your tea typifies do you find represented in me, Kamon?" asked Hidetsugu, still smiling.

"That, please your Excellency, in which the full-flavoured and richly scented leaf has just been touched by the moisture and mildew," answered Kamon, now bowing his head and imparting an air of reluctance to his speech.

"That is to say, by the breath of envy and slander" said Hidetsugu, who began to see that Kamon's words were not altogether insignificant.

"Such is in truth my meaning, and I trust your Excellency will pardon its presumption," replied Kamon. "Never did flies cluster thicker about a rice-trencher than your

* The practice of making tea from the leaf is only 115 years old in Japan. Up to that time the dust was always used.

traducers surround the Regent today. In other times no doubt, His Highness would have quickly blown away the scum of calumny, and looked only at the truth below, but now—and alas! that such as I should be able to say so—his inclinations make it pleasant to be unjust. Since the birth of Hideyori, every member of the court has been allowed to discover that the Regent only seeks a plausible reason for removing his adopted son, and your Excellency does not need to be told that when Taiko seeks, many join the search.”

“Go on, Kamon, nothing you say surprises me,” said the Minister, for however accurate his anticipations, the aspect of their imminent accomplishment had so dismayed him, that his pallor arrested Kamon’s speech.

“Pardon me, your Excellency, but words that cause pain to those we love and respect fall very tardily from the lips,” resumed Kamon bowing. “Your Excellency’s manner of life, the state inseparable from the high office of Prime Minister, the trifling amusements that lighten your hours of leisure, nay, the very splendour and luxury of this palace which the Regent himself caused to be constructed, have furnished themes, not indeed to your enemies, *they* are too few, but to those who value the Regent’s favour more than loyalty and truth. And when I say that nothing but the advice and entreaties of the Privy Council and other members of the government have prevented the Regent from taking a step half the nation would resent, your Excellency will appreciate how far His Highness’ inclinations have disposed him to credit these calumnies.”

Again Kamon ceased speaking, for it seemed that Hidetsugu paid no heed to his words.

The Minister indeed sat like one unconscious. Fate had assumed the control of his mind, and sensations hitherto unknown thrust back the promptings of his noble nature. The burthen of the story he had just heard, though confused at first by echoes, still vibrating in his heart, of past kindnesses and ungrateful returns, gradually shaped itself into a bitter denunciation of the Regent’s injustice, while strangely and most unhappily, now in the very presence of approaching catastrophe, his hopes and aspirations assumed proportions before unperceived, and the future he might have reached looked so fair as it receded, that sharp regrets and passionate appeals against prejudice and wrong roused a fierce mood of resistance, only however to be presently replaced by chill forebodings of eternal separation from love and loveliness, as he listened to the mellow song of the nightingale, and heard the whisper of the spring breezes that came freighted with flakes of plum bloom, and bearing babbling messages from the waterfall. Hidetsugu might assuredly have won a fair name under easier conditions, but fortune had been terribly against him. It is true that his own excesses furnished his enemies with an incentive and his ill-fate with an opportunity, but the treacherous snares set in his path might well have overthrown a firmer conscience. Before he had time to reason, the germ of evil had twined its roots round his volition.

As is often the case with men completely overmatched by fate, he failed at first to follow the processes of his own mind, but presently stirring, like one aroused from a trance, he looked up at the sky and saw a network of fleecy clouds in which the sunbeams were entangled. Then, for at such times the drifting senses often cling to the scantiest stay, he knew that the pure sunshine had faded for ever from his own life, and in the gloom crouched a spectre that appalled him, the spectre of treason. For a moment he sought with all his soul to banish the apparition, calling earnestly on faith and honour to hide it from his eyes, but its outlines grew rapidly more and more distinct, until he shuddered at the conviction that it had become an inseparable part of himself, and must thenceforth be the guide of his actions.

The two men had remained silent for some time, the one seeking to penetrate the thoughts that absorbed the other, when suddenly a swift shadow glanced across the paper slides. Kamon started visibly, and at once addressed the Minister.

“Your Excellency,” he said, “has seen the shadow of the passing bird* ; the visitor whose advent it portends is Sir Yukinaga. He comes authorized by the Regent to demand an explanation of your Excellency’s conduct, while Kumagaye has been sent to your monitors on a similar

* The Japanese believe that the shadow of a passing bird portends an arrival. F. B.

errand. And in truth my object in waiting on your Excellency to-day is to warn you of these visits, for though innocence is easy to defend, prejudice is a cruel judge, and you may find it more convenient to dispose a method of repelling these charges now, than at the moment they are preferred.”

Hidetsugu received the intelligence without any evidence of emotion.

“Kamon,” he said, “first let me thank you for the good will that has prompted your present action. Since the birth of the Regent’s son, I have had all these contingencies constantly in view, though I confess I did not think that Taiko would have sought to remove me until Hideyori had attained his majority. Many years must pass before the child is competent to assume the reins of government, and meantime I am the Regent’s adopted son, and have been raised by him to the high post of Prime Minister. It appears to me little to his credit that he should deem a few slanderous tales sufficient reason for my sudden overthrow, and for inviting the anarchy that would almost certainly ensue, after his own death, under the rule of a child.”

“Your Excellency perhaps forgets,” answered Kamon, “the influence of the Lady Yodo, whose constant aim is to secure her son’s succession before the Regent’s decease. Perhaps, too, the Regent himself feels that he dare not act leisurely, for the hearts of half the nobility belong to your Excellency. It seems to my humble judgment that your Excellency has only to declare your innocence, and afterwards establish it by a memorial bearing the names of your many friends. Even the Regent’s power has its limits, for it depends on the support of the nobility.”

Had Seta Kamon combined all the subtlety and penetration of many craftier men, he could not have conceived a more pernicious counsel; since it exactly suited the Minister’s mood; and he left the Palace of Pleasure persuaded that the seed he had sown would bear fruit very sweet to the man he served. Ishida, meanwhile, had deferred the departure of the officers charged with the conduct of the enquiry until Kamon’s return, when, furnished with all the information he required, he instructed Yukinaga to treat Hidetsugu with the utmost deference, and accept any excuse he might offer, however trivial; while on the other hand he directed Kumagaye to tell the Minister’s monitors that Taiko was highly incensed at their conduct, and attributed Hidetsugu’s excesses entirely to the weakness of their admonitions.

Ishida’s policy in all this had three aims: the first, to persuade Hidetsugu that he could command the good will of even the Regent’s chosen officers; the second, to elicit from him an insufficient explanation, evidencing contempt for the Regent’s rebuke; and the third, to excite his monitors to such sharp remonstrances, that Hidetsugu would resent their interference and thus compel them to appeal to Taiko. As for Yukinaga and Kumagaye, they received Ishida’s instructions in perfect good faith, recognising in him the mouth-piece of the Regent, which indeed he was at that time.

(To be continued in our next.)

THE JAPANESE PRESS.

THE QUESTION OF PROPERTY IN MONEY.

(From the ‘Hochi Shimbun.’)

WHAT construction do experts put upon the Notification No. 2 of the *Dajjokuan* (Council of State) dated the 19th January of this year?

Though we have carefully read it, we cannot understand its meaning clearly: so publish now the opinions of various debaters, in the hope to elicit the opinions of the learned, and at the same time to inform ourselves by considering their various statements.

The Notification ran as follows:—

“It is hereby notified, that any attempt to deface, or otherwise make unfit for circulation, the coins in current use, by either melting or defacing them, is strictly forbidden.”

With respect to this Notification, it is argued that, although the unavoidable cause for its issue is unknown, its appearance causes only doubt and disquietude in the minds of those who consider it.

If the Government increases the amount of money, its value will certainly come to be less than that of bullion. The mint weight, or value, of one Gold *yen* is 4 *fun*, 4 *rin* 3.67 *mo*, (or 25.8 grains Troy weight) and if bullion of that weight is worth more than one Gold *yen*, those who are in the possession of gold *yen* would find it more profitable to themselves to sell them as metal, breaking them up or melting them, than by using them as money.

Since the outbreak of the South-Western rebellion, the paper money in currency has increased, we hear, about 27,000,000 *yen*; besides which, there are bank notes in circulation to the amount of about 20,000,000 more. The increase in the amount of money being so great as this, and the value of coins consequently becoming less than that of the metal, we are induced to believe that the Notification originated in our statesmen fearing lest sweaters and clippers ('the piercing people'—in orig. trans.) should commence operations. If all processes of making the coin unfit for use are to be forbidden;—we ask:—'what about their export to foreign lands'—'their being lost, or buried in the ground,'—'their being melted in foreign countries?' These are pressing questions, to which we cannot in any way find words to reply. That coins should be made unfit for use does not seem to us to do any harm to the public; indeed we cannot as yet discover what harm there can be in it.

It is also argued that:—"if the practice originated from coins being abundant,—whether melted or not, such coins might be regarded as though they were lying idle in the Treasury vaults, without being in current use; and that the process of melting would certainly have no effect on the price of things in the market." On the other hand:—if the practice be caused by a rise in value of bullion, then we only see that it is profitable, and not harmful, to the public. Because we conjecture, that the fall in value of coins is caused by their being immense in amount; and, therefore, to turn them again into metal, by melting or breaking them up, lessens indeed the number of the coins, and therefore enables the coinage to regain its original value. That the *Economist* writing about money, should say that 'it possesses a quality to rise and fall in value of itself,' is in accordance with our argument above. This is the reason we entertain doubts about this Notification."

Others argue that:—"those who entertain doubts about the Notification, having no sufficient knowledge to understand it, may arrive at a satisfactory conclusion—by 'giving it up.'" But there is a point involved which greatly troubles us. This is lest the Notification may be considered as affecting the individual rights of the people. That Government should retain the exclusive right of coinage, and should not allow the people to interfere therewith, is advantageous to the public, and we have nothing but praise to give to the arrangement. But as soon as the coins have been brought into use, and have become the private property of the people; then Government should cease to interfere with them; for it has, until the coins return into its possession, no right in them, nor power to recoin or remelt them. Money is merchandize, and is the property of any man after he has worked for it. What distinction is there between money and other commodities? A man who possesses a piece of ground may either let it, or cultivate it, at his pleasure. A man who buys a piece of meat, may either roast it or boil it, as he prefers. And is there any reason why he may not do so with his money? So long as it does no harm to others, a man can do what he likes with his money, and cannot be said to have committed a crime. Such practices as melting or disfiguring coins can only be performed by rich men. As our countrymen are mostly poor, they may not feel the action of this Notification much, but we cannot but view it with alarm; should its action be an invasion of individual right."

As we cannot arrive at any clear opinion ourselves, to enable us to reply to those who argue thus; we therefore beg learned men in Japan to state their views on the subject. We shall feel extremely happy if they will read this article carefully, and give us a clear explanation which may dispel the doubts of disputants on the question; show us proofs that the Government have done right in issuing this Notification, and that it is a good plan; and then kindly place their explanation within our reach.

CO-OPERATIVE STORES A MEANS OF CHECKING IMPORTS.

(From the 'Hochi Shimban'.)

THE Foreign Import trade increases daily: and every thing, from vessels and carts, to clothing, tools, dishes and other miscellaneous articles—are being imported from foreign countries, while we, sitting quiet and doing nothing, wait only for the approach of poverty and ruin. Our financial affairs can hardly be in a more seriously difficult position than at present; can we not do something to resist this? Yes; but what are the means of doing so?

Imports may be divided into three classes:—1st those without which our requirements cannot be met;—such as machinery and books;—2nd, those which are in favour on account of difference of cost, such as muslins which, being cheaper than Japanese cotton cloths, are preferred to them;—and 3rd., those which have a good appearance. These are rather matters of luxury, and are of many kinds, and are admired not only for their beauty; but sometimes only because they are foreign.

These are the reasons why foreign imports are bought; and we may again classify them as imports very difficult to resist, and imports which should not be resisted. Now, putting aside those easy to resist (the luxuries. Ed. J. T.) and those which should not be resisted (the machinery and books. Ed. J. T.) our present urgent necessity is to resist those which it is difficult to oppose. (the competing cotton manufactures. Ed. J. T.)

This second kind is that which increases or decreases in demand according to difference of cost. If foreign goods are dear, ours are employed; if on the contrary, our goods are dear, a demand is created for theirs; the advantage and disadvantage of which can be easily understood. For instance: if the cost of a suit of foreign dress is 30 *yen*, while that of ours of equal quality is less than 29 *yen*, the latter would of course be taken. On the contrary, if the cost of one *tan* (a Japanese measure of cloth about 26 feet in length) if muslin be 40 *sen*, whilst that of our cotton cloth is more than 42 or 43 *sen*, the former will of course be taken. Therefore, this kind of imports would cease when the cost of our own goods shall become less than that of theirs.)

The imports which our patriotic countrymen are anxious to stop, are mostly of those luxuries of the third class, which seem to be of small amount. But we advancing another step, endeavour to resist the imports of the 2nd. class. The means of doing so are indeed difficult, and must be gradually adopted.

They are, that patriotic Japanese should form a Co-operative Store Company; should purchase all articles of dress and other miscellaneous goods required by the members of the Company, (goods only to be of Japanese make) and that the Company, under order of the members, should purchase these goods from the manufacturers in the several *ken* and (adding* the expenses of transit, house rent, wages of employees) should sell them to the members at the lowest possible price. (Interest on capital not included here.) And that they should at all times buy and sell for ready money, so as to reduce the sale price as much as possible.

The benefits derivable from this Company system are three:—obtaining goods at a low price; getting them of good quality; and avoiding the risk of selling on credit.

Ordinary trade is different from this. Business being done by selling on credit, or by partial payment between the wholesale and retail merchant; they are liable to ruin or loss; and unfaithful (fraudulent) merchants cannot get goods at a low price and of good quality. A Co-operative Company is not like this. The business being for ready money, to buy or not to buy is at the will of the buyer, and thus goods can be obtained the cheapest and best.

When goods are in manufacturers' hands a merchant called 'Tobi' runs about amongst the factories, and picking up goods at the lowest possible price, brings them to a merchant called 'Nakaqi' who collects them for the 'Togiya' (broker—*lit.* merchant who goes between) and the latter sends them to the wholesale merchant, who sells them to the retail merchant, and so finally they come to be displayed in shops. Going through this process, they incur

* The writer has 'deducting,' but of course this is a mere *lapsus calami*. Ed. J. T.

such frequent transit expenses, and the profits of so many persons, before they reach the hands of the buyer, that their cost gets increased by about 30 or 40 per cent. above their cost in manufacturers' hands. The Co-operative Company will not be like this:—as goods will be bought at their place of manufacture, the profits of so many persons, and all these expenses of transit will be saved.*

Again, in selling on credit, as is done in ordinary trade, an amount must be allotted for loss of interest on the money until payment is made; and also allowance must be made for the risk of the purchaser becoming bankrupt. This makes the cost greater. But as the business of the Company will be all in ready money, these enhancements of price will be avoided.

The cost of silk goods: such as *Hakatsuyori*, *Yukitsumugi*, and *Yonazawa-hachijo*, &c. (all Japanese silk piece goods) which have to be brought from distant places, are mostly increased by 40 or 50 per cent on arrival in Tokio. But if we buy them on the spot, and thereby decrease their cost by more than 30 per cent, we shall be able to stop the imports of the 2nd kind, which are now employed on account of their difference in cost. And even in respect to those goods which have to be brought from distant places by expensive transit; still, buying as wholesale merchants (straight from the manufacturers) great deduction would be made in cost by the Company.

The question of investing the Company's accumulated funds, and that of selling goods at the cheapest rate, being under different heads; we shall not here speak of the former.

The origin of this idea of a Co-operative Company appears to be the following:—In 1844 at Rochdale in England, the state of the flannel trade having become unfavourable, and the wages of the workmen having fallen greatly,—they, seeing their means of livelihood diminishing, and disliking the bad quality and high prices of the things they had to purchase daily; twenty-eight of them formed themselves into a Company and uniting the small wages they received for their labour, purchased a supply of tea and sugar from a wholesale merchant, and keeping them as a common store, got them as they wanted them at cost price; and from the profits of this arrangement, paid 8 per cent to the shareholders, 2½ per cent for their education, and the remainder to the purchasers, according to the amount of goods purchased. By so doing, they not only obtained good things at a low price, but also gained the means of storing an immense amount of money.

For the number of members and the amount of Capital increased year by year; they commenced several other kinds of business, and in 1869, the Company was so flourishing, that it did a business of more than £2,000,000 in one year. The rapidity of its success is indeed surprising, and most other trades—Engineering, farming, and several manufacturers began to adopt this system, and flourished excessively.

It is said that, now, nearly all the factories in the North of England are adopting this system. So we, taking it in hand, wish to use it as a help to enable us to stop the use of foreign goods. Will it really effect it?

LEATHERN BOOTS *versus* STRAW SHOES.

(From the 'Nichi Nichi Shimbun'.)

[A correspondent of the *Nichi Nichi Shimbun* writes to that paper on the 14th inst. in reply to the *Hochi Shimbun's* proposition to abandon leathern boots. We translate his letter. Ed: J. T.]

In an article of the *Hochi Shimbun* No. 1498, the subject of abandoning the use of leathern boots, and thereby curtailing unnecessary expense and diminishing foreign imports was argued. On the beauty of the composition, and correctness of the views expressed, I cannot venture to give an opinion. But the article speaks only of the disadvantages of leathern boots, and of the merits of straw shoes: and from what I have heard, the article is far from being complete or precise; in fact, the writer is like one, who, knowing the first step which should be

taken, is ignorant of the second. My reasons for thinking which I beg to lay before you.

In all things, harm exists amongst the good, and good amongst the harm; and we should not discuss the one, without considering the other. The advantages of leathern boots are, that not only have they a good appearance when generally worn, but that they prevent the feet from being hurt by striking against anything; and, in time of war, they set the mind of the wearer at rest when running about, over mountains or fields, as they prevent the feet being hurt by edged things &c. left thrown about by the enemy* and they are also very durable.

For these reasons, leathern boots are considered to be the best foot-coverings, either in peace or war, in all countries of Europe, whence we derived the use of leathern boots for our soldiers. Since that decision was taken, Messrs. Nishimura and Dan, have invested all their property in hiring foreign teachers, and have created a manufacture which has now grown to such magnitude that we no longer need to import leathern boots. All the materials employed are of our own production, except the leather for soles, for which imported elephant skin is used, as being cheaper than our own ox hide. And military men having now become accustomed to them, find no fault with them, either in barracks or on the parade ground during peace time; but, on the contrary, recognize several advantages in them. But in the beginning of the Southern War, most of the soldiers suffering from the friction of their boots upon their feet,—and finding straw shoes more convenient to run about in over hills and muddy paths,—it was decided to employ the latter for a time. This is the 'harm existing among the good.' Besides, abandoning leathern boots entirely, and employing only straw shoes, does not not serve to diminish a portion of the imports, as argued in the article. How can this possibly be the means of diminishing imports?

The disadvantages of straw shoes are:—not to speak of their odd appearance—that they allow the feet to be hurt in running about, and are very soon worn out. (I do not know if any other kind of foot-covering has been invented to take the place of the strong and durable leathern boot; but during the war of last year, shoes made of 'shuru' (bark of the Palm tree) and cotton proved no better than those of straw, for running about over steep hills and muddy roads.) In a day of battle, three or four pairs were necessary for one man, and even on an off-day, one or two pairs were required, and much time was therefore lost in distributing these to the soldiers, and in their putting them on.

Moreover, from what I have heard of the amount of expenditure, leathern boots, humpen leggings, and stockings, according to the existing regulations cost—for one soldier in time of peace, 5.90 yen per annum; and, if these be replaced by cotton stocking and leggings and *waraji* (straw shoes) and *uwazōri* (straw slippers) the cost would come to about 14.60 yen per annum, thus making a difference of about 8.70 yen, and if I multiply this amount by 40,000 the total number of soldiers in the country, an amount of about 348,000 yen results to be added to the grant now made for the purpose. Added to which, leathern boots are more convenient in time of peace.

In the case of foreign expeditions, the inconvenience of moving straw shoes is immeasurable. Suppose a force of 10,000 men was to be sent out, the straw shoes required by them for one month would be 6,000,000 pairs (taking three pairs a fighting day and one pair a rest day, supposing them to fight on alternate days, and thus 60 pairs per month would be required for each man.) These made up into 30,000 packages, at 200 pairs per package, would occupy three medium-sized vessels. And supposing these vessels either to be late of arrival, or to be wrecked by striking on an unforeseen rock, there would be no place in the invaded country where these shoes could be obtained, and as they require to be changed daily, there is no guarantee against its finally becoming necessary for the men to fight barefooted.

In our own country, they are obtainable wherever we go, or should we fail in getting them, they can easily be made. Also they are convenient in actual fighting. Therefore there is no objection to employing them in war in this country.

* This is all very fine, Mr. Ferguson; but what will 'Tobi' say? And how will the *Nakaguni* and *Toiya*, and your merchants, wholesale and retail, approve this beautiful arrangement for their ruin? Ed. J. T.

* This is a reasonable argument: as the Japanese have instruments, equivalent to our ancient 'calthrops' with which they strew the ground, and also thoroughly understand the art of 'staking' rough ground. Ed. J. T.

This is the 'good existing among the harm.' But the question of expense for replacing leathern boots by straw shoes being as above described, where can possibly be the 'curtailment of unnecessary expense' mentioned in the *Hochi Shimbun's* article?

I hear that it has been decided to retain leathern boots in use for time of peace; as while, not causing the least inconvenience in barracks, or out on drill, they have a better appearance, and their use curtails unnecessary expense. And that, in time of war, straw shoes shall be used, if the war is in this country, as then expenses may be specially incurred, and they are more convenient for actual fighting. And, in case of an expedition to a foreign country, something will be hereafter decided on, which will lessen as much as possible the trouble of conveyance, and will also be convenient for actual fighting. Should all this be actually decided on, there will be no more inconvenience, only advantages; and parties unconcerned need not argue any more on the subject.

So long as it does not prevent the practice of economy, and defeat be not hazarded, there should be no harm in having separate regulations, and different modes of dressing in times of peace or war, at home at abroad. From this I cannot but conclude that, though the simile of 'the body and its shadow' seems to be very good, yet the argument founded on it is one-sided (*orig. trans.* 'only on one end of a thing') and in fact that the writer is one who, knowing the first step to take, is ignorant of the second. And should my arguments above be found correct, I would say without hesitation, that it follows:—that there being a War Department and Military Officers for the administration of military affairs, we should silently watch what they do, and not risk being ridiculed for being obscure, by looking too far into the question.

THE PUBLIC APPEAR TO BE SUFFERING FROM THE ABUNDANCE OF PAPER-MONEY.

(From the 'Nichi Nichi Shimbun'.)

ALTHOUGH, beginning an argument with such a title, the public may believe us to be of those who recklessly jump at a conclusion, the statement is made from actual observation of an instance, and having several times pondered over it, we have finally been induced to our conclusion by the fall in interest of money and the rise in value of coins. We proceed to explain our views.

As,—though the laws of our country prohibit a difference being made between coin and paper-money; and, indeed, the publication of the current price of paper-money in the daily papers has been stopped, the efforts of nature cannot be resisted by laws made by men,—so there has not been a day for a number of years back, when differences between coin and paper-money have not existed.

We are actually informed that at present 100 Gold *yen* cost 16 *yen* more than 100 paper *yen*; information which does not appear to us unfounded, since a foreign merchant in Yokohama is said to have offered to pay a difference of 1,600 *yen* for 10,000 Gold *yen*. If this is really so, the rate of difference is 16 *per cent*.

In the 5th or 6th year of Meiji, the cost of coin and paper-money was equal, but since, on account of the amount of imports and exports being unequal, coin has gradually come to be exported, in consequence of which a difference of 3 or 4 *yen* was created between them (per 100 *yen*) which farther increased to 6 or 7 *yen*, and in the 8th and 9th years of Meiji, it came up to 7 or 8 *per cent*. Since last year the difference has become greater, and it must now be stated as having risen from 10 to 15 or 16 *per cent*.

As, however, trade in coin does not prevail in the interior, our merchants do not observe so great a change, and no serious circumstances have, up to the present time, occurred in our markets; but though, therefore, economists do not seem to take much notice of it, a difference of more than 10 *per cent* is not so small as that we should not be distressed at it.

The reasons for this difference of cost being chiefly the scarcity of coin in the market, on account of their export in great measure, and also their being hoarded in the treasuries of the rich; it may not appear to be on account of the increase of paper money. But it is in accordance with nature and reason that, if plentiful, it should lose in

value and, if scarce, it should gain. How much more would this be, if it is withdrawn from circulation by export and hoarding, while but a little is being made in its place: while paper money always remains in circulation, and is constantly being increased by fresh issues.

Therefore we have come to the conclusion that the abundance of paper money is one of the real causes of the considerable increase in the cost of coin.

If, however, it be said that the difference in cost of coin is not a sufficient cause of the suffering from the abundance of paper money; we shall proceed another step and prove it by the fall of interest.

Those who are interested in the business of lending and borrowing money in market places are doubtless aware, before reading this, what is the present state of the circulation of money among the public. Are not bankers, and all those whose profession is to lend money, suffering from the abundance of paper money in their hands, and are they not all searching for means of lending it? Though there are some who complain of the unfavourable state of the money market at present, in reality it is because such borrowers have not sufficient security to give, or have not sufficiently good credit. Any man with good security or good credit wishing to borrow, does not find it difficult to get it at 10 *per cent per annum* at present. If any proof of this be required, a good one is given in the ruling rates for Bonds. For instance, Pension Bonds are worth now from 110 to 115 *yen* and Security Bonds (those issued by Government in place of the Noble's debts, when Government took over the Noble's dominions) are worth now about 70 *yen*. Whereas two years ago the former were worth 80 to 90 *yen*, and the latter 60 to 65. This is simply because the holders of these bonds required more than 10 *per cent* interest the year before last, but are now satisfied with less than 8 *per cent*. The credit of the Government has nothing to do with the question.

Although these who form their opinion from the actual state of the market, may consider that the rise in value of these bonds has been caused by the establishment of so many National Banks, and also from the Bonds being a favourite security, and do not seem to think that the difference of interest of money has any concern with it; the real cause is the fall in interest, which is the result of excess of paper-money.

Since this time last year, the Government, in less than 12 months, by degrees increased the paper in circulation by 27,000,000 *yen*, the 15th National Bank issued 15,000,000 *yen* and other Banks have issued altogether 43,000,000 *yen*: which, being done all at once, the amount of paper in circulation is increased by about 50 *per cent*. Thus it is easy to see that the money now in circulation must be indeed great. And it is certainly not an error for us to conclude that the increase of paper-money is one of the real causes of the fall in interest.

EXTRACTS.

ARE WE CONSUMING OUR CAPITAL?

II.

(From the 'Economist'.)

CONTINUING this subject from our number of December 15, we commence with the obvious fact that whatever may have been the case during the last two or three years, it is quite evident that the balance of indebtedness, say, for fifteen or twenty years previously, cannot on an average of years have been really against this country. Had it been so, the country must have experienced the effects of such a state of things long since. So protracted a drain on our resources, had it existed, must have shown itself very clearly. If the country had imported more than it could have paid for in goods, the balance must have been paid either in the precious metals, or by exporting the securities of foreign countries which may be held here. With regard to the export of the precious metals, the amount exported must either have been drawn from the supply held by the Bank of England, or from the amount ordinarily circulating from hand to hand. The amount of coin circulating in the country must always be a matter of conjecture, but various estimates have been formed from time to time, and though they have differed from each other in some particulars, all have agreed in this, that they have represented the amount now circulating to be much larger than at any previous period. There is, at all events, at present, no sign of the pre-

try, and the very considerable outlay of capital in this direction, it may turn out that a good deal of this expenditure has been unproductive and ultimately unprofitable. These "improvements" in buildings do not always mean increased value; if there is no demand for them, unused and unusable buildings are about as undesirable investments as can be found.

We should not conclude our observations, if we are to attempt to form a balance-sheet, however rough, for the country as a whole, without taking into consideration other classes besides those whose condition we have been attempting to review. There are many persons in this country who neither carry on trades, nor are engaged in businesses, nor work for their livelihood in any way. This class of persons, those who live on the returns from their accumulated capital, is a very large one, and is now both much larger and much wealthier than it has been at any previous time. And we believe that these persons, as a class, in ordinary times, accumulate capital. They feel, as a rule, the necessity of living within their incomes, and their savings in the aggregate must form a very large sum. While the working-classes, and the merchant, and the trader, and the manufacturer have felt the pinch of the times, the accumulations of the moneyed classes may have gone a long way to make up for the losses which have been experienced in other directions.

One deduction, and that a very serious one, must be made from this. A very great loss, or what comes virtually to the same thing, a very great depreciation of property, has, no question, been experienced recently by many of those who, tempted by high rates of interest, have placed some of their money in securities which have either ceased to pay dividends, or have been sold during a time of great depreciation. To form an estimate of this loss is impossible, but taking into consideration the enormous amount of foreign securities held in this country, the aggregate depreciation must have assumed corresponding proportions. So far back as April, 1876,* the depreciation in three classes alone of foreign Securities, Turkish, Peruvian, and Egyptian, was estimated in the *Economist* as having been during the twelve-months previous no less than ninety millions, and there has been a very great drop in their value since that date. This loss was undoubtedly distributed over the holdings of a vast number of persons, and probably has affected only a portion of the income of most of them. It is also impossible to say how much of it may have extended to Great Britain, but it is quite possible that the loss this country may have experienced in this manner, and in other ways during the last three years, may have been sufficient to consume, at least, as much as may have been saved in other ways on an average during one year out of the three. In support of this statement, it is only needful for the reader to bear in mind how great the drop in value of investments in many industrial undertakings has recently been. To put it plainly, it is quite possible that the loss on foreign investments and in other ways during the last three years may have amounted to fully as large a sum as the savings of the country during one year.

As we mentioned before, the scale on which affairs are conducted in this country is so vast that any estimate must be necessarily incomplete. One instance, however, which we can quote from an official statement, will show how considerable a diminution in one branch of the resources of the country may take place without its being obvious, had not the evidence of the fact been before us. The *Agricultural Returns* show a diminution of more than 400,000 cattle and 2,000,000 sheep in Great Britain and Ireland since 1874. This diminution in the value of farming stock can hardly represent a value of less than twelve millions. The cultivated land in the United Kingdom in 1877 was estimated at 47 millions of acres. The value of the farming stock in the form of cattle had therefore dropped about five shillings an acre over the whole country in the course of four years. But if this fact had not been shown from the *Returns*, would any estimate have been likely to have been formed of the existence of so great a diminution in the value of the stock employed in one of the greatest industries in the country?

To enter into a more detailed statement is out of the power of any one; while there seems to us no proof that we are living out of our capital, it is yet obvious that accumulation does not go on in the country at the same rate as previously. So far as the increased importations, which have been so much discussed of late, have been paid for out of the capital set at liberty by the diversion of trade from one channel to another, we are not necessarily the worse off, if the imports have been employed in a manner which will be a source of future profit. So far we are accumulating stocks of manufactured goods in the country for future use, a source of future profit may be merely accumulating unsold, waiting till a demand may, as it doubtless will, in course of time, spring up. So far as our importations of articles of food enable us to

support a large population engaged in preparing stocks of manufactured articles drawn from materials found within our own boundaries, this supply of food is the stay also of an industry which may also be classed as productive. So long as the country is merely fetching back in one shape or another the capital which it formerly exported, no injury is done to its permanent prosperity. But further it cannot safely go. There are limits in time to the largest accumulated resources, and there are other considerations besides mere movements of capital to be thought of. There may have been, and there probably was, a considerable increase, in the days of our recent prosperity, in the unproductive expenditure of the country, and this must lead to its ultimate impoverishment. There is the difference in the modes of life started or developed during the recent years of too abundant sunshine to be borne in mind. There has been much waste of capital in various ways. It is always unpleasant for people, when less well off than they have been, to come down to a lower scale of expenditure; but come down they must, if they would avoid ruin. The prodigality indulged in among the working-classes during the time of high wages has been the theme of many a speech and many a statement. The reckless extravagance of those above them in station, who suddenly enriched, thought there was, as the old saying has it, "no bottom to the money-bag," the sums lavished on costly buildings, on splendid establishments, on luxuries of every description—all these have to be written off the account, as so much wasted capital. Yet the business heart of the nation is still thoroughly sound. The evidence is strong in favour of this. The Clearing-house returns, the Railway returns, the receipts of the Exchequer, all show that though the great wave of prosperity, which seemed as if it would bear everything so rapidly onwards with it a few years since, is stayed in its course, and has for the moment even receded, we may well hope to maintain our position by a timely economy. Retrenchment will undoubtedly have to be the order of the day, and when the cloud is removed, it is to be hoped that the lessons of the past will not be forgotten.

CHINESE NEW YEAR'S FESTIVITIES.

THE celebration of New Year's commences very early in the morning of the first day of the new year. Preparations relating to these festivities have all been made previously, a description of which will be found where the annual customs relating to the latter part of the twelfth month are described.

The festivities connected with New Year's, as observed generally in every respectable family, divide themselves into five parts—1. *The sacrifice to heaven and earth*; 2. *The worship of the gods and idols belonging to the family*; 3. *The worship of deceased ancestors*; 4. *Prostration before living parents and grandparents, etc.*; and, 5. *The making of New Year's calls.*

The sacrifice presented to heaven and earth, usually called "*presentation of rice on New Year's*," is the first thing done on New Year's morning, commencing oftentimes as early as four or five o'clock. The adults of many families do not retire to rest on the last night of the old year. The table spread with offerings to heaven and earth is usually placed in the front part of the principal reception hall. On it are put a bucket of boiled rice and five or ten bowls of different kinds of vegetables (no meats of any kind), ten cups of tea, ten cups of wine, two large red candles, and three sticks of common incense or one large stick of a fragrant kind. In the wooden vessel containing the rice are stuck two small branches of cedar or some flowers, and ten pairs of chopsticks here and there around on the surface. On the chopsticks are placed two large sheets of certain kinds of mock-money, one representing gold and one representing silver, only used on *New Year's rice*, and on the top of this is placed mock-money of another kind. On one of the chopsticks is suspended, by a red string, a copy of an almanac for the current year. A few of each of five kinds of dried fruit are scattered around under the mock-money on the surface of the rice. Near the centre of the table is always placed a plate or bowl full of the loose-skinned orange. When every thing is arranged, fire-crackers are exploded not far distant, often in the street in front of the house or at the door.

The head man of the family, all of the rest being present, now comes forward and kneels down in front of the table, and bows his head toward the ground three times, holding one or three sticks of lighted incense in his hands. On rising to his feet, he places the incense in the censer on the table. The same ceremony of kneeling, etc., is repeated the second or the third time in some families; in others, only one kneeling and three bowings are performed. In some families, the one who kneels and bows repeats, while on his knees, his thanks to heaven and earth for past protection and favors, a prayer that his family may be protected from sickness during the year now begun, and that it may be successful in business. This ceremony is designed to express the obligations of

* See *ECONOMIST* of April, 1876.

the family to heaven and earth, and their dependence upon them for protection, life, and success. At the conclusion, fire-crackers are exploded, and the common kinds of mock-money, which have been prepared for this occasion, are burned. The plate of oranges and the bucket of boiled rice are usually left undisturbed for a day or two.

By this time it is nearly or quite daybreak, and preparations are made to worship the family gods and goddesses. Several bowls of rice and plates of vegetables, vermicelli, and fruits, with three cups of tea and three cups of wine, are usually placed before them on a table: incense and candles are also lighted. Some families do not use the vegetables and the rice, while others do not employ tea or wine at this service. The head of the family kneels down before the images, and performs in very much the same manner as he did before "heaven and earth." At the proper time the mock-money is set on fire and consumed.

It now becomes the duty of the family to pay the customary tokens of respect and remembrance to its deceased ancestors, represented by the ancestral tablets. A quantity of things very much like those which have been paraded before the gods is put before the tablets. These are worshiped by kneeling, etc., in a similar manner.

The performances of another important ceremony now takes place. The surviving heads of the household father or mother, grandfather or grandmother, uncles or aunts—if present, must be worshiped by their descendants, the junior members of the family. The parties worshiped, or before whom prostrations are made, sit side by side in chairs, *if husband and wife. No incense is used.* Married sons and their wives, as well as unmarried children, kneel down before their seniors, bowing only thrice, and expressing their congratulations. Uncles and aunts almost always prefer to stand rather than sit while receiving the customary tokens of respect.

The adult male members of the family start forth to see their male friends or relatives, making New Year's calls, on this day, or they may delay such calls for one or two days, if they choose. Friends of equal rank and standing in society, on meeting, must bow to each other, shaking their own hands, each mutually congratulating the other. Relatives of lower social rank bow, or pretend to bow sometimes, one knee, on meeting their superiors. The higher never kneel to the lower. The husband must call on his wife's parents, if living within a reasonable distance, worshiping them and their ancestral tablets. Husband and wife do not mutually worship each other, being of the same social rank. Concubines living in the house must worship the husband and the wife by kneeling before them, and presenting their congratulations on the return of a new year.

The same Chinese term, "Pai," is applied to worshiping deceased ancestors and living parents; but there is this essential difference between the two ceremonies: in regard to the dead, incense, and candles, and mock-money, and sometimes offerings of food, are made; while in regard to the living, neither incense, nor candles, nor mock-money, nor offerings of food are ever made.

It is customary for all the honges, stores, and groceries to close during New Year's day, and for at least one or two subsequent days. Many of the larger stores and honges do not open for the transaction of business for five or six days, and some even do not commence business until the tenth, or even until after the fifteenth of the first month. Many of these will sell to accommodate friends, opening a side door, on the fourth or fifth day after New Year's. The longer a shop, or store, or hong is closed, the more respectable and reputable it seems to be regarded. It is asserted by middle-aged men that in their boyhood there used to be a much larger proportion of shops and groceries closed until the tenth and the fifteenth of the first month than nowadays. The tendency is now to open earlier and earlier every year. There is really very little of buying and selling done for the first ten or fifteen days after New Year's, except necessary articles of food or articles for urgent use. Large sales of goods are seldom effected during the first half of the first month among the Chinese. Between Chinese and foreigners such sales are sometimes made.

There seems to be a superstitious dread of spending money for the first three days, except for candies, sweetmeats, peanuts, and similar kinds of refreshments, buying and selling, as matters of business, being regarded as an inauspicious commencement of the year.

The first day of the new year is a day of great festivity and rejoicing among all classes. No unnecessary work is performed. Should it be necessary to hire a coolie or a workman to perform labor, he would expect two or three times as much pay as usual. Much gambling is performed in the streets, in gambling dens, and in private houses on the first few days of every new year. Gambling, which, according to law, is forbidden to be practiced at all, by the universal consent and connivance of mandarins and their underlings is permitted at New Year's. Almost every adul

Chinese knows how to gamble in various ways. Custom requires that every boy who calls on his neighbors or his relatives on New Year's day—or any time before the fifteenth of the month, as some assert—should receive a couple of loose-skinned oranges, or the lad would consider himself slighted, and treated shamefully and niggardly. The reason why this kind of orange is so popular at New Year's is, that the colloquial name for it, *ket*, is precisely the same as the term for "fortunate," "lucky," "auspicious." The presentation of these oranges is equivalent to the wish of an auspicious and lucky year; it is an omen of good. When a man recently married calls on the parents of his bride, or on any of his own family relatives or intimate friends, he must have two or four oranges of this species given to him, and a handful of watermelon seeds, put up in a red paper, for him to carry home when he departs. Adults, when calling at New Year's, must invariably be treated with hot tea to drink, good tobacco to smoke, and watermelon seeds to eat. As the local saying is, "*During the first part of the first month no one has an empty mouth.*"

From the first day to the fourth it is customary for the common boat-women and their children to go around from house to house, presenting their congratulations to the members of respectable families, and begging a present of cakes or food of any kind. They call out at the street door or knock on it, singing songs until they receive the cakes sought or until they become wearied. Many families make it a point to give to these boat-women. They do not seek out the poor on the occasion, but the poor seek out those who are willing to contribute a cake or two. They carry the cakes home and eat them at their leisure.

It is estimated that probably ninety out of a hundred families do not eat any meat on New Year's day: this is on account of their reverence for heaven and earth. The custom is sometimes called eating vegetables in honor of heaven and earth, and is regarded as an act of merit.

The New Year's festivities among the respectable classes of citizens last from the first to the fifteenth of the first month, and among the officers of government from the first to the twentieth, or rather from the twentieth of the twelfth month of the old year to the twentieth day of the first month of the new year. This month, among the mandarins, is given up to recreation and dissipation, feasting, visiting each other, and seeing theatrical exhibitions. Very little public business is done by them; only very pressing complaints receive attention. It is a season of relaxation and rest from the cares and responsibilities of office. Among the common citizens and gentry there is a great deal of mutual giving and receiving invitations to feasts. Bands of musicians and playactors are very busy during the first half of the first month. In mandarin establishments and in neighbourhood temples, there is a vast amount of theatricals performed in this interval.

Between the first and the fifteenth it is common for bands of music to call on respectable and wealthy families in the day-time, and, if their services are not promptly declined, commence playing. After playing three tunes they stop, and expect to receive a present of money. The amount given is voluntary and optional. These players come professedly to present their congratulations to the families they visit on the arrival of another new year. Sometimes wealthy householders specially invite a band of players to come to their houses and perform for the amusement of the females connected with their families. Their remuneration is much greater when formally invited than it is when they invite themselves.

During the first half of the month the festivities are frequently diversified and enlivened by fireworks in the evening. These are called *flowers*. The occasions when exhibitions of flowers in the evening are made are not few; for instance, sometimes, when offering thanksgivings before the images of gods and goddesses in their temples, in view of a happy event, or in the performance of a vow, or when a large family worship the ancestral tablets in their ancestral halls or in their private residences, or when the clerks and other underlings in mandarin offices have theatricals performed for the purpose of propitiating the god of riches, or when distinguished guests are invited to a feast in a wealthy family, the "*letting off of flowers*" is oftentimes attended with great show and expense. Some married women take occasion to visit some celebrated temple, dedicated to the goddess called "Mother," on the evening of the fifteenth of the first month, and have "flowers" let off at their expense in her honor, hoping that this goddess will aid them to have male children, in consequence of their thus worshiping her on her natal day.

From the eleventh to the fifteenth it is customary for bands of playactors, or idle people who are willing to engage in making amusement for others, to go around to the different mandarin establishments, the residences of the gentry and the rich, and places of public rendezvous, and *manoeuvre the dragon*. The per-

formers expect to be rewarded by those who permit them to play for their amusement on their premises or before their houses. If they happen to go where they are not wanted, a present much smaller than would be expected, were they permitted to play, will send them away in peace. Officers and rich people often give several dollars to a band, after having witnessed the dragon play for a part of an evening.

A ceremony performed in every heathen family at this place on the morning of the fourth day is called "offering rice for receiving the gods." It is the belief that the gods who ascended to heaven on the twenty-third or twenty-fourth of the twelfth month of the year just closed, to report to "the Pearly Emperor Supreme Ruler" in regard to the affairs under their supervision, all descend to earth again on the fourth day of the first month. The people prepare an entertainment for them as a kind of welcome, and in order to propitiate their goodwill during the year just commenced. This is called "receiving the gods." The kitchen god, the god of wealth, the god of joy, and other household gods, are supposed on this day to come down from heaven to begin their duties on the earth. Some say the spirits of deceased ancestors are also present this day in their former home. A bucket of boiled rice, with various things arranged upon it, very much like the offering to heaven and the earth on New Year's day, ten plates of vegetables, three cups of tea, three cups of wine, with incense and candles, are placed upon a table in the front part of the public room of the house. The head of the family kneels down on the floor, and bows three times before the table, which is understood to be an act of homage rendered to the gods who have already arrived on the premises, or who are momentarily expected. At the conclusion of the genuflections, mock-money is burned for their use. After waiting a short time, a plate having five kinds of fruit upon it is placed before each image worshiped in the family, with two candles and three sticks of incense, and also before the niche holding the ancestral tablets of the family. Some utter a kind of prayer before idols while bowed before them on this occasion, asking for wealth, male children, health, success in business or literary employments, etc. There is a proverb in common use to the effect that "when the rice used to receive the gods back again is eaten, then all kinds of work should be commenced." In fact, however, some have already commenced their usual employments, while others yet wait several days after the consumption of this rice before they begin. *Doolittle's 'Social Life of the Chinese.'*

YOKOHAMA MARKET REPORT.

FRIDAY, FEBRUARY 22nd, 1878.

IMPORTS:—We have almost to repeat, without change, what we wrote last week. *Kinsatsu* continuing to fall in value, the market generally has been dull, and for such goods as are saleable, the demand has been moderate. The speculative demand for COTTON YARNS which characterized last month's business has entirely ceased; and most staple COTTON GOODS are dull, only small sales being effected at fractionally lower quotations. WOOLLENS remain unchanged at nominal quotations, with nothing doing.

EXPORTS:—SILK. During the past week, very little business has been done in our principle export staple; the extremely menacing character of political telegrams appear to have fairly frightened most buyers, and of the 600 Japanese bales which we mentioned in our last report as being in foreign godowns, under inspection, only about 240 remain. In addition to the above-mentioned cause of depression, good hanks are now becoming extremely scarce; and really high-class Nos. 1 and 2. are unobtainable; while, in order to obtain a small parcel of silk of fairly good and even quality, a comparatively large lot must generally be inspected and sorted. Prices remain unaltered, and we leave our quotations as they stood last week. But native pretensions are to-day firmer, which, considering the fall in native currency, is a proof that they take a more hopeful view than ourselves of the European political situation.

The stock in Yokohama is about 2500 native bales. Shipments by the English mail of the 19th inst. totalled 184 bales.

TEA.—Our season may now be considered as closed, the few small transactions which may take place prior to first arrivals of the 'New Crop' affording no real market test. Settlements for the week amount to only 250 piculs and arrivals are quite nominal, stocks in first hands are also much in the same state.

EXCHANGE:—The bulk of private paper for the week was done at 3s. 11½d., early in that period; but the news from America of the Senate having passed the Silver bill apparently had effect on this market; for, in spite of the extremely limited character of business in the Silk and Tea markets, rates of Exchange have risen to our quotations. There has been scarcely any demand for Bank paper, and until to-day's transactions, 3.11½d. was the best obtainable rate.

Only the usual small business has been done on Hongkong and Shanghai.

We quote:—London Bank, 6 months' sight 4s. Od., sight 3s. 11½d. Credits, 6 months' sight 4s. 0½d. Documents, 6 months' sight 4s. 0½d. Documents continental, 4s. 0½d. * The dates of Arrival and Departure of the Mitsu Bishi Company's steamers are susceptible of alteration, consequent on the necessity imposed upon the Company—by its contract—of connecting with the steamers of the Pacific Mail.

* No days for Arrival or Departure of the Pacific Mail Company's or Occidental and Oriental Company's steamers having as yet been fixed, we are unable to tabulate them. Each separate steamer's departure from her port will be notified in the Table below, and the day of her probable arrival at her destination.

* Three days are allowed in the P. & O. Company's Schedule for transit of the Mails between London and Brindisi.

* Two days are allowed in the Messageries Company's Schedule for transit of the Mails between London and Marseilles.

CARGOES:—Jap. str. *Tokio Maru* from Shanghai and ports:—Treasure, \$139,086.00.

REPORTS:—The American ship *Ladoga* reports:—Sailed from New York on the 24th of September: had moderate weather throughout; came East, experienced very bad weather on the coast of Japan. Arrived at Yokohama Feb. 18th, 146 days out.

The American ship *Sacramento* reports:—Leaving Newcastle, N.S.W., on the 20th of December: got pilot off Cape Segami: arrived on the 16th February, all well, 56 days out. On the night of Feb. 12th the pilot-cutter *Jane* was laying hove to off Cape Segami to take her owner, Pilot Christian, from the British steamer *Lorne*, which was expected down that night. A Japanese junk ran into the pilot-boat, and carried away the gaff, tore the mainmast, besides doing sundry damage. The boat went to harbour at Misaki, and repaired damages, which were paid for by the owners of the junk.

The German corvette *Augusta* reports:—Left Samoa Islands on 20th January. Had moderate weather throughout. Was under sail till within three days of port.

NEW SERIES. VOL. 1. No. 9.]

March 2, 1878.

[\$24 PER ANNUM.

THE OPIUM CASE.

THERE is no doubt that the Tariff requires revision respecting the importation of opium. The case of *Regina versus Hartley*, which takes up so much of our space to-day, would seem to prove that the Japanese Government recognizes the fact; that while aware of the noxious effects of opium-smoking, and determined to protect its subjects from the vice; it is fully alive, at the same time, to the value of the drug as a medicine and anxious that it should be imported under proper regulations. It is impossible to believe that this prosecution was instituted with any hope of getting a verdict; nor can we agree with the defendant that *animus* against him individually instigated the proceedings. The motives lie far deeper, as is generally the case when Oriental diplomacy takes overt action. One may be an honest fear lest opium-smoking should really increase, now that the Chinese population is increasing, and that it has passed from under native jurisdiction to that of a Chinese Minister and Consul. In the Government Notification of September 1870, the use of the drug for smoking was strictly prohibited to Chinese, as well as Japanese; and now that the former can no longer be reached by Japanese law, it may very well be, that the intention of the Government, in prosecuting an English importer, was to notify to the Chinese authorities that there was still another method of preventing their countrymen obtaining their favourite poison. If such was their purpose, they have gained a victory in their apparent defeat; for the validity of the prohibition of opium for smoking is brought out into the strongest prominence by the British Court's decision that the intent of the Treaties was not to exclude it as a medicinal drug. It is quite possible that the Chinese Minister and Consul are opium-smokers themselves, and might be presumed to have a certain fellow-feeling for culprits accused of importing it; in which case the action taken by the Government will carry fuller weight.

And we think we can descry another motive, lying deeper still. As we shall presently show, the evidence, arguments, and judgment in this case, are all wrong on two points:—the relative narcotic values of Indian and Turkish opium; and the impossibility or difficulty of converting the *Opium officinale* of the British Pharmacopœia into smoking opium. And it will result, we venture to predict, from the discussion necessitated on this item of the Tariff, that the only practical way of enabling the Japanese Custom House to discriminate between the two will be, to give them the power to demand from the importer satisfactory proof that he imports it, either for his own use as a medicine, in which case he must be a medical practitioner or a druggist; or that he imports it by direct order from some customer who is either one or the other;—in which case he must give up the name of his customer, and so enable the Government to follow the drug to its destination. And, in either case, the Government would

get at least a fragmentary jurisdiction over foreign residents.

We are so entirely on the side of the Government in their wish to secure their first object—complete control of the opium traffic, and surety against their people being inoculated with an additional vice; that we are quite content that the Foreign Powers should give up so much of the protective extra-territorial clause, as will assist the full attainment of a desire so reasonable; but enough has been done in this direction at present, and we trust that Mr. Hartley will not be put to the inconvenience of defending a second action,—a second verdict in his favour not being likely to strengthen the Government's hands, while it will only cause an innocent man needless annoyance, for which he does not get even the poor compensation of costs. We pass to our criticism on the case itself.

We have noted two errors in the evidence; errors which necessarily led astray counsel and judge. The first is with respect to the various percentages of morphia contained in various kinds of opium. The evidence stated that Smyrna opium contained ten *per cent.* of this principle, and Indian opium only four; stress was laid on the point in argument, and in his judgment, Mr. Wilkinson stated that Indian opium contained only one-fifth of the quantity in Turkish. The second mistake is with respect to the possibility of preparing Turkey opium for smoking, which was represented to be difficult.

Now, we find it stated in 'Squires' Compendium,' a standard work in all dispensaries, that the amount of morphia in Smyrna opium is from six to eight *per cent.*; and in 'Normandy's Hand-Book of Chemical Analysis,' edited by Dr. Noad F.R.S. Lecturer on Chemistry at St. George's Hospital—which is a work of great authority, we find a careful analysis of the drug, in which the three sorts of Turkey opium are distinguished; and Smyrna, the best, is stated to contain 6.9 *per cent.* of morphia. The United States Dispensatory, another work of authority, says: 'Opium should yield at least seven *per cent.* of morphia,' and this may probably be taken as the average strength of the Smyrna drug. Now, on the other hand, Indian opium differs quite as much as Turkish; and the evidence given, that Patna, Benares and Malwa opium are all known as Bengal opium, and that they all differ very largely from Smyrna in their percentage of morphia, was altogether incorrect. Bengal opium is grown by Government on the Eastern side of India and sold on Government account; while Malwa is grown by natives on the West side, and pays a tax to Government. The result is that Bengal opium is a comparatively staple product and of uniform character—and is taken by the purchaser without examination on the Government warrant; whereas Malwa opium is variable in character and has always to undergo examination. With regard to the percentage of morphia in the Indian drug; it is true that it is less than

that contained in the best Turkish, but the difference is not great, if the best Indian be used for the comparison; and, as a matter of fact, opium has been grown in India under favourable conditions, which was fully as rich in morphia as the Smyrna product.

The fact is simply this—the preparation from the Smyrna drug has been constituted the *opium officinale* of our pharmacopœia, because in the first place it had secured its position long before any opium was got from India; but mainly because it is more stable and uniform in its character, is less adulterated, and, consequently, more easily reduced into the form available for dispensing chemists, who must have a drug of constant quality.

Touching the second point; the opium of the chemist is necessarily dried or 'dissicated,' to remove the unknown quantity of water which is one of the most uncertain factors in his calculation. Dessication simply drives off water, and in fact, when the Chinese opium-smoker boils his opium down to a thick treacley substance, and subsequently takes a piece of it on the opium needle as big as a pea, and puts it into his pipe—he has to 'dessicate' this, by drawing the flame of a lamp through it, until it is sufficiently dessicated to give off its morphia under the effect of the heat. It is evident, therefore, that nothing is easier than to damp the dessicated opium of the chemist into the consistency required by the opium-smoker.

Of course, these two points would make strongly against the defendant, did the Treaties distinguish between medicinal and smoking opium, and had the charge against him been for attempting to import the latter, a prohibited article. For no demonstration is needed that the meaning of the Treaties was to exclude smoking opium; and as it must have occurred to their compilers that opium for medicine must of necessity be admitted, it is equally clear that they contemplated the admission of medicinal opium under the general head of medicines. But the charge against him was for 'smuggling or attempting to smuggle prohibited goods, to wit 20 lbs. of opium' and of course the evidence going to show that he imported it as a medicine, which is not a prohibited article, the charge could not be sustained.

There were several side issues, with some of which we do not think it expedient at present to deal, and others which were of small importance. The defendant laid himself open to severe animadversion from the counsel for the prosecution, and to milder rebukes from the judge, by attempting to strengthen a strong case by supplementary untenable arguments. He adduced them in good faith, but had he been represented by counsel learned in the law, such defects would not have marred a defence which, otherwise, was most creditable. Laymen who conduct their own cases are apt to forget the maxim '*ignorantia legis neminem excusat*,' and that a professional *entente cordiale* incites bar and bench to take full advantage of the axiom to worry any suitor who presumes to plead his own cause.

Mr. Wilkinson's judgment was, as usual, painstaking and exhaustive; and evidencing, as it does, minute and industrious research, and covering many points of international difficulty, besides that immediately before him, will hereafter be of considerable value as a reference. As we have shown, the Japanese Government has as much reason to be satisfied with the verdict as the defendant. We are perfectly happy to have got quit of it, and so, in all probability, are our readers; and the case therefore stands in the almost unique position of leaving all parties to it content.

THE NEW RACE CLUB.

THE motto which we quoted the other day for the benefit of Japanese statesmen:—'*humani nihil a me alienum puto*,'—must of necessity guide the conduct of any

journal which expects to live by the aid of subscriptions; and a Society such as the Yokohama Jockey Club, numbering, as we were told on Tuesday, a hundred and thirty members, after having been in existence but a few weeks, and before it had even formulated its constitution, deserves more notice to be taken of its 'Transactions' than a short paragraph, or a 'Note of the Week' For the sake of record, we have printed its Code of Laws in other columns, and propose now to consider them in detail.

The '*raison d'être*' of the Yokohama Jockey Club appears to have been the conviction that the existence of two Race Clubs in so small a community as this was an absurdity; increasing unduly the number of holidays and deteriorating the quality of the sport. The Yokohama Race Club and the Yokohama Racing Association being, therefore, both on the point of dissolution, a Meeting of gentlemen willing to support the combined Society took place on the 29th of December, at the International Hotel, and was very largely attended. A committee of eleven, representatives of both the old Clubs, was appointed to manage the affairs of the new one for 1878, and, as their first work, to draw up a Code of Laws. The result of their deliberations lies before us, in forty-seven rules, and the power they have of making by-laws provides for any petty details omitted. Their Code bears evidence of much care, thought, and labour; the leading principles sought to be established for the control and good governance of Racing in Yokohama are well and clearly defined; the rules are intelligibly grouped, and distinctly worded, and only on one or two points are they open to discussion. As, furthermore, the new Club inherits the combined cash balance of the two defuncts, amounting to about \$2,100; has already a hundred and thirty members, whose half-yearly payments in advance will swell this amount to \$2,750; two half-won cups, of \$200 each, and a considerable sum *in prospectu*, from entrance fees, gate money, and minor sources; it will be seen that its financial condition is most flourishing.

The first group of Rules, Nos. 1 to 8, give its constitution to the Club, and state its objects; define the qualification for membership, fix the subscription, and provide for the holding of ordinary and extraordinary Meetings. The Club is open for membership to the whole Foreign Community, and to Japanese at the discretion of the Committee; and the subscription is limited to the small sum of \$10, payable half-yearly in advance. These are liberal and wise regulations. Racing is, above all other sports, that to which is applicable the proverb—'*the more the merrier*.' The periods during which the actual contests take place are very short, and occur at considerable intervals of time, and—especially where, as here, there is little betting, these intervals would become tedious, unless enlivened by the humours of a crowd. The admission of all classes to the privilege of entering and riding ponies, cannot fail to result in larger fields and better racing, and we have no doubt, either, that a marked improvement will be seen in the course of a few years, in the breed of native horses; the supposed chief end and aim of the sport. Touching the amount of subscription,—as it is but the cost of a ticket to the Stand and enclosure, it is clearly an advantage to all to pay it at the beginning of the half-year, instead of in the middle, securing the advantages of full membership; while the advantage to the Committee is that with a certain, instead of uncertain, amount of gate-money in their hands, they have at least one fixed sum to guide them in their calculations of expenditure.

Rules 9 to 18 define most of the powers of the Committee. They elect their own officers, fill up vacancies in their body during their term of office, may frame and enforce by-laws for the management of the Race Course, may exclude from the Course all persons misbehaving themselves, whether members or not, suspend from membership, or expel from the Club,—and, at their discretion,

restore to his privileges,—any member guilty of 'default, fraud, malpractice, or improper riding in any race;' determine the dates of the Meetings, and postpone them when necessary. Additional powers are given to them in the other groups of rules, over salaried riders and for the decision of disputes; and, generally, a discretionary power so large as to closely resemble despotism. This is as it should be, and we trust that they will not shrink from the responsibility of using their power firmly, and without fear or favour. It is not an easy thing to rule a race course to which all classes and all nationalities are admitted, or a Race Club whose members enter it without ballot. Nothing will do it but swift and severe punishment of offenders, and as the existing Committee is a fairly representative body, it is sure of support for its decisions; and of extension, even, of its powers, should they be found insufficient to cover all cases. Abusing the Committee in the newspapers ought to be constituted an offence.

The third group of Rules, Nos. 19 to 28, relate to the horses, their description and nomenclature; how they are to be entered, and the weights which they are to carry; but as these are all taken without change from the old rules, they require no comment, save on one point. 'Half-bred' ponies, the progeny of a few Arab or Barbary sires, (imported some years ago), out of Japanese mares, are, under the new rules, admitted as 'Japan' ponies. With one or two exceptions, we believe that such half-bred ponies as foreigners have been able to buy have proved comparative failures as race-horses; but we are given to understand that all the ponies from His Imperial Majesty's stable, which ran so well at the last meeting of the late Association, had the strain of Arab blood. Should these half-breeds be found, in course of time, to be practically superior, all round, to the pure Nambu breed, of course they will gradually push the native animal out of the market; but such decisive superiority has not yet been by any means proved, and the Committee have obviated the possible occurrence of many disputes by the step they have taken.

Under Rules 29 to 39 come the regulations for riders and owners, &c. Most of these, too, are importations from the old codes; but Nos. 30, 38, and 39 seem to call for particular notice. The first reads:—

"No owner of a pony engaged in any Race shall be permitted to ride for another independent stable in the same Race;"

and at the meeting which was held on Tuesday an attempt was made to expunge it. It certainly bears hardly on a 'gentleman-rider'—or we should perhaps write 'on a rider who is a gentleman.' He may be riding throughout the meeting for a particular stable, and yet, owning a single pony himself, wish to enter him for two or three races. This rule compels him, either to ride his own horse, or, putting a friend up—to keep, himself, altogether out of the race. In neither case can he ride for the great stable. This is unfortunate, but we must support the Rule; laws of this sort are not made to direct honest men, but to checkmate rogues, and on any Race course in the world are always to be found men capable of 'pulling' the animal they are riding, to benefit another in which they have an interest. The only possible thing for a rider so situated to do, is to stipulate, when engaging to ride for a stable, that in races where he wishes to ride his own pony, the stable must find another jockey. As in fact and practice, all the large stables must have more than one jockey, this arrangement will always be possible.

Rules 38 and 39 relate to the governance of salaried riders and bettoes; the former being very useful in protecting pony owners against mutiny in the stable, and the latter giving to the Committee the necessary control over salaried riders or grooms. But this Rule, and Nos. 2 and 16 seem to conflict, as was pointed out by a member at the

meeting on Tuesday. We think the contradiction which appears at first sight will be seen to vanish on examination. Rule 2 confers membership on any person who chooses to pay \$5, but membership does not confer the right of breaking a rule. On the contrary, it pledges the member to obey the whole code. If therefore, a groom or paid professional rider chooses to join the Club, he may; but he will do it, knowing that one rule, No. 16, debars him from entering a pony, and from riding in any race except in one of the four to be designated by the Committee; and another, No. 39, renders him liable to a fine if he misconduct himself. Generally, as a member, he has a member's privileges;—specially, as a professional rider or groom, he has to suffer disqualifications. There is no injustice or cause for complaint in this.

The remainder of the Code calls for no special remark, and the whole sporting world of Yokohama owes a debt of gratitude to the eleven gentlemen who have given so much time and thought to its construction and arrangement.

For ourselves, we have but two faults to find with it. No cognizance is taken of lotteries, and no attempt is made to stop the practice of owners scratching their ponies for their own pecuniary benefit. Rule 28 is a most feeble step in this direction. But this subject is a large one, and much may be said on both sides of the question: we shall take some other opportunity of stating our own views, which require for their development more space than we have, to-day, at our disposal.

EDITORIAL NOTES.

BY no means without interest, in connection with the important subject of Forestry, to which we recently devoted a considerable portion of our space, are the facts of which we have lately received information from Hong-kong. In that Colony, where they have been tree-planting on a small scale for many years, and with marked advantage in improved climate and water supply, we now hear that it has just been decided to plant at the rate of a million trees *per annum*. So that, ten years hence, the bare, untitled hillsides of the island will be covered with young plantations which, properly conserved, will yield a steady revenue to the Colonial government, besides improving the soil and water supply, enhancing the beauty of the island and improving its climate. We all know that the town of Victoria was built,—as regards the health and comfort of its inhabitants,—on the wrong side of the hill. During the hot season, no benefit is derived from the refreshing S.W. breeze which blows so freshly and steadily on the other side of the isle, that at Stanley one almost requires a blanket to one's bed. Whereas, in Victoria, the fierce sun, beating all day on the bare hill, warms it to such an extent, that the heat, radiating throughout the night, prevents the thermometer falling more than a degree or two, and in the heavy stifling atmosphere, sleep either altogether forsakes the pillow, or is fitful and unrefreshing. Hence come lassitude, exhaustion, resort to stimulants, preparation of the body for ready reception of the seeds of disease—with their ulterior consequences. Whereas, were Victoria Peak clothed to its summit with wood, like some hills, familiar to us all, in this neighbourhood or that of Kobé, the sun's rays would be fended off the surface of the rock and this radiation of heat at night would not take place, with all its contingent discomfort, danger, and disaster.

If Mr. Pope Hennessey associates his name with the afforestation of Victoria Peak, he will deserve a niche in history among the benefactors of mankind.

WHY should not 'afforestation' become a fashionable amusement? When a party of ladies and gentlemen go out, now, to spend an autumn day in the open air, they leave under the trees only empty champagne bottles and picked chicken bones; and the only record of the day is a less or more-badly grouped and executed photograph. Why should they not take with them a few fir cones, or other tree-seeds,—even a bundle of young saplings—

which might all, with great advantage, be supplied, *gratis*, by the new Department of Woods and Forests, which we hope soon to see organized—and then, after tiffin, plant them, as judiciously as they could. An excellent, and quite classical precedent may be adduced, in support of our idea. Old Admiral Collingwood (Nelson's Collingwood) never went out for a walk without a pocket-full of acorns, which he used to plant in likely looking spots, mindful of the possible future requirements of England's 'wooden walls.' We might do equally good service to Japan's agriculture and climate. A few simple directions respecting soil, and aspect, and position, suitable to each species of tree, would have to be supplied with the seeds; and then, if ten per cent of them survived, the expense to the Department would be repaid a thousand-fold. And how pleasant, in the next generation, for some '*matre pulchra filia pulchrior*' to point to some clump of acacia or some stately group of cedars, and be able to say 'Ask Mamma' when her cavalier wondered who planted them in so appropriate a spot. Native papers, please copy.

AS we have already taken occasion to state, the *Japan Times* aspires to be a Review, rather than a newspaper; and current events, unless in exceptional cases, have therefore no detailed record in its columns. As was explained in the first number, the imperfect sketches of the prominent points in the seven days' history, to be found in the 'Notes of the Week,' are not intended to compete with the daily newspapers, which do the needful work efficiently enough. Indeed, it is their success in this particular, which permits the writer of 'Notes of the Week' to be reckless of criticism and careless in his sins of omission. Of what possible interest to the readers of a weekly paper can be page after page of reprinted paragraphs from the daily papers, which have been daily read, and just so far forgotten as to make it irritating to have to read half through them again, before one finds out that they have been read before?

For these reasons, the proceedings in the local Law Courts will receive, as a general rule, only the slightest mention in these columns; and mere police cases will not be reported at all. But all such suits as are of commercial importance we shall record in the way of which we give an example, to-day, in the case of '*Regina versus Hartley*.' Only professional readers, probably, can appreciate the labour bestowed on work of this description, or appraise the completed work at its proper value: to laymen, we must explain that,—though the examination and cross-examination of witnesses is purposely omitted,—the material points, to sustain or destroy which the evidence was brought, are stated in a summarized form, or are referred to in the arguments on both sides, or in the decision of the judge. And, in the same way; though the judgment is not given in full; quotations, for instance, being occasionally referred to, instead of reprinted,—and its arguments occasionally condensed;—yet no point of it bearing on the cause is omitted, and for all purposes of record and future reference, the Report of the case is virtually complete.

In fine, the case is treated exactly as cases are treated at home by the legal reporters; and we submit it to legal and commercial readers here and in China, in the hope that their approval and appreciation of the work will justify our perseverance in it. Should we receive such encouragement, we purpose to devote four or five pages of the last number in each month to Reports of this nature; and we hope to be able to make arrangements in Shanghai which will enable us to treat cases brought before the Court there in the same way; and so provide commercial readers here and in Europe, interested in the China and Japan trade, with a readily accessible and satisfactory record of legal proceedings affecting their interests.

WE place on record, in lieu of an extract from a home newspaper or elsewhere, the Rules of the Yokohama Jockey Club, which were adopted at the meeting in the Gaiety Theatre on the 26th inst. Without pretensions to being a Japan 'Bell' or 'Field,' the meetings of the Club, which give us two such agreeable holidays in Spring and Autumn, will be duly recorded by us, as coming fairly under the head of 'exceptional' events of the week mentioned above. In the old days, the *Japan Times* enjoyed an exceptional privilege in receiving its race reports from a gentleman formerly on the editorial staff of *Bell's Life*. 'Greyhound' took his mantle with him, unfortunately, and no successor has appeared in the columns of our local press. We can

hardly hope that our reports, now, will have the value they had in his time, but we shall give something that will serve at all events for record and future reference.

LAST week we gave as 'padding,' an extract from 'Doolittle's Social Life of the Chinese,'—describing the festivities of the China New Year. We have since been favoured with some extracts from a private letter, giving an animated description of the Feast of Lanterns at Canton, which will be found just after our 'Notes of the Week.' It has of course no pretension to accuracy of detail or research being merely the impression received by one of those peripatetic pilgrims of pleasure who now go to and fro upon the earth, it necessarily gives but a lightly-drawn sketch of what is apparent on the surface: it affects to do nothing more.

WE have to thank the proprietor of the *Japan Herald* newspaper for a specimen of the 'Annual Directory for Tokio, Kobe, Osaka, Hakodate, Nagasaki and Niigata,' published at his office. Not aspiring to be more than a list of names and addresses, it fills that office perfectly well. It is exceedingly well printed and very accurate; and the introduction of the Japanese characters for the numbers of houses is of use to letter-writers, whose chits are the less likely to go astray if their bearers can read at least so much of the addresses. Having so recently reviewed another work of this character,—that which reached us earlier in the year, we have left ourselves nothing to say regarding this publication beyond recommending it as a conveniently arranged list of names and addresses, which should be on every writing table. Accompanying it is a map, which we strongly advise all visitors to Yokohama, and even many residents, to pin up on their walls and carefully contemplate, especially when going to dine at a house where they have never been before. The numbering of the houses in the settlement has a guiding principle, not excessively departed from; and, besides, the *jinrikisha* men are quite familiar with them. But in no more annoying way is the absence of sensible municipal government evidenced than in the numbering of the houses on the Bluff, which follow not in their order of position, but in their order of sale. The result of this arrangement is that No. 201 is a full mile from No. 203 (there is no 202, so far as we can make out) No. 228 is a small piece cut out of No. 65, and Nos. 234 to 239 are embedded in a cluster of eighties and nineties. All which is disquieting to a guest, in thin patent-leather boots, on a wet night, five minutes late for dinner, and with a *jinrikisha* man who has just commenced business.

THE 'JAPAN TIMES' LAW REPORTS. No. I.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., *Acting Law Secretary*.

REG. (on the prosn. of the Imperial Customs)

versus
JOHN HARTLEY.

1878

Jan. 4th, 10th, 11th, 22nd, 30th, 31st. } THE defendant was charged on summons, under para. 8, Regulation II. appended to the Treaty of 1858* between Great Britain and Japan, and by virtue of Section 84 of the Order in Council for the government of British subjects in China and Japan, 1865†; for that 'he did, on the 14th Dec. 1877, smuggle, or attempt to smuggle, prohibited goods, to wit, 20 lbs. of opium, or thereabouts, in to the Port of Yokohama.'

It was shown by the evidence adduced by the prosecution and the defendant respectively, that on the 13th December 1877, the defendant applied to the Custom

* "The importation of opium being prohibited, any British vessel coming to Japan for the purposes of trade, and having more than three cattie weight of opium on board, the surplus quantity may be seized and destroyed by the Japanese authorities; and any person or persons smuggling, or attempting to smuggle, opium, shall be liable to a fine of fifteen dollars for each catty of opium so smuggled or attempted to be smuggled."

† "If any British subject * * * in Japan violates or fails to observe any stipulation of any Treaty between Her Majesty, Her heirs or successors, and the Mikado of Japan for the time being in force, in respect of the violation whereof any penalty is stipulated for in the Treaty, he shall be deemed guilty of an offence against the Treaty, and on conviction thereof under this Order shall be liable to a penalty not exceeding the penalty stipulated for in the Treaty."

House at Kanagawa for a permit to land a case of drugs, and he tendered duty thereon; the form of application for the permit was filled in by the defendant, or his clerks, and the contents of the said case were described as 'scurvy grass and cochineal'; on examination by the searchers, the case was found to contain, in addition to scurvy-grass and cochineal, two tins, each containing 10 lbs. of powdered opium. Neither the tins containing the opium, nor the packages containing the scurvy grass and cochineal bore any distinctive label. The defendant was asked by the legal adviser to the Customs, to explain the presence of the opium in the case. The defendant then replied:—"Well, I wish to pass that opium as cochineal." The present charge was thereupon brought.

The practice of passing merchandize through the Custom House, is for the importer to forward an application for permit in writing, stating the nature of the goods and the amount of duty payable thereon; this form of application is accompanied by the invoice. The form is presented at desk No. 1 and is there noted and stamped; thence it is passed on to desk No. 4, the officer at which procures a translation thereof, then examines the form and compares it with the invoice; the goods are then examined, and, if necessary, valued by Customs' appraisers. In this case the invoice contained no notice of opium, but several invoices were put in by defendant, which contained opium, and which had been passed by the Custom House; but it was pointed out that, in some of these, although the form of application mentioned opium, in the translation of the form this was omitted. It was also shown that, from time to time, opium had been passed through the Custom House by special order from the Japanese Government. Part of this had been for Government use; but much opium admitted into the country under special order, and under the invoices before mentioned, was for use of foreigners.

It was further shown that opium is a narcotic of great value as a medicine, and an absolutely necessary ingredient in the preparation of many prescriptions. It can be taken into the human system by inhaling, eating, or drinking; for smoking it must be in the form of a thickened liquid like molasses. Smyrna opium, which alone is recognized by the British *pharmacopæia*, is in the form of a dessicated gum or powder; in that form it is unfitted for the purpose of smoking; it can, but with great difficulty, be converted into a form for smoking. The value of opium as a drug depends upon the quantity of *morphia*, Smyrna opium contains not less than 10 per cent. Indian opium, which is chiefly used for smoking, contains only 4 per cent. The use of opium as a drug is practised by Japanese doctors, and permitted by the Government; opium is grown in Japan, but is very inferior, and almost valueless; and there is not enough grown for medicinal purposes. The terms of the Treaties with Japan were referred to, but these are sufficiently set forth in the judgment. In the judgment, too, will be found further evidence and arguments brought forward.

Hartley (the defendant) contended on these facts, that the prohibition against import of opium, contained in the Treaty, applied only to smoking opium. That he had traded in Japan for 11 years, and during part of that time had imported medicinal opium without difficulty, until he made a claim against the Japanese Government, for loss occasioned by seizure of some gum opium. Since that time he had met with obstruction on the part of Custom House authorities. That opium had been admitted under the names of '*aplum*' and of '*extract of papaver*.' This case should be dismissed on the ground that the Government had, for a long time before the opening of the ports to foreign trade, admitted the import of opium.

Lowder (legal adviser to the Customs) for the prosecution:—

The importation of Opium is prohibited by the Treaty; the same prohibition is contained in the Treaties made by Japan with other nations. There is no distinction known to the medical profession between 'medicinal' opium and smoking opium; and, even if there were, it does not follow that all powdered opium is good for medicine, or that this particular opium is good for medicine. There is no proof of its quality. Again, if it had been the intention of the Government to draw a distinction, and exclude only Indian, or smoking opium, nothing would have been easier than for them to have said so. But the term used is a compre-

hensive term; it includes opium of every kind. Treaties must be construed on the same principles as contracts are. Where the terms are general and comprehensive, they must be taken to include all species which come within the definition. Moreover, if 'medicinal' opium be admitted, the Treaties would be rendered contradictory in terms, and nugatory in effect; for it may be said that 'all opium is a medicine,' for all opium contains medicinal properties; but it is also a poison. There is a provision in the Treaty against the importation of opium: the defendant, by attempting to introduce opium secretly, has violated that Regulation, and has defied the legislature. The Court under the circumstances, has but one course to adopt—to inflict the full penalty provided for the offence.

JUDGMENT.

Wednesday, February 20th.

The judgment of the Court was delivered this day by H. S. Wilkinson, Esq.:

After reading the charge, and the Regulations and Sections of the Treaties and Order in Council under which the charge was brought, and after stating the facts as found, his Honour proceeded;—

"That there is a distinction between smoking opium and medicinal opium has been clearly established, and it was finally admitted in the fullest manner by the Counsel for the prosecution. I am satisfied moreover upon the evidence that the opium which is the subject of the present charge is medicinal opium.

"The only point, therefore, to be decided is, whether the regulation which speaks of opium without any express qualification was intended to apply to medicinal opium. In deciding this question, an important element of consideration is the nature of the distinction which it is admitted existed between smoking opium and medicinal opium. The evidence shows that the distinction is one both of form and substance. In one thing they agree: they are both the juice of poppy, the *papaver somniferum*. In form, medicinal opium is a dessicated gum or powder; smoking opium is of the consistency of molasses. In substance, there is a difference in the proportions of their component parts. Medicinal opium contains a comparatively large proportion of *morphia*; and this is the principle which renders it valuable as a medicine. Smoking opium contains only about one-fifth of the quantity of *morphia* contained in medicinal opium; and on that account alone would be of scarcely any use as a medicine. As to the use of medicinal opium for smoking, we have the evidence of Mr. North that Smyrna opium, which is the only recognised medicinal opium, is never used for smoking purposes, but that he certainly believes it is possible to prepare it for smoking; he does not know the way in which it could be done, but he could easily find it out.

"It was assumed throughout that opium smoking is an evil, and a great evil, which having happily no hold over the people of Japan, it is desirable to avert from them, even if stringent measures should be necessary for that purpose; and it was admitted that the object of the regulation is to avert that evil. As to medicinal opium, on the other hand, the evidence shows it to be an inestimable blessing to suffering humanity. It is unnecessary to go into this evidence at length, as it is recognized in a notification of the Japanese Government as an indispensable medicine; and Mr. Lowder informs us on behalf of the Japanese Government, that Government still recognizes it as such. But, not only is it indispensable, the evidence shows that, in order to obtain it in sufficient quantity, it is necessary to import it. This also is admitted, and Mr. Lowder informs us that he is instructed by the Minister for Foreign Affairs to state that he intends drawing up rules under which medicinal opium may be imported. I think these facts are sufficient to raise the most serious doubts as to whether the Treaty could possibly have been intended to prohibit the importation of medicinal opium. I am of opinion that it could not. I think such an interpretation would lead to an absurdity, as that term is understood by writers on international law. Vattel lays down this rule on the subject (Bk. II., Ch. XVIII., sec. 231):—(his Honour then read the passage referred to).

"Now it is not always easy to determine whether a thing is or is not so contrary to reason that it cannot be attributed to a man in his right senses. But in this case I

think there is not much difficulty. The evidence shows that the consequences which would follow a strict observance of such a prohibition would be a great increase in the sufferings of the sick and wounded, and a great increase in the number of preventable deaths. Now these are consequences which it cannot be presumed any man in his senses intended to happen, unless under the direst necessity. Now is there any necessity approaching in adequacy to that which would justify such a result? It is scarcely necessary to say that there is not. There is an evil similar to that which this Regulation was intended to avert occupying the attention of philanthropists at home. Drunkenness is not less baneful in its effects than opium smoking, and those who are endeavouring to suppress it in the United Kingdom are certainly not open to the charge of lukewarmness in the cause. Many of them are prepared to submit to great restrictions themselves, and to impose restrictions on their neighbours in order to suppress it, yet, I am not aware that the most enthusiastic, or even it may be the most fanatical of them, would go the length of denying the use of alcoholic drink, where they were assured that it was necessary to relieve the sufferings of the sick, not to say to save the dying from death. Many of them perhaps would deny its efficacy, but in the case of medicinal opium the efficacy is admitted. If there were therefore no more evidence than that afforded by the nature and use of the two sorts of opium, I should be very slow indeed to come to any decision which recognised an intention on the part of the framers of the Treaty to include medicinal opium in the opium prohibited to be imported. To justify me in imputing that intention to them I think there ought to be more unequivocal evidence of it than the paragraph itself affords. Is there then such evidence? There is nothing in the Treaty itself to clear up the ambiguity; and there is nothing in the only other agreement on the subject *between the same parties*, in the Tariff Convention of 1866, which read by itself, or read with the treaty, apart from extrinsic evidences, serves to throw much light upon the subject. Subsequent to the Tariff Convention, the subject of the interpretation of the Regulation has been under the consideration of H. M. Minister and of the Japanese Minister for Foreign Affairs; but the evidence shows that no agreement on the subject has been arrived at. We can therefore get no assistance from the discussion. If a definite agreement as to the interpretation of the Regulation had been arrived at between the two Governments, we should have been bound by that, at any rate as to all acts done subsequent to the agreement. As it is, the views held on the one side or the other during the discussion are excluded from consideration.

"We have therefore to see what was the state of circumstances with reference to which the Treaty was made. We have no direct evidence of the state of affairs at the time or immediately before the Treaty was signed. But evidence has been given from which an inference may be drawn.

"Three notifications of the Japanese Government have been put in for the defence. The first is dated the intercalary fourth month (about June) of 1868, the second, April, 1870, and the last on the 3rd of September 1870. This last notification is accompanied by an instruction from the Foreign Office of the same date. The first is headed "The strict prohibition of smoking opium" and it says:—

"Whereas opium for smoking is an article which destroys the animal vigour, and shortens life, its importation by Foreigners has already been strictly prohibited by Treaty. Of late however it has been heard that it has been secretly introduced on board vessels, and as it would cause great injury to the people, should it spread throughout the Empire, both its purchase and sale and its use for smoking are forbidden."

"It then threatens punishment for disobedience. The second, after reciting that punishment proportionate to their crimes had of late been dealt out to Japanese purchasing smoking opium from Chinese residents at the ports, and to the Chinese selling the same, and that stringent measures had become necessary, it strictly prohibits the practice of opium smoking by Chinese at the ports. In the third appears the first mention of medicinal opium. It recites and re-enacts the previous prohibition against smoking opium, and then goes on to say:—

"Even crude opium for medicinal purposes may not be dealt with at pleasure, and the enclosed rules for its management have been enacted, and the government of each place will take strict measures that they be not departed from by the people under their several jurisdictions."

Then follow three Rules:—The first provides for the examination and registration of the crude opium in the several druggists' shops. The second provides that when "crude opium indispensable for medicinal use" is bought or sold the chemist, is to send in a report to the government office. The third is as follows:—

"When opium for medicinal use becomes insufficient, and it is desired to import it from foreign countries, upon a representation being made to the open ports by the local authorities, steps are to be taken to procure it by a special order."

The word here translated "order" means an order for goods. The instruction from the Foreign Office is in these words:—

"Whereas smoking opium was previously strictly prohibited, the law regarding the sale of smoking opium having now been re-enacted, its strict prohibition to all Chinese also resident at the ports is communicated. Let therefore strict measures be taken to prevent secret transactions."

No law of the Japanese Government earlier than 1868 has been put in. But a great deal of evidence has been given to show that up till 1872, medicinal opium had in fact been freely imported, and had been sold without concealment.

"We have the evidence of Mr. Miller, who entered the service of the Customs as appraiser in 1872, that medicinal opium was occasionally imported on the payment of five per cent duty: that he does not recollect any special injunction issued by the Superintendent, but he knows that the importation of medicinal opium had been discussed from time to time, and he believes that it was stopped after numerous discussions. We have the evidence of Mr. Takeoka that he has acted as examiner of drugs at the Custom House for nine years, and during the first five years of his service he often saw medicinal opium at the Custom House and appraised it. And, we have the evidence of the defendant's late servant, Matsumura, that opium so appraised was formerly passed through the Custom House without difficulty. Then another servant of the defendant, Nagasawa, stated that after 1871, when he entered the defendant's service, he had orders for medicinal opium from the Government Hospital at Tokio and fulfilled them. We have then the evidence of Mr. North, that when he came to Japan eleven years ago, he found medicinal opium in the stock of the Yokohama Dispensary; and that from that time until about 1873, he imported it as medicine along with other medicines, and sold it openly and freely to Japanese. We have the evidence of Dr. De Jong that, in 1864, he imported opium for his own dispensary. And then, leading us still further back, we have the evidence of Dr. Otsuki, that he went to Nagasaki in the autumn of 1859, a few months after the port was opened under the Treaties, and there studied medicine under a Dutch physician, Dr. Baudoin; that Dr. Baudoin procured opium for the use of the Hospital from Holland; that there was also opium in the market. He produces a book which had at that time, and had before that, a great sale at Nagasaki, and in which the advantages of opium are set forth. He states that, from twenty years ago until about ten years ago, foreign opium was the only opium asked for by the foreign school of Japanese doctors.

"We have here, then, evidence of what the law of Japan was in regard to opium between 1868 and 1870, and we have evidence going to show that what it was in 1868 it had been for the nine years before that; and this evidence takes us back until within a few months after the first port was opened under the Treaty, and leads to the belief that the state of affairs which then existed had existed for some time before. Upon this latter evidence being given, I intimated to Mr. Lowder that, believing as I did that the Japanese Government in a case like the present could not wish otherwise than to have the case decided upon the fullest statement of the facts, I considered it desirable that evidence should be given on his part of the circumstances which existed at the time the Treaty was made, and the practice under the Treaty up till the time when the first package of medicinal opium was seized at the Custom House. With the exception of the production of the Treaties made between Japan and the other Foreign Powers, the evidence sought for was not produced. I am quite satisfied that it was from no desire to conceal the facts, as Mr. Lowder expressed himself ready to admit all the facts of which he had been able to ascertain the truth. He has given an explanation of the cause which led to the

insertion in the Treaties of the provisions concerning opium. It appears that some Chinese at Nagasaki induced two Japanese women to smoke opium, and so injurious were the effects upon their system that they died in consequence. This occurring just about the time the Treaty with Holland of 1857 came to be made, the Japanese Government, justly alarmed at the consequences which might follow if the freedom which was for the first time being given to foreign trade should be extended to the importation of opium, determined to make provision against such a contingency. In the Dutch Treaty accordingly the importation of opium in Japan was provided against in these words. "The importation of opium into Japan is prohibited."

"No other law was made at the time, but in each successive Treaty a provision was inserted for the same purpose, varying more or less from that made in the Dutch Treaty. Mr. Lowder further explains that no express law was then necessary, as, until the ports were opened, the trade at the factory at Nagasaki was completely under the control of the Japanese Government. I need scarcely say that there is nothing in this explanation to alter the conclusion to which a consideration of the evidence put in for the defence would lead us. And, after a careful consideration of the Treaties themselves, I am of opinion that they point to no other conclusion. I have been pressed with the wording of the provision in the Regulations appended to the United States Treaty of 1858.

"The second of those Regulations says: 'The importation of opium being prohibited, if any person or persons shall smuggle or attempt to smuggle *any* opium, he . . . Now the insertion of the word 'any' does not seem to me to alter the case. Without that word the expression is general, and in the absence of explanation would include all opium. But where facts are admissible to show that "opium" meant a particular sort of opium, the same facts would show that "any opium" means any of that sort of opium. On the other hand the Russian Treaty of 1858 contains this provision: 'If Russians are found guilty of opium trading in Japan they shall in addition to the foregoing confiscation be punished with the payment of a penalty of 20 roubles per catty, according to Russian laws, which laws are strongly opposed to this injurious trade.' A similar provision had been inserted in the Russian Treaty of 1857 signed eight days after the Dutch Treaty. It is as follows:—'In case Russian vessels shall import opium into Japan, their cargoes will be confiscated, and the guilty shall be dealt with according to the Russian laws, strictly forbidding that pernicious trade.' We have no evidence of what the opium is, the trade in which is here designated as "injurious" and "pernicious," but there is a strong presumption that the selling of a medicine so valuable as medicinal opium is, could scarcely be called "injurious" or "pernicious." As a rule, in the interpretation of a Treaty between two powers, the Treaties made between one of those powers and other powers are not admissible in evidence. They may be referred to in certain circumstances and for certain purposes. But, coming to the conclusion to which I have come, I have not thought it necessary to inquire too curiously whether the requisite conditions are to be found in the present case.

"This being the only evidence adduced by the prosecution to meet the evidence given for the defence, the question now arises, what conclusion are we to arrive at. It has been urged for the prosecution that medicinal opium and official opium are the same, and that, as the great criterion between official opium and opium which does not properly answer that description is the presence of a certain proportion of morphia, it could not have been intended to admit medicinal opium, as that would have involved the keeping of an analyst at each Custom House. Without going into the question whether medicinal opium and official opium are convertible terms, it is sufficient to refer to the evidence that has been given, to raise an inference that the importation of medicinal was not prohibited, especially as there was no attempt at concealment on the part of the importer.

"It has been suggested that the Notifications issued by the Japanese, to which reference has been made, are probably not all the laws of Japan upon the subject. But if there are other laws differing from these, and pointing to another conclusion, I think it lay on the prosecution to put them in evidence. The same remark applies to an inference

which I have been asked to make, that opium was not for sale at Nagasaki in 1859, because Dr. Bardoin got the opium he required from Holland. The evidence of the witness goes to show almost conclusively that it was for sale, and, after that being shown, if it was really not sale, or if its sale was unlawful, it lay, it appears to me, on the prosecution to show it. I have already said that I am satisfied that there was no desire to keep back evidence. But I think the result must be the same. I think that, under the circumstances of this case, the defendant having shown, as I think he has shown, a *prima facie* case that, while the importation of smoking opium was, the importation of medicinal opium was not, prohibited in Japan prior to 1872, it falls upon the prosecution to bring evidence to rebut the presumption which the evidence for defence raises. I think this case comes exactly under the rule laid down by Sir W. Scott in the case of the "*Santa Cruz* (1 Rob. 50)" and I cite his decision because it is the decision of a Court administering international law.

"The conclusion, then, to which I come from a consideration of the evidence is, that medicinal opium is not included in the prohibition contained in the Regulation.

Some arguments not yet noticed were urged against that conclusion; which, his Honour said, though not sustainable, it might be desirable to consider. The first is; evidence is not admissible to explain the terms of the Treaty; and, after considering at length the several authorities among the writers on international law that have been cited, he said that, without doubt this was a case which required interpretation, that evidence might and ought to be adduced, to explain the ambiguity or obscurity of the Clause. That such evidence was admissible on the part of the defendant, as the words of the Treaty must be taken to express the meaning of both parties, the rule laid down by Vattel "that if he who "could, and ought to have, explained himself fully and "clearly, has not done it, it is the worse for him: he cannot be allowed to introduce subsequent restrictions which "he has not expressed;" cannot be upheld; for to make this maxim apply at all, it must be shown that the power and duty of making the expression clear, lay with Great Britain and with Great Britain alone.

Another argument used was founded on the rule laid down by Vattel (Bk. II., Ch. XVII., sec. 298) that:— "When the things which constitute the reason of a law or "convention are considered not as actually existing, but "simply as possible, or in other words, when the fear of an "event is the reason of a law or a promise, no other cases "can be excepted from it than those in which it can be "proved to demonstration that the event is really im- "possible;" and the explanation which immediately follows, that: "The bare possibility of the event is sufficient to "preclude all exceptions." It has been urged that, as there is at least a bare possibility of medicinal opium being used for smoking, and the smoking of opium being the possible evil contemplated, any construction of the treaty which excludes medicinal opium is totally inadmissible. This rule his Honour showed was taken from Grotius (Bk. II. c 16. sec. 22.) and, after fully stating and considering the arguments used by Grotius, in his treatment of the subject, he held that the rule would not bear the interpretation sought to be put upon it, for it will be seen that, instead of this rule being intended as a prohibition against the use of restrictive interpretation in any case; it amounts simply to this, that when you know certainly the reason of a law or treaty, you are, in interpreting the treaty, to exclude from it every case which does not fall within that reason, but you are to remember that every case in which the evil, the prevention of which was the reason of the law or treaty, may possibly happen, does fall within that reason, is not to be excluded as not falling within it. To justify the exclusion on the ground of the reason of the law or treaty, the evil contemplated must be an evil which in that particular case cannot possibly happen. But it is not intended to exclude restrictive interpretation on other grounds. That the evil which a treaty is intended to provide against may happen in any particular case, may be an element in considering whether it was not intended to be included in the terms of the treaty, but it is not the only element of consideration. The possibility of medicinal opium being used for smoking, if there was nothing else known about it, would be a good ground for holding that it was intended to be included in the prohibition in

the Treaty; but in the other circumstances concerning it, which are known, we find considerations for holding that it was not intended to be included, which, said his Honour "in my opinion, far outweigh the considerations for holding that it was. This interpretation is also strictly in accordance with what is laid down by Vattel. In the concluding section of his chapter on the Interpretation of Treaties (sec. 322) he says:

"All the rules contained in this chapter ought to be combined together, and the interpretation be made in such manner as to accord with them all, so far as they are applicable to the case. When those rules appear to clash, they reciprocally counterbalance and limit each other, according to their strength and importance, and according as they more particularly belong to the case in question.

"The conclusion which I have arrived at upon a consideration of the rules given by writers upon international law is, it appears to me, borne out by the cases decided in the courts in England upon the interpretation of contracts, wills and statutes. I might cite numerous cases upon the construction of each of these where words equally extensive, taken by themselves, as the words of the regulation, have a restricted interpretation put on them. I shall however confine myself to two cases upon the interpretation of statutes; and I cite these cases, because an argument has been founded upon the regulation as being a statute. And if it can be seen that in putting the restricted interpretation which I have put on this regulation, I have not gone beyond the liberty which the Courts in England allow themselves, it cannot, in view of the opinion which Vattel gives, in the passage I have cited, of the strictness of those courts, be considered that I have gone too far. The first of the cases to which I refer is that of *Hawkins v. Gathercole* (24 L.J. ch. 332.) before the Lords Justices Knight, Bruce and Turner. It turned upon the construction of the 13th Section of the Statute 1 and 2 Vict. c. 110. The question was whether the statute, although in terms referring to all rectories and tithes, extended to ecclesiastical rectories and tithes, and it was decided that it did not. The decision arrived at was that the act extended only to lay rectories and tithes.

"The other case is that of *Cope v. Doherty* (27 L.J. ch. 600.) tried in the same Court. This case turned on the interpretation of the words "any sea-going ship" in the 503rd and 504th Section of Merchant Shipping Act, and upon the principle laid down in *Hawkins v. Gathercole* it was decided that they did not extend to foreign ships.

"These cases are, I think, sufficient authority for putting on the words of this regulation considered as a statute, an interpretation as restricted as that which I have put on them. In those cases the Judges did not require to go into evidence as to the cause and purpose of the act or the extraneous circumstances which bore upon it. They could find these in the statutes and decided cases and in legal treatises to which they could refer. But in this case, the regulation was made in view of a state of circumstances, social and judicial, existing in Japan, and of these this Court only can be informed by evidence. Against the relevancy of this evidence it was urged that it was to show that a statute had been constantly infringed, and that the infringement of a statute, however long continued, would be no defence to a charge brought under it, just as in the case of the charges lately brought under the Sunday Trading Act in which the accused were convicted although the statute had been so long infringed as to have been considered practically obsolete. It is quite true that if this had been the effect of the evidence, it would have been irrelevant. If it had been shown that medicinal opium was included in the prohibition, the fact that others had constantly evaded it, would not have availed the accused. A conviction under such circumstances might possibly be attended with great hardship; but when the law is known, the Court cannot allow considerations of hardship to interfere with its administration. But this was not the effect of the evidence. It was to show, not that a prohibition had been disregarded, but that there was no prohibition in the case.

"In thus deciding that the accused is not guilty of the charge preferred, I do not finally settle the question as to the disposal of the contents of the two tins which have been seized. All I say is, that the accused is not liable to the fine prescribed by the particular clause of the regulations which has been the subject of consideration; and that the goods seized are not liable to confiscation under

that clause. I understand that the issue I had to try was guilty or not guilty of the charge of violating that particular provision.

"I do not say that these tins were not correctly described in the summons as containing opium, and I do not say that they were not smuggled. But as all the evidence and all the arguments for the prosecution, and all the evidence and all the arguments for the defence, with the exception of what was put forward by the accused at the close of his address, and to which I shall refer, were directed to the question of whether the contents of these tins were, or were not, prohibited to be imported;—all I decide is that they are not prohibited to be imported, and that the person importing them, even though he smuggle them, is not liable to the punishment either of fine or confiscation under that particular provision of the regulation. But as medicinal opium, as much as any other medicine, is subject to the provisions of the regulations which relate to all goods, and as it is right that the Customs authorities should have an opportunity of considering what course they will take with respect to the two tins in question after the decision I have given, these tins will remain in the charge of the Custom House under the seal of the Court until further application is made on the subject.

"Of the points referred to in the statement of the accused, to which I have alluded, one was whether he ought not to be allowed to import medicinal opium duty free. The decision of this question is not necessary to the decision of the present case; but as it may save the same question being agitated in subsequent proceedings, it may be desirable that I should state my opinion upon it. All the evidence showed that, with one exception, where it had been imported as medicine, it had been charged with the *ad valorem* duty of five per cent on the original value, and I understood that it was the contention of the accused himself that that was in accordance with the provisions of the Tariff Convention. But he claims that because a large parcel of medicinal opium, recently imported by a Dutch house for the War Department, was allowed to be brought in duty free, he ought also to be allowed under the favoured nation clause to import his medicinal opium duty free. But to say that the Japanese Government, because it charges no duty on goods imported for its own use, when imported for it by a Dutch merchant, is bound by the favoured nation clause, to grant to a British merchant, when importing the same description of goods for sale, the privilege of passing them duty free, appears to me so manifestly to ignore the meaning of the favoured nation clause as to require no argument. Such a contention cannot be sustained. In view of the decision I have come to, and looking at the provisions of the Tariff of 1866, I decide, so far as I can decide a question not directly in issue, that medicinal opium is an article coming under class IV. of the Import Tariff and chargeable upon importation with an *ad valorem* duty of five per cent on original value.

"The other contention of the accused appears to me equally unsustainable. He stated that what he had done in this case was done in accordance with directions from a late Superintendent of Customs. That Superintendent, he says, told him that he ought to do as others did, that is, that he ought to import his opium under another name. Now if the course he took is illegal the fact of such advice being given by a Superintendent of Customs as that which he says was given him, would not render it legal, even if the fact of such advice being given were established. It would have been contrary to the Superintendent's duty to give it, and the accused could not avail himself of it for his defence. I must add that I think the accused ought to have known that it would not avail him; and I think the statement was one which he ought not to have made. He knew, for he stated it himself, that the Superintendent referred to was abroad in the service of his country, and could not answer the accusation against him which the statement contained. And he can therefore only blame himself for having subjected himself to the observations which that statement elicited on the part of the Counsel for the Customs." Case dismissed.

[The above Report is, as we have stated in another column, presented to our subscribers as an example of the manner in which we should wish to furnish them with important cases bearing on points of Commercial or International law, which

may hereafter be useful as precedents, or instructive in business. We are quite aware that the number of our readers to whom such matter is of interest is limited: but to make this Review of real value, such heavy matter as this must occasionally be introduced. We shall be glad to receive, as early as possible in the ensuing week, intimations that such a legal record will not be unwelcome; and as an experiment, purpose printing on foolscap paper, and in such a fashion as will admit of subsequent binding, a few copies of this Report, which will be on sale, at the price of \$1 per copy. The price may appear high, but as we do not anticipate a sale of more than fifteen to twenty copies, it will do little more than cover the cost of the reprint. Ed. J. T.]

YOKOHAMA: SATURDAY, MARCH 2, 1878.

NOTES OF THE WEEK.

FRIDAY NIGHT, March 1st.

THE long-looked for O. & O. str. *Belgic* arrived on Sunday night about 8 p.m. reporting all well. No accident had happened to her machinery, but she had experienced strong westerly gales throughout the passage. She naturally arrived here with empty coal-bunkers, and we learn that so bad was the quality of coal put on board her in San Francisco by the contractors, that she only reached port with great difficulty, after actually burning some of her own woodwork. As lumps of clay, &c. were found mixed with the coal, we may possibly hear of these contractors being made responsible, in some measure, for her delay and loss.

The *Alaska* came in from Hongkong on the 26th ultimo and left on the 28th for San Francisco. We wish her a better passage home than she made out. The *Tanais* with the French mail from London of the 11th January arrived this afternoon, two days before her due date; and the *Malacca* with London dates a week later, left Hongkong on the 28th ultimo and may be looked for here about Wednesday or Thursday next. The *City of Tokio*, which left San Francisco on the 7th February, is hourly expected, and her namesake the *Tokio-Maru* has been kept back for her till to-morrow. The usual M. B. coast steamers have come and gone; and we have to note, also, the departure of the American ship *Messenger* for New York, which has at last managed to complete her cargo of tea.

The news from Europe, both by Reuter's public telegrams, and by private messages to Banks and Commercial houses, are of the gravest character, and trade is almost entirely paralysed. If Russia persists in demands inconsistent with the safety of British interests, and incompatible with the tranquillity of Europe, on her will fall the heavy responsibility of provoking a general European war—a war of such magnitude as the world has never witnessed yet. She provoked this war with Turkey, but her guilt will be deepened beyond measure, if she now provokes a general strife, of which no man can think without horror, and of which, as we see, merely the foreshadow darkens all the earth, even unto these far isles of the Pacific Sea.

The 'butcher's bill,' by the way, of the Imperial army, incurred in suppressing the Satsuma insurrection last year, has just been published. 4194 were killed in battle or died in Kiusiu from other causes, 1929 died subsequently of wounds—making a total loss of 6123 men; while of 9678 wounded, 6284 have recovered, and 3394 are still under treatment. We turn to pleasanter themes.

Full prominence is given in other columns to Racing affairs, and the proceedings of the new Club. This appears likely to be a very flourishing concern, for, besides the hundred and thirty names recorded before the Rules were read at the Meeting on Tuesday, others are dropping in daily, and fully thirty or forty may be expected from Tokio. We earnestly trust that men will, now that so many causes of disquiet have been removed, try to sink all minor difficulties, forget old causes of quarrel and avoid new—and exhibit in their prosecution of the noble sport of racing

a little of the good temper, mutual forbearance, and common sense which used—ah, how long ago!—to distinguish the Yokohama Turf.

Would it not be a good idea, by the way, to invite a couple of Japanese gentlemen to join the Committee. We think the compliment would be appreciated; and hereafter, when foreign racing takes full hold of the native mind—as it is sure to do, and that at no distant date, we might have the number of our members doubled, and be able to build our Grand Stand and fill up the dip, from our own surplus funds. If our native friends in the government would but make us a present of the course, instead of charging a ground-rent for it, what an extremely graceful act of liberality this would be, and what a beautiful "Emperor's Vase" we might afford to give out of the rent we should save!

Mr. White, after a short season of a week, has removed his dangerous matched and his acrobats; we trust that he will select a better site, and receive the support that his exertions deserve. We regret to be unable to do more than notice that, while we are 'putting the *Japan Times* to bed'—the *Modeste Minstrels*, a company from H. B. M. ship of that name, are tuning up for an entertainment of mixed music and drama, in aid of the funds of that most worthy institution the Temperance Hall. We are not advocates for more temperance than is strictly moderate, in general, but no drink is better than too much; and too many unfortunate men cannot hit the happy mean; so these institutions deserve all the support they can get. If it will not be considered a 'bull,' we will take the liberty of wishing the teetotallers a 'bumper' house to night.

Certainly, one of the disadvantages of *giurikisha* travelling, in Yokohama particularly, is the necessity which every humane man feels under to get out and walk whenever the foot of a hill is reached. And as even the easiest slope up to the Bluff necessitates the fare getting out of the carriage, it is almost a matter of wonder why, except to save a very few minutes of time, anyone, sound in wind and limb, goes in that direction at all in one of our Yokohama 'hansoms.' One does sometimes see a foreigner remain in his *giurikisha*, with the miserable creature in the shafts toiling in zig-zags up the steep incline, but the spectacle is not common, as men who cannot get out and walk, are generally careful to relieve the draught animal, by hiring a second at the foot of the hill, to push behind. But it may not be generally known that, since the invention of *giurikishas*, heart disease has been rapidly on the increase among this part of the Japanese population. There must be some unwholesome strain on the lungs in this special work, we should imagine; as the class of *cango*-carriers, from which most of the *giurikisha* pullers is drawn, used to be an exceptionally healthy set of men. It is not often, however, that a case comes so directly under foreign notice as this, which is reported in the *Hingo News* of the 23rd ultimo:—

"On Wednesday morning a foreigner hired a *giurikisha* at the Kobe (not Sannomiya) Station to ride to No. 13 on the Concession, and passing the Public Park, the driver seemed to stagger, but recovered himself. Just after the fare had gone in to Messrs. De Ath & Co.'s, news was brought from the street that the coolie was ill, and he was seen to be sitting in his machine senseless and apparently in convulsions. Cold water was applied and Dr. Thornicraft sent for. Meantime an excited crowd of Japanese had succeeded in finding on a vacant lot an old straw shoe, which they placed on the sufferer's head with great apparent satisfaction to themselves. On the doctor arriving, the man was pronounced past much hope of recovery, but the only treatment likely to be of any use was recommended and the man removed to the police station, where he died almost immediately. Dr. Thornicraft was not required to make a *post mortem* examination, but death was probably caused by the rupture of some bloodvessel."

The European passenger in this instance had of course no cause to reproach himself—for the distance between the two points mentioned is only about a mile, and is on the flat for the whole distance. But we should not envy the sensations of any foreigner here, who—from simple laziness or want of thought,—might have to see his *giurikisha* driver "stagger," and "go into convulsions," and finally die—just after pulling him up the Camp hill.

Our readers who prefer the healthful and harmless sport of rowing to the more exciting one of horse-racing will hear with regret of the *hara-kiri* of the Nagasaki Boat Club, which lamentable ceremony took place on the 8th ultimo and is reported in the *Rising Sun*. Mr. Hellyer appears to have acted as 'best friend' on the occasion, having carried the motion for dissolution by 7 to 3 and Mr. Ringer will dispose of the property of the deceased.

The flourishing financial position of our own Boat Club, in contrast to this, is very satisfactory. It has just borrowed \$1,000 to build a new Boat House, and as it has property more than sufficient to cover this, and a long list of members, the disbursements for this sum will soon be cleared off.

We hear from Hongkong, that H. E. Mr. Pope Hennessey, the Governor, on the 20th instant entertained at a state dinner at Government House, H. E. Sameshima, the new Japanese Ambassador to France, and Matsukata, Japanese Commissioner to the Paris Exhibition. After dinner, the Governor proposed the health of the Queen and the Emperor of Japan, and the visitors were attended to their ship on the following day by a guard of the 74th Highlanders, and embarked under a salute. They appeared highly gratified with their entertainment and the honours paid to them.

We note that the China Fire Insurance Company have again paid a dividend of 12 per cent to their shareholders, putting seven thousand odd dollars to Reserve Fund. This is in spite of exceptionally heavy losses during the year. It is quite a pleasure in these hard times, to have to congratulate anybody on making money.

Several important law cases have been commenced or advanced a stage, during the week, of which due notice will be taken in our Law Reports,—should sufficient inducement offer, (as the agents for ships say),—and quite a number of small earthquakes have simultaneously forced themselves upon our attention. The winter is over; and a sort of prophetic feeling of spring may occasionally be felt in the air, particularly after tiffin on the East side of the Grand Hotel, which reflects the heat of the morning sun in a very pleasant manner. The amorous chirps of pairing birds, in the wood on the French hill across the creek, would materially aid the delusion that spring is really coming, if they were not mingled with the discordant cries of the coolies who are building the sea-wall of the British Navy-yard.

Here we are interrupted by our chief printer, who informs us:—
'*Moa dekimasen.*'

CORRESPONDENCE.

THE FEAST OF LANTERNS AT CANTON.

• • • "The scenery all the way from Hongkong is very beautiful, strongly reminding one of many parts of Scotland:—bare green hills, with grey rocks cropping out near the summits, and lovely, sunny little glens between them; with small patches of pasture or tilled land, and tiny thatched huts, always at the right points for k-y lights in a sketch. We pass the Bogue forts, which you will recollect as the scene of a fight in our last war with China—where John objected to our landing troops and taking them in the rear, as unfair—considering that they had got everything in readiness to receive our attack in front. Soon after this, the passage—all the way called the Canton river—grows narrower as one approaches Whampoa. Here the griffin or the globe-trotter sees and admires his first Chinese pagoda. All I can tell you about these buildings is that their pictures on the willow-pattern plates are as true as photographs and perhaps for the first time in my life my expectations were realized. I am, however, bound to confess that I missed the three little men going over the bridge. The tree with the large oranges is clearly the Amoy pommelo-tree.

"Canton lies fifteen miles from Whampoa, up a river, and as one enters the city, which is one of the largest and most populous in the Empire, one's first feeling is very different to that with which the first pagoda was encountered, for it is one of disappointment. There were two disillusion for me. The place looked very small, mean and insignificant, and there were not a tithe of the boats I looked to see. I began to wonder where on earth the two millions of people were stowed away. The ground immediately bounding the river, on which the city is built, is as flat as the palm of your hand; and as none of the houses are more than two low stories high, of course only the river front is seen, and one can form no idea whatever of the depth to which the mass extends behind it. The roofs of such public buildings as there are scarcely rise at all above the general level, and the only exceptions are the pawn brokers' shops, which tower up grim and dark, with but narrow loop-holed slits instead of windows, looking very like the old Scotch 'pouls' that one sees on the Border. To look at Canton from the opposite side of the river, therefore, at the long unvarying range of low houses with the scars of recent fires in their midst, here and there, and a limitless tiled roof behind, is not a cheerful prospect. Nor is there anything in the colouring of the picture to make up for the lack of variety of form. In most Eastern cities that I have yet seen—the houses are of dazzling white, with gay green

patches of foliage here and there, and often spots of gorgeous colouring in mosque or bazaar. But here, the building materials are mainly unbaked bricks and mud, and the dreary long lines of roofs are of thatch or tiles, as dirty and gloomy as the walls. Whatever wood is apparent is rough, grey, unpainted—a deep fringe of dirty grey boats, several fathoms deep, all jammed close together, skirt the shore; and the river itself, shallow and full of mud and all manner of filth, which the inhabitants first throw into it, and then stir up with their boat poles, is turbid, thick and brown, as used to be the old Fleet Ditch and with just the same patches on it here and there of lovely prismatic colour on floating scum. Canton on a cloudy, wet day, must be a miserable spectacle, for then only the river front would be seen, and one would miss the one redeeming feature in the landscape, which I am gazing on now,—the glorious background of hills—the White Cloud Mountains. There the sunlight falls, and the cloud-shadows flit across in ever-changing colour, as on all the eternal hills all the wide world over; making one long to be lying on the thick moss listening to the tinkle of the burn at one's feet, and to the low whispers of the stately trees as they welcome the warm summer wind, fitfully playing with their foliage.

"But one is soon recalled to the reality in the immediate foreground, which is as I have faintly attempted to describe it. And if such a picture—a town mean, sordid, grey, poverty-stricken, filthy—does not charm the eye; how the nose suffers when one enters the place! Some of the low parts of Calcutta and Bombay are not sweet, there are lanes in Damascus which smell of anything else than roses, Cairo is stenchoriferous in spots, and we all know how Byron described Cologne. But in the Indian and Egyptian cities, there is always detectable, through disagreeable smells, a suspicion of spice and incense and fragrant woods;—but in China there is no relief, and the stench of the towns is simply horrible. Compared with such, Dhoobe Talao is as a fountain of *frangipanni*, and Bhoroe Bazaar as a bed of violets. The faint, sickly, nauseating odour is as that of the worst parts of London combined,—of Wych Street as it used to be, of Seven Dials, the Westminster Rookeries, Clare Market and Tiger Bay. Such foul smells assail the sense where Irish families live six deep in damp cellars; where rats, cockroaches, and every "pestilence that walketh in darkness" swarm; where immense oysters, decayed fruit, scraps and trimmings of butchers' meat, are the luxuries of life; and where second-hand boots, stale vegetables, old clothes-fried fish and periwinkles, singing birds and rabbits, broken bottles and kitchen stuff the mediums of barter and the staples of trade;—and where costermongers and low Jews, bird-fanciers and ticket-of-leave men, black fighting-men and unwashed street-walkers, are the inhabitants. Such is Canton, mostly; and such, I suppose, most Chinese cities. The well-to-do people one does not see abroad; the lower classes swarm in the close, narrow streets. They are all dressed alike in dingy blue or dingier white; they seem to live coarsely, if one may judge from the cooked food exposed for sale, chiefly on roasted rats, dried ducks, split open like codfish or ling, ill-conditioned pork, fly-blown slices of pine-apple, and a highly indigestible substance made of bean-flour, which looks like yellow soap. They never seem to change their clothes, are always having their heads shaved in public—the soap suds being subsequently thrown into the gutters—and, I am told, get washed twice during their stay on earth, once just after they are born, and once just after they are dead. Altogether an unwholesome lot.

"I discovered the solution of my problem about the whereabouts of the two million inhabitants of Canton; by wandering about the place for a day, until I was foot sore, and then feeling that I had not seen a tithe of it. My dear —, the streets are all lanes; not one of them as wide as a London Court, or an Edinburgh wynd. There are few or no open spaces, and the streets are really not more than seven feet wide, except in two or three instances. A bird's eye view would not detect them at all, for the sky is shut out by overhanging balconies and frowsy clothing hung out to dry. Closer packing one cannot conceive.

"There is one very noticeable feature about these lanes—quite peculiar to Chinese cities, and very suggestive. Each street (I will call the lanes 'streets' for courtesy) has a gate at each end. A threshold and lintel of solid stone are provided with holed about nine inches apart, and into these, every night, are slipped thick poles. A simple enough contrivance fastens them at the top, so that no one can lift a single pole, until the 'key' is withdrawn. Thus each street is made into a defensible fortress, and should rebels or robbers get into the city, each street would thus have to be stormed in succession, before the place could be sacked; and any internal disturbance is, by the same means, prevented from spreading. This is an advantage; but the system has its disadvantages too. If a convivial gentleman were out late at anything beyond a hundred yards from his home, it would have

to be a case of 'where I dine, I sleep—and where I sleep, I breakfast'—for unless he had the 'key of the street' literally,—that is, the key of his own street, he certainly wouldn't be able 'to go home till morning.' In case of a fire too, one would be apt to imagine that these barricades would be a great nuisance. But, indeed, in case of fire in Canton, it is difficult to understand how it is ever put out. And the large scars left here and there by conflagrations apparently recent, would prove that they are extinguished with difficulty. Probably by pulling down the houses.

"The manufactured products of the place are, I should think, about every thing that one can possibly conceive to be made out of metals, wood, ivory, silk, cotton, or anything else. But as neither you nor I have any special interest in commerce, I will not tire your patience by attempting to describe, or even by giving you a list of what I have seen. I have, of course, bought a quantity of specimens of them, and we can talk about them when I get home. I will conclude what I fear you will think already too long a letter, by trying to give you an idea of the fairy-like Feast of Lanterns, the magic touch of whose light and joy changed this ugly, grey, melancholy mass of hovels into a realized dream of Aladdin's palace gardens.

"The Feast was held on the three nights of the September full moon—our harvest moon—and celebrates the birth of that luminary, sister to the Celestial Lord of the five-clawed Dragon. On the swell night, that of actual full moon,—every Chinese householder is obliged (doubtless on pain of being chopped into mince meat), to hang out from the highest point of his dwelling two lamps at least, and all day long the people may be seen occupied in fixing these lanterns on the points of long slender bamboos, till the city from afar looks like an enormous cane-brake or a mighty bed of bulrushes. The lanterns, gaily painted, are of all forms, sizes and colours,—and as night falls and the full moon slowly rises, the lights begin to glimmer, and in half an hour, the low, mean, sordid city is changed into an almost indescribable scene of brilliant, twinkling, glittering light and beauty. I was most fortunate in the weather. A slight, very slight mist hung above the water, which, while it dimmed the lamps in the extreme background, yet magnified them and deepened their colour. In the foreground were the boats, scarcely moving on the river, which lay as smooth as a mill-pond,—for there was now scarcely a breath of wind—all gaily lighted, and some, the flower-boats (floating theatres and houses of entertainment or cafes) brilliantly illuminated with rows of coloured lamps and bright devices of every conceivable pattern. Behind lay the great city, with its countless houses, closely packed, the lights on their roofs gently swaying to and fro on the vibrating canes and showing like a fiery cloud hanging in mid air: all the ugly forms and dull grey masses vanished,—shrouded in the luminous veil. And so away to the farthest limits of the walls, where the glitter changed to a dull red glow, like that of a dying fire. Then, from every flower-boat on the stream, rose incessant rockets, and each fiery meteor, as it rushed up into the deep, deep blue of the Oriental sky, seemed to drive down into the river a corresponding flash; each, as it burst into a rain of sparks above, reflected below, keeping the water always glittering with many-coloured specks of flame. And from every boat, from every house, burst innumerable crackers, sounding like an incessant fusillade, and making the air heavy with the perfume from the shavings of scented wood with which they are filled. Then the tinkle of the Chinese gittern, and the sonorous clang and clash of gong and cymbal, softened by the distance, filled the air with a not unpleasing music,—the music of holiday joy. And best of all, to my mind, far above and all in contrast to the glitter and the glare,—the smoke and mist, and fiery glow,—the rattle, and the laughter, and the song:—there rode the full, round moon,—pale, pure, bright, as she only is in the glorious lustrous purple of a tropical sky, and beyond the city on the far horizon, the eternal hills lying quiet and calm and beautiful, sleeping in her light. Puck and Oberon, Messieurs Cobweb, Mustard-seed and Peasblossom, might be revelling and rioting here—but there, one might well believe that Titania slept her happy sleep amongst immortal thyme and oxlips, and where the never-dying, nodding, nodding violets blow! Indeed it was a scene I shall not readily forget."

NOTES AND QUERIES.

QUERIES.

Qy. I. Can any experienced woodman, or analytical chemist, favour the community with a disquisition upon charcoal? Is there any method of getting rid of the

free carbonic acid gas which rises from it—before burning, or of any portion of the same? Do different woods give off different volumes of vapour, and if so, which is the safest to use in a bath room? (*Unanswered.*)

J. T.

Qy. 2. Where can I find any account of the ceremonies in use on the occasion of birth, death, or marriage, among the Japanese? Do any of the French, Dutch or German works on Japan contain such? I fail to find any information on the subject in English books. A work like Sir John Davis' "The Chinese" is a great desideratum in Japan. (*In process of answer.*)

B. H.

Qy. 3. Were the actual incomes of the Nobles larger or smaller than as represented by their official rent-rolls and have they now, as a matter of fact, more money to spend on themselves, than they had in old times?

N. or M.

Qy. 5. Dwellings on the Bluff are much more susceptible to the motion of the earthquake wave, than those on the Settlement. Why so? is the object of this Query. One would think that, considering the magnitude of the causes at work, the few feet of elevation of the Bluff from the Settlement would make no difference at all in the perceptible motion of an earthquake; for the same reason it would appear childish to suggest that the weight of the various constructions on the Settlement would have the effect of steadying, as it were, the earth's crust; however it is a fruitful matter for conjecture, though by no means a pleasant one. (*Unanswered.*)

JISHIN.

Qy. 6. Can any of your readers inform me whether there are any, and if so, what books on Japanese surgery, or midwifery, as practised before the coming of the Dutch and Portuguese?

Z.

NOTES.

(Addendum to Note in reply to Qy. 3 respecting the comparative value of Daimiōs' revenues, now and in ancient times.)

NOTE. In my note in your issue of Feb. 16, I used the term "official lists of Daimiōs' revenues" because "N or M" had used the term "official rent-rolls" in his query. It was not the exact term to be used on the occasion; but the meaning, I submit, was quite clear, and could cause no confusion in the mind of any one who had read both query and answer.—The statement that the revenue of the Daimiō of Kaga was 1,200,000 koku was a slip of the pen; I had intended to write 1,020,000.—Nor was there any doubt in my mind as to the correct-meaning of the term *taka* or *kusadaka*.

But my object in this note is not so much to acknowledge the corrections which the fuller knowledge of "Studiosus" has made in my hasty note; as to ask him what authority he can give for the statement that the fiefs as a general rule yielded 20 to 25 per cent more than the assessments? That is to say that the *agaridaka* was greater than the *kusadaka* as found in the *Bukan*. I am bound to say that my authority on the subject is entirely verbal. There is quite a consensus of opinion against him among all the Japanese of my acquaintance; and "Studiosus" must produce some reliable written proof in order to convince me that he is correct. I do not think his remarks about the reclaiming of waste lands alone are sufficient to account for the great increase he mentions. This argument cannot be used at all unless he shows:—

(1). That there was on an average from twenty to twenty-five per cent more land under cultivation in each fief at the Revolution, than at the time of the assessment, which was I believe the Keichō period (1596-1615).

(2). That the waste land to which he refers was not assessed in the slightest degree.

I should be glad if "Studiosus" can clear up these points. I may say in conclusion that my study of the subject has been too slight to qualify me for taking up a side. I am an enquirer rather than a disputant.

X.

THE TIMES OF TAIKO.

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GOYEMON.

Chapter IX. THE CASTLE OF SAWAYAMA.

IN the environs of Kiyoto, within two bowshots of the "avenue of the three thousand pines," lay the castle of Ishida Mitsunari, Baron of Sawayama.

Its site had been chosen on the plateau of a hill, clothed from base to summit by stalwart firs and cedars, under whose damp shade the moss had already clustered deeply on the bases of the battlements and the roofs of the barbicans.

Along the main avenue of the three thousand pines, and the broad branch that led thence to the castle, frosts and winds had cast down such a thick carpet of leaves and sprays, that the silence of his muffled footfalls inspired the traveller with a feeling of awe, a sense of tranquil solemnity; and when he reached the massive gates, and saw their ponderous copper studs and hinges thickly crusted with verdegriis, and the guard houses that flanked them on either side, with their heavy gables of armorial tiles and gratings of tough oak, he might have deemed that the whole had been summoned into an enchanted existence by the dusky giants that waved their hands overhead with such a weird persistency, that even the strong sunlight became in their presence a fitful glimmer, and trembled as it peered into the gloomy corners darkened by their shade.

Yet with all its veteran air, the castle was no older than the fortunes of its owner, Ishida. Its mossy nooks and leaf-strewn alleys were but illustrations of that element in his character that took for its motto:—"learn to seem what you wish to be." He might have selected many more convenient sites; spots nearer the stream of life and within easier range of the observation that men in lately reached high-places generally court, but he could scarcely have chosen any circumstances that lent him more ready aid in concealing the immaturity of his baronial titles.

Strange it is how often the seeds of fortune turn to bitterness in the core of the full-grown fruit! Those whom greatness leaves sufficiently great to confess their former obscurity are but a very pigmy band amid the giant multitude that would fain barter half the record of their fair deeds to obliterate one narrow page of their early history. In the days of Ishida Mitsunari's seignior, men, as they sipped their tea, often reminded each other of a page called Sakichi, who waited on the canon in a certain temple of the Shingon sect. One hot summer day, a knight rode up to worship at the shrine, and was afterwards served with tea by the hospitable priest. The first cup offered was scarcely tepid, the second warmer, and the third so hot as to demand very leisurely sipping. The knight, an ill-favoured but singularly shrewd-looking gentleman, seemed surprised at this gradation of temperature, and, asking for an explanation, was respectfully informed by the page that the first cup had been adapted to his hot and droughty mien, the second to his half slaked thirst, and the third to his sated palate. "Verily, my lad," said the knight, "your talents are above tea-making, and if you will come with me, I promise you ample opportunity of exercising them." The knight kept his word, for he was no other than Hideyoshi, and the page Sakichi was the future Ishida, Baron of Sawayama, Chief Minister of Finance and member of the Privy Council; who however knew, to his intense annoyance, that even within the limits of his own suzerainty, travellers seldom received a third cup of tea without dubbing the inn-servant, Sakichi, and making jocose allusions to the future that awaited cunning pages. This did not, however, deter Ishida from carrying into all the details of his house and equipage, the same methodical shrewdness that had served him so well at the outset, and thus it happened that, while the majority of his compeers had become their friends' or vassals' debtors, for sums

required to meet the war imposts, Ishida's strong-room enclosed a golden surplus variously estimated at from ten to twenty thousand riyos.

On the afternoon of the day succeeding Seta Kamon's visit to Hidetsugu, Ishida had left the court at Fushimi, with the intention of passing a short time at his own castle, for he deemed it best to be absent when the result of the envoy's mission to the Prime Minister was made known to the Regent. Not that he shrank from the consummation of his schemes; but because, having detected in Taiko a remnant of affection for his adopted son, he saw that Hidetsugu's downfall was still uncertain, and did not care to run the risk of assisting at a possible reconciliation between the Regent and the Minister. Yet even under these circumstances, he was disturbed by no doubt or disappointment, for he felt that with his resources and the opportunities Hidetsugu's conduct furnished, the result was secure, sooner or later.

Night-fall had scarcely lulled the bustle excited by the Baron's arrival, when an officer rode hastily up to the castle gate, followed by an escort of five or six men. Giving his name as Kakizaki Joyemon, he desired to see the chief chamberlain Shimaroku. The guards at the gate admitted him without any difficulty, for he wore the livery of Mayeno Tajima, the Prime Minister's monitor, and declared himself a messenger from the court at Fushimi. These details quickened, also, the pages in the vestibule and through them the chamberlain, who, hastening to meet his inexplicable visitor, found a man covered with dust and betraying all the disorder of extreme urgency. He had received orders, he said, from the Captain of the Regent's body-guards to request the immediate attendance at court of the Baron of Sawayama.

"But," objected the chamberlain:—"my master only returned from Fushimi this afternoon."

"Indeed!" said the other with a very transparent assumption of concern:—"I am sorry then to be the medium of causing the Baron to repeat his journey."

"And what is the Regent's business with my master?" demanded the chamberlain.

"The Regent's business with the Baron!" repeated the stranger, examining Shimaroku curiously, as though he discovered in him a new and very novel form of chamberlain.

"Yes, the Regent's business,"—reiterated the chamberlain, although he was beginning to fear he had committed one of those blunders his inexperience made him constantly dread; for like the Baron, his vassals were new men.

"Really, Sir, I cannot tell. My position scarcely entitles me to such knowledge," replied the stranger, now assuming an air of disdain that confirmed Shimaroku's worst misgivings.

"Yet," he remonstrated;—"my master is hardly one to be summoned verbally in this vague way even by the Regent."

The stranger paused a moment, as though he would have been glad to humour the chamberlain by discussing this question, but presently, shaking his head despairingly, said:—

"I really must confess my inability to answer your scruples, Sir."

"Then, I think it very unlikely the Baron will comply with the orders you carry,"—retorted the chamberlain, excited beyond prudence by the other's supercilious assurance.

"Perhaps it would be as well to consult the Baron on that point,"—suggested the stranger quietly. "I do not think that if the Regent had anticipated any lack of zeal in Sir Ishida, I should have been commissioned to use such despatch in conveying these orders."

There was nothing to be urged against this view of the case, and the chamberlain felt that he must run the risk of incurring the Baron's displeasure by presenting himself with these meagre details, for it was plain that nothing more could be elicited from this supercilious visitor.

"Be so good then, as to wait a moment," said he:—"I will inform my master of your message."

"Ah!" ejaculated the stranger simply, but imparting to that solitary monosyllable a tone of tardy approval that completed the chamberlain's embarrassment.

The Baron however received Shimaroku's report with such evident surprise that the other felt his own inquisitiveness had been fully justified.

"Show the messenger in here," he said, "I will question him myself," and presently Shimaroku returned conducting Kakizaki, who suffered the Baron's somewhat severe scrutiny with perfect unconcern.

"You bring me, I understand, a message from the Regent," said Ishida, "but I see you wear Sir Tajima's uniform."

"Yes, Sir, I accompanied my master to Fushimi this evening," said Kakizaki, replying to the Baron's implied question.

"Did your master then desire you to carry me the Regent's orders?" asked Ishida.

"Not directly, Sir, but he authorized the Captain of the Guard to employ me for that purpose."

"And has Sir Tajima returned to Kiyoto?" demanded the Baron.

"No, Sir. His business with the Regent had reference, I believe, to his duties as the Prime Minister's Monitor, and we gathered that some important step requiring your assistance was contemplated before my master's return. I was commissioned to carry His Highness' orders, because I was waiting to escort my master home, and could thus start with the least possible delay."

Ishida reflected a moment. This method of summons was most unusual, yet its very informality forbade the idea of deception, and the circumstances described attested their own truth, even supposing there was any reason for mistrust. It seemed certain that the Prime Minister's conduct had at last driven his monitors to appeal, and that Taiko had in consequence determined on taking some decisive action. If this were so, delay that might induce reflection was of all things most to be avoided, and Ishida gave orders to have his horse saddled, and a sufficient escort immediately warned to accompany him.

As Kakizaki and his companions moved outwards from the gates, they could see lanterns flitting hither and thither, and hear the shouts of men, the jingle of accoutrements, and all that *melange* of sound that accompanies hasty preparation.

But if the retainers of Ishida lacked long pedigrees, they were not wanting in method or discipline. Very soon these tokens of stir and industry concentrated themselves under the arms of the solemn cedars that guarded the gates, their cones and sprays gleaming like silver in the light of a hundred lanterns borne aloft on poles of bamboo, and scarcely had its last bustling unit been absorbed by the motley mass of squires, bowmen, equerries and men-at-arms, that marshalled itself beyond the vestibule, when a sudden hush fell upon the whole, as the Baron appeared on the threshold.

With a brief glance at his retinue's arrangement, Ishida mounted his horse, and riding leisurely at first, that his followers might have time to dispose their ranks and adjust their trappings, shook his bridle and broke into a brisk trot, as soon as the tail of the procession had fairly turned into the main avenue of the three thousand pines.

All through the streets of Kiyoto, echoing to the clatter of the horses' hoofs and the cries of the couriers, and out into the lonely country roads beyond, the procession swept merrily along, preserving indeed its compact form, but little by little adding to the noise of its progress the sounds of panting horses and gasping runners. By and by the leaders' lanterns dipped over the brow of the moor that looked down on the "Wisteria Forest," and then the road, sheltered alike from wind and sunshine, burthened with mouldering vegetation and torn by errant springs, grew so rugged and deceitful that progress became a measure of temerity rather than of vigour.

Half a furlong from the forest's outskirts, began those labyrinths of wisteria that brought it ruin and renown together, for the cruel parasite, stretching from tree to tree, clasped strong oak, and cherry stems in its deadly clutches, and tightening round them season by season, strangled them slowly and surely, till they stood sapless, like blanched skeletons in the moonlight. Sometimes however, its tendrils, turned backward by hazard, twisted and knotted themselves into the most fantastic of bowers, where the long blossoms hung so thickly in early summer, that the bee scarcely found room to rife their petals.

Into such a roadside harbour, two men-at-arms turned from the last files of the procession. One of them carried

a lantern, which he unfastened from the long pole that supported it, and then by its light, choosing a convenient place among the distorted elbows of the wisteria roots, both men sat down, and disposed themselves to change or refit their sandals.

"You are a prudent fellow, Naosan," said he of the lantern. I never thought of providing myself with a spare pair of sandals."

"Well," replied the other, "I have left my foot-gear too often on this forest road already. Winter and summer it's always the same; stumps, ruts and mud. I doubt whether your sandals will carry you to Fushimi."

"I am afraid not," said the lantern-bearer, "but I mean to take it easy from this on. If we get to Fushimi in time to follow the Baron home, nobody will be a bit the wiser."

"All right then," assented Naojiro. "I shall keep by you, for without some light, even my new sandals would fare ill." And with that the two passed leisurely from the bower.

But the second was still stooping under the boughs of the wisteria when a crashing blow fell upon his head, and the leader had scarcely turned towards the sound, before a similar fate befell him. Then two men stepping forward, drew the bodies behind the wisteria arbour, and possessing themselves of the dead soldiers' mantles, hurried back in the direction of Kiyoto. In a few minutes, however, they turned again into the forest, and mounting two horses that stood shackled a short distance from the road, galloped off at full speed, scarcely drawing bridle till they came within sight of Ishida's castle. Then, dismounting, they left their horses to the care of a groom who had evidently been expecting them, and running as if their lives depended on their speed, thundered and shouted at the gate of the castle.

"Hilloa! Hilloa!" cried the warder, half awake, "who may these noisy customers be? Gently, Sirs, gently. Passing the mean in gate-rapping is not the quickest way of passing the gate," and possibly to establish the truth of his aphorism, the old vassal's inertness seemed to grow with the knockers' impatience.

"Quick, warder, quick," shouted those without:—"The Baron has been attacked in the Wisteria Forest! Open the gate! Rouse the guards!"

But already a hurried stir and murmur of voices had replaced the silence of the guard-rooms, and twenty eager faces pressed against the lattices on either side.

"What is this about the Baron being attacked in the Wisteria Forest?" demanded the captain of the guard.

"Who are you that bring these tidings?"

"Naojiro and Motokichi, men-at-arms, Sir," answered those without, speaking both together so that their voices were indistinguishable. "Our party has fallen into an ambush, and we have lost half our numbers. The Baron himself is wounded and has barely escaped with a few of the escort to the temple of Kwannon."

But the tumult was now so great that the men's words were unintelligible. The old warder was thrust aside, and an excited crowd, stumbling through the gates, found two men sitting beyond, their faces covered with mud and their voices broken by fatigue. For some time all was confusion and perplexity; but presently from the inner circle of the ever-growing throng, a cry arose that gradually multiplied itself until it swelled into a many-tongued roar, "to arms! to arms!" and in a moment the dense mass of men melted into a hundred groups, that running, met and absorbed all questioning comers, so that at the last the guards, their captain, and a few other officers alone remained at the gate.

One of these officers, beckoning the two men-at-arms inside the gate, took a lantern and held it close to their faces as if he doubted their identity. Then making a sign to the warder to shut the gate, he said:

"Come into the vestibule, Naojiro and Motokichi. I should like to hear the particulars of all this."

"Sir," replied one of the men, "we know nothing more than we have told you. We were attacked before and behind in the thickest part of the forest, and unless you bring speedy succour, the Baron cannot hold out."

"For my part," cried the second:—"I shall not remain here any longer. Our master may be in mortal peril at this very moment. I left the fight to summon help, but I shall not run the risk of disgrace by lingering here:—"

and from that moment, unity of object so fully and, swinging round, he pulled off his mantle, dashed out of the gate, for the warder was still swinging the heavy leaves forward.

The Captain picked up the mantle, and with the other officers examined it carefully. It bore the Sawayama arms, and the right shoulder and sleeve were thickly spotted with half dry patches, which these men of war recognized at a glance, and with the recognition, their hesitation seemed to vanish at once and completely.

"Out with the horses, men!" shouted the Captain of the guard:—"Let us get to Fujimori by midnight."

"Aye, aye, Sir, and carry home the heads of the varlets before dawn," replied a score of voices, it on the ground, and followed by his comrade, darted supplied the place of controlling authority, that from a maze of scattered fragments, jostling, impetuous and discordant, there grew together quickly and surely a long black phalanx, bristling with spears and halberds and brilliant with light and armour, which, swaying at first from side to side like a reptile before it springs, presently surged forward in one huge wave of purpose, and rolling through the gates, swept along with shouts and clashing over the shadows of the three thousand pines.

The castle was deserted. Only a few old men sat in the guard house, crouching over the brazier, while the women of the household, huddled together, listened, with throbbing hearts, to the beat of the horses' hoofs and the stamp of the soldiers' feet, and held their breaths as the sounds grew fainter and fainter, half expecting to hear them deepen again into the crash of combat.

But had solicitude strength to give these sounds permanency, or was it only imagination that preserved their echoes after the reality had passed away? Nay, not only preserved but intensified them, for now it seemed as though a roll of rapid hoofs was beginning to grow again out of the darkness, swelling and advancing, faster and faster, till it became a clattering thunder not a furlong distant. No creation of either solicitude or reality, that,—but a very active reality of fifty horsemen dashing up to the gates, and a confusion of voices clamouring, "good news! good news! open, my masters. The Baron is saved. The villains that attacked him are all killed or taken."

The poor old warder! Drifted beyond the pilotage of reason by such a tide of strange events, he and his equally feeble fellows drew back the bars with trembling fingers, and had begun to peep eagerly through the slowly widening separation of the leaves, when a burst of wild laughter shook the mailed crowd without, and the gates, flying back before the thrusts of a hundred hands, sent their decrepit custodians tottering and trembling hither and thither. Two of the old men indeed fell under the weight of half a dozen swords, but this murderous impulse was immediately checked by a voice strong with authority that shouted:—"No violence, where there is no resistance! Remember the rule, comrades!"

He that spoke was a man of great stature and evidently the leader of the band. Like his comrades, he wore haberk, helmet and visor, but there all uniformity of equipage ceased, for bow, spear, sword, arquebuse, almost every species of offensive weapon was represented, and, what astonished the inmates of the castle still more, was that on the helmets of these fifty men were blazoned the armorial bearings of half the noblest houses in Japan.

As soon as the whole had entered, the gates were closed behind then, and the leader, raising his hand to command silence, addressed them thus:—

"Now, comrades; a score of you to guard every exit. Don't let a man, woman, or child out, but remember, no unnecessary violence, and no flurry. Our friend the Baron's wise vassals will follow him to Fushimi, and we shall see nothing of them before daylight."

Thereupon, some half the band dispersed quickly to right and left, and the rest remained standing before the vestibule.

"Now, Kakizaki," said the leader with a laugh, "do the honours of the house. You have had the pleasure of making the Baron's acquaintance," and forthwith, amid a hum of merriment, Matsuyama Raitaro stepped forward and led the way into the castle.

"But by this time, a few vassals who had of necessity remained behind, and even some of the women of the

household, believing that their master had been killed, and that nothing remained but to sell their lives dearly, seized the first weapons they found, and ran to meet the assailants. The two parties entered the wide corridor communicating with the vestibule, from different ends, but almost simultaneously, and thus the space that separated them afforded each time to estimate the others' numbers. Such a disparity then became apparent, that the scanty knot of vassals involuntarily paused, for it was mainly composed of seneschals and menials, who think before they fight. Two officers, however, presently pushed their way through the ranks of the domestics, and ran forward sword in hand. A coincident change also accomplished itself in the order of the assailants, for their tall captain, placing his hand on the shoulder of a little man that marched in the van, drew him back and passed in front himself, laughing after a fashion that sounded terribly at discord with the circumstances. His followers, however, seemed accustomed to his ways, for they yielded to him quietly, and did not even utter a word of applause when the two officers fell under his irresistible strokes.

"We seek no man's life except he oppose us":—said the Captain, addressing the now shrinking company of retainers. "We have made the Baron our prisoner, and now come merely for his ransom. Your submission will save yourselves and him, but if you determine to resist, remember that we have already proved too strong for all your fellows."

This speech changed the vassals' hesitation to complete submission. Some indeed, attempting to fly, found all the issues guarded by armed men, but the main part, throwing down their weapons, bowed their heads on the mats.

Then the Captain of the assailants, taking a lantern, came forward, and after a moment's scrutiny, selected an usher who had fallen on his knees and was rapidly mumbling incoherent prayers. Grasping the unhappy man, who made no resistance, but only redoubled the fervency of his devotional exercises, the Captain threw him down, and setting his foot on his neck, twisted one of his arms till the usher writhed and shrieked in agony.

"Tell me where your master's money is stored," said the Captain, releasing his victim's arm for a moment. "If you do so, you are safe; but if not, you and all your comrades shall die, and the women and children burn with the castle!"

The usher needed no further persuasion. Not once, but over and over again, did he repeat the desired information, and indeed never afterwards failed to do so, whenever one of the bandits approached him.

For these fifty men were the Shidzugatake Bandits, and their leader was Ishikawa Goyemon. Twelve thousand pieces of gold, besides a quantity of rich armour and other valuables, were the spoils they carried away from the castle that night, but whence they came or whether they went no one discovered, for only one old vassal attempted to track them, and he was found the next morning, gagged and bound on the road-side.

The party, meanwhile, that set out to succour the Baron, reached the temple of Kwannon and found the priests sleeping quietly, unconscious of all disturbance. In the wisteria forest, however, the corpses of two men-at-arms were discovered, and full of alarm and suspicion, the vassals determined to push on to Fushimi. But as they emerged from the forest, they met the Baron on his way home. He, too, had found nothing but surprise at his arrival, for neither had the Regent sent for him, nor had Sir Tajima been at Fushimi that day.

At first Ishida fancied that Hidetsugu had discovered his plots, and attempted to draw him into an ambush, but this idea was negated by the reflection that had such a scheme existed, its execution would certainly not have been deferred till his return journey. He therefore resolved to strike boldly back, never doubting that a little scrutiny would easily unriddle the mystery, but when he found more than two hundred of his vassals on the verge of the forest, and heard the stratagem that had lured them out, he knew at once that the real point of danger was his castle, now completely denuded of defenders.

Thenceforth there was little halting on the road. Once more the thunder of hoofs rolled along the pine avenue, but this time there was no need to summon the warders, for the gates stood open, and the wind blew unobstructed across broken doors and pillaged rooms.

The most puissant Baron of Sawayama and all his gentle retainers had been the dupes of an infamous robber and his rabble of satellites. But hush! Let no man tell it, for in the story lies fresh food for mockery, new aliment for the hungry crowd that gapes round homespun lordliness.

(To be continued in our next.)

RULES OF THE YOKOHAMA JOCKEY CLUB.

1. The Jockey Club is formed to promote the interests of Racing in Yokohama, and to take charge of the Course, enclosure and buildings.

2. The Jockey Club is open for membership to the whole Foreign Community and to Japanese, at the discretion of the Committee, upon application to the Hon: Secretary and payment of the subscription; but no person shall be admitted a member who shall have made default in payment of stakes or forfeits, who shall have been guilty of foul riding, or have been a party at any time and at any place to a fraud or malpractice connected with Horse racing.

3. The subscription to the Jockey Club shall be \$10 per annum, payable half yearly in advance; such subscription giving access to the Course and enclosure for the term for which payment has been made.

4. Every member upon admittance to the Club must conform to the Rules and By-laws, and he must abide by all the consequences resulting from his breach, or non-performance thereof. A copy of the Rules will be handed to him by the Honorary Secretary.

5. A General meeting, of which 14 days' notice shall be given by advertisement, shall be held in the first week in February of each year, for the purpose of passing accounts, electing a Committee, and discussing any questions relating to Racing; but notice of any proposed change in Rules must be advertised ten days before the meeting takes place.

6. A General meeting shall also be held in the month of June for the purpose of laying before members a statement of the condition of the Club and the result of the Spring meeting, at which also any changes in Rules may be made, upon the usual ten days' notice having been given.

7. The Secretary of the Club shall, upon the written requisition of 15 members, call an Extraordinary meeting of the Club, provided in the opinion of the Committee such meeting be necessary or desirable. Upon the written requisition of 25 members, the Secretary shall at any time call an Extraordinary meeting of the Club. In all cases ten days' notice of such meeting shall be given by the Secretary, together with notice of the special purpose for which the meeting is called. But no change in the Rules can be discussed or passed at such Extraordinary meeting.

8. At the General, or Extraordinary meetings of the Club, the presence of one fifth of all the members shall constitute a quorum; but in the event of no quorum being obtainable at any such meeting, it shall stand adjourned for one week, when any number of members present at such adjourned meeting shall be deemed to constitute a quorum; but no new business shall be brought before an adjourned meeting.

9. At the General Meeting in February, a Committee of eleven out of the body of members shall be elected by Ballot for the year then current.

10. The Committee shall elect from among themselves an Hon. Secretary, an Hon. Treasurer, and a Clerk of the Course.

11. In the event of any member or members of the Committee retiring, from any cause whatever, the remaining members of the Committee shall have the power of filling such vacancy or vacancies from among the members of the Club, for the term during which the Committee remain in office.

12. The Committee is empowered to frame and enforce by-laws for the governance of their own proceedings, and for the management of the Race Course.

13. The Clerk of the Course is empowered to issue all notices relating to the Paddock, Grand Stand enclosure and Race Course, and to regulate the hours for training and all matters pertaining thereto.

14. Any person creating an uproar, or disturbance, or using ungentlemanly or improper language within the precincts of the Grand Stand and its enclosures, or upon the Race Course, will thereby forfeit his right of entry to the Grand Stand and its enclosures, and to the Race Course; during a time at the discretion of the Committee.

15. It shall be competent for the Committee to suspend for any period they may determine, or to dismiss, any member who may be found guilty of default, fraud, malpractice, or improper riding in any Race.

16. The privilege of riding at the meetings shall be confined to amateurs, members of the Club, and no salaried persons or grooms shall be allowed to enter ponies, nor shall they be permitted to ride in any except four races at each meeting, to be specially designated by the Committee. Salaried riders, non-members, shall pay a fee of \$5 at each meeting.

17. A programme shall be published at least two months before the dates of the Race meetings, the dates of which shall be fixed by the Committee.

18. The Committee shall have the power of postponing the days of the Races in cases of urgent necessity.

19. All Ponies must be the *bond fide* property of, and entered by members of the Club. By the term "All Ponies" is meant China and Japan ponies only; half-bred ponies whose dams are Japanese, to be considered Japan ponies.

20. All entries to be addressed in a sealed cover to the Secretary, to be opened in the presence of not less than three of the Committee. The entrance money must be paid at the time of entry, in bank notes, height of ponies and riders' colors given, and the *bond fide* owners in case of a confederacy, declared, or the nomination will not be taken. Post entries for Griffins and for Hacks will be received at a later date.

21. Any alteration in the names of Ponies that have run in Yokohama or elsewhere, must be notified in the entries to the Committee, and the Pony entered as "so and so," late "so and so."

22. Three ponies to be entered from opposing stables, or no race.

23. A member is allowed to enter and run more than one Pony for a race, except the race be in heats, but must declare which will win if able.

24. The term "Open Race" to mean a race in which there are no qualifications as to entry, no exclusions, and no penalties.

25. Penalties for winners to mean for winners on the flat only, except for winners of Hack races.

26. Ponies shall be measured on the Course by the Committee at a time to be appointed by them. All Japan ponies shall be measured before each and every meeting at which they run, but it shall be competent for the Committee to accept old measurements for China ponies that may have already run here or elsewhere.

27. Scale of weights for China ponies: to be 9 stone 7 lb. for 12 hands, and an increase of 3 lb. for every inch above up to 13 hands, 3 inches, and 5 lb. for the inch or fraction of the inch above 13 hands 3 inches. Fractions of an inch to count in favor of the Pony under 13 hands 3 inches.

Scale of weight for Japan Ponies to be 9 stone 12 lb. for 13 hands, and an increase of 2 lb. for every inch above. Fractions of an inch to count in favor of the Pony.

A special scale of weights shall be drawn up by the Committee for the four races in which salaried persons or grooms are permitted to ride.

28. Before each race, owners or their authorised representatives shall deposit in the box provided for that purpose in the weighing room, the name or names of the Pony or Ponies they intend to start for the race to be then run. All Ponies so declared to start, and not competing, will be

disqualified for the rest of the meeting. After the second bell has been rung, the box containing the names of Ponies declared will be opened, and their names and numbers declared, after which no further declaration will be allowed. One of the Stewards or Committee-men appointed shall draw for the places of the Ponies declared to start, and hand a list thereof to the starter, who will proceed to the starting post, and start such ponies as are ready on the Course, in the order of the list as drawn.

29. Riders must appear in the Colors entered, under a penalty of \$5 to go to the Race Fund.

30. No owner of a pony engaged in any Race shall be permitted to ride for another independent stable in the same Race.

31. Riders shall carry not less than the specified weight and all must be weighed out by one of the Committee at the place of weighing before the race.

32. Should a rider carry beyond the weight specified for his Pony, the actual weight he rides shall be publicly announced before the race commences.

33. After a race, no rider, requiring to be weighed, shall be permitted to dismount except in the enclosure, where he will be received by one of the Committee. Any Pony whose rider disobeys this rule is distanced, and will not be permitted to start for a handicap.

34. When two Ponies run a dead heat and their owners agree to divide, both are liable to carry weight as winners. The dead heat shall be run off at an interval of a race, unless the owners agree to run at the end of the day.

35. In the event of two or more separate stables agreeing to run together for mutual benefit, a confederation shall be declared to the Committee at least one week before the first day of the races, and which shall be duly posted. Failure to comply with this rule shall disqualify such stables from running ponies at the meeting.

36. If in any race, one pony shall cross the track of another, it shall be deemed a disqualification unless there be two or more clear lengths between them at the time of crossing.

37. If in any race one pony shall purposely cross, jostle, or in any way interfere with another, such pony shall be disqualified from winning, as shall also any other Pony running in the same race belonging wholly or in part to the same stable.

38. Contracts or agreements between employers and their salaried riders or bettoes can be registered with the Hon. Secretary upon payment of a fee of \$5 to go to the Fund, and it shall be competent for the committee to investigate and deal with all complaints that may be made in connection with such contracts.

39. It shall be in the power of the committee to inflict fines upon salaried persons or grooms, to the amount of not exceeding \$20 in each case. Pony owners are responsible for the conduct of their servants and for fines imposed upon them, unless they prefer to dismiss them, in which event their new employers will be responsible.

40. Entrance fees for "Presentation Prizes" to go to the Fund, except when otherwise mentioned, and, in the event of a walk over, the entrance fees only, and not the prize or stakes, will be given to the winner.

41. Matches to be run after the Race Meetings must be declared to the Secretary on the Course before the close of the last day's racing and a fee of \$5 paid at the same time.

42. All disputes to be referred before the close of the day's racing to the Committee, whose decision shall be final. The Committee will decide in accordance with Newmarket and Jockey Club rules, when the question cannot be settled by the published rules. Any objection to Ponies must be made to the Committee before the race commences.

43. Any complaints about the measurement of the distances to be run, must be made to the Committee before the race begins.

44. All complaints, statements of disputes, or objections of any kind must be made in writing, and accompanied by a fee of \$5 to go to the Fund.

45. Records of all complaints made to and decisions given by the Committee shall be kept by the Honorary Secretary for their own use.

46. At the meetings, admission to the Grand stand or enclosure, will be \$2 per day or \$5 for the three days, for non-members and they must conform to the rules. Members free. No person will be admitted to the Grand stand or enclosure, without a ticket, which must be shown to the gate-keeper. Non-members can obtain tickets from the Honorary Secretary and at the gates on race days.

47. A refusal on the part of any member to conform to the rules and regulations, shall render him liable, subject to the decision of the Committee, to expulsion from the Club. But any member who may have temporarily forfeited his right of membership, may be readmitted to the Club, after a certain lapse of time, with the approval of the Committee.

EXTRACTS.

A BRITISH DOLLAR.

(From the 'Straits Times')

WHEN the Legislative Council again resumes its sittings there is one important subject which should form the text for an interpellation by one or other of our unofficial members, and that is, what answer, if any, has been received by the Government here from the Colonial Office with reference to the coinage of a standard British Dollar for circulation throughout the Eastern Archipelago, in Siam, Cochin-China, Hongkong and the Treaty Ports of China. In 1872 or 1873, the subject was first mooted here in consequence of a threatened failure of the supply of Mexican Dollars, and, if we remember aright, representations in favour of a British dollar were made by the local Government to the Colonial Office. Again in 1876, the question cropped up and was discussed both here and in China, and further urgent representations in favour of a British coined dollar were sent to the Colonial Office from our own Governor, Sir William Jervois, and from Sir Arthur Kennedy, Governor of Hongkong. The only reply that, as yet, has been received from the Colonial Office is, so far as the public are aware, that the subject is under the consideration of the Home Government. Surely there has been time enough now given to consideration and the time for action has come. The Chambers of Commerce of Shanghai, Hongkong, and Singapore have all, some more than once, strongly advocated the introduction in the Far East of a British coined Dollar. It may be said that there is not a banker, merchant, or trader of any experience in the Far East, but who, if asked his opinion, would give it unhesitatingly in favour of such a coin. The Colonial Office knows, or ought to know, this, and, it is, therefore, difficult to imagine what can be the reason for the hesitation of the Colonial Office, especially seeing that in sanctioning such a coinage no risk or expense would be incurred by the Home Government.

In 1876 the Shanghai Chamber of Commerce thought it likely that the Chinese Government would be induced to follow the example of Japan, and establish a Mint of its own, if the matter were put in a proper light before it. There was a general opinion, however, throughout China that there would be no security that the standard purity of the coinage would be long preserved under the auspices of the Chinese Government, on account of the ineradicable venality of its Officials. It was asserted, also, that it would be vain to expect that the Chinese Government would ever sanction such an innovation on national prejudices and custom as the introduction of a Mint would be. And this last opinion turns out to have been a sound one. The Foreign Ministers in Peking endeavoured to induce the Chinese Government to favour the scheme, but, according to the latest news, the reply received was a very blunt statement of the determination of the Chinese Government to have nothing whatever to do with a Mint or a civilised form of currency. They will sanction neither railways, nor decent coinage, nor any other new-fangled invention of Western civilisation. There is no hope, therefore, of assistance from China to provide a supply of coin necessary to the trade of the Far East, and so much the more reason is there that the Home Government should no longer delay in the matter, but make up its mind to sanction what is so universally desired here and in China, the issue of a British trade dollar. The Straits Association and the representatives of the Chambers of Commerce of Shanghai and Hongkong in London, would be doing good service by reminding Lord Carnarvon that the question has been now long enough under consideration.

YOKOHAMA MARKET REPORT.

FRIDAY, MARCH 1st 1878.

IMPORTS:—With *kinsatsu* down to 9½ discount, the Tea season closed, and absolutely nothing doing in Silk, business in our Import market is naturally checked, and ‘dull,’ ‘quiet,’ ‘nothing doing,’ are becoming stereotyped remarks against our quotations. Prices are weaker all round and we fear that no improvement can be looked for until the political horizon in Europe clears a little, or the native government hits upon some method of improving the position of its currency, the steady droop in which is beginning to be seriously felt in the neighbourhood of the open ports. For such small business as there is doing in our Import markets, we must refer our readers to the next page.

EXPORTS:—**SILK.** The market has been absolutely paralysed during the week by the news from Europe, and for the first time for many years at a corresponding period, we have seen a day pass without the purchase of a single bale. Only about 80 Japanese bales altogether have been received for inspection into foreign godowns since our last report, and actual settlements have been almost *nil*.

Holders seem more anxious to sell, but in the present state of the market—an almost absolute cessation of business, it is impossible to test prices, and we must necessarily leave our last quotations in force. Stocks may be put down at 2500 Japanese bales.

Total shipments to date are 19,620 bales, nearly the same as at the same period last season. The *Volga* (Fr. mail) took away 316 bales on the 26th inst. and the *Alaska* 238 on the 20th.

TEA.—Our Market may now be considered as closed and transactions are quite nominal: we do not furnish quotations as they afford no criterion of the state of the market. The figures given in the table over leaf merely represent, therefore, the state of the market at its close.

First Garden musters of New Crop may be expected about the third week in April.

EXCHANGE:—Since our last, after a very quiet day, a fair business was done in Bank paper for the American mail. The same causes which have depressed our Import and Export Markets, have of course reacted on Exchange, and very little has been done in private paper. Rates close firm. On Hongkong and Shanghai only a very trifling business has been done.

We quote:—London Bank, 6 months’ sight 4s. Od., sight 3s. 11½d. Credits, 6 months’ sight 4s. 0½d. nom. Documents, 6 months’ sight 4s. 0½d. nom. Documents continental, 4s. 0½d. * The dates of Arrival and Departure of the Mitsu Bishi Company's steamers are susceptible of alteration, consequent on the necessity imposed upon the Company—by its contract—of connecting with the steamers of the Pacific Mail.

* No days for Arrival or Departure of the Pacific Mail Company's or Occidental and Oriental Company's steamers having as yet been fixed, we are unable to tabulate them. Each separate steamer's departure from her port will be notified in the Table below, and the day of her probable arrival at her destination.

* Three days are allowed in the P. & O. Company's Schedule for transit of the Mails between London and Brindisi.

* Two days are allowed in the Messageries Company's Schedule for transit of the Mails between London and Marseilles.

LIGHTSHIP SIGNALS.

The following are the new signals to be made from the lightship to denote the approach of vessels.

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the Company's flag below, at the peak.

Man-of War:—National flag of the vessel at the peak.

Sailing vessel:—For a ship; flag B. (red): barque, flag C. (red ball on white ground): brig, flag D. (white ball on blue ground): schooner, flag F. (white ball on red ground): all commercial code, with the vessel's national flag below as soon as it can be made out.

SHIPPING INTELLIGENCE.—Inwards.

ADVERTISEMENTS.

ORIENTAL BANK CORPORATION.

INCORPORATED BY ROYAL CHARTER, AUG. 30, 1851.

Paid-up Capital £1,500,000.

Reserved Funds..... £ 500,000.

The Corporation grant Drafts, and negotiate or collect Bills payable at London, Paris, Bombay, Calcutta, Colombo, Foochow, Hiogo, Hongkong, Kandy, Madras, Mauritius, Melbourne, Point de Galle, Port Elizabeth, Shanghai, Singapore, Sydney, Tellicherry, New York, and San Francisco; on terms which may be ascertained at their office. They also issue Circular Notes for the use of Travellers by the Overland Routes via India and America.

They undertake the agency of parties connected with India and the Colonies, the purchase and sale of British and Foreign Securities, the custody of the same, the receipt of Interest, Dividends, Pay, Pensions, &c., and the effecting of remittances between the above named Dependencies.

They also receive deposits of \$100 and upwards for fixed periods, the terms of which may be ascertained on application at their office.

Office hours, Ten to Three; Saturday, Ten to Twelve.

Yokohama, January 1, 1878.

CHARTERED MERCANTILE BANK OF INDIA, LONDON, AND CHINA.

Incorporated by Royal Charter.

HEAD OFFICE—65 Old Broad Street, London, E.C.

Branches and Sub Branches.

In India Bombay, Calcutta, Madras.
Ceylon Colombo, Kandy, Galle, Matale.
Straits Settlements Singapore, Penang.
Java Batavia, Sourabaya.
China Hongkong, Foochow, Shanghai.
Japan Yokohama.

BANKERS.

Bank of England—London Joint Stock Bank.

The Bank receives money on deposit, buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts the usual Banking and Agency business connected with the East, on terms to be had on application.

ADVERTISEMENTS.

THE JAPAN TIMES

A WEEKLY REVIEW OF

JAPANESE COMMERCE, POLITICS, LITERATURE, AND ART.

NEW SERIES. VOL. 1. No. 10.]

March 9, 1878.

[\$24 PER ANNUM.

THE DEPRECIATION OF THE CURRENCY.

IN common with our fellow-residents interested in the Japan trade, and in Japanese politics as affecting it, we have been carefully watching the recent fluctuations in the value of *Kinsatsu*. But our point of view has been a different one, and the conclusions we have, so far, arrived at also differ, from those of both the native and foreign press of Yokohama and Tokio. As we took occasion to remark, when cursorily noticing the Finance Minister's Statement, published in January last,—nothing that has been written on the subject of Japanese Finance since 1869 has been of much value, because what ought to have been a principal factor in the calculations of publicists has been almost entirely neglected. Japanese journalists cannot fairly be expected to be conversant with even the elementary doctrines of Plutonomy; but foreign writers on Finance are assumed to have at their elbows, if not in their heads, at least the works of Adam Smith and Ricardo, of Mill and Jevons, of Goschen and Walter Bagehot; though their memories or their libraries may not be enriched by all the writings of all the specialists. And certainly so elementary a truth as that the price of food is the true gauge of money's worth, ought not to have escaped them in the manner which it has done. The fact is, as we pointed out on the occasion referred to above, they have—all of them—failed to give due weight to the fact that the circumstances, experience, habits, prejudices, and lines of thought of the Japanese people are so totally different from those of European countries, as to render quite inapplicable to her present monetary situation the laws which govern European finance. A most interesting memorandum which we publish to-day in 'Notes and Queries,' on the paper currencies of the Daimiates before the Restoration, shows how thoroughly familiarized the people have long been with practically irredeemable promises to pay: and though appreciating to the full the labours of those foreign essayists who have been, for the last eight or nine years, trying to educate Japanese financiers, we cannot but think that they have been wasting their time; because the arguments they have been using, applicable enough to the Europe of to-day, will only be applicable to Japan, thirty years hence.

We need not point out to our foreign readers that the fluctuations in the value of the Mexican Dollar are of little moment to foreign merchants who are interested, as most of them are, in both Imports and Exports. To quote a phrase quite proverbial in Yokohama ten years ago:—'what they lose on the raga, they gain on the bones':—when *Satsu* are cheap, imports go off more slowly, but silk and tea can be more easily bought, and *vice versa*; and a moderate difference in value between coin and paper really matters nothing whatever. Also that this heavier depreciation, which paper has suffered during

the past six weeks or so, could not have occurred at a better time than at this always dead season of the year. Also that the time of year is partially responsible for it. And foreign bankers are, in addition, probably aware that native speculators in Tokio and Chinese compradores in Yokohama have been 'bearing' the market. But it is the apprehensions of the native journalists, who appear to be inoculating certain classes of the people, and even the Government, with their own fears, that we are anxious to allay. This ought to be easily done. If they will only grasp the idea, and hold firm to it:—that so long as a paper *yen* will buy in the markets of the interior as much rice, or fish, or vegetables—or go as far towards paying wages, *i. e.* will buy as much labour—as it did six weeks ago;—so long will that paper *yen* remain at *par* with the rice, fish, &c. and whether it is at *par* or not with a foreign coin which is not current in the country, or with a native coin for which the people in the interior will not give any more fish or rice, is a matter of no importance whatever. The fluctuations in the value of *satsu*, so far as our researches have extended,—and they have been pushed far,—seem to have affected merely foreign trade at the open ports, and the interests of foreigners and natives engaged in it;—the native food markets in the interior not a whit. 'The worth of a thing is what it will bring,' and so long as 'the pottle bag holds a pottle' in exchange for the same piece of paper which bought it last year, so long that piece of paper retains its value, and Japanese journalists have no cause for fear.

But this is what *is* to be feared. That journalists should frighten the people, and so create the very evil—panic—which, as patriotic, earnest men, they are seeking to avert. The Japanese press has grown, in a few short years, to very large proportions; and it is growing, and its influence is increasing, day by day. But its conductors hardly appreciate the enormous and growing weight of *responsibility* which is thereby accumulating on their shoulders. The masses of the people in any country are very ignorant, and none are so ignorant as those who know a little—because these begin to distrust their instincts, which are generally right, and found their actions on their opinions, which are always wrong. And this class of people especially are most easily led astray by their newspapers, to be able to read which, gives them a factitious advantage of a most dangerous character, over their neighbours who cannot read at all. Now, if the newspapers of the capital and the leading journals of the provinces go on, day by day, decrying *kinsatsu* and predicting panic and national bankruptcy—it will follow, as surely as night follows day, that their readers will gradually come to believe them, and their neighbours who cannot read, but can listen, will believe that a panic is coming—and then the panic will come. This is an English journal, and it would ill become

such a publication to advocate restriction of the freedom of the press;—but better, far better, than that this Government's paper currency should be depreciated as have been French *assignats* and American 'greenbacks,'—would be the circulation of a Government order forbidding native editors to write on Currency at all. And if a selected few of the most influential could be all locked up in comfortable quarters for a twelvemonth, with the best standard works on Plutonomy, and not let out till they had passed a severe test examination therein; themselves and their readers and the country at large would be greatly benefitted.

We are glad, however, to be able to announce to our foreign readers, that at least one exception to the above criticism of the native press can be quoted, in the person of the editor of the *Chingai Bukka Shimpō*, a commercial paper published in Tokio, which gives market reports, commercial telegrams, &c. and aims to become the future '*Economist*' of Japan. In an article headed 'The Cause of the high price of Mexican Dollars,' which appears in his paper of the 6th. inst., he combats the idea that there is any cause for fear, by detailing some of the reasons for the fall in comparative values of *kinsatsu*, and though he does not exhaust the subject, and—as it appears to us—does not give due weight to the effect of the last issue of paper—his contribution to the discussion now going on is of great value, and his newspaper might, with advantage, be widely circulated by the Government. We have not had time to get the article fully translated, which we shall have done for our next number, together with others to which he refers his readers, but the main points he makes are these:—

That during the war in the South-West last year, a large proportion of the new issue of paper money was distributed among the people of Kinshin, by the Imperial Commissariat, and by the soldiers themselves; thus enriching the local inhabitants. That these have immediately commenced to spend their gains in what to them are luxuries,—foreign goods. That thus there has been a sudden and copious reflux of *satsu* upon the markets of the open ports, in exchange for the foreign imports which have flowed out, until stocks have been almost exhausted. As the Silk season has been—so far as prices have ruled—disastrous to the native merchant, the balance of trade has been against Japan, and dollars have had to be bought to restore it. During January and February, very little silk has been sold even at ruling low prices, on account of the war in Europe depressing the trade, and with the Tea season almost over, the demand from the interior for imports continuing, stocks decreasing in Tokio, and speculators buying fast 'to arrive;'—it was natural that dollars should rise as they have done. He then goes on to argue, from the fluctuations of foreign exchanges, in sterling and bullion, &c., in support of his views; but as he altogether ignores the effect of the Bland Silver Bill just passed through the American Congress and Senate, it is hardly worth while following him here at present; especially as we have to discuss that subject ourselves, at length, next week. But one other point of importance he makes with great effect. He shows that while, in the period he takes for comparison—from the 14th of February to the 5th of March, silver dollars have advanced in value seven *per cent.* against paper-money, gold *yen* have advanced only one-and-a-quarter *per cent.* Whence he takes up his parable against the double standard.

We cannot now anticipate more of what we have ourselves to say next week on the present and future of Japanese Finance; but we have not been able to refrain from welcoming thus a native fellow-student of the 'dismal science' as Mr. Manton Marble dubs Plutonomy. It is indeed a refreshing new sensation to find such pro-

misg, healthy-looking grains of wheat amongst the bushels of chaff of periodical Japanese literature.

EGYPT AN EXAMPLE FOR JAPAN.

JAPAN may find a possible solution of the foreign jurisdiction difficulty by study and observation of the experiment now being tried in Egypt. When writing on the subject of 'mixed courts' a month ago, we purposely abstained from adducing this example for her imitation; because the joint jurisdiction of such a tribunal as Japanese and foreigners in China and Japan have in their minds, when they use the expression 'Mixed Court,' differs completely from that exercised by the New Egyptian Courts:—and because, before describing the good system, it was necessary to expose the errors of the bad. We had also to show that the 'Mixed Court' of Shanghai, often quoted by ignorant people as an example to be followed here, was by no means what they supposed it to be, but a tribunal with civil and criminal jurisdiction over Chinese only, within the settlement, but with no jurisdiction whatever over foreigners; and so, quite incompetent for the work to be done in Japan. We purpose to-day to give a sketch of the judicial reform lately worked out in Egypt, a country in many respects analogously situated to Japan—especially as regards its commercial relations with foreigners;—and to lay before those who have to grapple with a difficult question here, some details of the manner in which it has been surmounted there. We trust that we shall not be misunderstood as advocating the immediate adoption of the Egyptian system. Though there are many analogies in the situations of Egypt and Japan, there are also serious points of difference; and much consideration must be given to the subject, and due thought to detail, before we can mature an opinion worth pronouncing. A very wise man was he, whose words Bacon quotes:—'stay a little, that we may make an end the sooner;'—and Japanese reformers would serve their country better than they do, if they would adopt the motto. The system is on its trial in Egypt; and—so far as it has been worked—it appears to work smoothly and well; but all that we wish to do at present, is to recommend that its progress should be watched from Japan, postponing the question of its importation to a future date.

In Egypt, the imbecility of Consular Courts bore more heavily on the Egyptians than on the strangers within their gates. The very existence of the new kingdom into which Mehemet Ali had expanded his Pashalik depending, as it did under the weaker hands of his successors, on the goodwill of the Christian powers, they had to be conciliated in every possible way, and the so-called jurisdiction of a number of petty Consular tribunals was allowed to grow, until it became an intolerable nuisance, even the Government being compelled, by the diplomatic pressure brought to bear upon it, to suffer equally with its subjects. Japan has not escaped altogether scot-free from Consular and Ministerial 'squeezes;' but when we say that it is estimated that, from 1864 to 1867 inclusive, the Egyptian Government had been mulcted to the tune of nearly Three Millions sterling in satisfaction of 'claims,' it is not a matter of wonder that it should cry out for relief. Accordingly, the then Minister for Foreign Affairs, Nubar Pasha, addressed a Memorandum to the Viceroy, graphically describing how the progress of the country was retarded by the existing system, and suggesting a scheme of reform. This was first submitted to the French Government, whose influence was then paramount in Egypt, but was unfavourably received; and to England, and her Foreign Secretary Lord Stanley (now Lord Derby) belongs the credit of first accepting Nubar Pasha's proposition and, by example and persuasion, procuring its acceptance by the other European powers. And there is little doubt—*par parenthèse*—

that from this act may be traced the gradual but steady growth of English influence in Egypt.

It is needless to say that Nubar Pasha's reforms were not carried through without both delay and modification. It took a couple of years to overcome the initial difficulties; to beat the 'vested interests' and expose the fallacies of the interested 'reports:' but in October, 1869, delegates from the six powers of Austria, France, Great Britain, Italy, Prussia and Russia met in Cairo under the presidency of Nubar Pasha, to sit as a Commission on his scheme. As then submitted, it proposed: that all cases, criminal or civil, in which foreigners of different nationalities, or foreigners and natives together were concerned, should be dealt with by three Courts of First Instance, sitting respectively at Alexandria, Cairo, and Zagazig—a town midway between Cairo and Damietta—and by a Court of Appeal sitting at Alexandria. That a majority of the judges of these Courts should be European lawyers, paid by the Egyptian Government, but not removable by it. That all these Courts should admit Christian evidence; and that they should all have jurisdiction in real property as well as in personal suits. Civil suits between foreigners of the same nationality were left to be decided, as before, by their own Consular Courts.

The Commission amended Nubar Pasha's scheme by proposing the creation of a Third Court—of Revision—above the Court of Appeal; by providing that, though the President of each Court should be a native judge, the real control should be exercised by a foreign vice-president; and,—a very necessary provision—that the law to be administered by the whole judicature should be embodied in a code, based on European legislation, but harmonising in it such rules of Arabic jurisprudence as were not repugnant thereto. So much for the civil side of the Courts: with respect to the Criminal side, the Commission also accepted the principle of Nubar Pasha's scheme, providing that its introduction should be preceded by the promulgation of a Penal Code, fully guaranteed.

The Egyptian Government lost no time in drawing up its civil code; but the Franco-German war stopped the negotiations; and when they were resumed in 1871, the Sublime Porte interfered, jealous of Egypt's acting for herself, but on the pretence that the matter was of imperial, rather than provincial concern. But Great Britain and Russia, resisted this interference, and the Porte had to withdraw its *veto*. Then France put forward a counter-scheme, which would have had the effect of altogether swamping the native element on the bench; and the Austrian Government demurred to the proposed surrender of its criminal jurisdiction. Thus a year was lost in negotiations at Paris and Vienna, but at length, in the autumn of 1872, another Commission met at Pera. The Khedive accepted a useful modification of the Cairo Commission's plan—the suppression of the Court of Revision, and consented that for a year the criminal jurisdiction of the new tribunals should be limited to offences committed against the Courts themselves, or in obstructing their process. This Commission, after due examination of the guarantees offered by the Khedive for the manner in which these limited criminal powers should be exercised, reported favourably; but France, though her delegates had voted for the reform both at Cairo and Pera, still held out, and it was only in 1875,—under pressure of a threat of the Egyptian government to close the old mixed Tildjaret Courts, and thus practically leave French citizens without legal redress against either natives, or other foreigners,—that the question was referred by the French Foreign office to the Assembly and decided in favour of Egypt.

We have dwelt at some length on these particulars; but with an object. We have now to state the existing constitution of the New Egyptian Courts; but it was advisable to show both the Japanese Government and foreign publi-

cists that a similar reform cannot be worked out here in a hurry. It is to be hoped that, with the main outlines of the scheme clearly drawn for them, the Commissioners of Japan and the Treaty Powers need not consume eight years in filling in the details. What is suitable to Japan in the Egyptian system, may be at once adopted; what requires modification may be modified; and where additions are necessary, it will be a facile task to add. 'Tis an easy way to learn shaving, to practise on other people's chins; and from the times when the Egyptians, with touching simplicity, lent their jewels to the wily Israelite on the eve of his departure, and, later, when, instead of seizing the empire of the world, Alexandria submitted to be a mere granary for decaying Rome, these child-like people have always played the victims' part. Nothing less than the crass stupidity of the British bond-holder could ever have given them an advantage over anybody:—Japan, having no money to lend to them, may borrow from them without scruple their new system of juridical reform.

On New Year's Day, 1876, a date also signalized by modern Egypt abandoning the old 'optic calendar in favour of the Gregorian,—Riaz Pasha, the Minister of Justice, who had succeeded to, and vigorously pushed on, the work of Nubar, inaugurated the Tribunal of First Instance at Alexandria. The Courts opened for work on the first of February, and at that date, except as regarded the deferred criminal authority and civil disputes between foreigners of identical nationality, Consular jurisdiction, with all its abuses, came to an end in Egypt. The system which replaced it is this:—

Three Courts of First Instance sit at Alexandria, Cairo and Ismailieh the latter provisionally, to be hereafter removed to Zagazig:—and they divide the country fairly enough between them. The Court at Alexandria is divided into two chambers, with equal jurisdiction, and consists of fourteen judges, of whom six are natives, and eight Europeans; the Cairo bench seats three natives and five foreigners; and at Ismailieh, three native and four foreign judges compose the Court. The nominal Chief-Justices in all three Courts are Egyptians, but foreign vice-presidents actually direct the proceedings. At Alexandria sits a Superior Court of Appeal, in which the foreign element still more preponderates, there being seven foreigners to four natives on the bench of eleven judges, under the Vice-Presidency of Dr. Lapenna, an Austrian lawyer, to whose tact, ability and independent spirit are greatly due the confidence and respect which this Court—and through it, the whole system of reform—have already won from the Egyptian public. The only dissatisfied persons are the nine or ten thousand rascals, the scum of the Levant, who, within and without the Consulates, constitute some ten per cent of the foreign population of Egypt, and who are now finding themselves put to the expense of emigration.

Naturally, the expenses of these Courts are considerable; for though the foreign judges receive but the modest salary of £1,600 a year each, and the natives,—who are young Egyptians who have received legal education abroad at the Khedive's expense—£800 a year; there are necessarily a number of foreign subordinate officials (the natives could not be trusted in these positions) who have to be paid; and £60,000 a year is the price that Egypt has to pay for equal justice. Cheap law—and, during the first judicial year, which only included six months' actual work, £30,000 were received in fees, towards covering cost.

This experiment is to have a life of five years,—up to 1881—before it is finally decided to adopt it permanently; so that Japan has ample opportunity to watch it. And money could not be more judiciously expended by the Japanese Government, than in sending a sufficient number of law students, who have already had preliminary training in England and America, to note cases in the Egyptian Courts; and so, perhaps, to fit themselves to sit in Japanese

Courts, as colleagues of foreign judges, to administer a similar system of jurisdiction in Japan. They will have no lack of opportunities, for the Report of the first judicial year in Egypt states that the Alexandria Court of First Instance heard and decided 1,360 civil and commercial cases out of 2,684 set down, and about 1,500 summary claims: and the Court of Appeal 75 out of 183, besides sitting as a Court of Arbitration on outstanding claims by foreigners against the Government.

A most important and noticeable fact,—in view of the certainly permanent naturalization of these 'Mixed Court' in Egypt—is that the people feel such confidence in them, as compared with their own *mekkemehs*,—where the poor man has so indifferent a chance against the rich,—that a common device of native plaintiffs is to fictitiously cede their right of action to foreigners, so as to take their cases out of the jurisdiction of their own native Courts, and to bring them within that of the new ones. And even the Khedive himself has found it to his advantage to submit to them questions affecting his private estates. There can be no doubt that the confidence thus shown will be fully justified, as the work proceeds; and we cordially recommend Japanese statesmen to watch most carefully the progress of this experiment, in the success of which may very probably be found the solution of a 'burning question' which now greatly vexes them, and which unquestionably retards most seriously the inflow of foreign capital into this country—the thing most needful for its progress and for the rapid development of its latent power.

EDITORIAL NOTES.

WE strongly commend to the attention of our readers, native and foreign, an article entitled 'Currency Quacks and the Silver Bill,' which we extract to-day from the *North American Review*, decidedly the soundest and ablest periodical publication in the United States, and which ranks with our own *Quarterlies* and the *Revue des Deux Mondes*. It is by Manton Marble, a sound platonist and a brilliant, incisive writer. There is a sentence here and there rather involved, notably one twenty-nine lines long, near the end, without ever a full stop; but Mr. Marble's meaning is not difficult to get at, his arguments are sound, and his article is very valuable. The other half of it we shall publish next week, when we intend to take the occasion of reviewing it, and showing what of it is, and what is not, applicable as warning or example, to foreign commerce in Japan, or to Japanese financiers. What is sauce for the full-grown American goose is by no means fit for the tender young Japanese gosling, which appears to be a fundamental truth very hard of appreciation by the *chefs* who have to look after the latter.

OUR English readers will receive with pleasure our announcement that this Review has been honoured by the German Asiatic Society selecting it as the organ of publication of the valuable papers contributed to it by resident German Orientalists. Translations of such of these as are of general or special interest will appear in our columns from time to time. Next week, for instance, will appear an account of the Battle of Uyeno, which was fought on July 4, 1868, the result of which gave the ancient capital of the Shoguns into the hands of the Imperialist party. We have other papers under translation, and shall thus be able to give an additional value to this, the first volume of our Review.

THE *Hongkong Daily Press*, in its issue of February 27th is good enough to refer in complimentary terms to our article on the present condition of China, published on the 16th ultimo. On one point the writer reminds us of an omission. When stating that, in our opinion, one of the necessary steps to be taken for the salvation of the Empire is the abandonment 'for a time' of the north west provinces now desolated by famine, we left our meaning obscure, in the attempt to compress it into a single phrase. In fact, the essay was, as it stood, too long for a weekly

Review, and—did China and Japan support a Monthly or Quarterly,—the subject would have been more proper for treatment there. Our views on the policy which Chinese statesmen should adopt in the future we reserve; but on this particular point—'abandonment for a time' of the N.W. Provinces—we take this opportunity of explaining that our scheme,—though involving the removal of the population to points where they could get food, instead of persevering in the hopeless and wasteful task of trying to carry food to them,—would provide for the retention of empire over the depopulated country by a chain of fortified and garrisoned posts, by which it should be held in precisely the same way as Russia holds her recent conquests in Central Asia, and indeed in Siberia.

WE attempt to lighten the rather 'heavy' character of this number of the *Japan Times* by inserting part of our Scotch correspondent's paper on 'Curling.' The other half of it we must hold over till next week; and as it has considerably out-grown the dimensions of a 'Note,' we give it a more prominent position in our columns. We have to apologize to the author and our readers for delaying its publication till now; when 'the winter is past . . . the flowers appear on the earth; the time of the singing is come and the voice of the turtle is heard in our land.' It would have read with more gusto before a sea-coal fire and over a glass of hot toddy; but circumstances control all mortals, and editors of newspapers are not exempt from the operation of the law, that

'The best laid plans o'mice an' men,—gang aft aye.'

WE have to acknowledge the obligation we are under to Dr. J. C. McCoan, the author of 'Egypt as it is'—a most interesting book, just published by Messrs. Cassell, Petter and Galpin, of London and New York,—for the material from which we have constructed the article, 'Egypt an Example to Japan,' which occupies our leading columns to-day. Englishmen specially are now greatly interested in the future of Egypt, and to all who wish to make themselves acquainted with the resources, recently developed; the government, recently reformed; and the climate and general conditions of the country, so greatly improved of late years under the comparatively wise rule of Mehemet Ali and his successors;—we cordially recommend Mr. McCoan's book.

THE news from Europe this week has lost not a whit of its interest: and assurance doubly strong is given to us by the telegrams that Russia has outwitted Europe, as she has often done before. She has made a separate peace with Turkey, in defiance of the protest of the other Powers whose signatures were attached to the Treaty of Paris. This, as we explained in our preliminary article on 'Treaty Revision' the week before last, when diagnosing the several kinds of Treaties, she has a perfect right to do, if she feels strong enough. She tore up the Treaty of Paris in 1870. But whether the other Powers will not force her to retreat to the old ground, and to sign another Treaty of very similar character to that of 1856 remains to be seen. This depends upon the other Powers' estimates of their strength, and on the combinations and alliances which may be made. One thing is very certain, it appears to us here: that England, at least, is prepared to fight, if Russia will not draw back.

We are committing the same old error of delaying our blow: during all these wasted weeks of diplomacy, Russia has time to recruit her wasted battalions, to organize and bring up her reserves; to strengthen herself in the positions she has gained and so to intrigue with Germany and Austria as perhaps to secure herself from a flank attack. And Russia is committing her old error of mistaking the clamour of a noisy party for the voice of the English people, of undervaluing the warmth of the English spirit, which burns long with a dull red glow, till it suddenly bursts into a devouring flame; and of altogether mistaking the relative strengths of the people's will and the personal inclinations and prejudices of the Court. This is, unhappily for its conductor and his fellow-workers, a journal condemned to the consideration of the petty politics of an obscure Oriental State, and from the larger and nobler field of European strife we are shut out; but even our small trade interests are affected

by the threatening war of giants, and such relief to our souls as can be got from a weekly note on the situation at home ought not to be grudged to us.

REVIEW.

THE PROCEEDINGS OF THE GERMAN ASIATIC SOCIETY FOR 1876-77.

READERS of Siebold and Kaempfer, who are also students of Japanese, and therefore acquainted with the difficulties which beset the enquirer at every step in his search after a knowledge of this country and its people, are apt at first sight, and without due consideration, to contemplate with admiration and despair, the enormous stores of information which those authors were able to collect. Kaempfer spent, we believe, only about two years in this country, and yet to this day his work is referred to as a repertory of useful, and for the most part correct, knowledge of things Japanese. But the modern enquirer may solace himself with the reflection that the opportunities for observation of the solitary student of those days were limited to Deshima, which was literally a prison, and the yearly journey to Yedo; whilst in our more favoured times, students have every opportunity for examining any native subject to which they may be led, either by circumstances, or by the bent of their own minds. Moreover, the Asiatic Societies of Japan, both English and German, are at hand, and readily undertake to discuss and publish any suitable paper written by one of their members. It is hardly too much to say that more correct and valuable information is in this way presented to the public in the course of a few years, than in all Kaempfer's or Siebold's ponderous tomes.

The German Asiatic Society has done good work in this way since its foundation a few years ago; and in the quality of the papers read, as well as in the able manner in which they have been discussed, it is worthy to claim an equal place with its more favoured sister-institution, in the task of disseminating in the Far East, as well as at home, a fuller and more accurate knowledge of this remarkable country. The truth of these remarks will be abundantly evident to any one who glances over the latest number of the "Mittheilungen" or Transactions of this Society.

A paper by Mr. Gebauer on the advances which the Japanese have made since the Revolution in their marriage laws, opens the number; and the writer seems to us to have got at the root of the difference between the marriage tie in Japan and in western countries, when he says that marriage in the latter was always regulated by the State or by the Church, while in Japan it was regarded entirely as a private affair, in which the government interfered, only when it saw its policy threatened. The paper passes under review the various laws lately made for regulating marriage.

The chief of these are, 11°, the law of January 4th, 1870, by which persons about to marry are required previously to obtain permission from the authorities, and which makes the legality of a marriage dependent on this permission being granted. Mr. Gebauer observes on this law that from this moment marriage lost its character of a private institution in Japan. 2°, the law of May 14th, 1873, by which the right of the husband to force the wife against her will to continue with him in the wedded state is taken away, and jurisdiction in divorce cases is given to certain courts. The preamble to this decree sets out the evils of the old system in the following terms:—"There is an immoral custom widely prevalent among the people, by which a husband refuses to listen to the request of his wife for a dissolution of their marriage on the ground of discord, or from some other cause which renders it impossible for them to live together. He lives with a concubine himself, and declines for years to agree to a divorce. Meantime the wife, once married, cannot marry a second time, unless the husband grant a separation; her prospects disappear with increasing years, and thus the whole purpose of her life is missed, and she is placed in a most deplorable situation." A decree supplementary to this was issued, on the 17th December 1874 forbidding separations without previous reference to the courts, and divorce in this country is now a judicial act quite as much as in England.

The tendency of the legislation in the matter of breaches of the marriage contract is also to curtail the power of the husband. Formerly he could dictate a peculiar punishment called *mamehiroi* or beangleaning, on his wife and her paramour. This consisted in exhibiting the offenders in the streets, their only garment being a small paper apron. An official who went in front of them scattered a certain quantity of beans on the wayside which they were forced to collect again in exactly the same quantity. It is only very lately that this barbarous custom has been stopped.

Mr. Kempermann is well known as one of the most accomplished Japanese scholars of the present day, and his paper on the "Kami yo no Moji" or letters of the divine period, will be read with much interest. Notwithstanding his high reputation, and the great care which Mr. Kempermann has bestowed on this paper, we venture to doubt whether his conclusion will be accepted without demur by scholars. He endeavours to show that these letters were the sacred characters used by a people who inhabited the west of Japan and the south of Corea, from whom the Japanese of our day are descended, while a greater or less portion of them is to be found among the present Coreans. Shinto scholars maintain, that these letters were a purely Japanese product, and were carried thence to Corea; while the Buddhists contend that Corea was their birthplace. We find it difficult to understand why the Japanese should give up an alphabet so scientific as the Corean is said to be, for their present unscientific and inadequate syllabaries. Moreover Mr. Kempermann only throws the period of the discussion back into a remote antiquity, when, according to him, the Japanese and Coreans were one people. However this may be, his paper is the most valuable contribution yet published on the subject, and perhaps other foreign scholars may investigate further on the lines he has so ably laid down.

Herr Greoven follows with a paper on the "Uji." This is a generic name applied by the Japanese to larvae and worms which derive their sustenance from putrefying bodies; but the writer of this paper confines himself to that form of maggot which feeds chiefly on the silk-worm. This is a paper of great interest to the mercantile community here, and we trust shortly to be able to present them with a translation of it. We have not space to do more than mention Dr. Lange's interesting account of the battle of Ueno in 1868, which placed the Capital of the Shōgun in the hands of the Imperialists, and virtually closed the Civil war. The paper is chiefly a translation, with explanatory notes, of the diary of a prisoner who spent his enforced leisure in writing what he had seen, before and during the battle:—and this we also purpose to translate.

A short note on the flora of Chiuzenji Lake near Nikko, and reports of the discussions on the papers, conclude a number of which the members of the German Asiatic Society have reason to be proud, and on which we heartily congratulate them.

CURLING.

Grey morning 'treads on the skirts of Night,' but the sun seems unwilling to rise. The snow lies thick on all the landscape. The frost, during the night, has been so sharp, that 'the owl, for all his feathers, was a cold' and his wierd, ghostly cry has not been heard. Hungry he must have been:—he went to his perch in the old ivied tower supperless; for the young rabbits lay close in their burrows, secure from everything but the bloodthirsty ferret; the field-mice were fast asleep, safe and warm under the thick fleecy blanket of the snow; and the robin, the chaffinch, the sparrow and the oxeye, early yesterday afternoon took refuge from the biting cold in the innermost recesses of the hollies. And in his cheerless cell he sits still, 'nursing his five wits'—and blinking at the dawn, through the veil of frosted gossamer that some eccentric spider has spun across his porch. Heavy lies the snow on the masses of ivy above him, heavy on the rough boles of the elms, heavy on the hardy laurels and arbutus and clumps of *arbor vite* in my lady's flower-garden. The grand old silver fir, on the lawn before the hall door, is so snow-laden that even his hundred stalwart arms—sylvan Briareus that he is—droop till the lowermost touch the ground. But what a splendid warm nook for the home-fed pet pheasants they make;—mark that splendid old cock running in from the rhododendron shrubbery to the corn box at the foot of the tree! and see, leading to it in all directions, the numberless light

footprints of his friends and relations, making an intricate lace-like tracery, broken only by the deeper spots left by the feet of some benighted hare! Not a breath of wind has stirred the trees for many hours, and every branch of oak, or elm, or feathery larch, each twig of the aspen and the lady birch, all the lingering red-brown leaves on the beech hedges, obstinate patriarchs who refuse to depart until they see their successors in the spring,—each and all of these carry their share of snow crystals, only waiting the touch of that sluggish, red-faced sun that is so slowly coming up through the brown mist on the horizon, to flash into the glittering silver and the rainbow-coloured jewels of the forests of fairy land.

It is not easy to convey to the minds, or, rather, to the palates, of those unfortunate Southrons who have never luxuriated in the reality,—the idea of breakfast in an old Scotch manor-house. A borderer, who hails, from 'Warkworth or Naworth, or merry Carlisle' counts cousins with Scots, or at least feels such sympathy as arises from a common ancestral taste for other men's beeves, and appreciates the meal;—but the sensation is denied to all born south of Tees. Prayers are over; the news of the night are told; we have heard of the sheep which have kept themselves alive in the snowdrift by crowding together, and treading out for themselves a haven in the wide sea of white; of the solitary wether smooored within a few yards of safety. Forester and gamekeeper have made their reports, and the hint that each gives:—"that the 'souter' threeps that there'll be curlin' the day on Balyarroch, and that the ice'll carry fine" are not lost upon the Laird. The thermometer outside the window, registering 16° Fahrenheit, confirms the thought, born from their wistful looks, that to hear "the stanes ringin'" will be pleasanter to his dependents than ploughing through the snow after him, with game bag or blazing hatchet. So the fiat goes forth, for a holiday for the sons of the house and their tutor, and we set to in high glee and with keen appetite, at the kippered salmon, and the grouse pie, the scones and apricot jam—nor neglect those wholesome 'parritch' which the warm new milk makes so especially grateful. Then, with due care to one's shoeing, and with a warm 'a' 'oo' plaidie thrown right shepherd's fashion, round shoulders and back, (for the wind may get up, and on Balyarroch there is but little cover) we sally out. Heh! what a scatter among the pheasants from under the old silver-fir, as the heavy hall door closes behind us with a report that almost justifies their fright, it sounds so like a gunshot in the still morning air. And away goes Topsy after them—who really ought to know better—in pure doggish fun and really 'animal' spirits, till she is brought up standing, wrong side up, by going tail over head in a rabbit hole; when she picks herself up and comes to heel, shaking her wise old head at her own absurdity. And so we push on, down the west avenue, through snow up to our ankles, but so crisp and dry that it falls off highlow and stocking like dust. And now, above the coppery-coloured coverlet beneath which he has been a 'lig-a-bed' so long, peeps the sleepy red face of the sluggish sun. Ten minutes more—and he wakes up for the day; the sky loses its greyness, and assumes a pure, bright blue, which gives a doubled beauty to the scene. The frosted silver of the trees begins first to glitter, then to sparkle with prismatic colour; the first faint, doubtful, 'cheep, cheep' of some impudent sparrow is heard, questioning where he can find a breakfast; and as we leap the dyke, and take the short cut through the young larch plantation, and drop over the sunk fence into the Drumclog turnips,—the 'carruck, carruck, carruck' of the startled pheasant, as he settles into his flight, and sails away towards the Tay, and the whirr of the covey that rises almost at our feet, tell us that we might have had a good enough day's sport, had we been intent to carry the gun, instead of the broom.

Well—a stout heart to a steep brae soon takes us up to the solitary tarn, high among the eternal hills, which—without apparent feeders or outlet—save one little burn, now closed by a portcullis of icicles,—is a green, shallow, bog in summer, where the cows love to cool their feet; but a miniature lake in winter, six or seven feet deep, fed doubtless, by some undiscovered spring; a wonder to the simple folk in the scattered hamlets in the hollows of the surrounding hills.

At its far end, as we rise the last steep bit of the path,

we descry a cluster of men round the door of the little bothy where the curling stones are kept, and one by one, as we near the group, we recognize the Minister, a sound divine of the old school and a keen curler yet, in spite of the many winters that have frosted his pow; and the 'Souter,' who won the medal last year, and Birkies and Gowansbrae and Broomielands (for farmers are better known by the names of their farms in these parts, than by those given them by their own godfathers and godmothers) and others enough to make, with ourselves, two full rinks. They have only been waiting for our party, evidently—our advent announced by the gamekeeper and the forester—for as we near the little lock, they move across the ice to greet us. The rinks are ready, clean swept, measuring circles drawn, tees up, hog-line and roaring-line scored, stones lying in order by the cramps, and a bundle of neatly made brooms handy by to choose from. We divide into two parties of eight: in ours—the Laird and the Minister, the Souter, Broomielands and the grocer from Normanstoun, Andrew the forester, the tutor and the young Master of Malcolmslaw. The Souter and Andy of course are 'skips'—captains of the sides—and 'short cuts' and 'long cuts' drawn from a handful of broom, adjudge to each his sides. The Souter gets the Minister, Broomielands and the youngster—Andy the Laird, the tutor, and the grocer: a fair enough division; for the tutor, being an Englishman, counts for little better than the boy, while the Minister has decidedly the whiphand of the Laird.

And here must be interpolated a little description and technology. The best game is of four on a side; though six and eight a side are often played. The first player plants himself on the roughened iron cramp-plate, with his left foot advanced and pointing straight towards the 'tee' which, as already explained, * is a wooden mark

* So long a time has elapsed since this explanation was given, that the game now to be described could hardly be made intelligible, without reference to it. For the convenience of our readers we therefore repeat it, taking the opportunity to correct one or two errors in the details of measurement.

"Curling is a game played upon ice, and is peculiar to Scotland, or rather to Scotchmen; for whithersoever Scotchmen emigrate, and whither do they not?—if ice is attainable, there Curling may be had. As good a short description as can be given of it is:—that it is the good old English game of bowls played upon ice, with stones instead of wooden bowls, with a fixed, instead of a movable 'jack' and with the additional scenic advantage that a 'bias' can be given to the stone to either side, and modified at the will of the curler, by his method of delivery; instead of the player having to depend, as in bowls, upon the mere dead 'bias' of lead put into his bowl by the maker. But some there may be so sunk in ignorance as not to know 'bowls,' except in its cramped, degenerate form in a 'bowling alley'—which is quite another thing; so a more detailed description of Curling may be deemed desirable.

"To give it then: an expanse of ice, some sixty yards by six, is first swept clear of snow; and this should be carefully done, and so as to leave no uneven little lumps detached from boot-heels, which interfere with the passage of the curling stones. It is convenient to bank the snow a little at each end. On this 'rink,' at two spots, one at each end of it, and forty-two yards apart, the point of one leg of a large pair of wooden compasses. (such as sergeants use when drilling 'awkward squads' to measure the men's steps) is set and with the other point are described two or three concentric circles, the inner a yard, the outer seven yards in diameter. These circles are for convenience of measuring. In the centre of each circle is set up a small wooden pin, like an exaggerated chess pawn, called the 'tee.' The length of the rink may be shortened by mutual agreement, when the ice is not good enough to enable the stones to be driven conveniently the full distance of forty-two yards. One sixth of the distance, (in a full rink, seven yards from the 'tee') down towards the centre of the 'rink' is drawn a line across it, called the 'hog line.' All stones failing to clear this are called 'hogs,' are removed from the rink, and do not count. All which overpass the 'tee' by seven yards, so as to go outside of the outer circle, are called 'roarers,' and equally do not count to their side. These circles and line being drawn, the 'rink' is ready for use. The implements required are:—1°, for each player, two 'curling-stones' which weigh from thirty to fifty pounds each, which are very like a flattish cheese in shape, (exactly like the 'cheeses' we used to make out of marbles when schoolboys) and which are, for choice, made from pieces of Ailsa Craig, but which may be made from any granite or other stone which will take a high polish. There are as many fashions in curling stones as there are in coats; and there are dandies in each department: but when the writer last played curling, the latest approach to perfection was an Ailsa Craig stone, with the slightest, hardly perceptible departure from the absolute plan; in the direction of the sphere applied to the bottom of the stone. In the hand of a 'deacon of the craft,' such a model could be propelled with greater certainty and power to its mark, than one resting on a base which was absolutely flat. The means of propulsion is by a handle which rises from the upper face of the cheese, so shaped and placed that, when grasped, the knuckles of your fingers almost touch the stone. 2°, for each player a broom, made of gorse, the use of which is to sweep from before an advancing stone any small particles of snow or crushed ice which might stop its way:—and 3°, a couple of 'cramp-plates,' pieces of thin roughened iron, on which the players stand when delivering their stones. These, I believe have now altogether superseded the old 'cramps' or 'sparrow hills' which used to be fixed upon the players' boots. In an adjacent hut, or on the pile of gorse or broom, repose a basket of oatcake, with a lass without a foot, and a fat 'stone bottle of whisky;—and the rink is ready for the curlers.

like a small nine pin, forty two yards away. (When the ice is dull, this distance is shortened, by consent.) He lifts his stone just high enough from the ice to clear it, and with arm and wrist swinging in a straight line from the shoulder, delivers it as smoothly and quietly as possible towards the tee. His object is that the stone should end its journey just short of this mark, and the precision is remarkable with which some curlers can lay a stone within a foot of the spot indicated by the 'skip's' broom. For the skip's place is at the other end of the rink, the remaining two players being stationed, one at the hog-line, one a few yards in advance of the first player. Their duty, and the judgment of the skip, now come into play. The stone has been delivered, and evidently with too little 'vim,' for it slackens fast as it approaches the 'hog-line.' 'Broomielands' has made too great allowance for the keenness of the ice. 'Soup, soup! soup!' shouts the Souter:—'Soup, laddie! soup Minister, or she'll no win o'er!!' Young Malcolmswallow sweeps away with a will in front of the advancing stone, the old Minister more dexterously, but with less animation, aids him, and the stone just clears the hog line by about nine inches, greatly to the delight of the boy. An awkward customer that stone, perhaps as good for its side as though it had been closer up, for lying just off the centre line to the left, it is difficult to pass. But the Grocer is equal to the emergency and, profiting by Broomielands' trial of the ice, he plays a really fine stone, passing the first by about a stone's width, and resting a couple of yards from the tee, a little beyond it and on the right. Eight feet back, and it would have been a perfect cast: but as it is, he gets due praise from his party. Now Broomielands poises his portly form again on the cramp iron, to play his second stone, but the Souter lifts a warning hand. This craves deliberation. Can he trust Broomielands to play a tee stone? If he falls short again, he may guard the well-placed grocer. Or shall he order Broomielands' first stone to be advanced a stage? He decides on this as the most prudent course. 'Noo, Broomie, ye'll just come roking up on your ain back! Cannily noo! . . . Eh, mon, ye're a deacon—that's just the right hare's fut . . . dinna soup, laddie, dinna soup'—as the well-played stone delivered with precision, in almost the exact track of the first, strikes it and drives it forward to a point short of the tee, but nearer to it than the grocer's.

But not striking it exactly full, the second stone swerves a trifle to the left and the first, driven up, lies full in view from the cramp iron, without a guard. The Grocer's work is therefore clear: he must drive out the successful stone. And this he does, but catching it on the edge, the object stone and his own both glide out to each side of the tee at a widely open angle,—making both of them 'roarers,' which don't count,—and the Minister has a clear field for the shot he is best at, placing a tee stone. He and the Laird move down the rink, and their places are taken by the farmer and the grocer. The Minister's turn—and the Souter silently places his broom just in front of the tee. No need to give instructions to that pillar of the Kirk. Ah-h, a splendid stone! the old man, with hardly an apparently effort, just lays it so truly on the ice and with such judgment of the pace that, without a touch of the broom, it quietly glides up to within eighteen inches of the tee. Magnificent! Andy the Forester looks serious. If the Laird doesn't 'see out' the Minister, the old man will guard with his second stone, to a dead certainty, and the game will become complicated. 'Noo, Sir, ye ken what ye're to dae—ye'll just crack an egg on the Minister's back! . . . Gude . . . agudeline . . . eh—soup! men—soup, soup!! she's nae enough ponther, soup her!! soup!!' But all the sweeping is of no avail, the Laird's stone lies just too short and a little off. Then the Minister places his second stone a perfect guard for his first about two yards over the hog line. This the Laird sends 'roarin' with his vigorously played second; but alas! he hits it too truly in the centre, and his own remains, equally guarding the winning stone. The game looks bad for Andy's side; the tutor can't be depended on, and the others have an extra shot. But no game's lost till it's won. The young heir throws away the extra shot, sending his prettily ornamented little five-and-twenty pounder singing away through the crowd, half-way up the snow bank at the end of the rink (on keen ice like this there's no keeping back a light stone) and the tutor suc-

ceeds in just touching the Laird's second stone on the left, so as to make it a guard for his first, which now lies next best to the Minister's, and leaves the way open to 'see' that divine 'oot.' But young Malcolmswallow, steadied by the failure of his first effort, and encouraged by the Souter's "Noo, ma mannie, cannily, cannily" just drops his second over the hog line to fill the vacant guard. This the tutor fails to hit away; and then the Souter and Andy, the two skips, march down the rink together to play the concluding and decisive stones, leaving the Minister and the Laird at the 'skip-end,' with whispered instructions, to mark the points they mean to aim for and to direct the 'souping.' This is the turning point of the first round, and we take up our positions in breathless silence.

(To be continued in our next.)

THE JAPAN TIMES.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN TIMES must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

YOKOHAMA: SATURDAY, MARCH 9, 1878.

NOTES OF THE WEEK.

FRIDAY NIGHT, MARCH 8th.

THE first mail arrival we have to record since our last issue is the Pacific Mail S. S. *City of Tokio*, Captain Maury, which arrived here on Sunday last. She left San Francisco on the 7th ulto. and so has made a tolerably fast passage for this time of the year, she leaves for Hongkong on Sunday next, her long stay in port being on account of her loading rice for China. Other Mail arrivals are the *Malacca* which arrived on Thursday afternoon, two days before her due date, bringing English Mails of the 28th January, and the *Kokonoye Maru*, which arrived in harbour this morning from Shanghai and way ports with the regular weekly mail. We understand that she is a very good steamer to travel in, and if kept on the service will very likely become the favourite passenger boat, as she is built of iron and very strong of outward mails the *Sunda* left on Tuesday morning last, the 5th instant, carrying the homeward mail due in London via Brindisi April 22nd, and the *Nagoya Maru* with the usual Shanghai mail left on the following day.

The *Volga* with the French Mail of the 27th January left Hongkong for this port yesterday at 6 p.m. and may be looked for about this day week. The *Gaelic* left San Francisco on the 21st ultimo and *China* on the 4th instant.

The most prominent social event of the week has certainly been the issue of the programme for the Race Meeting on the 8th, 9th, and 10th of May. We had intended to have discussed this in full in other columns, but are obliged to postpone our notes upon it until next week. Training, we remark, has already commenced.

A case of the Japanese Government, represented by Mr. Kirkwood, against Messrs. Cope and Mitchell, has been occupying a good deal of attention during the week. The suit was brought for the recovery of a strip of land, now incorporated into Mr. Cope's lot No. 95, which, it was contended, in remote ages, was a road or path between that lot and the next. To the best of the writer's recollection, there certainly must have been a path there, some time to 1863, for the tradition was then current; but it led no where in particular; for the then unfilled swamp came right up to the palings of the lots abutting on what is now the Homura Road, and out of the back windows of the bungalows we used to shoot wild ducks. There surely should be a 'statute of limitations' or its equivalent, to govern cases of this sort: and so the Jury apparently thought, for, after sitting up till two this morning, they answered a long string of questions put to them by Mr. Wilkinson in such a manner as practically to carry a verdict for the defendant. We shall report the case in due course in a more formal manner.

We agree most cordially with our evening contemporaries in condemning the action of the Hospital Committee in proposing to cut down the salaries of the medical men attending the General Hospital. They are ridiculously small and inadequate as it is, and should be increased, though, in these hard times, it is difficult to suggest any means of doing it. We cannot help making the re-

mark that the two or three thousand dollars lately sent away to buy rice for people who will never get it, would have been charity well-bestowed at home, if given to our own Hospital; and the proceeds of the Entertainment soon to be given in the Gaiety Theatre, announced to be for the benefit of the China Famine Relief Fund, might with great propriety be applied here, where it will be much more usefully spent. Not a grain of rice can reach the really famine struck districts where the people are dying; it is all stolen on its way through the fringe of country surrounding them, where the people are merely badly off.

Appropos of the theatre; We rejoice with exceeding joy to notice that next Wednesday we are again to have the pleasure of hearing *Cox and Box*. The pleasure with which one listens to this charming little trifle is perennial. *Trial by Jury*, to be given by the Choral Society, is also in full rehearsal; the music of this is by no means so good as that of Mr. Sullivan's other piece; but the fun of the situation is immense. It wants more acting, by far, than singing; and drilling the corps in the stage business must be no sinecure. If this be not perfectly done, the piece will fall absolutely flat.

A fire which would have done immense damage on a windy night occurred on the evening of the 4th inst., and burnt down a few of the nests of vermin in the Homura district. The circumstances were fully reported in the daily papers and are totally uninteresting. But indeed, nothing of any interest has happened during the week, and our only excitement has been the waiting and watching for European telegrams which we don't get.

We have elsewhere referred to one of our extracts published this week "Currency Quacks and the Silver Bill." It is a pretty heavy subject: and we think those of our readers who do not care about silver except in the form of small change, will thank us for relieving its weight by the contrast of Mr. Gilead P. Beck's experiences as an Editor. This gentleman is a principal character in 'The Golden Butterfly' a most amusing novel lately published in *The World*, and by the authors of 'Ready-money Mortiboy, a capital book which made a sensation some ten years ago. We see that they are now publishing another in the *Graphic*;—'Celia's Arbour,' which promises to be as interesting as either of the other works we have named. By the way, they have conferred a benefit on posterity by rescuing from oblivion the entire text of the following beautiful lyric; which is sung to one of those melodies proscribed, we believe, by the Government in Ireland, at the time of the Fenian scare:—

'Tis O! for a gay and a gallant bark,
A brisk and a lively breeze,
A bully crew and a captain too,
To carry me o'er the seas.
To carry me o'er the seas, my boys,
To my own true love so gay,
For she's taking of a trip
In a Government ship,
Ten thousand miles away!
Then blow, ye winds, heigho!
For a roaming we will go,
I'll stay no more on England's shore;
Then let the music play,
For I'm off by the morning train,
Across the raging main,
I'm on the rove to my own true love
Ten thousand miles away!

My true love she was beautiful,
My true love she was fair,
Her eyes were blue as the violets true,
And golden was her hair;
And golden was her hair, my boys,
But while I sing this lay
She's doing of the grand
In a distant land
Ten thousand miles away.

The sun may shine through a London fog,
The Thames run bright and clear,
The ocean brine may turn to wine
Ere I forget my dear;
Ere I forget my dear, my boys,
The landlord his quarter day,
For I never can forget
My own dear pet,
Ten thousand miles away.

Oh dark and dismal was the day
When last I saw my Meg,
She'd a Government band around each hand,
Another one round each leg;
Another one round each leg, my boys,
Dressed all in a suit of grey,
"My love," said she,
"Remember me;
Ten thousand miles away."

Oh! would I were a bo's'n tight,
Or e'en a bombardier;
I'd hurry afloat in an open boat,
And to my true love steer.
And to my true love steer, my boys,
Where the dancing dolphins play,
And the shrimps and the sharks
Are a having of their larks
Ten thousand miles away.
Then blow, ye winds, heigho!
For a roaming we will go,
I'll stay no more on England's shore;
Then let the music play,
For I'm off by the morning train
Across the raging main,
I'm on the rove to my own true love
Ten thousand miles away!

It is because these blossoms are not always caught as they fall, that they get trampled into the mud of common-place, prosaic life and are forgotten. There are some half-remembered strains—chiefly of a humorous cast—which we would give anything to recover!—worlds, had we a planetary system to dispose of, with a reserve of undiscovered asteroids! Inscription of his name, for instance, on the free list of this Review for ever, awaits the fortunate man who can supply our common-place book with the lost lines of that poem of which we only possess this charming fragment:—

"On Egypt's banks, contagious to the Nile,
Where Pharaoh's daughter washed herself in style,
And ran upon the shore to dry her lilywhite skin—
She struck her foot against the basket, Moses in:
And, turning round with a bewitching smile,
Said 'which of you young ladies owns this child?'"

or who can fill up the *lacunae* in the existing, mutilated versions of 'Jack Robinson,'—'Oh, poor Robinson Crusoe,'—'Old Rose is dead, that good old man,'—and half-a-dozen others of the really comic songs which our grand-fathers and fathers used to sing, when they dined at three o'clock and had heads that could stand port wine? Ye Gods! the puny youngsters of this generation have no conception of what manner of men were those who stood with their backs to the wall, defending the life of Europe against the first Napoleon! No—all this sort of thing is—'aw-vulgaw'—'bad form.'—'Gin and polly' and lawn tennis have taken the place of cakes and ale, and 'Champagne Charlie' and 'Tommy, make room for your uncle' are warbled in drawing-rooms, to chase hence 'loathed melancholy' instead of 'Drink to me only with thine eyes,'—'the Thorn,'—or 'Tell me, Shepherds have ye seen.'

NOTES AND QUERIES.

QUERIES.

Qy. 1. Can any experienced woodman, or analytical chemist, favour the community with a disquisition upon charcoal? Is there any method of getting rid of the free carbonic acid gas which rises from it—before burning, or of any portion of the same? Do different woods give off different volumes of vapour, and if so, which is the safest to use in a bath room? (*Unanswered.*)

P.S.—Will *nobody* answer this or must our contributors' valuable lives continue to remain in peril?

J. T.

Qy. 2. Where can I find any account of the ceremonies in use on the occasion of birth, death, or marriage, among the Japanese? Do any of the French, Dutch or German works on Japan contain such? I fail to find any information on the subject in English books. A work like Sir John Davis' "The Chinese" is a great desideratum in Japan. (*In process of answer.*)

B. H.

Qy. 5. Dwellings on the Bluff are much more susceptible to the motion of the earthquake wave, than those on the Settlement. Why so? is the object of this Query. One would think that, considering the magnitude of the causes at work, the few feet of elevation of the Bluff from the Settlement would make no difference at all in the perceptible motion of an earthquake; for the same reason it would appear childish to suggest that the weight of the various constructions on the Settlement would have the effect of steadying, as it were, the earth's crust; however

it is a fruitful matter for conjecture, though by no means a pleasant one.

JISHIN.

Qy. 6. Can any of your readers inform me whether there are any, and if so, what books on Japanese surgery, or midwifery, as practised before the coming of the Dutch and Portuguese?

(Unanswered.)

Z.

NOTES.

NOTE TO QUERY 5. (Comparative severity of earthquakes on the Bluff and in the Settlement.) Regarding the query why dwelling houses on the Bluff are more susceptible to the shock of an earthquake than those situated on the settlement; to an unscientific mind the reason appears to be self-evident, and to be simply this:—the Bluff land is firm and condensed, and receives the shock with resistance, by virtue of its solidity, to a considerable depth. The Settlement is notoriously soft and elastic, being of modern formation; and the motion imparted by the earthquake wave must therefore filter through it with less severity. There cannot possibly be any other organic chasm in this unhappy settlement.

X. Y. Z.

[The following Note relating to the paper money of the former *Han* is intended as a contribution to the mass of information on ancient Japanese currency accumulating in the 'Notes and Queries' of this Review. The question is one of great interest, and wide importance, as bearing upon the present financial position of Japan; and these items are therefore offered, in the hope that they may prove of some slight utility to any student who may hereafter be tempted to take up the subject at greater length.]

THE FORMER HAN PAPER-MONEY.

OUR readers are no doubt aware that when the various *Han* restored their fiefs and registers to the Central Government at the close of the Revolutionary War of 1868-69, the Government also took over the debts contracted by those *Han*. Amongst these, by far the most important liability was the recall of the paper-money issued by the territorial nobles. Each *daimiō*, as he found himself in need of funds, had, until the period mentioned, been accustomed to put into circulation *kinsatsu* for different amounts. The rule laid down was that no *daimiō* should act thus unless by the special permission of the old *Shōgunate*, and it was therefore required that a full report should be furnished beforehand by him, stating the total amount of paper-money proposed to be put into circulation, the different denominations or values of the several notes, and sundry other particulars. If permission were then granted, the notes were issued, and passed current in that single *Han*. The grave disadvantage arising from the existence, at one and the same time, of innumerable different issues of paper-money throughout the Empire—none of which could pass current in other *Han* than the one in which they were manufactured—prompted the Government to call them in, and to issue, instead, their own notes, which should pass as coin in every part of the country. This scheme being put into operation, certain places were appointed in Yedo, where the old *Han* notes were publicly destroyed by fire, minute record being kept of their values and of the *Han* to which they belonged. At the then existing *Mimbushō*, or Department of the Interior, some few specimens of these notes were, however, preserved as curiosities, and several collections were arranged, in as nearly complete a condition as was possible under the circumstances. These collections have now become exceedingly valuable, and it may perhaps prove of interest to our readers to be placed in possession of a few notes regarding one of them, presented several years ago to a foreigner residing in Yedo.

This collection consists of no less than eight hundred and thirty six notes, issued by one hundred and fourteen different *Han*, thus giving an average of seven to each *Han*. Whether these figures represent the whole issue is, of course, open to considerable doubt, but they may yet be taken as being tolerably correct. The Toba *Han* (province of Shima) possessed notes of but one amount, while the Kagoshima *Han* (Satsuma) issued the large number of

nineteen notes of different denominations. The values are, in most cases, written in *cash*, but *monmé*, the *bu* and its fractions, and *riyō* are also used. The largest note is for 1,000 *mé*, equivalent to about 16 *riyō*, 2½ *bu*, and was issued by the Katsuyama *Han* (Echizen), and the smallest denomination is 2 *cash*, for which sum notes were put into circulation by the Asaō (Bitchū) and Miyadzu (Tango) *Han*. In some places, however, various articles of produce and manufacture were used in the stead of money. Thus, in the *Han* of Komono (Isé), Okazaki (Mikawa), and Obama (Wakasa) notes were issued for different quantities of rice varying from 5 *gō* to 4 *to*. But in this respect the Kanō *Han* (Mino) affords the most curious specimens: its notes were but five in number, and are for 2 umbrella rings, 3 ditto., 1 umbrella, 2 ditto., and 15 *monmé* weight of silk thread, respectively. In that province umbrellas were a staple article of manufacture, and the rings to which allusion is made are the wooden rings which work up and down the handle and to which the ribs are attached.

The earliest date marked on the notes is the period Kiōhō (1716-1736), during which time some were issued by the *Han* of Kishiwata (Settsu), Kambé (Isé), Kashiwabara and Sonobé (both in Tamba), Tottori (Inaba), Akō (Harima), Tsuyama (Mimasaka), Tokushima (Awa), and Marugamé (Sanuki). Large numbers are undated; and some are marked with the month only, without the year. The latest date is during the present period of Meiji, which commenced in 1868.

The paper used in the manufacture of these notes appears to have been similar to the tough fibrous article to be found in the Government *kinsatsu* of the last issue but one. The most common colour is a light grey-brown, but a few are almost white, while others are green, deep orange, and even crimson. The lettering and the patterns on the face and back are marked with black ink. One set of twelve notes is very tastefully decorated with representations of the signs of the zodiac; and on others are engravings of the god of wealth, or of storks, junks, plants, &c. The general shape is oblong, but the size varies considerably in different *Han*. Some of the notes, particularly those for the smaller amounts, are exceedingly narrow (the breadth in some cases being only about ¾ inch) but those for higher denominations are as a rule about three times that size. The length is about 6 inches, on an average. The face of the note is commonly divided into two portions, each surrounded by a border of various designs. In the upper space is marked the value, and in the lower the name of the *Han*. On the back are inscribed characters, differing widely in meaning. In some cases they record the date, in others the proportion borne by the value of the note in question to that of the others issued by the same *Han*. As might be expected, many of these *kinsatsu* are so worn and otherwise defaced as to be hardly legible, and it is a matter for wonder that any of them should have passed through the wear and tear of more than a century back in such a manner as to be still in tolerable preservation.

The collection, as a whole, is very valuable and intensely interesting, although it is of course impossible, in mere written description, to do more than touch upon the principal points that attract attention upon an examination of these old relics of the feudal system in Japan.

SHOSEI.

THE TIMES OF TAIKO.

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GOYEMON.

Chapter X. THE ENVOY'S BODY-GUARD.

AFTER Seta Kamon's departure, Hidetsugu remained a long time seated in the Tea Pavilion, scarcely moving from the position in which his visitor had left him. He was glad to be alone, not because he wished to think, but rather indeed to avoid the necessity for thought. It was pleasant to turn his mind away from the truth and let it roam among reminiscences now doubly precious; pleasant to watch the sun wrap himself in fleeces of gold and silver as he sank to rest, and see the face of the lake wreathed into smiling ripples as the carp sailed out from the shadow of the willows; for nature was kind, and looked at him, it seemed, with eyes that

sympathy clouded. But when the dusk had nearly deepened into darkness, he sent for his chief comptroller, Fuwa Bansaku.

Fuwa owed his high position, his wealth and everything he possessed in the world—he would have declared himself to Hidetsugu's generosity;—others would have said to unselfish industry and matchless fealty. Perhaps the truth lay between the two versions, for whatever the comptroller's merits were, it is certain that the vacillating Minister found a fascination, easily understood, in his servitor's powerful frame, in his ample countenance beaming all over with joyous honesty, and in the atmosphere of active steadfastness that surrounded him so sensibly as to be almost oppressive, had it not been softened by an eye gentle as a girl's. Bansaku's normal belief was that all men were loyal and upright. Nor was this, in his case, an entirely credulous estimate, for the darkest nature could not but emit some answering glimmer, when brought into contact with the strong light of his own probity. Side by side with this faith, however, he guarded another conviction, apparently at variance with his kinder creed, but in truth necessary to its existence among the evidences of his fellows' guilt. He held that human malice can command alliances with superhuman agents. They could not be all fables, those stories that related how poisons that wasted the stoutest bodies and corrupted the purest hearts, had been often administered by invisible hands working in obedience to incantations and sorceries, and in the Lady Yodo's interested hatred, he found an easy explanation of his master's mental malady.

And, indeed, the fitful nature of the minister's excesses seemed to be directed by some unnatural agency, for today, seated among the ladies of his household, he would listen to soft music or compose long songs; tomorrow, he would steal home from a midnight ramble with the blood of three or four luckless travellers on his sword blade; one full moon saw him rapturously gazing at her melancholy splendour from the top of some watch-tower; the next found him on his knees in the same place, blowing the match of an arquebuse, and speculating what chance passer by would receive its first bullet. To Bansaku alone he was always the same kind, confiding master, and it was much easier, as well as pleasanter for the simple-hearted vassal, to imagine the promptings of some transient diabolism, than to conceive that his benefactor's handsome face hid passions strong enough to induce such horrors as men laid to his charge.

When the comptroller entered the pavilion, he found Hidetsugu engaged in tracing some characters on a paper that lay beside him. Even the brief glance that precedes a vassal's obeisance detected evidences of deep trouble in the minister's mien, while the slow, abstracted efforts that directed his pen as it painted rather than wrote the letters, indicated a mood drifting towards the maturity of some unwelcome purpose. Yet, with the tact of pity, Bansaku refrained from inviting any premature confidence, and kneeling silently before his master, sympathy gradually assimilated his aspect to that of the man he confronted.

When Hidetsugu had finished writing, he pushed the paper carelessly forward with the handle of his pen, and the comptroller, taking it, read a transcript of the intelligence brought by Seta Kamon that afternoon. Whether by intention on the writer's part, or whether he had unwittingly copied from the tablets of his memory words indelibly fixed there by their consequence, Bansaku knew from their construction that the sentences were recorded as they had been addressed to the minister. He therefore asked:—

"Whence has your Excellency obtained this intelligence."

"Bansaku," replied the minister, "did you see a man standing on the brink of a rapid river with a large stone in his arms, should you not rather put out your hand to stay his leap, than stop to enquire where he picked up the stone?"

"Your Excellency, I was wrong,"—said the comptroller, simply. "I spoke like a child whose words precede his ideas. But surely there is nothing so critical in your Excellency's present position?"

"I can conceive nothing more critical,"—answered Hidetsugu, "than the position of one called on to refute charges his judge desires to establish. It were more manly and wiser, I think, to accept the foregone conclusion, and seek some method of averting its consequences, than to solicit equity from injustice."

As he spoke these words, the minister's composure was disturbed by an access of dark anger, so little familiar to Bansaku that he turned away in distress, and fixed his eyes again on the paper he still held in his hand.

"There may be no more truth in this statement, your Excellency,"—he said, pointing to the writing, "than in the slanders it attributes to your father's courtiers."

"My informant could have no object in deceiving me, whereas the Regent's desire has given their cue to my traducers,"—replied Hidetsugu, who however glad he might have been to see Kamon's story disproved, resented any distrust of its veracity after he had himself transmitted it.

"Your Excellency's father will not do an injustice, nor condemn without a hearing,"—said Bansaku with a quiet assurance that, even while it convinced Hidetsugu, impelled him to combat his conviction by recrimination.

"If the Regent's conscience,"—he said, "were clear of injustice, he would not see Sen no Rikiu's face in the embers,* and if he were himself less fond of ostentation and magnificence, he might be also less prone to detect this appetite in others. Was not his first act after he became Regent, to build this palace, and was not the Emperor's reception here six years ago made the occasion for a display of pomp and equipage such as Japan has seldom seen?"

Bansaku made no reply. He could not justify Sen no Rikiu's sentence, nor deny that men remarked the Regent's love of parade, and found in it an evidence of his vulgar origin.

But Hidetsugu knew well that such accusations could never impair Bansaku's reverence for his former master, Taiko. He did not therefore urge them, but resumed in a calmer tone:—

"It has not occurred to me yet to consider what course I shall pursue tomorrow, when the Regent's envoy arrives; perhaps because I feel that nothing I can say will avail much."

"Your Excellency surely does not think so,"—said Bansaku earnestly. "You have but to declare your innocence, and let the nature of Sir Yukinaga's message dictate the details of your answer. After all, the judge is your Excellency's father."

All through this interview, Bansaku persistently spoke of Taiko as the minister's father, while Hidetsugu, with equal care, avoided any reference to the Regent, except in his official capacity.

A silence of some minutes ensued. The Minister seemed to be pondering Bansaku's advice, and the latter devising some argument to induce its adoption, when suddenly Hidetsugu said:—

"Bansaku, if it were in your power to aid me, could I count on you?"

The peculiar tone of this question separated it completely from the conversation that had preceded, and set it forth as the real index of the master's business with his vassal. Bansaku's answer showed that he in part appreciated his interrogator's meaning.

"My life belongs to your Excellency,"—he said; "If it can serve you, I offer it with pleasure."

Again Hidetsugu sat silent, for his defection was too young not to be abashed in the presence of such loyalty as Bansaku's. He scattered and assembled the embers in the brazier, plunged the silver tongs in the ashes and swayed them impatiently backwards and forwards, and when he again spoke, it was easy to see that his words still only approximated to his purpose.

"I have heard you mention an art called stealth-craft,"—he said. "You have made it an especial study, have you not?"

"Yes, your Excellency," replied the comptroller. "When I was still your chamberlain, I made the acquaintance of one Ishikawa Goyemon, who is certainly the most accomplished master of that art in the empire, and from him I learned something of its practice."

"Who is he then, this Ishikawa?" asked the Minister. "He is the descendant of a very old family, your Excellency," answered Bansaku, "though not at present borne on the roll of any clan. He seems to have ample private means, and when in Kyoto, leads a life of ease and luxury, but at times I lose sight of him for months together."

"Is he then a connexion of yours?" demanded Hidetsugu.

"No, your Excellency," replied the comptroller, "he became known to me by a mere accident some six years ago. It was at the time of the Imperial progress. Ishikawa had, it seemed, rescued a blind man from three half drunken equestrians,

*It was reported that for many years after Sen no Rikiu's death, his face used to appear to Taiko in the heart of the fire and sometimes in the smoke of the lampwick. F. B.

who were about to thrust him inside the barriers. The equerries followed Ishikawa to an inn, and attacked him when he was sitting upstairs unarmed, but he leaped from the balcony into the garden, and knotting a large stone into his girdle, wielded it with such dexterity that he killed two of his adversaries and stunned the third without receiving a wound himself. I happened to be in the next house at the time, and seeing the affair, the great strength and address of the man attracted me to seek his acquaintance. I have often offered to solicit your Excellency's patronage for him, but he has a strange antipathy to all restraint, and says his habits have made discipline and service impossible to him."

Impatience at the recital of these details seemed at last to have imparted resolution to Hidetsugu. Pushing aside the brazier suddenly and lowering his voice, he said:—

"What does this art enable you to do, that is not equally possible to one untaught?"

"If your Excellency would explain the nature of the service you require of me, I could answer at once whether it falls within the province of my art:"—replied the comptroller, for, seeing that the aspect of his own desires was still repugnant to Hidetsugu, he avoided any explanation that might facilitate their expression.

"I have not said that I require any service connected with your art:"—answered the Minister haughtily, "but suppose I asked you whether the science you have learned from Ishikawa would enable you to make your way through guards and sentinels, and overcome all the precautions against surprise that surround such an one as—myself, for example, what would you reply?"

"I should reply, your Excellency," answered Bansaku, "that the success of such an attempt depends on a condition not included in your Excellency's statement."

"A condition more important than the presence of the guards and the excellence of the precautions!" asked Hidetsugu in astonishment.

"Yes, your Excellency," said Bansaku firmly. "And what may that condition be?" demanded the minister.

"The knowledge that failure would not entail any consequences more disgraceful than the death of the agent:"—replied the comptroller, looking earnestly and with some air of expostulation into his master's face.

The Minister turned away and lapsed into a reverie that betrayed no less perplexity than disappointment. He had forgotten that honest men are only able when their aims are honest, and reminded of this truth by the comptroller's indubious reference of result to the nature of the motive, he found no arguments to control his own or his vassal's conviction. He had looked also for Bansaku's aid in the development and arrangement of his still crude projects, but finding that though he might reckon on his servant's devotion, he could not command his accordance, he resolved to defer his appeal till urgency should make it easier as well as more cogent.

Bansaku, however, though he refused to admit the extent of Hidetsugu's treason till the sequel of this conversation subsequently disclosed it to him, did not depreciate the importance of the crisis, complicated as it was by treacherous influences working at both courts. Leaving the palace of pleasure, he immediately visited Kimura and Tajima, the Minister's monitors, and engaged them to join him in endeavouring to induce Hidetsugu to adopt a policy that might defeat the plots of his enemies.

The texture of Ishida Mitsuari's schemes was too subtle to obscure the discernment of these honest servitors. Not one of them believed that the disgrace of his adopted son would really accord with Taiko's wishes, and in this faith they selected direct communication between the Regent and the Minister as the condition most likely to secure a happy result, and therefore most worthy to be the object of their action.

At daylight the following morning, the three men repaired to the Palace of Pleasure. Their positions at the court generally secured them speedy access to the Minister; but on this occasion they were shown into the waiting-room, and informed that his Excellency was too much indisposed to see them immediately. To Bansaku, who could not endure delay between design and execution, this accident was exceedingly disquieting, but his companions reminded him that the morning was still young, and that they might reasonably have anticipated some tardiness.

Still as the hours crept on, and pages, coming in from time to time to offer refreshments or rebuild the fire, invariably

returned the same answer:—"His Excellency was lying down and had given orders that he was not to be disturbed;" the three men, no longer attempting to reassure each other, sat watching the shadows shorten with an anxiety they scarcely attempted to conceal. The comptroller's solicitude far exceeded that of his comrades, for not having imparted to them his true suspicions of the Minister's mood, he alone was tormented by a misgiving that this seclusion signified the elaboration of some scheme necessarily disloyal, since it was concealed from servants known to be loyal.

Towards noon, they became aware of a bustle in the palace, and presently the sounds of various arrivals reached them from the vestibule, which lay but a little beyond the place where they were seated. But the visitors, whoever they were, passed by the doors of the waiting-room without pausing, and took their way apparently in the direction of the Audience Hall. Bansaku, seeing that his companions were no less bewildered than himself, rose and, throwing open a panel, disclosed the corridor along which the stream of arrivals was flowing. Then they saw that this stream was discharging itself into the Hall of Audience, a great part of which it had already filled with the chief officers of the court, all in their robes of ceremony and marshalled according to the order of their precedence.

"Gentleman," cried a page bursting into the room, "have you received the letters I left at your houses this morning?"

"We have been at the palace since dawn, answered Sir Kimura. "If there were any letters for us, why were they not delivered here?"

"We had them last night, Sir. We have been distributing them since last night. What's to be done? A good two miles and only half an hour!" exclaimed the page, rising suddenly and making for the door, and then as suddenly returning and falling on his knees.

"What were the letters about, Uchida?" demanded Bansaku:—"You evidently know their contents or you would not be so disturbed about their miscarriage."

"That's just it, Sir. They were copies of a general order of His Excellency's, desiring the attendance of all the chief officers to-day to receive an Envoy from the Regent."

The monitors looked at each other uneasily. Never before had Hidetsugu taken any step of this sort without consulting them. Indeed, according to the usual chain of authority, general levées, receptions, or missions of envoys, and all matters lying outside the daily routine, fell under their immediate control, so that they naturally drew uneasy anguries from this unwonted action of the Minister's. Careful, however, to conceal their disquiet from others, Sir Tajima turned to the page and said quietly:—

"If that be all, no harm is done, since we are here."

"Yes, but—interposed Sir Kimura, holding up the sleeve of his mantle and pointing to it significantly.

It was true. Mole-hills beget mountains, and here was the action of three resolute men paralyzed by such a petty embarrassment as the lack of a robe of ceremony!

"If we have time to get home and back before the Envoy's arrival, it may be all right still:"—said the ever-hopeful Bansaku, starting to his feet and throwing open the door. His companions, though not so sanguine, showed no less alacrity, and threading their way across the throng of arrivals, the three men were soon urging their horses rapidly through the streets.

A large crowd of idlers had now gathered before the palace gates, attracted by the equipages of the various officials. Some, especially those who found themselves nearest the line of processions, sat in the conventional posture of respect, but the main part standing, stared boldly at the nobles and grandees as they passed.

"It's a fine thing to ride in a lane between two hedges of gentlemen, and have your rain coats and tea-kettles carried behind you by men in livery," mused a bean-cake merchant, who had rested his boxes on the ground and stood leaning lazily on his bearing-pole.

"Yes, and be ready to cut yourself open if the Minister's hawk flies wild, or his verses scan badly," mumbled a sparrow-catcher, his voice deadened by the folds of a black hood that enveloped his head. "A bean-cake vendor with a good market is a happier man than many a banneret."

"You mightn't think so if you carried the boxes for a few days, my master:"—retorted the other. "Bird-lime and a bamboo rod are a cheap stock in trade."

"Bean-cake or bird-lime, you can't put more than a pottle

in a pottle bag, Mr. Merchant. I take it, we've all a pretty equal nodding acquaintance with good and evil luck, but the carle that crawls in the by-ways runs less risk of being roughly jostled than the count that struts in the thoroughfares."

"Mr. Sparrow-catcher is in the right," chimed in a round little man, whose enormous obesity kept him solidly planted in his place, despite the occasional shocks of the mob. "Better sup from a platter with old chop-sticks than have a stiletto served to you on a lacquered salver. Look at Mr. Comptroller there, what a pucker he's in and what a pace he's riding at. How do you know with all his stout honesty he hasn't got his 'route for the shades' in his sleeve."

"You've shot wide there!"—said the sparrow-catcher, who seemed to dislike community of sentiment almost as much as contradiction. Fuwa Bansaku's face is the last place you'll find any token of danger to himself."

But the further progress of this colloquy was interrupted by a cadence of marshalmen's voices, indicating the advent of another dignity. "Back ye, back ye, back ye" droned the marshalmen with the perfunctory intonation of long habit, and "back ye, back ye, back ye" echoed half-a-dozen urchins, who had climbed into the boughs of a cherry tree, and repeatedly deluded the bystanders by descrying imaginary processions of marvellous magnificence from their vantage ground.

"Take care, my lass," cried the sparrow-catcher, stretching out his hand to stay a slender girl of sixteen or seventeen, who had nearly stumbled over the bean-cake vendor's boxes.

"Thank you, Sir," said the girl, raising a face of singular beauty, but flushed with anxiety and weariness; for she carried on her back a sturdy child, half as heavy as herself, and had received more than one rough buffet in her efforts to shield the boy from the pressure of the mob.

"It's no place for little lasses strapped to big children to be wandering about!"—growled the sparrow-catcher, at the same time, however, planting himself sturdily behind the girl and protecting her by voice and action.

"Should you like to be shut up in a room with nothing to do but write verses and play the harp, child?" asked the bean-cake merchant, looking admiringly at the girl.

"No, Sir,"—she answered laughingly. "I should soon be tired of that, for I don't know how to do one or the other."

"Then I advise you not to show yourself often near the palace gates, for if the Minister sees such a flower as you on the way-side, he won't leave it long uncultured."

"Aye, aye, and if she don't rhyme and dance then, she'll have a cold pillow, and perhaps make the acquaintance of the dissecting knife *," added a rough voice from the crowd.

The poor girl, finding herself the centre of so much observation, blushed deeply, and perhaps to hide her confusion, stooped down and deposited her living burden on the ground.

"Shame on you, my masters," remonstrated the sparrow-catcher. "A girl's no safer from your tongues than she is from the Minister's eye."

"Mr. Sparrow-catcher wants to plaster her feathers with his own lime of fair words," cried a shrill voice from the cherry-tree.

"I'll plaster you, my lad," said the sparrow-catcher, and turning, he thrust his long lime-smeared rod among the branches, eliciting a chorus of screams from the cluster of urchins.

But a scream of a very different nature caused him to turn quickly, and he saw, to his dismay, that the child had escaped from its sister and was standing in the middle of the lane left by the crowd, and up which the procession of the Envoy, Sir Yukinaga was now advancing.

"Tell it to come back, girl, instead of screaming," urged the sparrow-catcher earnestly, himself beckoning and calling to the child.

But the girl, taught by the hyperbole of household tradition that to cross before a noble's retinue was a synonym for a sword-cut, could only hide her face and moan, while the man, despite his efforts to seem calm, gesticulated so excitedly that the child, terrified by his earnestness, and bewildered by the uproar that had suddenly sprung up on either side, sat down in his place and burst into tears.

What was to be done? To pass before the cavalcade

was to incur at least blows, nay possibly to imperil life, while to leave the boy where he was could entail no more serious consequences than a scolding for his sister. A little prudence would at once have inclined the balance towards the latter course, but either the man was not prudent, or else the glance of anguished appeal that met his, as the girl plucked her tearful face from her mantle, excited some feeling nobler than prudence. The leader of the procession was still some five or six paces distant, as the sparrow-catcher leaped towards the child. His apparition between the two living walls that lined the street acted like the breath of the genius that guards the groves of Gongen, for the restless turbulence of the motley mob was instantly petrified into a rapt and statue-like silence of suspense.

It was indeed a sight such as even in those stirring times might make the coldest heart throb: the man, whose life had always been narrowed by poverty and hardship, throwing himself into the jaws of a terrible peril, under the impulse of a feeling that the kind and the cruel alike respect, and the proud pageant of the cavalcade, smoothly and steadily approaching, at every step exchanging its air of solemn grandeur for an aspect of grim menace, as it shortened the distance between itself and its victim. Traditions of many and many a fatal sabre-stroke that had disencumbered the front of a procession, made it impossible any longer to plead ignorance in extenuation of such an act as the sparrow-catcher was now performing, and the most inexperienced of the spectators felt that the man's life depended in a great measure on so fickle an element as the humour of the officer heading the retinue, whose long swords craftily adjusted in his belt, offered their hilts to his grasp with ominous significance, as though they solicited employment. There was also such an immense disparity between the actors in the scene, between this humblest of hunters, whose meanly clad body would have been deemed a fair target for the fleshing of his maiden sword by any blue-blood roisterer, and that group of haughty gentlemen, pacing along in all the magnificence of aristocracy and equipment, that the temerity of the first and the absolute might of the second became doubly conspicuous in each other's presence.

But the man had already reached the child, raised it and turned to escape. After all, he had not insulted the procession, since he had only removed what would otherwise have obstructed its progress, and the justice of his action seemed to be recognized, for the leading officer made no gesture of anger or reproof. People began to wonder what they had feared, and the girl, smiling through her tears, stretched out her arms to receive the child, when her glad exclamation of gratitude was suddenly changed to a cry of horror, and at the same moment there rose from the crowd one of those indescribable sounds, half gasp, half groan, that betrays emotion incapable of either expression or suppression, for whether owing to the struggles of the boy in his arms, or from some awkward heedlessness of his own, the sparrow-catcher in turning, had thrust the lime-daubed point of his long rod full in the face of the procession-leader, and the officer, grasping the rod so as to check the man, had leaped angrily forward, plucked his long sword from its scabbard, and swept it across the sparrow-catcher's back from shoulder to waist.

Though the dexterous rapidity of the stroke left no room to doubt its issue, the wounded man had strength to struggle to his place and restore the child to its sister's arms before he fell.

"It was my own fault, lass,"—said he soothingly, as the girl's tears dropped on his face. "After fifty years' practice, I should have known how to manage the lime-rod better."

"Oh, Sir, is he badly hurt?" exclaimed the girl in an agony of grief, addressing an officer apparently of high rank, who had pushed through the crowd, thrusting men from his path as if they were children, and was now examining the wound.

"Not hurt at all, my lass," murmured the sparrow-catcher. "I'm very thankful to die so easily, for I couldn't have used the rod much longer."

"Old man," said the officer, for now that the sparrow-catcher's hood was removed, his wrinkled face and whitening hair showed the footprints of some threescore summers, "have you no message for your friends before you go?"

But there was no answer. The sparrow-catcher was dead.

"Namu-amida-Butsu," said one of the spectators, stepping forward, and drawing his black hood once more over the dead man's face. "The Gods comfort the child that waits for him at home."

* A allusion to a brutality ascribed to Hidetatsu, but on very doubtful authority. F. B.

"You know him then?" asked the officer.

"Yes, Sir," replied the man, "he and his little granddaughter were my neighbours."

"If that be so," said the officer, "you will do a kindness both to the living and the dead by conducting this young girl to his house. All that we can offer the man now, is revenge for himself and charity for those he leaves. And you, child," he continued, turning to the girl who sat rocking herself backwards and forwards, and sobbing as if the intensity of her grief could never find complete expression, "since this old man's last act was undertaken for your brother's sake, I will ask you to carry this packet to his granddaughter, and tell her, when you give it, that Ishikawa Goyemon promises her grand-father's murderer the same death his victim died."

With these words he placed a rouleau of gold in the girl's hand, and walked away, leaving the people staring at one another and at the rouleau which contained more money than many of them had ever seen in their lives.

"Who is he?" demanded several, each addressing his neighbour. "Such a man must be well known somewhere."

"For my part," said the bean-cake vendor as he shouldered his boxes, "I don't know who he is, but I tell you what: there's not much to choose now between this dead man and him that killed him, or I'm very much mistaken."

The next morning, the officer who had led the procession of the Envoy, Sir Yakinaga, was found lying dead beside the castle moat. He held a drawn sword in his hand as though he had fought for his life, and his body was almost cut in two by a blow that had divided it from shoulder to waist.

(To be continued in our next.)

"THE PEOPLE ARE LOSING THEIR INDIVIDUAL RIGHTS AGAINST THE GOVERNMENT BY THEIR OWN ERROR."

(Correspondence of the *Choya Shimbun*.)

I OBSERVE that in several cases, the people, by their own fault, are losing their individual rights. I will give an example.

Our Government, at the time of the Reformation, 18th January 1871, removed the limit on interest on money; since which time money has been at the rate of 15 or 16 per cent, per annum; but lenders seized their opportunity and increased the rate 5 per cent more, making it up to 20 per cent. And then, as borrowers did not take much notice of this, but consented to anything lenders asked; lenders again availed themselves of the chance, and demanded commission fees besides the interest. And though borrowers were not pleased at this, they were obliged to comply with the demand, in order to release themselves, for a time, from the bill-collectors, &c., who were dunning them for payment.

Thus, when the time for repayment arrives, various difficulties occur; and after giving a good deal of trouble to the judges, borrowers finally come to bankruptcy.

Although borrowers bring this result on themselves, the blame, in reality, is on the lenders: but if one considers a step further, it is seen that the borrowers are also blameable. For instance:—A comes to a money-lender, and asks to borrow some money at 15 per cent interest: to which the lender complies, when presently B comes and asks for the same, which the lender declines, having previously promised A his money. B then says, that, if A was to pay 15 per cent, he would pay 20 for the loan; to which the money-lender gladly says 'all right.' Then A comes again, and the lender, with a regretful look, acquaints him with what has just taken place. Then says A:—"if B will pay you 20 per cent, I will pay you 'reikin' (money given in acknowledgment of a favour) or a commission fee,"—which brings it up to 25 per cent. It is like throwing meat to a hungry tiger, but this is the actual condition of things among the people.

The Government, unable to overlook this, has again decreed, in the 10th year of Meiji, a legal limit of money interest. But, although this is a favour from the Government to the people, in reality the latter have thereby lost their freedom of action in this particular by their own error. And according to what I have heard, people—though not in this district, acting against the orders of the Government, have inflicted on themselves a more serious injury. The rate of interest is now divided into two:—

that of private arrangement, and that of the legal rate; so that, though it is plainly written on the surety paper that the interest is to be paid at the rate of 12 per cent; it is privately arranged to be 20, and the extra 8 per cent is deducted beforehand; so that, if the principal is 100 yen and the interest to be one yen, per month; then the 8 per cent extra is calculated up the time of expiry of the contract, and this amount deducted from the principal when handing it over at first. And, added to the above, they charge commission-fees. So no one can escape from the covetousness of the money-lenders.

Alas! how can the Government stop this hidden calamity? I should say, without hesitation, that the only means to prevent it is the establishment of a National Assembly. Although the practice of gambling has been long since strictly forbidden here; it is not so injurious to people in civilized countries: in fact, it is not too much to say that it promotes the circulation of money; but, in uncivilized countries, it is a fearful thing, and not a few of our countrymen get ruined, and even turn to robbers; and thus good people have been greatly injured. Government therefore, by establishing a strict law, attempted to sweep away the practice. This was also from the people's error.

It must not be supposed, because I argue thus, I consider gambling and taking interest for money as of the same nature. But one who violates the law is a criminal, offending against the Government; and one who is the cause of loss of our individual rights is also a criminal, offending against the people. Should there be any who agree with me in my opinion, let us 'strike drums' (sound an alarm) and look out for the criminals.

EXTRACTS.

CURRENCY QUACKS, AND THE SILVER BILL.

AS soon as the war was over, and economic questions began to be of chief importance, a number of ambitious politicians sought to rise to control in each of our great political parties by proposals to oblige those who had trusted the United States in its darkest days, to receive its non-interest-bearing promissory notes, of an unlimited issue, in compulsory exchange for its interest-bearing bonds. The scheme grew popular. Many public men of rank and ability succumbed to the "greenback" movement, and floated with the current which, before it gathered headway, they should have stemmed, and fought, and turned. Such abdications, indeed, of the function and duty of leadership, in Ohio and Indiana, are the open secret of the endemic financial heresies in those States, and of the sequacious compliances, timidities, ambitions, and even the dishonor, of some of their foremost men, in the crisis of last winter and at the present hour.

The defeat, however, of the greenback demagogy, after varying fortunes and a long struggle, was complete in each political party. Despite the packing of the United States Supreme Court with judges committed to the reversal of its legal-tender decision in *Hepburn vs. Griswold*; despite the degradation of court, government, and country, in the reversal of that decision by *Knex vs. Lee*; despite the stoppage of the resumption policy preparing by Secretary McCulloch; despite the illegal inflation authorized by President Grant; despite the annual improvidence which in eleven years of peace took from the people in Federal taxes thirteen times the whole amount of the legal-tender notes, and squandered four times that sum in useless expense without accumulating any reserve for their redemption—at last the inflationists calling themselves Republicans were foiled in their long endeavor to capture the control of that party. So, too, despite temporary and local successes, the demagogues calling themselves Democrats failed in their persistent effort to capture the control of the opposition party, or interrupt its historic character and fame. In the nomination of Governor Tilden, upon a hard-money, resumption platform, at St. Louis, they met their Waterloo.

It was in such a condition of the country, and of our politics, that the most portentous calamity befell, of which republican institutions have ever borne the shock. Although Governor Tilden was chosen to the presidency by a majority of the popular vote, and a majority of the electoral vote, the control of political events and policies, and the selection of a Chief Magistrate whose capacity in public economy and finance had been illustrious, were whipped out of the people's hands by a conspiracy of force and fraud, to which the late President and eight members of the Electoral Commission furnished the conditions of a successful issue. A candidate whom the people had rejected attained and administers the presidential office.

Nemesis has not delayed. And hardly will she be adjured by vows of a prosperous immunity to fraud. The majority party lacks the use and the responsibilities of its power, primacy of leadership, the web-like affiliation of public trusts and party ties. The minority party has the semblance of power without the substance, the responsibility without the possession. Its leadership lacks authority. Its executive initiative is pure impotence. Its executive veto is an arithmetical, not a moral, force. Its head has been obliged to be the channel, not the organ, of a people's will—a vessel of dishonor, not of honor. He has been constrained to abjure the policy his followers had defended, and abandon the usurpations in which their faith was reposed. And after bestowing judicial, diplomatic, or civil trusts upon the scoundrels who perpetrated and the lawyers who defended the crime by which he rose, Senators are tightening their grasp upon the perquisite renounced in their platform, and bruise the hand, gloved with civil-service reform, that he stretches forth from the White House to gather up out of chaos the elements of party order and rule.

These facts are here touched, not in order to reargue a past or anticipate a coming debate, but to point their relation to an imminent peril. For this political disorder and relaxed party allegiance in a country of which the government has hitherto been conducted through party contentions, are precisely the circumstances which to-day make it possible for the advocates of dishonest finance, although lately routed in each party, to unite their forces outside both; and, joined by many an honest but misguided man, to carry through the two Houses of Congress, when controlled by opposing parties, a bill perfidious to pledges in respect to the public faith, given by both. In fact the "Silver Bill" would be a faithless reversal of the policy of the country itself in a matter concerning the public interests and the public honor. Under the guise of a legal pecuniary advantage promised to the burdened tax-payer by demagogues willing to promise anything if so they may but thrive, it is in fact a measure depreciating silver itself, damaging the credit of the United States, as the markets show; and will be yet more costly in its increase of the annual burden of a gigantic debt, in deepening and prolonging the present industrial and commercial depression, and in the new and needless suffering it will inflict upon millions of the laboring poor by chasing affrighted capital, that might employ them, back to its hiding-places and its hoards. The bill* would never have been dreamed of had not the price of silver fallen from the par 100, below the paper promise to pay a "dollar"—now worth 98, down to the level of 90 to 91.

Now, it is not to be expected that the sequelæ of any such enactment as this in our prices, commerce, currency, and finance, should be forecast by one voter in ten thousand. The reason is plain. It involves the intricacies and the principles of a science in which the experts are few. That science deals with an order of facts touching indeed the interests of all, but not therefore appreciable by all in their relations, results, and laws. Consider this a little. One expert, of practical experience and high scientific training, and who, by-the-way, warns us of the folly of receding from the gold age to the silver age of currency, is W. Stanley Jevons, an ex-master of the Australian Mint, author of a celebrated treatise on "The Principles of Science," of another on "Money," and Professor of Political Economy in University College, London. He is a man who has done more for his science than any other since Adam Smith, for by applying the differential calculus to its familiar notions, he has given to it mathematical precision and a future of assured and widening power. And this is his way of speaking of political economy,—as "already consisting of many extensive branches of inquiry, among which one is a subject of such appalling extent and complexity as the currency." So that we shall hardly, all of us, see our way clear in this matter, by the mass-meeting method, although in Chicago they think otherwise, and an assemblage there resolved the other night that they were "terribly in earnest, and that nothing short of absolute and unconditional surrender to their demands will be accepted." Nor is this the way of Logan, a Senator of whom Illinois is now disenchanted, who is said to have proposed devoting a fortnight

* *Be it enacted, etc.*—that there shall be coined, at the several mints of the United States, silver dollars of the weight 4.22 grains Troy of standard silver, as provided in the act of January 18, 1857, on which there shall be the devices and superscriptions provided by such act, which coins, together with all silver dollars heretofore coined by the United States of like weight and fineness, shall be a legal tender at their nominal value for all debts and dues, public and private, except where otherwise provided by contract; and any owner of silver bullion may deposit it to such dollars for his benefit upon the same terms and conditions as gold bullion is deposited for exchange under existing law. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed.—[*Passed House of Representatives, November 5, 1877.*]

to the study of financial science, which at that time he knew nothing of, though afterward he knew less. Nor are such the views of Bland, of Missouri, who told the Senate Finance Committee that he thought the people of his district understood this matter, and this silver bill was what they wanted, and that it would save everybody eight cents on the dollar, and who threatened repudiation of the whole national debt if there should be resistance to such small scaling. Nor is this the way of Ewing, of Ohio, who says that "whoever by covert legislation changes the value of contracts is as accursed as he who moves his neighbor's landmarks," himself meanwhile preferring the blessings belonging to one who by open legislation changes the value of contracts, and debases a nation's standards. The late Charles Sumner was eminent by comparison with legislators such as these. Discussions in finance were little to his taste, but in a speech on return to specie payments he exhibited at least this qualification for his task, the knowledge that political economy has a literature and laws, and that he could do no better than be the mouth-piece of an adept like Amasa Walker.

In this view it is certainly discouraging to read the recent report* of the United State Silver Commission which is founded upon battalions of figures representing the store of gold and silver in the world in 1492, and the product and proportions since, tables which Bagehot justly thought and testified before the Goschen Silver Commission "were not worth the paper on which they were written." It suppresses or defers the testimony of the witnesses called before them, and appears to be the work of some hired dabster in all the misinformation that can be extorted from the statistics of national wealth and progress, and most of the misapprehensions that can be foisted into literature which has classified and construed them. Its law wants nothing but humor to make it a fit appendix to "The Comic Blackstone;" and, in a style shockingly hirsute, its author rattles on through one hundred and thirty pages, finding within himself the means of believing a thousand times as much as there is to believe, judging by experience, and pouring forth with never a dash of doubt more unflinching assertions about debts, values, credit, and prices, silver, gold, currency, and its volume, than all the first-rate economists, from Pierre Boisguilbert to Wm. G. Sumner, could demonstrate in a millennium, even if any one such assertion, so unqualified and cosmical, could perchance be true.

Yet it will not do to be discouraged. It is a bad outlook, but public opinion constitutes our court of errors and final appeal; and self-government, of the people, by the people, for the people, is not therefore a foredoomed failure, because at last their votes revise the reports of monetary commissions, and decide the fate of silver bills. The seaman who saves his ship by heeding the storm-signal need know little of meteorology. The farmer who gets his crop under cover before a predicted heavy rainfall need know nothing of isobars and isochisms. The people's votes support the Coast-Survey, which has mapped our shores, fathomed our harbors, sounded sea-slopes, and guarded the keels of our commerce, without one in ten thousand of us knowing its problems or its plans. Here it is quite the same, and the people's common-sense, as in other cases outside their ken, may be trusted to estimate shrewdly and fairly the influence of authority in matters of opinion.

Now Sir George Cornewall Lewis and Mr. Gladstone in their discussions of this just and great authority, owned by the wisest even more than by the weakest of men, lay down one rule as primary for those who wish to walk wisely where with their own eyes they cannot see the way:

"With respect to subjects of speculation and science the existence of an agreement of the persons having the above qualifications (ability, honesty, and learning) is the most important matter. If all the able and honest men who have diligently studied the subject, or most of them, concur, and if this consent extends over several successive generations, at an enlightened period, and in all or most civilized countries, then the authority is at its greatest height. . . . If ten credible witnesses agree in their testimony to a fact, the value of their concurrent testimony is more than ten times the value of the testimony of each. So the joint probability of the agreement of ten competent judges in a right opinion is far greater than the sum of the probabilities of the rectitude of the opinion of each taken separately. . . . Therefore as the agreement in a scientific opinion among competent judges widens its area, the chances of rectitude increase and the chances of error diminish in a perpetually accelerated ratio."

Consider now that most of the able, honest, and learned men in all or most civilized countries, who are versed in the speculations and science of political economy, after diligent study of the subject, after debates which have extended over successive generations

* The concise, masterly scientific minority report by Prof. Francis Bowen, of Harvard, concurred in by Banfill Gibson, of Louisiana, is but the jewel in the mountain, 22 pages of sense hidden amid 574 pages mostly rubbish.

during the present century, have come to an agreement or consensus that the single metallic standard of value coined in gold is best (not excluding silver over valued in fractional coins, and paper convertible with gold). The silver bill has absolutely no scientific support, for the small minority remaining of these able, honest, and learned men, who still contend for the superior advantages of a bi-metallic, double or alternative standard of value, condition the success of that scheme and their approval upon a congress and coöperation of the leading commercial states of the world; affirm that, if but one metallic standard of value must be chosen, gold is best; admit that several of the greater European nations have for the present no hope of using coin of either metal, and that the rest are steadily discarding the double standard and adopting the single gold standard, or have adopted it; declare that the Bland silver bill if a law would drive out gold, demonetizing it in the land of its greatest production; and oppose its passage as fatal to the bi-metalism they prefer.*

Concerning universal bi-metalism, whether it is desirable or no, and if desirable, whether possible or no, and if possible, whether possible soon or no, and how; and whether the coöperation of England can be constrained by increasing her Indian difficulties, or by a drain of gold set up by the United States opening for three days in the principal markets of Europe a public subscription to a loan of about £85,000,000 United States sterling consols; and whether, by such a measure, or by any act of ours, or by the arguments of Laveleye, Wolowski, Seyd, Say, and Courcelle-Seneuil, Germany can be led to retreat from her recognized embarrassments, and join the other great powers and the United States in making both metals full legal tender at the fixed ratio of 1=15.5; and whether or no the guarantee of all the governments would suffice to fix and maintain that ratio amid great possible fluctuation hereafter in the relative supply of either metal from new mines or cheaper production; and whether, as to the measuring power of total currency over total commodities, including long debts, the disuse as full legal tender of our small part, or even such disuse of any larger part, of the total of the precious metals, in the currency of European nations, or both, has brought down, or can bring down, the ratio of commodities in exchange for gold, here or throughout the world, effecting a universal fall of prices, when it is conceded that, even over the United States, with our bank-notes, checks, drafts, book-accounts, and clearing-house machinery to accomplish the great bulk of mercantile transactions, not twelve per cent. are done in cash, and in England not five per cent., to say nothing of the constant cheapening of most commodities by the steady advance in sciences and arts, the writer here defers the expression of any opinions whatsoever. It is a high debate, *inter apices*; and, besides, until the Copernicans have convinced the Ptolemaists, our readers who are ignorant of astronomy may as well refuse to acknowledge the heliocentricity of things. These are questions not now upon the carpet. The question under debate, lugged untimely into the public councils by eccentric quacks, mischievous and incapable to read in the horn-book of either school, is the Bland silver bill. In detestation of that, the Copernicans and the Ptolemaists of political economy are at one. The mono-metallists denounce it for demonetizing the best of the two metals, and the bi-metallists denounce it for that, and for postponing the restoration of both. So that the Silver Bill should be condemned by everybody who knows little or nothing of currency or coinage, lacks for any reason the ability to form a sound judgment for himself, and has the wisdom to accept one from those most competent to form and accredit such a judgment.

(To be continued in our next.)

MR. GILEAD P. BECK'S EXPERIENCES AS AN EDITOR.

"I was in Chicago Fifteen years ago. I wanted employment. Nobody wanted me. I spent most of the dollars, and thought I had better dig out for a new location, when I met one day an old

* What Milton calls "a horse-load of citations" from the majority of the economists were prepared for dumping into this foot-note, which nobody would have read, or, if reading, sensible readers might have read no more. It is safer to cite only from the small minority of the economists, namely, from the most active and impassioned of European bi-metallists, Henri Cernuschi, and the most acute and learned of them all, S. Dana Horton, of Ohio. Says Cernuschi: "This exportation of gold is inevitable if you establish bi-metalism, Europe remaining gold-mono-metallic. . . . Bi-metalism can only be rehabilitated by the coöperation of all the states, India included." In his "Silver Vindicated," published in the *Journal des Economistes* (xliv., 1876), with criticism by Léon Walras, another economist who has betrothed mathematics to the dismal science, Cernuschi says the only remedy is universal bi-metalism. Says Horton, in his "Silver and Gold": "The Bland bill means mischief. It is really an attack upon the bi-metallic system, the restoration of which is needed for the future prosperity of the world; and if it becomes law it will prove an obstruction to the prosperity of the United States. . . . Instead of the bimetallic standard, the result would be mono-metallic inflation in the dollar of the Fathers."

schoolfellow named Rayner. He told me he was part proprietor of a morning paper. I asked him to take me on. He said he was only publisher, but he would take me to see the Editor, Mr. John B. Van Cott, and perhaps he would set me grinding at the locals. We found the Editor. He was a short active man of fifty, and he looked as cute as he was. Because, you see, Mr. Dunquerque, unless you are pretty sharp on a Western paper, you won't earn your muck. He was keeled back, I remember, in a strong chair, with his feet on the front of the table, and a clip full of paper on his knee. And in that position he used to write his leading articles. Squelchers, some of them; made gentlemen of opposite politics cry, and drove rival editors to polishing shooting irons. The floor was covered with exchanges. And there was nothing else in the place but a cracked stove, half a dozen chairs standing around loose, and a spittoon.

"I mention these facts, Mr. Dunquerque, to show that there was good standing-room for a free fight of not more than two.

"Mr. Van Cott shook hands, and passed me the tobacco-pouch, while Rayner chanted my praises. When he wound up and went away, the Editor began.

"Wal, sir," he said, "you look as if you knew enough to go indoors when it rains, and Rayner seems powerful anxious to get you on the paper. A good fellow is Rayner; as white a man as I ever knew; and he has as many old friends as would make a good-sized city. He brings them all here, Mr. Beck, and wants to put every one on the paper. To hear him hold forth would make a camp-meeting exhorter feel small. But he's disinterested, is Rayner. It's all pure goodness."

"I tried to feel as if I wasn't down-hearted. But I was.

"Any way," I said, "if I can't get on here, I must dig out for a place nearer sundown. Once let me get a fair chance on a paper, and I can keep my end of the stick."

"The Editor went on to tell me what I knew already, that they wanted live men on the paper, fellows that would do a murder or a prize-fight right up to the handle. Then he came to business; offered me a triple execution just to show my style; and got up to introduce me to the other boys.

"Just then there was a knock at the door.

"That's Poulter, our local Editor," he said. "Come in, Poulter. He will take you down for me."

"The door opened, but it wasn't Poulter. I knew that by instinct. It was a rough looking customer with a black-dyed moustache, a diamond pin in his shirt front, and a great gold chain across his vest; and he carried a heavy stick in his hand.

"Which is the one of you two that runs this machine?" he asked, looking from one to the other.

"I am the Editor," said Mr. Van Cott, "if you mean that."

"Then you air the Rooster I'm after," he went on. "I am John Halkett of Tenth Ward. I want to know what in thunder you mean by printing infernal lies about me and my party in your miserable one-hoss paper."

"He drew a copy of the paper from his pocket, and held it before the Editor's eyes.

"You know your remedy, sir," said Mr. Van Cott, quietly edging in the direction of the table, where there was a drawer.

"That's what I do know. That's what I'm here for. There's two remedies. One is that you retract all the lies you have printed; the other—"

"You need not tell me what the other is, Mr. Halkett." As he spoke he drew open the drawer; but he hadn't time to take the pistol from it when the ward politician sprang upon him, and in a flash of lightning they were rolling over each other among the exchanges on the floor.

"If they had been evenly matched, I should have stood around to see fair. But it wasn't equal. Van Cott, you could see at first snap, was grit all through, and as full of fight as a game-rooster. But it was bulldog and terrier. So I hitched on to the stranger, and pulled him off by main force.

"You will allow me, Mr. Van Cott," I said, "to take this contract off your hands. Choose a back seat, sir, and see fair."

"Sail in," cried Mr. Halkett, as cheerful as a coot, "and send for the coroner, because he'll be wanted. I don't care which it is."

"That was the toughest job I ever had. The strength of ward politicians' opinions lies in their powers of bruising, and John Halkett, as I learned afterwards, could fight his weight in wild cats. Fortunately I was no slouch in those days.

"He met my advances halfway. In ten minutes you couldn't tell Halkett from me, nor me from Halkett. The furniture moved around cheerfully, and there was a lovely racket. The sub-editors, printers, and reporters came running in. It was a new scene for them, poor fellows, and they enjoyed it accordingly. The Editor they had often watched in a fight before, but here were two strangers worrying each other on the floor, with Mr. Van Cott out of it himself, dodging around cheering us on. That gave novelty.

"The sharpest of the reportes had his flimsy up in a minute, and took notes of the proceedings.

"We fought that worry through. It lasted fifteen minutes We fought out of the office; we fought down the stairs; and we fought on the pavement.

"When it was over, I found myself arrayed in the tattered remnants of my gray coat, and nothing else. John Halkett hadn't so much as that. He was bruised and bleeding, and he was deeply moved. Tears stood in his eyes as he grasped me by the hand.

"'Stranger,' he said, 'will you tell me where you hail from?'

"'Air you satisfied, Mr Halkett,' I replied, 'with the editorial management of this newspaper?'

"'I am,' he answered. 'You bet. This is the very best edited paper that ever ran. Good morning, sir. You have took the starch out of John Halkett in a way that no starch ever was took out of that man before. And if ever you get into a tight place, you come to me.'

"They put him in a cab, and sent him home for repairs. I went back to the Editor's room. He was going on again with his usual occupation of manufacturing squelchers. The fragments of the chairs lay around him, but he wrote on unmoved.

"'Consider yourself permanently engaged,' he said. 'The firm will pay for a new suit of clothes. Why couldn't you say at once that you were fond of fighting? I never saw a visitor tackled in a more loveable style. Why, you must have been brought up to it. And just to think that one might never have discovered your points if it hadn't been for the fortunate accident of John Halkett's call!'

"I said I was too modest to mention my tastes.

"'Most fortunate it is. Blevins, who used to do our fighting—a whole team he was at it—was killed three months ago on this very floor; there's the mark of his fluid still on the wall. We gave Blevins a first-class funeral, and ordered a two-hundred-dollar monument to commemorate his virtues. We were not ungrateful to Blevins.

"'Birkett came next,' he went on, making corrections with a pencil stump. 'But he was licked like a cur three times in a fortnight. People used to step in on purpose to wallop Birkett, it was such an easy amusement. The paper was falling into disgrace, so we shunted him. He drives a cab now, which suits him better, because he was always gentlemanly in his ways.

"'Carter, who followed, was very good in some respects, but he wanted judgment. He's in hospital with a bullet in the shoulder, which comes of his own carelessness. We can't take him on again any more, even if he was our style, which he never was.'

"'And who does the work now?' I ventured to ask.

"'We have had no regular man since Carter was carried off on a shutter. Each one does a little, just as it happens to turn up. But I don't like the irregular system. It's quite unprofessional.'

"I asked if there was much of that sort of thing.

"'Depends on the time of year. It is the dull season just now, but we are lively enough when the fall elections come on. We sometimes have a couple a day then. You won't find yourself rusting. And if you want work, we can stir up a few editors by judicious writing. I'm powerful glad we made your acquaintance, Mr. Beck.

"That, Mr. Dunquerque, is how I became connected with the press."

"And did you like the position?"

"It had its good points. It was a situation of great responsibility. People were continually turning up who disliked our method of depicting character, and so the credit of the paper mainly rested on my shoulders. No, sir; I got to like it, except when I had to go into hospital for repairs. And even that had its charms, for I went there so often that it became a sort of home, and the surgeons and nurses were like brothers and sisters."

"But you gave up the post?" said Jack.

"Well, sir, I did. The occupation, after all, wasn't healthy, and was a little too lively. The staff took a pride in me too, and delighted to promote freedom of discussion. If things grew dull for a week or two, they would scarify some ward ruffian just to bring on a fight. They would hang around there to see that ward ruffian approach the office, and they would struggle who should be the man to point me out as the gentleman he wished to interview. They were fond of me to such an extent that they could not bear to see a week pass without a fight. And I will say this of them, that they were as level a lot of boys as ever destroyed a man's character.

"Most of the business was easy. They came to see Mr. Van Cott, and they were shown up to me. What there is of me takes

up a good deal of the room. And when they'd put their case I used to open the door and point. 'Git,' I would say. 'You bet,' was the general reply; and they would go away quite satisfied with the Editorial reception. But once a week or so there would be a put-up thing, and I knew by the look of my men which would take their persuasion fighting.

"It gradually became clear to me that if I remained much longer there would be a first-class funeral, with me taking a prominent part in the process; and I began to think of digging out while I still had my hair on.

"One morning I read an advertisement of a paper to be sold. It was in the city of Clearville, Illinois, and it seemed to suit. I resolved to go and look at it, and apprised Mr. Van Cott of my intention.

"'I'm powerful sorry,' he said; 'but of course we can't keep you if you will go. You've hoed your row like a square man ever since you came, and I had hoped to have had your valuable services till the end.'

"I attempted to thank him, but he held up his hand, and went on thoughtfully:—

"'There's room in our plat at Rose Hill Cemetery for one or two more; and I had made up my mind to let you have one side of the monument all to yourself. The sunny side, too—quite the nicest nest in the plat. And we'd have given you eight lines of poetry—Blevins only got four, and none of the other fellows any. I assure you, Beck, though you may not think it, I have often turned this over in my mind when you have been in hospital, and I got to look on it as a settled thing. And now this is how it ends. Life is made up of disappointments.'

"I said it was very good of him to take such an interest in my funeral, but that I had no yearning at present for Rose Hill Cemetery, and I thought it would be a pity to disturb Blevins. As I had never known him and the other boys, they mightn't be pleased if a total stranger were sent to join their little circle.

"Mr. Van Cott was good enough to say that they wouldn't mind it for the sake of the paper; but I had my prejudices, and I resigned.—(*The Golden Butterfly.*)

ORIENTAL BANK CORPORATION.

INCORPORATED BY ROYAL CHARTER, AUG. 30, 1851.

Paid-up Capital £1,500,000.

Reserved Funds..... £ 500,000.

The Corporation grant Drafts, and negotiate or collect Bills payable at London, Paris, Bombay, Calcutta, Colombo, Foochow, Hiogo, Hongkong, Kandy, Madras, Mauritius, Melbourne, Point de Galle, Port Elizabeth, Shanghai, Singapore, Sydney, Tellicherry, New York, and San Francisco; on terms which may be ascertained at their office. They also issue Circular Notes for the use of Travellers by the Overland Routes via India and America.

They undertake the agency of parties connected with India and the Colonies, the purchase and sale of British and Foreign Securities, the custody of the same, the receipt of Interest, Dividends, Pay, Pensions, &c., and the effecting of remittances between the above named Dependencies.

They also receive deposits of \$100 and upwards for fixed periods, the terms of which may be ascertained on application at their office.

Office hours, Ten to Three; Saturday, Ten to Twelve.

Yokohama, January 1, 1878.

CHARTERED MERCANTILE BANK OF INDIA, LONDON, AND CHINA.

Incorporated by Royal Charter.

HEAD OFFICE—65 Old Broad Street, London, E.C.

Branches and Sub Branches.

In India	Bombay, Calcutta, Madras
Ceylon	Colombo, Kandy, Galle, Matale.
Straits Settlements	Singapore, Penang.
Java	Batavia, Sourabaya.
China	Hongkong, Foochow, Shanghai.
Japan	Yokohama.

BANKERS.

Bank of England—London Joint Stock Bank.

The Bank receives money on deposit, buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts the usual Banking and Agency business connected with the East, on terms to be had on application.

[\$24 PER ANNUM.

TREATY REVISION.—THE MEXICAN DOLLAR.

OUR native contemporary, the *Chiugai Bukka Shimpō* (Foreign and Domestic Prices Current) is happy in its choice of phrase, when it stigmatizes the Mexican Dollar as 'an excrescence on Japanese trade.' Its first introduction was a pardonable error; its retention as the coin of account, and medium of exchange, after the first years' experience, was less venial; and its continued imposition now, after Japan has gone to enormous expense in erecting a Mint, which issues a better and more reliable coin, has grown to the dimensions of a gross injustice. The expression is a stronger one than our readers are used to see in these columns, but we employ it advisedly. For, saturated with the conviction that a stable and trustworthy medium of exchange is of prime necessity to healthy commerce, we consider that revision of the currency question should take precedence of revision of any part of the Tariff, and shall support the demand which we believe the Japanese Cabinet intends to make—that, under the Revised Treaty, Mexican Dollars shall only enter Japanese ports as bullion, and that proper respect shall be paid to Japan's indubitable sovereign right of minting the coinage which shall thereafter be the medium of exchange in the Japan Trade.

Art X. of the Treaty between Great Britain and Japan, concluded in August 1858, provided that

"all foreign coin shall be current in Japan and shall pass for its corresponding weight in Japanese coin of the same description"

and it was furthermore provided that

"as some time will elapse before the Japanese will become acquainted with the value of foreign coin, the Japanese Government will, for the period of one year after the opening of each port, furnish British subjects with Japanese coin in exchange for theirs, equal weights being given, and no discount taken for recoinage."

We have characterized this Article as a pardonable error of the Treaty-makers. Their immunity from blame rests on the facts that they could not be expected to be themselves metallurgists, and that the circumstances of pressure and haste under stress of which the Treaty had to be made prevented their procuring the advice of experts, had the necessity for such assistance been apparent to them:—that, naturally enough, the merchants who were at hand for them to consult, conversant with the China trade, and with that alone, anticipated that the Japan trade, dealing with the same products and manufactures, would move in the same grooves:—and that Ministers and merchants alike anticipated a career for the Mexican Dollar in Japan even more successful than that which it had run in China. Twenty years' very costly experience has shown us the fallacy of these views; the Japanese have shot far ahead of the Chinese in their solution of the currency question, as in many other directions; and though the Mexican Dollar

* By 'the same description' was of course meant, silver for silver—gold for gold.

has for years been known to the people, it is not liked; its circulation is now resisted by the most intelligent Japanese financiers, and it has degenerated into an instrument for gambling in native currencies; it is very properly at last formally stigmatized as 'an excrescence on Japanese trade,'—and the time is evidently ripe for its exclusion, as a measure of needful reform.

More than ten years ago, the writer procured a comparative assay from the United States Mint of various issues of Japanese silver *bu* and Mexican dollars. And this assay reported the *bu* of 1858 and five or six subsequent years as being .988 fine:—i. e. containing .988 parts of pure silver in 1,000; against what was then called the 'new' *bu*, which was .898 fine, exactly the same as the average Mexican dollar. Now from this it followed that—so long as, under Art. X of the Treaty, the Japanese government exchanged for foreign merchants, their coin of .988 fineness—the purest in the world—against the foreigners' Mexican Dollars of .898 fineness,—so long they made foreigners a present of 9 per cent. in every transaction, and had to bear, besides, the expense of re-coinage. It was not possible for mercantile human nature to avoid 'going in' for such a 'good thing' as this; and, accordingly, through the months from September, 1858, to November, 1859, larger and larger indents for exchange were made on the Japanese Government, till they culminated in the absurdity of one individual merchant sending in an application for the exchange of \$1,200,666,777,888,999,222,321, which was requested for the applicant and his friends, gentlemen bearing the euphonious names of Messrs. Newman, Oldman, Stick, Walker, Hookit, Snooks, Jack Ketch, &c.* It is hardly necessary, perhaps, to add—that the application was not successful.

When this discovery of the difference in touch between foreign and Japanese coin was made, then ought the remedy to have been applied, the establishment of a Japanese Mint, through which all foreign coin should have been passed. But the Japanese were not prepared to afford such facilities, nor were foreigners willing to help them—and, an end being put to the *bu* and dollar exchange system, except for foreign officials, the Mexican was left to 'find its own level.' It found it, at a considerable discount, and with a different integer—the 'new *bu*.'

* See 'Correspondence respecting the Stoppage of Trade by the Japanese Authorities; Presented to the House of Commons by command of Her Majesty, in pursuance of their address dated February 21, 1860.' It is only fair to the old resident who sent in this preposterous demand, to state that he did it to demonstrate the absurdity of Art X of the Treaty. Of a number of other demands for impossibly large sums, quoted by Mr. Consul General Alcock, in the despatch from which we have culled this *reductio ad absurdum*, some were representative multiples, so to speak, of the actual quantities of coin required for business; the native authorities having told foreign merchants that only infinitesimal fractions of their demands for currency could be met by the then inefficient, hand-worked Mint.

It will be remarked that we leave altogether aside, as apart from our immediate purpose, the history of the co-temporary transactions in Japanese gold coin.

This 'new' *bu* is referred to above in the U. S. Assay report, is of .898 fineness, and was the outcome of these transactions; it having been pointed out to the Japanese Government that our Ambassadors had unwittingly taken an advantage of 9 *per cent.* in the exchange of foreign coin against Japanese, in their ignorance of their respective proportions of pure silver and alloy:—and the recommendation having been given to them to alloy their *bu* down to the standard of our dollar. This they did, and the export of native coin at once ceased, as a matter of course. And then, as the writer maintained, in newspaper articles, private letters, official memoranda &c. ought the occasion to have been seized for the establishment of a Japanese Mint under proper guarantees, and the abolition of the Mexican Dollar, except as bullion, from our treasuries and our ledgers. But the occasion passed, and Japan has suffered for twelve or thirteen years, an additional, unnecessary, avoidable drain on her small metallic reserves. The punishment has not been undeserved, for it has been due,—first to the Japanese government wilfully tampering with the currency, 'and that with intent to deceive,'—and secondly, to their discarding the guidance of honest, educated financiers, and following that of half-educated, dishonest, currency quacks. Having alloyed the old *bu* down to the Mexican Dollar standard, the brilliant idea took possession of them that, by still further reducing the fineness of their coin, they could recoup themselves for the loss of that 9 *per cent.* which they had lost in the period 1858—1865. Instead of which, the country lost still more, for the drain of metal went on. With each successive issue of *bus*, more and more debased, the foreign banker bought up and sent away to the melting pot, the previous issues—till matters reached a climax. An 'old' or 'new' Tokugawa *bu* was a 'curio' which a globe-trotter bought to wear on his watch-chain, and values were represented by a little metallic bank-note, called a *nibu*, a gold washed silver piece nominally worth about sixty-four cents, but intrinsically not worth twenty. The transition from metallic to paper tokens was easy.

With the Restoration came another opportunity for Japan. A powerful and friendly Minister, and a bold, wise banker undertook to restore her credit and to furnish her with funds. The Oriental Bank negotiated the purchase of the Mint, which the Hongkong Government were so foolish as to sell, assisted its establishment, and imported a staff of experienced, trustworthy, and skilful experts to work it. With such a guarantee, it was not difficult to procure for the new Japanese Dollar, edicts from Chinese provincial Governors and other authorities, constituting it a legal tender at various important centres of Chinese trade. All promised well, a silvern future lay before Japan, in which—the Mexican usurper being pushed from his commercial throne, the Japanese *yen* should ascend it. The Japan Mint—become a real money-making machine—would furnish the currency for the whole Far-Eastern trade, and so, in process of time, with the assistance of foreign skill and credit,—and, of course, with due care and economy in other business, would be gradually restored to the country those metallic reserves which foreigners had drained, and which were so sorely needed as a base for the new paper currency to which her necessities had forced her to resort.

Again the opportunity was lost. The vices of the Japanese character—suspicion, instability of purpose, desire for novelty, and conceit,—intervened to undo so much of the good work as had been done. Astute American silver-kings and aspiring Japanese financiers, half-educated in the worst financial schools, succeeded in persuading the Government to attempt—here,—where silver was specially marked out as the proper medium of exchange—the establishment of a gold currency. Remonstrance by English bankers and Mint officials was in vain; millions

of beautiful gold coins, the very perfection of the coiner's art, were turned out by the Osaka Mint; but never to go into circulation in a trade accustomed to a silver medium. Sharp from the dies, fresh, bright, unsullied by use, they were bought with the cheaper silver, exported and melted; foolish, unfortunate Japan having borne the cost of coinage. But the object of her American advisers, they thought, was gained. The coinage of the Japanese silver *yen* having been stopped, and its progress in China checked, room was left for the introduction of the American Trade Dollar. Happily for the future of the Japanese Mint, the American Trade Dollar-makers knew little more about currency than did the Japanese they had diddled. They committed the fundamental error of trying to push out a current coin with another of the same nominal, but of a higher intrinsic value. They turned out a lovely coin, of a trifle better quality, and four grains heavier, than the Mexican Dollar they sought to displace. The inevitable result followed. The Chinese shroffs, to begin with, put the new Dollar at a discount—for which the importers were prepared, content to wait its self-assertion of superiority over the Mexican,—but then, for the sake of the extra four grains of silver, they ruthlessly and systematically sent every one of the pretty things to the melting-pot,—and asked for more. And so the time and opportunity for the superiority-assertion were never afforded.* Again did Japan, to her cost, follow the American lead. A Japanese 'trade dollar' made its appearance, 420 grains weight and .900 fine; which,—last week, when the Mexican Dollar, of 416 grains and .898 fine, was worth in the exchange shops 1.10 paper *yen*,—would only fetch 1.02!

Let us now summarize the results of all these twenty years' costly mismanagement. The dead loss, in cost of coinage, are beyond and outside of our meaning: what do we see as the outcome. Taking all the various paper issues as one, we have, complicating business, and giving opportunities for gambling, six differently valued and conflicting media of exchange:—gold *yen*, silver *yen*, paper *yen*, Japanese trade dollars, American trade dollars and Mexican dollars; with the latter, intrinsically the worst of all the metallic currencies, lording it over the others, and being so manipulated by a few score of clever Chinamen that—twenty years ago, house-boys or office-messengers at eight or ten dollars a month—they can now drive down in broughams to call on their Consul, in sea-otter or sable trimmed robes, and subscribe their thousands to the China Famine Relief Fund. How much longer is this 'sweating' or 'scaling' of the Japan trade to be endured? Verily, our friend of the *Chingui Bukka himpō* is right in calling the Mexican Dollar an 'excrescence' on the Japan trade, and we echo its cry 'Away with it—sweep it out, why cumbereth it the ground!'

Happily the remedy is not far to seek.

THE ERRORS OF THE PRESS.

A FEW weeks ago, when—wishful to impose silence on sinologues, our native printers gave us '*pacote*' for '*pacote*,' we were severely taken to task, and threatened with whipping, by a classical contemporary—who shortly afterwards asked '*quo bono*' something or other was done? Verily, we might then have held the other end of the birch. We were irresistibly reminded of Macaulay's criticism of some slip of Croker's, of which he said that 'if a school-boy under our care had uttered it, our soul should assuredly not spare for his crying.' The book Macaulay was criticising was Croker's '*Boswell's Life of Johnson*' and he says of the part for which his old political foe was responsible, that it was 'ill-compiled, ill-arranged, ill-expressed and ill-printed'—a wholesale and compendious

* Another object of the 'silver kings' was gained, but this is beside the present question.

condemnation with which he winds up the first paragraph of his review of the book, as a parallel to the great Doctor's characteristic phrase, with which he damned a leg of mutton as having been 'ill-fed, ill-killed, ill-kept, and ill-dressed.' And after flogging the unfortunate Croker through half-a-dozen pages of contumely and ridicule, he turns upon the unhappy printer, saying that he had 'done his best to fill text and notes with all sorts of blunders'—and that, between them, the editor and he had 'made the book so bad, that it could not possibly have been worse.'

Macaulay should have had books or newspapers to review, printed in the Far East, by compositors unacquainted with more than the alphabet of the language in which is written the copy they set up. Before us at this moment lies a proof of a few lines of the 'Times of Taiko,' set up by a native compositor evidently not familiar with the English language. For in ten lines we count seventy-two errors. Any young reader of ours, who thinks a journalist in the East has an easy time of it—that to write a couple of leaders a week is as easily done as inspecting a hundred bales of silk, or making up a ship's accounts—and that this is about all an 'editor' here has to do—may readily undeceive himself and damage his eyes, by application at any hour between 8 a.m. and 2 the next a.m., for 'proofs' to correct at our office.

But there are few difficulties or misfortunes in life that have not a humorous side, contemplation of which lightens their burden—if one only knows where to look for it: and we have established a file, whereon we mean to impale from week to week, such misprints as accidentally give us food for mirth, and—if our readers will bear with us—we propose, about once a quarter, to let them so far into the secrets of the 'J. T.,' (the affectionate abbreviation by which this sheet is known to the slaves of the lamp who evoke it from type-cases and contributors' manuscript), as to let them share some of the pangs which a proof-corrector suffers, when his most delicate phrases are massacred, by his 'roses' being turned into 'noses'—or when his sublime is changed to the 'ridiculous' by a dropped line, or a misplaced word.

From an ancient, dusty bundle of old proofs, on which we have just lighted, in the search for a book required to verify a quotation; we cull a few of such printers' travesties of an author's meaning. He has written, for instance, in the concluding paragraph of a political essay:—'We have been led into these remarks, &c.' It is not a little irritating to find his phrase rendered:—'we have bungled into these remarks;' and our dramatic critic,—who has been writing of 'the radiant smile or sympathetic tear, evoked from attentive listeners'—is inclined to tear his hair when his proof tells him of the 'rheumatic pear, cooked by attentive wistlers.' Or how hard a bit when, more fortunate than Job, your enemy has 'written a book,' and you have it given to you to review—your typesetter makes you unwittingly speak the truth, by changing the 'er' in your 'hypercritical,' into an 'o.' The omission or misplacement of stops, too, or the accidental transposition of a line or paragraph from one column into another, are amongst the most frequently recurring amenities of the proof-reader's occupation. Thus, in a shipping report, three lines after the loss of an 'unfortunate sailor' had been misprinted into the loss of an 'importunate tailor;' we have been told that a 'barometer, rising gradually, set the close-reefed main top-sail!' And as an instance of transposition, we may quote from an old proof of a law report, that had got mixed up with an account of the origin of a fire, and read that:—'the court ruled that the three signers of the deed were red silk curtains hanging down by the bed, and the mattresses had signed the contract and were personally responsible?' The substitution of one letter, even, for another, sometimes suggests to the writer quite another train of thought, as, for instance, when

the 'fickleness of woman' is rendered by a careless compositor—'the tickleness of woman.' Sometimes, even, one is tempted to suspect a certain wilfulness in typographical errors. How otherwise, could a 'skilful barrister' be transmuted into a 'spiceful canister;' or how could a prominent resident of a sister port be dubbed the Chairman of the Brown Chamber of Commerce?

The mercantile column of any newspaper is often—to lay readers—a 'funny market and witty report,' instead of a 'money market and City report' without the help of a bungling compositor. People uninterested in the ivory trade for instance, may read with dismay that 'there is a sudden demand in New York for large sound teeth' or that 'unicorns are saleable at quotations;' but when 'powerful commercial friends in China' get altered into 'powerful comical fiends in China' even experts may be excused for asking what sort of support the fortunate firm mentioned is to receive.

Mr. Weller, Senior, laid it down on a memorable occasion, that the great art of letter-writing is to leave off at such a point that your correspondent should wish you had written more. To trifles like these, the axiom has a forcible application. If our readers want any more such gleanings from 'first proofs,' they can be periodically supplied; for the file we mentioned has already upon it some specimen misprints fully as absurd as those we have quoted, everyone of which it a *bonâ fide* excerpt from the waste-paper basket of the first series of the 'Japan Times.'

PAPERS OF THE GERMAN ASIATIC SOCIETY.

THE BATTLE OF UYENO (July 4th 1868)

by Dr. LANGE.

[Whoever wanders at the present day through the groves of the temple of Uyeno, one of the three celebrated burial places of the last family of Shōguns, will be reminded by a bronze monument that these sacred shades have not always breathed peace and quiet, but that the wild cry of war has resounded through them. On the fourth of July 1868 the loyal retainers of the house of Tokugawa defended these holy places in vain against an overwhelming force of the enemy, and their overthrow placed the ancient Capital of the Shōguns completely at the mercy of the Imperialists.]

One of the higher officers of this band, Amano Hachiro Tadatsugu, was taken prisoner soon after the battle, and employed his enforced leisure in noting his experiences at Uyeno. Having died in prison, a scholar named Takabatake published them under the title of "*Uyeno sensō jitsuki*" or "True relation of the battle of Uyeno." Although the work is not exhaustive,—the writer reporting merely what he saw himself,—nor is it very well arranged, yet it is important as a contribution to the history of that remarkable period. On this account, the following translation is communicated to this Society.—]

Our divine country was the land of loyalty, of obedience to parents, of sincerity towards friends, and of justice and equity towards all our fellowmen. In these virtues it has from olden time been inferior to no other country. And why is it that now all of us, from the Emperor himself, down to the meanest of his subjects, not excluding even my lord, (1) the greater or the lesser princes, or the 80,000 Kika, (2) have turned away from the path of these virtues. But should I, a son of this divine country, forget the duty of a vassal, namely to wipe out the disgrace which has come upon my native land? In earlier days, I threw my whole strength into plans for the expulsion of the foreigner and the closing of the ports; and lately, in a painstaking and elaborate memorial, I desired to remove the origin of

(1) i. e. the Shōgun.

(2) Kika is the collective name of the "Hatamoto" and "Gokenin," vassals of the Shōgun.

the disadvantages which arose from foreign intercourse; but the selfish officials, who thought only of their own advantage, would not adopt my proposals. Then when the might of the Shōgun was broken at Kiōto and Osaka, and he returned to the East, and they did not wake for a moment from their long dream;—I could not look on quietly any longer.

I collected people of a like opinion with myself and on the 13th March 1868 about a hundred brave and true men, who were unanimous in their views, assembled together at the Higashi Honguanji temple in Yedo. At this meeting Shibusawa Seiichirō was elected captain, and I was chosen second in command. We announced this on the same day at Nishimaru, (3) and having received permission to do so, we called ourselves *Shōgitai* or the party which makes justice clear. In a short time the number of associates reached more than 300, and as the Shōgun had withdrawn to Daijin in Uyeno, we assembled in different temples outside that place to guard him.

On the 23rd March, Seiichirō was appointed Tōdori (4) and I was made Tōdōrinami (4).

On the 3rd of May, my old master removed his residence to Mito, (5) and Nishimaru fell into the hands of the Imperial forces. But we could only gnash our teeth with rage at these occurrences. The treasures of the Shōgun, which had been handed down in his family from generation to generation, were brought to Uyeno and placed in the Chief temple there. As my band received orders to protect these treasures, and also the Prince Rinōji-no-Miya (6) we stationed ourselves for this purpose in the different temples at Uyeno. Our might increased daily.

In the middle of this month two court nobles, who had command of the Hokurokudo, took up their quarters in the Rokugo-yashiki in Asakusa, with the object of removing their camp to Uyeno. Tsuda Sansaburō Sambō (7) led 1,500 soldiers with rifles and cannon to Uyeno and surrounded the hill on all sides. Odai Kurata and I had an interview with him, in consequence of which the troops remained there three days and then withdrew again. Our band earned high praise for this from Prince Arisugawa no Miya.

On the 20th May, I was made Tōdori, and on the 7th day of the intercalary month, I was appointed Kashira-nami. Towards the end of June, our band reached 1,000, and still more came. (Here follows a list of their numbers, according to which, the band consisted of 1,000 men with 56 officers and 1,550 peasants, shopkeepers &c. who fought with them.) These men had set before themselves the task of restoring the Shōgun to his former dignity.

Secret messengers came repeatedly to Rinōji no Miya to require him to appear at Kiōto and enquire after the health of the Emperor. In the same manner, messengers came still oftener from Nishimaru with the order that he should go to the castle. But the Prince steadfastly determined to entrust himself entirely to our band, and from this time forward desired the restoration of the Shōgun. For these his sentiments we were very grateful to him.

Although we consulted frequently with the abbot Chikurin Kakuōin, were in alliance with the lords of Oshiu and Dewa, and longed for the restoration of the Shōgun, time passed away. The people of our party and those who belonged to the lower orders, committed many lawless deeds. They killed three Satsuma men, who were walking near the temple of Tenōji; they murdered people belonging to Chikuzen and Chikugo who were crossing the "three bridges." One party by a sudden assault drove in the guard of a transport of ammunition which was going from Inahiu to Oshiu, and seized the ammunition, its escort and a horse. All this was strictly prohibited; but as there were some of the people of our party who paid no heed to any orders, we were much harrassed by this conduct. At that time, no more Imperialist soldiers were to be seen outside the Sujikai gate in the neighbourhood of Shitaya.

Ever since the intercalary month, people desired to

(3) Portion of Yedo Castle in which the Shōgun's offices were.

(4) Both titles of military ranks.

(5) The Imperial Envoy had especially required as a mark of his subjection that the Shōgun should retire to his native town, Mito.

(6) A Prince of the Imperial house was always priest of Iyeyasu's temple, and had his residence at Uyeno.

(7) Sambō:—Military Counsellor.

destroy our camp. After council had been held, and inquiries made several times at Kiōto, it seemed, on the 24th June, as if they were about to attack it. Still further outrages were committed by some of our troops, and the self-seeking officials of the Shōgun treated us therefore like people of another province, and what was still worse, regarded us as their enemies.

It looked as if the heavens themselves announced evil to our country in this year. From the beginning of spring rain fell unceasingly and there were not three fine days in the month of June. On the morning of the 9th of May our Head Quarters were at Kanshōin; in consequence of the heavy rains a land slip occurred and a dam burst; the wall of the residence of Prince Rinōji fell in for a space of many feet. Were these evil omens sent by the Shōgun's ancestor, or by the founder of the temple?

At seven o'clock on the morning of the 4th of July, I made a reconnaissance about Uyeno with Kasuga and Kobayashi; and as we were on the way between Hirōkoji and Negishi, we heard cannon firing in the neighbourhood of Kiridōshi. While we were hastening back, we heard seven reports, one after the other. When we got to the lake, the fight had already commenced and some of our party fought before the Ana no Inari, with one and a half pounders and small muskets. I crossed the hill by the Inarimon, entrusted the protection of the precious portraits of the ancestor of the house of Tokugawa to Ikeda Osami no Kami, and sent him hastily to guard the prince at Hombō. I then distributed the troops among the eight gates; and then I led the eight companies which were under me to the Kuromon, where the battle was raging. My proper position was at Yanakamon, but no enemy was to be seen there.

As Sakai Saisuke commanded at Kuromon at about eight o'clock, I ascended the Sanōdai and took over command of the artillery. The enemy fired from the second story of a tea house in Hirokōji, and also from other tea houses; their cannon were placed on the other side of the three bridges, and near Matsuzakaya. Our men threw numerous fireballs into houses, but on account of the continuous rain, the balls were damp and did not ignite. At eleven o'clock a fire broke out in the lower part of the Otokoza in Tenjin, but it was not sufficiently large to call off the enemy. The latter showed themselves more, and fought bravely in order to conquer their opponents at once. As our party had never from the beginning shown any disposition to be obedient or subordinate, we had neither mounds nor trenches to defend ourselves, so when the fight occurred, we could do nothing but put up two or three mats for protection. But as these were no defence against cannon balls, we had many wounded.

Perceiving that fighting was taking place at Yanakamon, I went there at 10 o'clock. I found Ogawa Hanamata leading my troops. With his division of about a hundred men, he had repulsed the enemy with severe loss; the temple had been set on fire, and the enemy had disappeared.

As I was returning to head-quarters, I received intelligence of a fight which was raging at Kuromon, and therefore I had no time to take my breakfast. I hastened immediately to Sammon, and thence to Sanōdai, which I again defended for some time. Shortly after twelve, I relinquished the defence of Kuromon to Sakai, and that of the hill to Kondō Takeō, and returned to Head Quarters. But before I had time to give orders at all the gates, news came that matters at Kuromon were critical, and I therefore rushed immediately back to Sanōdai. On the way, at Kiyomidzu temple, I met a Kika, Ogawa Tōzaburō, and some officers with skirmishers and foot-soldiers, in all about forty men, who were still quite fresh. I ordered them to go to Sanōdai and fight bravely there as Kuromon seemed in danger. They agreed unanimously, and I shouted to them "Follow me," and went in front. When I came up to the five pounder cannon of the first company, I looked around, and not a single one followed me! I did my office no shame at this moment, when I had reason to complain of the weakness of the house of Tokugawa, but performed my duty. I ordered the second officer of the first company, Hayashi Hanzō, to fire the cannon without interruption. The battle was now so violent that I helped the men to drag about the carriages of the cannon from place to place.

Since Sakai moved to Kuromon in the morning, he had not had the slightest rest, and had received the greatest assistance from all the higher officers. The killed and wounded on Sanôdai were then numerous. The guard-house on Kuromon was so ruined from shot that there was not a single corner where one could lie down. It also seemed a little later as if the defence were doubtful.

I had arranged to attack the enemy with the eighth company, and with the heavily armed soldiers, but found it quite impossible, as the soldiers ran about here and there. I then betook myself to Head Quarters, in order to collect the Totsushitsutai (soldiers armed with swords and spears) and lead them to where the battle was raging. On the way, I saw Kasuga calmly drinking saké. Since morning he had done nothing but run about between Sammon and Chiudô, as if what was occurring had no interest for him. I had no time to reproach him, and hastened on, when a messenger came from Tenôji to ask for assistance. The enemy had again returned to the attack, he said, and violent battle was going on at the entrance to Yanaka. As I was returning to the Head Quarters, Honamata came himself to fetch assistance. When I looked around at the four or five places where the battle was going on, I saw Kuromon was in most danger. On the other hand, if the entrance to Yanaka fell, there remained but a small garnison in Hombo. I was much perplexed as to what I should do. My own men ran about here and there, and ten did not remain in their places. While I was counting the other soldiers I was informed that there were still three hundred men in Shitadera, who had been in no important engagement since early morning. I made up my mind to go there, and, dividing them into three parts, to lead a hundred to Yanaka, to leave a hundred behind as a guard, and to go with the rest to Sanodai. With this reinforcement, we could have held out until sunset. I had been on my feet since morning, and as I was consequently very tired, I took a horse. As I was crossing before Hombo, more than a hundred of our soldiers ran suddenly out from Chiudô, as if seized by panic. I enquired the cause of this, and was told that Kuromon had already fallen, and that Sakai was dead; also that Kondo, who was shot in the side, was now being brought in on Arai's shoulders. Oyaushi Ringoro came just then, and he also was shot in the arm. The enemy crowded behind him like a rising flood, and advanced rapidly. Then I rose in the saddle, and called out with a loud voice:—"Here before the gate of the temple are the graves of generations of your lord's family, and also the treasure which you have to guard! Where can you live if you abandon this place! Then up, fight bravely, fulfil your trust, and die a noble death!"

When I called this out, Okubo Kii no Kami advanced with the Toshogu (8) flag. This man had formerly been overseer of the officials and was about fifty years of age. I got off my horse and followed about a step behind him, Arai Rintaro coming the same distance behind me. Then, as well as I remember, a hundred men followed us. But when the contest should have become a bloody one at Chiudô, Kii no Kami was struck by a ball in the forehead. As it was not a musket ball, it made a wound about three inches wide which looked like a pomegranate. He lost his helmet, and fell backwards to the earth. When the soldiers saw this, they broke up their ranks, and not one of them remained in his place. Only myself, Arai, and another who was no doubt a vassal of Kii no Kami, remained behind. Thus the might of the house of Tokugawa was destroyed.

We could not persuade ourselves to leave Kii no Kami, who was still living, lying there; and we carried him to the house of the gatekeeper of Hombo. Meantime the enemy assaulted the Hombo gate from the outside, and there was no one to defend it. Arai and I closed the small gate, and went, in much anxiety on account of the Prince, to the inner apartments of the building. It looked as if he had just fled, so that nothing remained for us but to watch over his future fate. I followed his footsteps to Negishi. I enquired there what direction he had taken, and heard that he had fled to Mikawashima. (9) On the way there, the reports of the cannon and muskets never ceased. I heard subsequently that our soldiers had again

assembled, and had offered a slight resistance before Hombo. Although many engagements had occurred since the morning, I have only described those which I saw myself.

As I came to Mikawashima, I noticed the abbot Chikurin amongst the fugitives. We gnashed our teeth with rage, and sighed, but our sorrowful hearts spake not a word. He led by the hand a young priest, who wore a black dress of a peculiar appearance, and had on his feet old straw sandals. His left hand was held by the abbot, and in his right he carried a garland of roses. When he saw me speak to the bishop, he enquired my name, and was told that I was Amano Hachiro. Then I heard for the first time that he was Prince Rinoji, and I bowed several times involuntarily with streaming eyes. As others could see us, the abbot forbade this. I therefore dissembled my awe, and enquired where they were going. The abbot replied that they would go to Aidzu, and as they refused my request to be allowed to accompany them, I took my departure with many bows. I had previously heard from a poet the words:—"Wear the straw sandals thus. His eyes filled with tears. One hears from afar the sound of guns." (10) The situation described in this poem was then before our eyes.

When I was alone, the tears streamed down my cheeks; but I dared not give way to my grief, because the flying soldiers constantly followed me, and I found myself forced to lead about a hundred of them. We crossed Dokuan-yama, went through Sugamo and came at nightfall to Gokokuji in Otowa. (11) We went in here, and begged permission to rest a little, and to get some food and drink. The people kindly gave us these, and in a little brook which flowed within the temple grounds, we washed off the dirt of the morning, and rested ourselves in the guest-chamber. After we had refreshed ourselves with food and drink, we took counsel together as to our future movements. As I had my own mind made up I remained in the town, as did most of the others; but some of them fled on the road which leads to Koshia. I left the temple at 12 o'clock that night, and betook myself to the house of a good friend, where I remained several days. The others hid themselves with their friends at their own will.

Reflecting over the fight of that day, I have come to the conclusion that we were somewhat more than two thousand strong; but we did not wish to appear enemies of the government, and therefore we made no entrenchments for defence. The enemy on the other hand was drawn from twenty-one provinces, and was nearly twenty thousand strong. The area of Ueno is about 300,000 Tanbo. There were eight gates and Tenoji temple to be guarded. We should not have been able to hold out three days, but I did not expect that we should be annihilated in one day. More than a hundred of us were killed, (12) and the number of wounded is unknown. The enemy's loss must have exceeded 600; and the number of their wounded is also unknown.

Two persons, Soshida Sodatarô and Katô Yosaburô, ought to have brought assistance from without. It was arranged with them that they should fall on the enemy's flanks with more than 2,000 men. Moreover we did not think that those who remained of the eighty thousand *Kika* would look on calmly, because they knew well that the teeth are cold when the lips are torn away. (13) It was the greatest folly to have trusted in these dastards. Up to the end of the battle, no help came to us from either of these. It is evident that neither of these men was fit for such a commission, and that, alas, was my fault! Woe! Woe! what a day was that!

Since Bishop Tenkai built the temple on Ueno, two hundred years have passed away, and this was the burial-place of several generations of our lords. The temples attached to it, Sammon, Chiudô and Hom'ô, which were adorned with pearls, gold and silver, and which were as lovely as flowers, were burnt to ashes by a fire which broke out after the battle. Many hundred priests from the thirty-six temples, became in a single day houseless beggars. It would be impossible to estimate the total loss. I

(10) These are the words of a faithful servant who binds the straw sandals on his flying master.

(11) All places between Ueno and Oji.

(12) According to the statement of the priest Butsuma, 236 fell.

(13) After the Japanese proverb *Kuchibiru yaburete ha samushi*.

(8) Posthumous name of the first Shôgun. The flag probably bore this name.

(9) A village north of Ueno.

was somewhat consoled in my affliction, however, to hear after about a month that the prince had arrived in Aidzu, and that Kankuoin was with him.

The soldiers who remained behind were hidden here and there, but they longed constantly for me, and begged for some instructions. I had already hit on a plan, which I racked my brains while in my hiding-place to put into execution.

During the day I went about with my head cautiously covered with a large hat, and at night I dared not step loudly. I appeared at one place, and soon again hid myself in another. I wandered about with the greatest circumspection; but at last about fifty days later on the morning of the 13th day of the 7th month, I was captured by the Imperialist soldiers under Inada, in the house of Ishiwara Bunjirô in Honjô, Yedo; and as I had no time to kill myself, I was bound and led for examination to Nishimaru."

(Here follows a long complaint about the misfortunes which the author had previously experienced, and the hardships which he bore as an officer of the Shogitai. As this has but slight interest for the reader, I give instead an account of the burial of the slain added by the editor.)

"Although the Shogitai fought bravely, they were defeated in half a day, because everything did not go as it ought during the battle. They fell among the trees and brushwood, here and there, by their own swords, or by the shot of the enemy. Hence the battle was soon finished. In the fire which broke out after the battle, the chief temple Kuanyei, which was sparkling and adorned with gold, Kichijôkaku, Hokkedô and Jôgiôdô, as well as Ruriden, Hombô, the two pagodas Ruizô and Unsui, a clock tower and the numerous houses of the priests were consumed, and the place looked empty and lonesome. There was no one to give directions, and the corpses which lay around could not be buried. Relations and friends crept about to examine the dead. It was a time of sorrow at which one still weeps. The only sound was that of the wind rushing through the green pines, and the fate of the dead seemed to be that they should be buried in the beaks of the hungry ravens.

"In the Temple of Entsuji on the Mino road, to the north of Uyeno, there lived a priest named Butsuma, who out of pity, begged permission to bury the dead. In the northern corner of Sanôdai on a grass plot behind Kiyomidzu he built a tea-tent, and had the corpses which lay stretched out all over Uyeno collected by some peasants, and burned in the usual manner. He took the ashes in an urn to his own house, and built a monument there. Since that time he has continually observed the festivals for these erring souls which will never return. This was in truth a noble deed. But on Uyeno hill where the spirits dwell and hover about, there was nothing but a miserable looking wooden seat overgrown with moss, and therefore three warriors, Ogawa, Momokawa and Saito, all from Shidzuoka, received permission about the end of 1874, to erect a stone wall and a bronze monument on the spot where the burning of the corpses took place, and to have a festival in memory of the soldiers who fell on the side of the Shôgun. The work was commenced in the beginning of the following year, and progressed rapidly, as large contributions were made. Who that knows this can restrain tears of gratitude that the stream of compassion of the Government should ripple over even the dry bones of the dead, and that thereby the souls of those who in life pursued a false end, should not remain uncommemorated."

CURLING. II.

(Continued from our last).

THE position is now this; as any one can see who has followed the play so far with white and black buttons or draughtsmen. The Minister's is the winning stone, close to the tee, but the Grocer and the Laird have each a stone next best to his. It is therefore clear that if the Minister's single stone can be got rid of, Andy's side will score two points. Now the best way in which this can be done is by an 'outwick' on the Laird's first stone, which lies within a couple of feet of the Minister's, but a little off to the right. 'Outwicking' means so touching the stone on the outside edge as to drive it forward at an angle, and the Laird's stone is so placed, that to touch it in this way on the right-hand edge will send it full against the Minister, send him

slipping past the tee, and leave the Laird in the vacated place of honour. Such a shot as this requires the utmost delicacy of touch, but the Souter kens full well that his old opponent, Andy, is perfectly equal to the occasion. He therefore plays his first stone to guard the weak point, and this he does effectively. Andy, however, has got another string to his bow. When the Tutor's first stone touched the Laird's second, its 'ponther' was almost exhausted, and swerving gently to the left, it rested in such a position that its inside edge is fully within view, and though a long way off the tee, still it affords the possibility of an 'inwick' which is just the opposite to an 'outwick,' and in fact the first half of what billiard-players call a 'cannon.' That grey old carle Andy has had his eye on this all the time, while making great pretence of intending to 'outwick' the Laird in on the Minister, and the more excitable Souter has fallen into the trap. To be sure he could hardly have guarded both the points at once. The Laird, who knows Andy's real intention, chuckles as he taps the side of the tutor's stone with his broom, to which old Andy responds with a nod and then plays the shot to perfection. His stone just grazes the tutor's—only enough to alter the line of its course without losing its way, and then, diligently 'souped' by the Tutor and the Grocer, plays pat on the Minister's back and sending him past the tee, remains in his place, the winning stone. 'Tut-Tut-Tut' clucks the old Minister—'Eh man, what's to dae the noo?' asks Broomielands, and the boy's exultant face falls into an expression of dismay. Only one more stone to play and the Forester with the last one to follow. Well, if you can't win all, you'd best lose little—Andy's side has the three best stones:—his own, one of the Laird's and one of the Grocer's. So the only thing to be done is to deprive them of two of their points at least, and this the Souter does by cannily driving up the Minister's last stone into second place. Andy is too wise to risk doing mischief, which he might easily do; so plays his last stone a 'hog' and is content with taking the one point for the 'end.'

And so the game proceeds, changing end for end of the rink, till one side first numbers 13 or 15, as may be agreed on. The full game is 21, but is seldom played, except in matches, as it would last almost all the day. Two or three hours see the first game finished, and then adjournment is made for half-an-hour to the little broom-thatched hut where oaten cake and cheese, milk for the boys and whisky and water for the men, are discussed with the appetite that only such exercise in such an atmosphere can give. The cheese specially receives the Laird's commendation: he declares there is no such cheese ever to be got at his own table; that it has a perfectly remarkable flavour—something quite peculiar. He appeals to the Minister and his sons' tutor for their opinion:—the tutor, who has just helped himself to another huge slice, perfectly agrees with him, as well as he can with his mouth full of oaten cake, but the divine's grey eye twinkles, as he mutters a quotation, in broad Aberdonian Latin, to the effect that 'hunger is the best sauce.' And—odd to say—when, after dinner, the other half of the same cheese,—which Broomielands' gude wife had promptly send up to Tayside, on her husband's return from the curling—appears on the table, it has not just the same flavour it had on Ballyarroch.

Days are short in winter in Scotland, and soon after three, and after another game, which has quite worked off the effects of the whiskey at lunch, the sun, which has never shown very high above the horizon, begins to get red and dim, and a brown mist slowly rises to shroud his face. Some of us have far to go; there's but a very young moon, and six miles tramp through heavy snow is much after a day's curling. So, with just a 'deoch an dorus' which nearly empties the fat stone bottle—stones are carried into the hut, plaids resumed and gaiters buttoned on, and with cordial 'gude e'en t'yo's, and the mystic hand-clasp and interchange of the 'curler's grip' and pass-word, we all start on our several ways for home.

A merry party is ours, bound for Tayside, and at first a little noisy. Young Malcolmslaw has to play the game over again, with all its varying fortune, to his brothers and the keeper, and young Geordie and Angus are equally anxious to give the details of the other rink which they were watching, and where they were allowed to help in the 'soupin.' Then the 'Tutor' has to be rallied on that shocking bad shot of his, which put up an

adversary's stone into the winning place, and which would have lost the game, but for Andy's subsequent magnificent 'draw.' The Laird and the Forester, a few paces ahead, are deep in a discussion on the propriety of thinning out certain larch plantations, the Laird having recently got some new lights on the subject from a book in Mudie's last box; but which Andy, with all the sturdy independence and conservatism of the old Scotch servant, apparently treats with ineffable contempt, stigmatizing them, even, as 'havers.' The good old Minister, who is coming to dine with us at Tay-side, is meanwhile giving the attentive young Englishman, a detailed history of the 'roarin game,' as no man is better qualified to do than he—for who but he sent that anonymous advertisement to the *North British Advertiser* in 1838, calling together the keen curlers of all districts to form a Grand Curling Court, an idea which at once took such root and flourished so well, that the Caledonian Curling Club is now second only in importance to the Masons or the Agricultural Society; numbering nearly 400 affiliated clubs in Scotland alone, and as many, if not more, 'furth' of the Land o' Cakes, in Canada and elsewhere. He little thinks that "a chiel's amang ye takin' notes, And 'faith, he'll prent it"—twenty five years afterwards and thirteen thousand miles away. Little knows he of this, but goes on to point out to his young friend, how admirable a game is curling, how healthily, invigorating, and conducive to the morality and happiness of the neighbourhood. Some of our partners in the 'spiel' of to-day, to wit; farmers, full-bodied, good men of their hands, but with no great love of the books, and with nothing to do all these long winter months save, now and then, to see to the thrashing out of a few quarters of wheat, or the fatting of their young stock. Whiskey, the demon he has continually to fight against, and pray and preach against—here out on the ice and in the keen frosty air, is a very different thing to the same in a close kitchen beside a roaring fire. And to see—too—how it brings all classes together. Here the Tutor interpolates 'hunting' and 'cricket' as equally good for the purpose. But no—the old gentleman will not allow it. Cricket, he owns, he knows little about—but now 'could I play cricket, think you, at my time of life, or imagine Broomielands running after a ball?' No—he allows cricket to be a fine 'play for the laddies'—(the old gentleman always lapses into the vernacular when eager in argument—fence) but for grown men, especially Scotchmen, give him the 'gowf' or the 'roarin' game'. "D'ye mind, Jamie,"—addressing the Souter, who is plodding along beside us with his dot-and-go-one step,—the Souter has aye been a little short in one leg, since he fell down the old quarry-pit coming home from Willie Henderson's wedding, when he'd been playing the fiddle:—"d'ye mind that gran' bonspiel your feyther tellt ye of when the Deuk made Tam Pate the cadger, the skip o' his side?" The Souter minds it fine—his father, a better curler even than himself, was never tired of telling how he had played with the Duke; and so proceeds to give us all the details of the grand match in 1784, between Lanarkshire and Renfrewshire, represented by the Duke of Hamilton and Macdougall of Castle Semple, with seven good men and true a side; when the Duke, selecting the best men of his county, made Tam Pate, whose ordinary business was that of hawking about fish, the 'skip' of his side. And how the game got so close—the Souter's father, who was playing with Castle Semple, having played what all thought the deciding stone—that the Renfrewshire men were all shouting 'Up brooms!'—when Tam made such a double in and out wick, and so 'kiggle caggled' his stone 'to an' fro'—that it slipped into the tee, and just won the spiel for the Deuk by an inch-and-a-half.

Then Andy—for the Laird and the Forester, attracted by the oft-heard tale, have dropped back to listen to the queer old Souter,—has another yarn to spin, telling how he once played by torch light to finish a great match and when, a thaw having set in, the rink hail to shortened to thirty yards, for the ice sagged, and there was 2 inches of water on it from the hog line to the tee. And so we bogaile the way, till nearing the 'toun,' as the home farm is called in Fifeshire, the Forester and Game-keeper and Souter drop off to their respective cottages. The youngsters are getting sleepy, and the men are a little tired and look forward to the hot footbath and the bright dinner table with a quiet dreamy contentment, that finds its best expression

in silence. And so the quiet of the winter's night settles down upon us on our homeward way, a silence hardly broken, save when the touch of a plaid brings down a bush-load of snow and a querulous chirp and quick rush of wings tells that it has disturbed a sleeping bird. For a footfall makes no sound on the evenly fallen snow in the West Avenue, and the swing to and fro of the iron gate closing as we leave it behind, seems to make the hush deeper as it settles on its latch. The patricks call to each other now and then on the Broomieland knowes across the valley and a distant bark is occasionally heard afar, too far to make Topsy do more than wink with one ear; but, beyond these, there is not a sound. Poor little Topsy, she is too tired with her day's fun to note even the rabbits which scud across the avenue every now and then, and is thinking of the hot red glow of that drawing-room fire before which she will soon curl herself up into an undistinguishable ball of hair. There is something almost oppressive in the silent night; the trees in their veils of snow, take strange weird shapes that make one think of ghost stories, and the pale blueish light of the young moon 'with the old moon in her arm,' gives such a strange uncanny look to all the familiar shapes, that we boys break into a run as the old house comes into view, and dash up the steps, and into the warm, bright hall, with quite a shout of glee to find ourselves safe again at home.

YOKOHAMA: SATURDAY, MARCH 16, 1878.

NOTES OF THE WEEK.

FRIDAY-NIGHT, MARCH 15th.

THE City of Tokio left for Hongkong on Sunday last with the enormous cargo of 4,198 tons, principally rice, the largest, we believe, ever shipped from this port, and the *Tibre* for the same port on Tuesday morning, with the French mail, due in London April 19th. The weekly Shanghai steamer left on Thursday, and a Hakodate steamer on Friday. The *Takio Maru* arrived on the 14th from Shanghai and ports, and the *Volga*, with the French mail, on the 15th, two days ahead of time and bringing the London mail of January 25th. The *Sunda* with the English mail of the 1st of February left Hongkong at 10 a.m. on Thursday last.

On Saturday afternoon (9th instant) a meeting of subscribers to the Yokohama General Hospital was held, Sir Harry Parkes occupying the chair. The lengthy report and accounts of the past three years were read and accepted, and a new committee appointed,—Messrs. Wilkin, Dickins, Enslie, Grauert, Foster, Fraser, Allen, Milson and Von Hemert. In deference to the generally expressed wish of the community, the *honoraria* offered to the hard worked surgeons who attend the patients was increased to something that makes their labour not quite gratuitous, and an appeal to the residents for increased subscriptions was resolved on. So necessary and useful an institution as this requires no recommendation at our hands.

We regret to notice that the Japanese Government has declined to abandon its second case against Mr. Hartley for importation of opium; but as the case is undecided we cannot say more at present on the subject. The amount of work just now thrown on our industrious Law Secretary, Mr. Wilkinson, is quite phenomenal, Mr. Cope occupying his attention with more cases, which will take some weeks to decide, as well as the important opium case alluded to above. We note, by a late *London and China Express*, that Mr. French, the Chief Judge of the Supreme Court, has left England for Shanghai, so that Mr. Hannon, the Assistant-Judge designate (whose appointment, we remark, has at last been officially announced) may shortly be expected here to relieve Mr. Wilkinson of part of his work.

Mr. Russell Robertson, H.B.M. Consul, is shortly to sail for Europe on long leave; and we hear with very great satisfaction, that he has had the good sense to decline acceptance of any mark of acknowledgment of his services, such as dinner,—ball,—or (preposterous idea) a *purse*! which some inconsiderate admirers have proposed to give him. A British Consul serves his Queen, and looks to that fountain of honour for any mark of approbation of long and faithful work, which, in accordance with the custom and traditions of the service, She may be pleased to bestow. Civil servants of less happily governed countries may stand in need of some certificate of good conduct on such occasions as these—but the offer of such to an English Consul is an impertinence, and his own dignity and that of the service to which he belongs are best consulted by its immediate repression. Mr. Robertson has done his duty, and carries home with him the satisfactory consciousness that his ability and industry, his tact and urbanity, have won for him the confidence of his superior officers and of his fellow countrymen. The latter will welcome him back on his return, with pleasure; and he will, in due time, receive from the former, the proper rewards of his work. We are sure that Mr. Robertson desires nothing more.

Reuter's telegrams from Europe this week have not told us much that we have not either known or anticipated; but the tone of private messages has been decidedly better, and quite an impulse has been given to the silk market. Some improvement in the position of the native currency (we sincerely hope that our explanation of last week, which has been freely translated and commented on, may have aided in its recovery) has taken place; and during the past two days, a very large quantity of yarns—over 3,000 bales—have been sold or contracted for. These signs of elasticity are hopeful ones, and we trust that peace in Europe may give us a good and brisk year's trade here in 1878.

From China we continue to receive the most dismal accounts of the progress of the Famine. We have fully expressed our views on the subject and have nothing to add to what we have already written. It is gratifying to note that the Japanese have come forward in a very handsome manner to aid in the attempt to relieve the distress; the Emperor and Empresses heading the subscription list with 2,000 *yen*, the Ministers following with 10,000 and other officials offering each a day's pay. The sum of subscriptions has already reached over 25,000 *yen*.

There is distress enough, too, to be relieved here—unhappily. Over 200 houses were burnt three or four nights ago, in a fire at *Asakusa*. It is much to be feared that until all *Yedo* is gradually burnt down, and rebuilt in brick, these large fires will be chronic. We hear, by the way, from Kobe, that on Wednesday last No. 109 one of the best houses in the settlement, the property of Captain Byrne, was burnt. This has a special interest to the writer, and at least one reader, of this column,—for we lived in it.

From Nagasaki we hear with regret of a very unfortunate accident. The following account of it we cull from the *Rising Sun* of March 6th:—

"It is our painful duty to record a sad accident, which occurred here on Wednesday night last, by which the brother of our German Consul, Mr. Iversen, lost his life. From what we can learn, it would appear that this gentleman, who was here on a visit for the benefit of his health, in returning to his brother's house, after a short walk, had evidently forgotten that the Sagami Bridge was impassable, and attempting to cross it, there being no barricade it is surmised to arrest his progress, fell over the side, striking his head against one of the stone abutments, and was drowned. The body was recovered some time afterwards, and was interred on the following day; the funeral being attended by a large number of friends and sympathisers."

From India we hear of another death, that of a man whose name is known and respected over the civilized world. The *Friend of India* tells us that Doctor Alexander Duff is dead. The news was received by telegram in Calcutta on the morning of the 13th February. It cannot be said to have been unexpected, for the aged missionary had been slowly sinking for some time, and his son, Mr. W. P. Duff, had been about two months ago, summoned to England by news of his father's dangerous illness. "From more recent intelligence," says the *Friend* "we gathered that he had rallied a little; but the end has at last come, and the name of Dr. Duff has passed into the pages of history. His life has not been short; his life's labour has been nobly done, and the rich results remain with us. There is no room for plaintive regrets at the close of such a life. He has left this earth full of years and honour; a 'good and faithful servant' of the Master whom he obeyed."

Of course the most prominent social event of our week has been the Ninth Performance of the Yokohama Amateur Dramatic Club, who favoured the community on the evening of the 13th inst. with a repetition of Sullivan's triumphviretta, '*Cox and Box*,' followed by Madison Morton's broad farce of '*The Two Bonnycastles*.' We

are glad to be able to chronicle a legitimate success, though the Gaiety Theatre was hardly as well filled as the performance deserved.

The music to *Cox and Box* is thoroughly original, full of diversity, bright, tuneful and pleasing. First a short, brilliant Overture (which was splendidly played by the little string band) condenses some of the melodies afterward recognised in the various numbers. A short dialogue between *Cox* and his landlord introduces the martial song of the old pensioner, in which he brilliantly and effectively relates his experience in the militia.

(And here we must take the opportunity of criticising the audience, as well as the performers. When a performance of this character is given, which necessitates much careful study and practice, punctuality in attendance is demanded by all the laws of good breeding. And when ten or fifteen minutes' grace have been given by the orchestra, to disturb them, in their rendering of their work, and the great majority of their hearers in their enjoyment of delicate music, by the seeking of seats and greeting of friends, amounts simply to discourtesy, only excusable—if so,—by alleging want of thought. There is little doubt that the omissions we noticed in *Bouncer's* opening piece were due to the restlessness of his audience, quite enough to cause a temporary lapse of memory in any amateur. We trust that these hints will not have been given in vain.)

Bouncer's reminiscences of his 'cavalry' exploits are followed by a dialogue in recitative between himself and his lodger, respecting sundry articles which *Cox* misses from his apartment; the account of the disappearance of his coals being particularly touching. *Bouncer's* outraged feelings at the bare idea of "his friendly lodger" suspecting his honesty were vividly portrayed and the duet finally subsides into the old familiar '*Rataplan*,' *Bouncer's* confident assertion "I'm a military man" being admirably contrasted with *Cox's* cynical and sarcastic repetition of the phrase.

The next piece is the exquisite Lullaby, sung by *Box*, who, tired and worn out with his night's work on a morning paper, can hardly keep his eyes open, while the bacon frizzles on the grid. This lovely melody is a perfect gem, and is worthy of better surrounding than it finds in this work. As it stands, it is a pearl of great price set in pinchbeck. *Box*, quite overcome by somnolence, retires to his couch; when suddenly, *Cox*, having obtained a holiday from his master, the latter, returns to take his breakfast. After some byplay, he encounters the awakened *Box* and a characteristic duet ensues—"Who are you sir?"—resulting in loud calls from each for *Bouncer* to turn out the intruder. *Bouncer* appears with his unfailing '*Rataplan*'—in which they all join, and after a great show of enmity, the belligerents subside into an amicable friendship, partaking of their roll in common and even joining in a serenade. This number—the '*Buttercup*'—is charmingly pretty, and further exhibits the versatility of the composer.

During their amicable intercourse, *Cox* confides to his friend his attachment to Penelope Ann, the widow of William Wiggins, and *Box*, in a well written scene, describes how, three years ago, he became defunct and yet managed to remain in enjoyment of many good things belonging to this present world. Mr. Townley both sang and acted this to perfection, and Mr. Pearson most loyally, yet unobtrusively supported him, in a way never seen except among amateur actors who happen, also, to be personal friends.

Again they fall out, on finding that at various periods they have both sought the hand of the same widow, and after much contention, proceed to throw dice for the lady. Both sets of dice being loaded, this leads to a dead lock, and after more contention, they agree to the arbitrament of tossing. By some occult influence 'heads' perpetually appear on both coins and a climax is the result. "I nail your six-pence. Hullo! it's got no tail! I've a mind to throw you out on the leads." "Your shilling I find has got two heads." A tirade of abuse—"Swindler! cheat! Vagabond! thief!" flies from one to the other and back again, and the scene closes once more by the unanimous call for the poor landlord who is worried wellnigh out of his life by his troublesome lodgers. This duet, one of the most difficult numbers in the score, was given with precision and effect by both vocalists; and we must not fail, also, to notice, both in this and the former '*Rataplan*' trio, the capital and most easily intelligible pantomime, by the assistance of which the disputants make known to *Bouncer* their complaints and intentions.

In the finale, after a false alarm as to the death by drowning of the widow of the late Mr. Wiggins and a last quarrel between the lodgers as to the money she left behind for 'her intended husband,' and after both are thrown into consternation by the prospect of a visit from the lady in question, they obtain a joyous relief from her communication announcing her immediate union with Mr. Knox! The brothers (for so they turn out to be) swear eternal friendship, now never to separate, but to remain

together in *Bouncer's* apartments, greatly to the delight of that venerable yeoman. The whole concludes with a joyous 'Rataplan' interspersed with

Three cheers for *Knox*
Who lives at the Docks
And may he live happily—if he can.

Altogether perhaps the music is the best of Sullivan's attempts at Operetta. Original, sparkling and admirably suited to the spirit of the text.

Mr. Henley, as the old pensioner *Bouncer*—who so admirably contrives to get double-rent for his one room, played his part well; but he was not in good voice, and his memory completely failed him for some time in his opening 'hobby' song; most probably for the reason we have suggested above. Mr. Townley as the printer, repeated one of his old parts, greatly to the delight of his numerous admirers. The Lullaby, rendered in his own unexceptionable manner, brought down the house. Again, in the Buttercup serenade, the friends received an unanimous encore for which they bowed their acknowledgments, but declined to gratify the house. Mr. Pearson as the 'gentle hatter' is so well known to the audience that his good points need not be recapitulated:—suffice it to say, that the solo 'Now coals is coals' was enthusiastically and most deservedly applauded. He also shared to the full the honours accorded to the 'serenade-duet' with *Box*.

Altogether, however, the whole work showed signs of neglect in rehearsal and did not go nearly so well as on the last occasion when it was played—in January, 1877. Perhaps, in this case, supposed familiarity with the music had bred contempt for proper practice, an error which we trust will be avoided in future. We doubt not that the repetition performance, (which is to be for the benefit of Mr. Wagner,) will show a marked improvement in respect of precision and exactness of rendering. Mutton-chops of inordinate size, interpolated passages of arms with bolster and pillows, add greatly to the amount of boisterous fun, of which there is plenty in the original farce, but nothing of this sort can compensate for a mutilated rendering of a composer's ideas, when that farce is dignified by being turned into an operetta.

The little band, under the leadership of Mr. Wagner (alas! sadly diminished in number by removals, absences &c.) proved itself to be of the same sterling stuff as of yore. As before mentioned, the Overture to *Cox and Box* was magnificently rendered. A set of waltzes formed an agreeable diversion between the triumphs of the farce and a brilliant performance of Suppe's fine Overture to the "Mauer and Schlosser" introduced the latter piece.

This overture is neither more nor less than a symphony in miniature; the delicate handling of the melody among the strings in the movement enchanting the ear of the musician: no love-song could be more tender, no wooing more gentle. The joyous strains of the finale, in which the melody leaps along, now in full harmony now in strong unison, bring this glorious piece of instrumental writing to a worthy close.

Mr. Griffin acted as accompanist, and displayed all his well known patience and tact in "nursing" his vocalists, by no means an easy task, when they will not strictly adhere to the score. The accompaniments throughout were finely played, with that alternate martial energy, delicate grace, and furious rushing, which the exigencies of the various situations demand. What need we say more? Only that when the whole performance is shortly repeated, for the benefit of the *Chef d'Orchestre*, we look forward to a more finished rendering of this genial work.

Madison Morton's farce of the 'Two Bonnycastles' was written for Buckstone, and is full of the very broad humour and founded on one of those absolutely impossible plots in which that artist revels. Mr. Bonnycastle, having gone out to take a walk in James' Park on a summer evening,—during the temporary absence of his better half at Buxton, where she is drinking the waters for the benefit of her health,—runs against a man in the dark, and immediately afterwards misses his watch. He rushes after the thief, collars and struggles with him, and snatching back the watch, makes off home only to find—horror!—his own timekeeper quietly ticking away on the dressing table where he had left it; and that he has consequently and unconsciously committed highway robbery. After a sleepless night, a poster offering £20 for his apprehension clinches his determination to make a bolt of it, and he accordingly goes to Canterbury, where he introduces himself to his wife's old lawyer, as a young man in whom she is interested, seeking employment, and is straightway inducted in the vacant seat in the clerk's office. Mr. Smuggins, a 'stage' lawyer, takes a fancy to Jeremiah Joram as Bonnycastle call himself, and in two or three days offers him the hand of his niece Helen; which, after some demur, he has to promise to accept. But Helen cannot bear him, and in fact,—as we learn from the opening scene between herself and Patty, the housemaid, has fallen in love at first sight

with a young gentleman who has been lately following her in her walks. This young gentleman presently introduces himself through the window, and makes love in the dashing and impudent style of the 'farce' lover. A former admirer of Mrs. Bonnycastle before her marriage, he avails himself of the fact that old Smuggins has never seen Bonnycastle himself (as all believe) to introduce himself as that worthy; which will give him a footing in the house, and enable him to prosecute his suit with the niece. Then of course begin complications. Presently Mrs. Bonnycastle herself appears, in chase of her husband; having, on her sudden return from Buxton, found nothing but an incoherent note to explain his absence. Hearing from old Smuggins, before Bonnycastle has had time to tell her the truth, that he is engaged to the niece—she becomes jealous, and to punish him, falls in with Mr. John James Johnson's assumption of the part of her husband, to the despair of the true Bonnycastle, who has to witness their conjugal endearments. We need not follow the characters further in their absurdities, nor describe the inevitable discovery and general reconciliation, but may end our notice with a few words on the actors. Mr. Bayne, who had condescended to personate the lover, played Mr. Johnson's part with the perfect self-command and aplomb which always distinguish him and, as usual, had not taken the trouble to learn the words of his part; a carelessness which, in the case of probably any other amateur here, less ready and fluent of 'gag' and improvisation, would have ruined the piece by checking its go. Mr. Hay's make-up, as the old lawyer, disappointed us, and he might, altogether, have made more of the part: why should he not be an oily, plausible rascal who is anxious to marry his niece to the first comer for some occult reason, to hide some defalcation; instead of the drivelling, senile old fool, no more like a lawyer than a general postman, presented by Mr. Hay? The ladies' parts were as well filled as such thankless offices can be discharged by gentleman amateurs. Messrs. Brown and Vivanti's capacities have been often proved, and they quite justified their old reputation on Wednesday night; Mr. Brown, particularly, rendering very well Mrs. Bonnycastle's quiet and malicious little revenge for her husband's supposed flirtation. Mr. Duer, we believe, made his first appearance here: he must have played elsewhere, for he showed no stage fright, made the points of his small part neatly and well, was capitally made up, and looked a rather impudent hussy of a parlour maid to perfection. He did not seem to know quite what to do with his hands, when they had nothing in them, but this is a common and easily corrected fault. We shall be glad to see Mr. Duer in a better part, for he has evidently many of the qualifications for a good light-comedy actor.

Mr. Mitchell (may we take the liberty of styling him 'the immortal Pickles') played the principal part, and one required to be told that he was an amateur, lest one should ask from what London theatre he came. He has the *vis comica* very strongly developed, an excellent stage voice, great facial expression and a most admirable broad humour. The writer has never before had the pleasure of witnessing this actor's performance in farce, and Mr. Mitchell's personation of Bonnycastle, therefore, probably strikes his mind with more effect than those of his Yokohama admirers who are more familiar with him. Fright, horror, jealousy and rage were all depicted with the hand of a thorough artist, and all, of course, with the touches of exaggeration demanded by the style of piece. We wish to pay Mr. Mitchell a high compliment, when we say that he is the best actor in his line that we have seen in the East since Mr. Seare's retirement.

The announcement that during the period when the Kioto Exhibition is to be open, foreigners may go thither without the troublesome formality of applying for passports is gratifying. May the Japanese government soon realize the fact that, as a general rule, foreigners may be trusted to go,—and that their going will be an advantage,—all over Japan without passports. To those of our readers who do not know Kioto, meanwhile, we may say that—during April—it probably comes nearer to a poet's dream of the 'juventus mundi' than anything now accessible to work-a-day mortals. No one in Kioto ever does any work except perhaps the cooks, confectioners and bath-coolies,—and they like it. All the shops exhibit pretty goods and all the people go about all day in holiday dress. Every one is cheerful and happy, and the whole city is a bright picture of cherry blossoms, pretty girls, brilliant dresses, gay boats, processions, lanterns, fireflies and soft moonlight or sunlight—one soon gets to confuse them by turning night into day—in which one would like to live for ever if its sweetness did not cloy. The thrush's flute-like notes, which we have heard last week, are reminding us that spring is coming fast—and if our subscribers will give us a week's holiday about a month hence, we will employ it to their advantage and our own in a visit to and description of the Kioto Exhibition.

Either the climate, by the way, or the interest felt in the people, or some other reason, apparently makes the Consular service here

and in China very popular amongst young Englishmen. We note that the *London and China Express* says that over three hundred entries have already been made for the competitive examination for the four or five student-interpreterships made vacant by the promotions in the Chinese Consular service necessitated by the opening of the new ports.

Our readers will remark that, this week, we give them a translation of a paper read before the German Asiatic Society, which we have taken from their lately published transaction. We shall shortly be able to give others of later date. We have to offer an apology to Dr. Lange and his translator for the omission, towards the end of a number of accented letters, but as we have before mentioned, our resources, in this particular, are limited.

NOTES AND QUERIES.

QUERIES.

Qy. 1. Can any experienced woodman, or analytical chemist, favour the community with a disquisition upon charcoal? Is there any method of getting rid of the free carbonic acid gas which rises from it—before burning, or of any portion of the same? Do different woods give off different volumes of vapour, and if so, which is the safest to use in a bath room? (*Unanswered.*)

P.S.—Will *nobody* answer this, or must our contributors' valuable lives continue to remain in peril?

P.P.S.—If we can't get an answer to this by next week, we shall either reply to the query ourselves, or have to take to cold bathing.

J. T.

Qy. 2. Where can I find any account of the ceremonies in use on the occasion of birth, death, or marriage, among the Japanese? Do any of the French, Dutch or German works on Japan contain such? I fail to find any information on the subject in English books. A work like Sir John Davis' "The Chinese" is a great desideratum in Japan. (*In process of answer.*)

B. H.

Qy. 6. Can any of your readers inform me whether there are any, and if so, what books on Japanese surgery, or midwifery, as practised before the coming of the Dutch and Portuguese? (*Unanswered.*)

Z.

Qy. 7. Who were the forty-seven Ronins and what about them? most of your readers may know but I do not; information supplied to me, may perhaps prove of interest to others.

B.

THE TIMES OF TAIKO

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GOYEMON.

Chapter XI. THE ENVOY'S MESSAGE.

SIR Yukinaga, the Envoy, was received at the palace with all the ceremony befitting the Regent's representative. The Minister himself met him at the vestibule, and conducted him thence along the long sombre corridor that led to the Hall of Audience, the loftiest and most spacious room in the whole palace, constructed entirely of white pine-wood, and altogether without embellishment, save that those points where the surbase crossed the pillars carried embossments of gold chrysanthemums.

This inornate monotony, simple yet not devoid of grandeur, was no doubt a fitting emblem of the dispassionate prudence and calm judgment that theoretically preside at official audiences and councils of state; but one living in those days of hot debate and feverish conspiracy, might rather have discovered a mocking contrast between so chaste a setting and the many-hued pictures of emotion it from time to time enclosed. So too might he have deemed that the spirit of an insidious diplomacy brooded in the delusive atmosphere by which the place was apparently pervaded, for despite the in-

finite pains with which the sunbeams crept inwards across environments of wide galleries, paper slides and close-meshed lattices, each massive pillar and broad white panel seemed to reflect the softest essence of the rays received, becoming thus a source rather than a consumer of light, so that the whole chamber was bathed in a subdued lustre, like that found on a snow-clad moor before moon-rise. And yet, emerging suddenly from the hall, a man encountered in the full day-light beyond, such a garish and dazzling brilliancy, that he was fain to think the faint luminosity within had been altogether an illusion; a visionary ether, in which he had seemed to see everything while discerning nothing.

The Envoy occupied the seat of honour before the alcove, and the Minister sat facing him, some three or four paces distant; thus having his back turned to the ranks of noblemen and officers that lined both sides of the hall. The monitors had arrived in time to take part in the ceremony, but not having first obtained the desired conference, they awaited the issue of this interview with absorbing anxiety; for despite his wild excesses and almost maniacal cruelty, Hidetsugu possessed some attribute that endeared him to the worthiest of his officers. Moreover the monitors had an interest more intimate than mere sympathy in the fortunes of the Minister, since they themselves would be exposed by his disgrace to an accusation of either connivance or incompetency, the first if, unable to restrain his intemperances, they had willingly refrained from reporting them; the second if, appointed to watch, they had failed to discover his miscarriage. Seeing then their own and their master's fate together in the balance, they earnestly sought some indication of his purpose in Hidetsugu's face, as he passed between the ranks of courtiers; but it was impossible to determine whether the mask of apathy that covered his features was the result of hopeless indifference, or the evidence of some resolve in nothing subordinate to present circumstances.

After formal instalment in his place, Sir Yukinaga, having saluted first the Minister, and subsequently the assembled courtiers with most minute courtesy, proceeded to deliver his message in these terms:—

"Your Excellency will, I hope, allow me to premise, that as His Highness the Regent's envoy, my discretion does not even extend to the forms of my speech. This I say less to your Excellency, whose just judgment will at once distinguish between the author and the agent, than to myself, who am disquieted lest the conduct of my duties should be prejudiced by the reluctance their nature inspires."

Here the Envoy paused a moment, and then resumed, speaking with the tone of one that follows a set routine of words:—

"His Highness, with the ultimate intention of placing the reins of state in your Excellency's hands, raised you to the high post of Prime Minister, and during his absence in the island of the nine provinces, delegated to you his own executive functions. He therefore hoped that your Excellency's gratitude would direct your Government into benevolent channels, securing to the people that quiet and well-being which constitute the ends of His Highness' policy. That this hope was unreasonable, or that it has not been realized, the Regent is most unwilling to admit, for though severe and intemperate attributes have been ascribed to your Excellency's rule by rumours, hard to be credited or combated, His Highness believes that your Excellency has long appreciated the value of those golden truths inculcated by the sages, namely, that to be a master of men one must first be master of oneself, and that the life of a great ruler should be a mirror in which his subjects find no images reflected save those of virtue and sedulity. His Highness has therefore commissioned me to solicit from your Excellency some evidence that will refute these rumours, and restore the confidence with which the country once anticipated your elevation to the most responsible post in the empire."

With whatever attention the courtiers followed the progress of Sir Yukinaga's speech, easily detecting the sharp outlines its smooth surface covered, their chief interest was concentrated on the Minister's reply, for those nobles and officers whose duties made them most familiar with Hidetsugu's disposition, had found him so imperious in his absolutism, that they had never attempted to forecast his probable conduct in the presence of restraint; and had it been possible for the Minister to study the glances that sought him in that moment, when discretion was overbalanced by excitement, he might have discovered many contradictions of Seta Kamon's insidious assurances. But he saw nothing, and had he seen,

would probably have taken no heed. Without raising his eyes, and scarcely imparting a shadow of earnestness to his words, he said:—

"His Highness' message takes me completely by surprise. Conscious from the first how far the favours I had received were in excess of my deserts, I applied myself to the performance of my duties during the Regent's absence, with a zeal that leaves no memory of negligence. It may be that my incapacity involved errors which have furnished themes to my traducers. If this be so, I have no excuse to offer, since crime cannot exist without intention. But if it be otherwise: if slander has discovered an opportunity, not in my miscarriages, but in the misfortune that renders me an obstacle to another's succession, then indeed, though seeing plainly that my office, my honour and therefore also my life are involved in these issues, I make no attempt to defend myself, lest by impugning the Regent's justice, I should exchange my consciousness of innocence for the guilt of disrespect."

When the Minister ceased speaking, the stillness of rapt attention that had gathered and weighed every term and tone of his address, was succeeded by an equal silence of astonishment. Not a few had supposed that at the first approach of danger, this reckless drifter on the streams of sensuality and excess would seek to compromise his difficulties by the surrender of his higher functions, while others had looked for a display of helpless resentment ending in sullen submission; but not one found that the reality bore any resemblance to his expectations. The main part however, after a moment's reflection, concluded that the policy Hidetsugu followed could not have emanated from himself, but must have been suggested, and therefore also supported, by a powerful section of his nobles, and thus it resulted that no one ventured to advise, being unable to foresee where his opinion might find accord or opposition. The Envoy, on his side, felt that while purporting to be a reply to his message, the words he had just heard were addressed to himself least of all those present. They were in fact an explanation, that showed the futility of defence by implicitly referring Taiko's action to either credulity or prejudice, and at the same time an appeal, that set the speaker's loyal resignation and magnanimity in strong contrast with his judge's lack of equity.

Bansaku alone detected the real motive that had dictated his master's language; he alone recognized the timid treason that sought to provoke its own justification, and developed a craftiness sufficient to supply the place of ability.

"Sir Yukinaga," he said, before the Envoy had time to make any reply to the Minister, "it seems to me that a little consideration ought to have proved the falsehood of these rumours without any reference to my master. His Excellency has monitors chosen by the Regent and therefore competent; he has also an adviser in myself, who if little competent, am at least earnest. If they have been silent; if I have been silent, should not this be accepted as evidence of our master's blamelessness rather than our own connivance? We have no answer ready, since innocence is seldom provided with a defence, but you who know the Regent's disposition, and now understand our position, will surely be glad to supplement your office of envoy by that of mediator between His Highness and his adopted son. We therefore commit our case entirely to your hands."

The Envoy was evidently much perplexed by Bansaku's words. It seemed almost a mockery, this sudden substitution of a mediator's for an inquisitor's office, and yet there was no room to question the simple faith that suggested the proposition, which, for the rest, seemed more and more reasonable the more it was considered. Nevertheless, since no agent, however impassive, is altogether impartial, Sir Yukinaga, obliged to elect neutrality or inclination, discovered that the reconciliation of the Regent and the Minister was not the end his own desires indicated. He therefore addressed his answer to Hidetsugu, for men who had anything to conceal instinctively avoided Bansaku's scrutiny.

"Your Excellency's words," he said, "are perfectly just. My mission however is neither to convey a censure from His Highness, nor yet to analyze the motive of these reports. I am simply charged to obtain a denial or an admission of their truth, and I trust your Excellency will not, by an inexplicit answer, expose me to the imputation of having misconceived and mismanaged my commission. Whatever be the nature of your Excellency's vindication, I will gladly charge myself with its support, for the misfortune that has elected me to such an office as this, would be more than compensated if my efforts could in any way induce a happy issue."

It was now Hidetsugu's turn to be embarrassed. He had made no mental provision for such a contingency as this, and his ideas suggested no alternative. But he had not overlooked the Envoy's avoidance of direct converse with Bansaku, and at his sign the comptroller again interposed:—

"If His Excellency has not given you an explicit answer, Sir Yukinaga, it is entirely because your question is itself vague. You have only to particularize these reports or accusations, and you will at once receive a satisfactory reply to each count. An indefinite charge of misconduct can only elicit a general denial, and yet, as you yourself know, the most blameless are always least willing to assert their own blamelessness."

"In order to be explicit, Bansaku," replied the Envoy, "it would be necessary to have recourse to conjecture, for His Highness specified nothing. And in this he evidenced, I believe, a desire to acquit, which it is certainly not my wish to defeat. With His Excellency's permission I will therefore now retire, and have the honour to wait at the palace again tomorrow, when I hope to receive an answer that will completely convince the Regent."

If this proposition pleased the Minister, who never opposed procrastination, it was doubly acceptable to his faithful servants, who saw in the respite thus afforded an opportunity to urge the adoption of loyal counsels. Sir Yukinaga accordingly took his leave, and after his departure, Hidetsugu dismissed the court, engaging the monitors' however, to wait on him again, so soon as they should have received the Regent's message to themselves from Kumagaya, intimation of whose arrival at Kimura's house had just reached the palace.

Towards evening, then, the monitors were at last admitted to their desired audience with the Minister. Less disposed to regret the delay that had occurred than to blame themselves for tamely suffering it, they confronted Hidetsugu with an air of resolution to which his conscience probably gave a false interpretation, for almost before any words were exchanged, he lapsed again into that condition of listless vacillation that Seta Kamon's subtlety had for the nonce quickened into independent purpose. Bansaku also was present. He carried in his hand a long slender box, resembling a letter case in form and size, but of the richest lacquer, and bound with a thick plait of violet silk.

Sir Kimura addressed the Minister in his own and his colleague's names:—

"The Regent's message to us," he said, "has none of the obscurity that Your Excellency noticed in the Envoy's address this morning. We have been charged in no measured terms with neglect of duty, and summoned to defend ourselves before His Highness against the accusation, first, of incompetence, and second, of negligence in that we have allowed rumour to precede our report of Your Excellency's excesses. Whether the inefficacy of our admonitions has been due to their own weakness or to their object's indifference, we leave Your Excellency to judge. At this crisis we have no intention of defending ourselves, since we could only do so at Your Excellency's expense. When we accepted the office of monitors, we determined that to be successful we must be devoted as well as zealous, and we offer to-day the proof of our devotion, for we place our lives at Your Excellency's disposal. It cannot be that the Regent will refuse to be satisfied, if we refer Your Excellency's irregularities entirely to our own incapacity, and offer to atone for them by our deaths.* "But," continued Sir Kimura, his voice trembling with earnestness, "if this is to be the end of our services, let it also be the beginning of a career that will restore to Your Excellency the confidence of the Regent and the people. It is a little thing indeed to die, but to carry to the grave the consciousness that death and life will have been alike unfruitful, is sad to loyal hearts."

"Sir Kimura," said the Minister quietly, "I will never accept immunity at the cost of your lives. The plots that threaten me are worthy of no such noble sacrifice. Nor would it suffice to defeat them. I am not arraigned by justice, but partiality. The question is between Hideyori and myself, and the judge is my rival's father. Whatever strength we can oppose to this combination is not, I fear, to be sought in submission."

Here Sir Tajima interposed:—

"Your Excellency may possibly think that because we have confessed our design, we look to be turned from it, but

* It was by no means uncommon for a vassal (especially a "Karo") to expiate his master's crimes by his own suicide.
F. B.

it is not so. Our resolution is taken, and we have only made it known with the hope of adding weight to this our last appeal. For standing on the verge of the grave, we conjure Your Excellency to remove the stains from your life, before it becomes necessary to wash them out with your vassals' blood. A ruler's life is the nation's guide no less than his laws, and on the pedestal of power there is no privacy, for neither curtain, gate nor guards can hide a prince's closet from the people's eye. It is not enough to have done a portion of one's work well, for a little wrong will obscure much right:—

"Good-fame was e'er a stay-at-home,

"But ill-report delights to roam."

If Your Excellency determines to forget these things, there can be but one end, and that no less inglorious than our's, who go down to the tomb deprived of the only medicine that makes death welcome, the memory of a useful life."

When Sir Tajima ceased, he and Sir Kimura, with heads bowed to the ground, anxiously awaited the result of their appeal, but Hidetsugu did not speak, for his eyes clouded and his voice failed in the presence of these men, who even while they censured gave their lives to shield.

Bansaku meanwhile had listened to this dialogue with evident astonishment, and something akin to indignation. The monitors' action departed altogether from the course preconceived with himself, and though he felt that this variance was probably due to cogent reasons, its inference of his master's guilt made it altogether repugnant to him. Turning, he addressed Sir Kimura in a tone of warm reproach:—

"Sir Kimura, your words have surprised me greatly. If my master's safety demanded the sacrifice of any life, it would be my privilege to offer mine first. But this is not an occasion for any such remedy. You speak to the Minister of reform, as though the irregularities you censure were within his control, while in reality they are but the work of evil influences invoked by his enemies. What end then would your death serve? Surely not the good of either the Regent or the Minister, whom, living, you help to protect, but dead, you abandon. No, Your Excellency," he continued, "the Regent is as unhappy in his suspicions as you are to be suspected. Our action must aim at more than a temporary reconciliation, and I entreat you to be guided by my counsels in the matter. Should they fail, my life will still be sufficient expiation."

The monitors' proposal had been distasteful not only to Hidetsugu's generosity, but also to the feeling he had secretly cherished since his interview with Seta Kamon. He therefore gladly consented to adopt whatever plan Bansaku suggested.

The comptroller then, having secured his master's approval, drew from the box he carried, a large sheet of paper, one half of which was blank, and the other covered with a rough delineation of a multitude of crows, clustering here and there about outlines that represented the shapes into which offerings of viands are formed for presentation at the altars of the gods. A few of these crows were distinguished by red circles, described beside their beaks or breasts, and in three places the vermilion contours of large temple-stamps could be traced among the flocks of sable birds.

This was the phylactery of the god Kuma no Gongen, the mystic emblem of the most solemn oath to which a Japanese could subscribe.*

Above this device Hidetsugu, at Bansaku's instance, indited a letter to the Regent, declaring that the rumours which had occasioned the Envoy's mission were entirely false; that he, Hidetsugu, had always performed his public duties with conscientious zeal, taking the welfare of the people as

* Izanagi, Izanami and Susa no O, the rulers of Japan in the times of its theocracy, are all worshipped under the title of Gongen. Jimmu Ten-o, the first emperor, invoked the protection of this deity, whose sprites, assuming the forms of crows, attended and directed him ever afterwards both on the march and in the battle. Hence to these birds was attributed some power of distinguishing truth and falsehood, and an amulet, such as that described in the text, was supposed to be an infallible instrument for the detection of guilt. One of the crows distinguished by the red circle was cut into morsels, which the suspected person was obliged to swallow in a draught of water, and there can be no doubt that conscience aided by superstition sometimes lent a marvellous efficacy to this potion. Pieces of paper are not at any time easy to swallow, and if their passage be further obstructed by a conviction that the guilty stomach must instantly reject them in a stream of blood, it may well be conceived that confession was often preferred to such an ordeal.

F. B.

his object and the Regent's example as his guide, and that in his private life he was not conscious of having exceeded the licence permissible to any nobleman. The letter concluded with these words:—

"And if any particular of these statements, however trifling, be wittingly insincere, may the direst punishments of the God of the Sun and the guardian Deity of the Empire within the four seas, the chastisements of the omniscient God and the God of Battles, the curses of the Tutelary Deities of the sixty four provinces, the Household Gods and the God of Learning, the plagues of the District Gods, with those of their attendant Genii, and the maledictions of the Spirits of the Dead in all ages, fall upon me, and confound me utterly."

It is not difficult to conceive the process of mental sophistry by which Hidetsugu persuaded himself to write this letter. He cannot indeed have entirely evaded the consciousness of perjury, but in all probability the darkness of his sin being for the moment dispelled by the strong light of Bansaku's probity, he was content to base his justification on the concurrence of his high-minded servant. It is easy, very easy, to be led astray even by counsels of evil authorship, but who is he that will refuse to follow, where the guide is integrity and the goal self-interest? And Bansaku too, the faithful vassal, quietly confident in the truth of his conviction; was his devotion to be shaken by a confession of compunction? Recrimination is the first weapon of a feeble conscience, and how pleasant it must have been for the weak, petulant Minister to be taught that his sins were not his own, and that to acknowledge them would be to encourage injustice. No doubt, also, there was much incentive in the idea that the Regent had been moved to this step, not by deliberate conviction, but by slanders to which his own inclination had given the weight of evidence, and whose malevolence warranted their opposition by any weapon whatsoever.

The monitors on their side seem to have conceived that a prospective interpretation might obviate the fraudulence of this letter, and they consented to present it to the Regent, provided the Minister solemnly engaged to reform his habits of life, and be guided in future by their own and the comptroller's counsels. To this condition Hidetsugu readily assented, and the monitors set out the same evening for Fushimi.

Sir Kimura suspected, though he could not altogether explain, Ishida Mitsunari's complicity in the schemes that threatened Hidetsugu. He knew that his own office of monitor had been designed not so much to utilize as to remove him from the court, where his influence had threatened to exceed that of the Baron of Sawayama himself, and this fact, added to certain information he had been able to obtain, gave him a tolerable perception of the truth. It was therefore with no small satisfaction that he received the announcement of Ishida's absence from Fushimi, and confident of easy access to the Regent, he and his colleague boldly demanded audience of the Privy Council, before which it was necessary to declare their mission, as a preliminary measure.

But, to their great astonishment, the four Councillors who were present, unanimously refused to sanction their introduction to the Regent, declaring that the question Sir Yukinaga had been sent to investigate, could not possibly be considered before his return.

This opposition was at first sustained with sufficient show of reason, but its true character was soon revealed by the obstinate warmth that combatted every argument and entreaty of the monitors, until at last Sir Tajima, seeing all his projects imperilled by this unlooked for obstacle, was so imprudent as to charge the Council with prejudice; whereupon they retorted by accusing him of an attempt to deceive Taiko by presenting a letter whose contents he knew to be false, and asked him ironically whether he had seriously hoped for their support in such an undertaking. The dispute seemed farthest from adjustment, when fortunately Mayeda Toshiye, Duke of Kaga, arrived at the castle, and resolved the difficulty by himself introducing the monitors to Taiko's presence.

The Regent received Hidetsugu's letter, read it and laid it aside without making any comment. He remained a few moments buried in thought, and the monitors drew the worst auguries from the evident gravity of his aspect. At last he said:—

"I should be content to acquit Hidetsugu on the evidence of this letter, supported by your testimony, believing as I do that he has endeavoured to discharge his duty conscientiously."

ly, but rumour must have some origin, however insignificant. Ease quickly effaces the memory of danger, and it is very possible that Hidetsugu, finding himself in an irresponsible position, may have forgotten to be sufficiently circumspect. If I have not been more explicit in my message, it is not because I lack details, but because I have preferred to leave your sincerity uncontrolled. To what then am I to attribute the reports that have reached me of debauchery and incontinence that threaten to make Hidetsugu's appointment a disgrace to myself and a misfortune to the people?"

Sir Kimura, startled by the Regent's angry accents, replied without a moment's hesitation, for he saw that nothing but some precise admission could now serve Hidetsugu's cause:—

"Your Highness, the origin of these rumours is well known to us, though without your express command we should not have deemed it worthy of mention. His Excellency, some time ago, added to the number of his concubines a young lady called Chika, the daughter of one Tarao Shirozayemon, a gentleman of Iga. This alliance gave rise to some scandal, because of Tarao's humble position, and we have since heard it said that the Minister has been led into various excesses by the young lady's great beauty and remarkable accomplishments, but whether this be true or not, we can affirm that his Excellency's duties have not in consequence suffered any neglect whatever, and under these circumstances we have not felt justified in remonstrating, fearing that a frivolous interference would only tend to diminish our influence. No nobleman imperils his reputation so long as he restricts the number of his concubines to eight, and surely the Prime Minister ought not to be an exception to this rule. But if your Highness finds in this any grounds for censure, we humbly submit that we alone deserve to be punished, since our silence may well have been construed into sanction."

"Sir Kimura," interposed the Duke of Kaga, who was sitting besides the Regent, "the mere fact of Tarao's daughter being admitted to the Minister's household would not constitute a fault, but Chika, I understand, was formerly the concubine of Yoshisato, who has been degraded and disgraced. She is not therefore a fit person to be the Minister's companion."

"That would be true, my Lord," replied Sir Kimura, "if His Excellency had received her direct from Yoshisato, but such was not the case. The lady had returned to her father's house before her admission to the palace, and to all intents her relations with Yoshisato might as well never have existed."

"Nevertheless," persisted the Duke, "as yourself admit, she has been the cause of these rumours, and my own doubts prove that men less well-informed than you, consider the propriety of her presence in the palace more than questionable. I most certainly think that her dismissal is a necessary step, both to re-establish the Minister's reputation, and to prove the sincerity of his explanation."

The monitors might still have endeavoured to avoid a condition which they knew would be most distasteful to Hidetsugu, but seeing that the Duke's complaisance depended on this concession, and Taiko's indulgence on the Duke's intercession, they promised to obtain Chika's dismissal, and in return entreated the Duke to use his good offices with the Regent on the Minister's behalf.

Taiko easily allowed himself to be persuaded. He however warned the monitors that under the circumstances it would be necessary for them to redouble their surveillance, and Hidetsugu his circumspection, since a reputation once tarnished is of all things most difficult to repair, and he dismissed them with a caution that the truth of Hidetsugu's letter must be established by his future conduct.

But when Hidetsugu heard the condition on which pardon had been accorded, his gratitude bore no comparison to his indignation. Was it consistent with any principle of justice, he asked, that, holding the second post in the empire, the petty details of his life should be subjected to such a vexatious restraint, and what could be more ridiculous than these new-born scruples of the Regent's, who himself had not hesitated to offer a place in his household to a fishmonger's daughter.†

* Mayeda, Duke of Kaga, held the office of Dainagon, a species of High Censorship, with most extensive functions and powers.

† Kiyō, daughter of Sen no Rikiu.

F. B.

But the monitors were firm. They had pledged themselves to carry this point, and if Hidetsugu definitely refused to consent, nothing would remain for them, they said, but to tender their resignation, and confess that the Minister's excesses were beyond the reach of their control. At this threat Hidetsugu had recourse to duplicity. He not only promised to dismiss Chika, but showed otherwise so much docility, that the monitors were completely deceived, and persuaded themselves to anticipate a total reformation in the court morals.

Meantime those who had abetted Ishida Mitsunari's schemes, were astonished to see that he evinced no disappointment whatever at their apparently abortive result. Why indeed should he, seeing that one object of his life was apparently attained, and that the happiness he had so long coveted was at last within his reach? Determined that none should forestall him this time, he despatched two of his vassals to Iga with rich presents for Tarao, instructing them to employ any and every means to obtain possession of Chika.

(To be continued in our next.)

THE JAPANESE PRESS.

THE RIGHT OF PROPERTY IN MONEY.

(From the correspondence of the 'Nichì Nichi Shimbun'.)

THE Editor of the Hochi Shimbun has published in the Editorial column of his paper No. 1,300, an article by Mr. Giurei-Joshi upon the question of "the right of Property in Money," in reference to the *Daijō-kurari*'s notification No. 2, forbidding any attempt to melt or deface the coins in current use &c. &c. A summary of his argument is "that, the people, when the value of bullion exceeds that of the coin, should they find it profitable to themselves to have the coin made into bullion by melting, may either melt or deface them, the consequence of which would be not harm, but only advantage to the public," and again:—"That Govt. should retain the exclusive right of coinage, and should not allow the people to interfere therewith is advantageous to the public, and we have nothing but praise to give to the arrangement. But as soon as the coins have been brought into use and have become the private property of the people, they are simply merchandize, and there should be no difference between them and other properties. To melt or deface is at the will of the holder. But the action of the Notification seems apparently to be an invasion of individual right."

What meaning does the writer attach to the words "advantageous to the public?" It would happen that unless manufactured by the Government, the proportion of the alloy and the weight of the coins could not be made uniform. Should this be really so, I wonder greatly at the strangeness of the opinion: in fact, I not only wonder at it, but I cannot but say that he 'begs the question' in both the former and latter part of the argument. Pray, Sir, think over it again, and consider why we at first agreed amongst ourselves to entrust the Government with the right of coinage. By doing so, you will doubtless become aware of your error before reading this. I will hereby give what I firmly believe to be the real spirit of the Notification. I have heard that the cunning Chinese ingeniously take off a portion of our coins, but I think that it could not be guaranteed that not only the Chinese, but the people of home and abroad, who are well versed in cunning arts, may not rob some portion out of our coin in several ways. Should it happen that such practices prevail, it would result in injury to the Government directly, and to the people indirectly. For instance, if there be a manufacturer, who is praised on account of his product, on which his trade-mark is put, and a vulgar retail merchant should sell it, after having quietly robbed a portion of the product and thus disgrace its reputation, there is no reason that the manufacturer should not sustain injury from the fraud. Even in ordinary merchandize this is so, and how much more would it be with the coins which are the medium of trade. If from such various lowering of the weights of coins, by clipping, piercing &c., it should become necessary to employ scales in each case of transfer of coin in business transactions, what difficulty there would

be in trading! And how could the Government, who is the manufacturer of this great and important thing, manage without forbidding the cause of such great injury? But the opinion of the disputant in the *Hochi Shimbun* seems to be that, while not greatly objecting to the prohibition of defacing the coins, he simply objects to that of melting. I shall therefore prove that the Government has not made any mistake in that point of its plan. The value of billion of 4 fun 4 rin 3 67 mo (in accordance with the words of the disputant) which is the Mint weight or value of our one Gold *yen*, has never exceeded that of one Gold *yen*, nor will it easily become so in future; there is no reason therefore that their coins be defaced or melted. But should foolish rich people or robbers commence such a practice, the effect would be very injurious to the public. That variations in value should exist between money and other articles, may not be so very injurious to the practice of economy; but it is both natural and reasonable to suppose that, if paper money only be increased, and coins not so in equal proportion; the former falls and the latter rises in value in proportion. It is said that since the outbreak of the South Western rebellion, the paper money has increased about 27,000,000 *yen* (according to the *Hochi Shimbun*) from which the value of coins has become greater than that of paper money by about ten per cent, and if at this time, cunning and wicked people were to melt the coins and thus decrease this amount in circulation, our country will shortly have to step on the same ground as the Americans and French did, or even should we not fortunately come to that point, the Government which is our protector, need not hesitate in forbidding the practice, if it sees calamity approaching.

Does not the disputant know that the Government has prohibited land-owners to sell their land to foreigners, although they are allowed to either let or cultivate them? This is because there might be injury at some future time, and so, also it prohibited coin holders to melt and deface them, although they are allowed to either spend them for clothing or hoard them. This is also because there might be injury at some future time. How is it that the disputant, whilst not doubting the prohibition of selling ground to foreigners, questions that of melting or breaking coins? Equally the point which will be injurious in both of these, is forbidden and how can one be possibly wrong whilst the other is right? I have always heard from the learned, that in Holland, the Government not having had the exclusive right of coinage, has sustained a great loss, and although it has not the right even now, in all the other countries of Europe and America, which have the reputation of being civilized, the Government has an exclusive right of coinage.

Thus although agreeing for a time with the opinion of the disputant as to the liberty of people to melt or deface coin, and there being no injury therefrom, I cannot say that his opinion as to the action of the Notification being an invasion of individual right, is correct.

(The writer of the *Hochi Shimbun* replies to the above as follows.)

In the column of correspondence of the *Nichi Nichi Shimbun*, Mr. Naruse has explained and objected to, the "Question of the right of property in money" which I had previously published. But he seems to have mistaken the *Daijokwan's* Notification No. 2, to be an order to prohibit the action of counterfeiting coins or diminishing their weight by clipping &c., and thus the former part of his explanation being a little obscure, I must ask him to read over the Notification once more. He says in the latter part, "that although it is permitted that money should be hoarded, the action of melting or defacing coin is injurious to the public," but I and my fellow disputants believe that both of these have the effect of bringing the coins out of circulation, and if the principle of this Notification be fully extended, the action of hoarding also must be forbidden and thus we wonder at it, and unless therefore the point that, any effort of bringing money out of circulation is injurious to the country, be fully and precisely explained, I do not think that I and my fellow disputants will come to a clear understanding.

So I hereby beg to thank Mr. Naruse for his kind attention, and at the same time request his further explanation.

THE MEXICAN DOLLAR AN EXCRESCENCE ON THE JAPANESE TRADE.

(From the 'Chingai Bukka Shimpô'.)

THERE is an excrescence of one particular kind, existing in, and greatly obstructing, the transactions of our trade with foreigners—the Mexican dollar. The cause of dollars having gained such strength in the market is that, at the time when the ports were opened for foreign trade, there existing no current money in our country which foreigners believed in, and consequently no means whereby to transact business; the silver money coined in Mexico and, at that time, circulating in China, was introduced at once, and soon gained such strength as to become indispensable as it remains at the present time.

The reason we call these dollars, "an excrescence of one particular kind" is because merchants must deal with them, according to the two current rates of exchange, the space of their circulation being so limited; and the frequent fluctuations in their current price, which greatly obstruct business transactions. Why are the Mexican dollars supposed to be worth believing in? What Government has the exclusive right of coining them? Not speaking of foreign merchants, with what belief in them do our merchants employ them in their business transactions? Actually, those now current in Yokohama not being the same as those first introduced, the Chinese merchants, &c. do not like them; indeed, some of them utterly refuse to take them. These dollars, being under the control of the Spanish Government, * it cannot be known how many more will be coined, and also they are unequal, for they undergo frequent changes. But our merchants knowing these things, are acting simply according to custom, and although they sometimes sustain injury themselves therefrom, they do not attempt to sweep away the cause, but remain in the same state. This is a very sad matter. These dollars cannot be used in paying the land tax in the interior, nor in purchasing anything outside of the foreign settlements, and, farther, they are not circulated all over foreign countries: indeed, there is nothing to compare with their limited circulation. It is therefore reasonable that their fluctuation originates from that of the English pound and of silver coin in several places, but the fluctuations of this origin are infrequent, and are mostly caused from speculators buying or selling them all at once according to the state of trade.

We will give the comparison of the current price English pound sterling from the beginning of the 10th year of Meiji up to this date:—

† Momme s. d.		Momme s. d.	
Jan. '77	60.37 ... 4. 2.5	Aug. '77	63.15 ... 3. 10.875
Feb. "	62.50 ... 4. 1.75	Sept. "	63.10 ... 3. 10.75
Mar. "	61.41 ... 4. 1.75	Oct. "	62.20 ... 3. 11
April "	62.11 ... 4. 0.	Nov. "	62.37 ... 3. 10.25
May "	60.86 ... 4. 0.	Dec. "	61.89 ... 3. 11.
June "	61.44 ... 3. 11.875	Jan. '78	62.74 ... 3. 10.75
July "	61.60 ... 4. 0	Feb. "	64.03 ... 3. 10.25

(the highest price reached).

From this our readers will observe that notwithstanding the fluctuation of the value of the English pound, dollars have mostly fluctuated of themselves. That we should have introduced and employed dollars as a medium of trade at a time when the value of our current money was uncertain and impossible to be believed in, (being an unavoidable matter) we cannot now complain. But, since the Government has, seeing this, established an extensive Mint, second to none in Asiatic countries, and decided the value and weight of the gold and silver coins; and, further, for the purposes of trade, have coined a special kind of silver money and put it in circulation, of which circumstances both natives and foreigners are doubtless aware, (and as to the good quality of the latter money, it is fully believed in) now what do native and foreign merchants mean by employing the Mexican dollar at present, while such good and trustworthy Trade dollars are being coined in this country? If the Mexican dollars were discharged from the market and our Trade dollars employed instead, it would follow that, not only the trouble of calculating

* An error. The Spanish Government has nothing to do with the Mexican Mints. But 'mexico monies,' 'Mexican' for 'Spanish'—the argument is sound. Ed. J. T.

† 'Momme' is the sixtieth part of one *yen*. S. M., Translator.

up the two current prices would be avoided, but the coinage being done in our country, foreigners would, according to the state of the current prices of silver, come to ask that their bullion should be coined here, and the bullion in both the interior of the country and in China would come to be coined; and the Government, always keeping a stock of bullion, could at once have them coined in case of rise of price, and have them circulated among the public. Thus those in the interior would come in of themselves without being sought for, and therefore it is apparent that such extreme rises as happen would not occur.

AS we are afraid that our readers may not have understood our phrase:—"merchants must deal with them according to the two current prices of exchange," we hereby repeat the explanation. What we call "the two current prices" is the difference in price between the current money of our country and the Mexican dollar (Mexican dollar rate) and that between the dollar and the English pound (Exchange rate) and in buying things from foreign countries these two prices must be first calculated before dealing with the business.

We have heard that current money is the gobetween of trade. But of coin, of itself and serving as gobetween of other money, the only example is the Mexican dollar circulating in our open ports and we have nothing of the kind elsewhere.

Although the dollars are an excrescence of one particular kind, if they simply needed the trouble of calculating the two rates, and did not otherwise obstruct trade, we should not say much; but there being a great obstruction from them, we say that we must expel them from the markets. For instance in Yokohama, if when the price of a dollar is 60 momme and that of a picul of silk 600 dollars, we purchase the silk worth about 35 momme per catty in Joshiu, and adding the transit and other expenses thereto, we could bring it to Yokohama at the cost of 495 dollars, we could still gain a reasonable profit; but at this time, should there be a difference of 1 momme in a dollar, it would create a difference of more than 6 yen per picul. This is also the case when we purchase such things as Chinese cords, and muslin from foreign countries, the costs of which fluctuate but very little, and how much more would it be, if the price were fixed with the rate of dollars at the time of making the contract and the things to be delivered 20 or 30 days after. According to the fluctuations in value, we sometimes sustain great loss. If one or two banks mutually agreeing, wish to raise the cost of dollars, they could do so to any height—and the reason why trade in Yokohama is dangerous, is nothing but this. Some people may say that, although we abandon the Mexican dollar, the trouble of calculating two rates could still not be avoided, because the paper which is our current money cannot be circulated in foreign countries; and certainly a difference would arise between the Trade dollars and the paper money. This may be so. But still if the Trade dollars were employed, the state would not be so serious as now.

In carefully considering the fluctuations of dollars, we find, that between the months from June and July to September and October, when there are most exports, the price of dollars falls and that of exchange rises, but if, on the contrary, there are but little exports, the price of dollars rises and that of exchange falls. Thus the time when foreigners want the dollars, is when their price is low, and when we want them, is when their price is high. This is simply caused from the fact that as dollars can not be circulated outside of the markets at the open ports, and as our merchants must, anyway, change them to current money, the dollars are all stocked in these places and never go out of them. They sometimes suffer from their abundance, but foreigners too cannot always profit from this; because when they wish to buy our goods when the exports are great, they must give us the dollars so scarce among them and we, at the time when the current price is low, can sell goods at high prices. Therefore, after all, the inconvenience falls upon both them and ourselves and the only parties who get profit in the interval, are those bankers who are fond of keeping many different kinds of money.

For what defect do the native and foreign merchants treat with indifference our Trade dollar? Do they entertain any doubt as to their quality and weight? As our

Government sends these coins to the Mint of England and other countries every year to be tested and analyzed, the reports upon which are occasionally published in native and foreign newspapers, their good quality must be known to the people and thus nothing can be said against their good quality. Is it on account of their circulation being limited? In China our trade dollars and other subsidiary coins are becoming prevalent. Indeed the subsidiary coins have actually gained a premium of a certain amount and as far as Macao, Singapore, Penang and Amoy, these coins are almost becoming the current money. Thus nothing can be said against their circulation. We, although we have carefully considered this, cannot come to a clear understanding upon it.

Some may say that being limited in number, they are insufficient for the purposes of trade. We believe that, as there is the Mint to make the coins at any time, this cannot be the cause which affects their circulation. We therefore earnestly wish that Government would permit the payment of taxes being made in the trade dollars; and, keeping a sufficient number of coins in the Mint, would give them to natives and foreigners, in exchange for the bullion which they might bring, and thus afford a convenient medium of exchange. At the same time, we should strive to sweep away the Mexican dollar; and we also hope that foreigners, giving up their obstinacy, will join us in our effort to secure future convenience.

THE CAUSE OF THE RISE IN VALUE OF MEXICAN DOLLARS.

(This is the article from the *Chiugai Bukka Shimpō* to which we referred last week in our leading article.—Ed. J. T.)

THE recent rise in value of dollars in Yokohama is excessive, indeed they rose to the value of 68 momme (about 13.3 per cent) yesterday (March 5th) and there must doubtless be not a few of both native and foreign merchants who have sustained loss from this. We have already explained in our paper (see above: Ed. J. T.) that Mexican dollars are an excrescence and a great obstruction to trade. Our readers will have now understood that our opinion was not a mistake. That the increase of paper money is the cause of this rise, seems to be the general opinion of learned men, merchants and economists. Indeed the Editor of the *Kinji Hiyoron* in his paper No. 111, has gone so far as to say, that our not mentioning that the increase of paper money is the cause of the rise, is because we look upon the matter in a different light. But our opinion is that the rise of dollars is *not* caused by the increase of paper money. Saying this, our opponents may take us to be flatterers, or those who seek to guide in favour of somebody. But this is not so, and we can give an explanation of our argument.

Although there are more than one cause of the rise of dollars, the principal one is the south-western war of last year. If we say so, it may again be said, that as the Government has employed the gunpowder and ammunition which it kept for many years, during the war of last year; although it had to purchase a small quantity of cloth or blankets, this can not have affected the price of dollars so much as we see now. This can only be said by those who 'knowing the first, are ignorant of the second.' We too are aware (as our opponents may say) that the purchases of the Government are but trifling. We therefore do not mean to say that this is the only cause. Pray let us complete what we have to say. About eight or nine tenths of more than 40,000,000 yen expended by the Government for the war of last year, was all distributed among the people in the Kiushiu districts, and by this the people having obtained unexpected wealth, spent it all in luxuries which is an unavoidable thing consequent upon natural desire. And an immense quantity of muslins, Chinese cords* and cotton goods, &c. have been sent to that district, as we have often before said. It may, therefore, be not too much to say that more than half of the above amount has been paid back into the open ports, such as Yokohama, Kobe, &c. Although silk, which is the most important of our exports, has been exported in good quantity, its price was not very high, owing to the trouble in European countries,

* We have not the dimmest idea what our translator means by 'China cords' but the name of any import would fit the argument.
Ed. J. T.

and tea, which comes next in importance, was in a very unfavourable state as the public may know. By these circumstances, balance in imports and exports was lost, and although we saw a little more favourable condition during the month of December last, in January and February of this year, trade in silk became very dull and the only products which were being exported to any considerable amount were rice and corn, (and these being chiefly exported by the Government, the money paid for them is kept in the Government treasury and not yet circulated among the public). On the contrary, imports, such as muslin, Chinese cords and cotton goods, &c. are continuing, and although as we have not seen the Government's list of exports and imports, we are unable to know the precise amount, an excess of about 1,000,000 *yen* of original price, must, according to our own calculation, have been incurred for imports each month. The balance of trade having thus failed in exports, merchants in the interior have no means of obtaining Mexican dollars; but as, when goods under contract arrive, they must pay with dollars, however dear they may be, they have had to buy them. On this occasion speculators seizing their opportunity, have contrived to cause the rise at the present time. Its immediate cause is the inequality of exports and imports, and this has been caused by the south-western war, by which imported goods have been introduced into districts where they have never been employed hitherto. This is the reason that we simply say that the war is the cause of the rise of dollars. Look at the current price of the pound sterling in London. As we have already explained in our number 71, the price of silver has greatly risen in London, whilst the rate of exchange between Yokohama and London has gone down to from 4 shillings to 3 shillings 11.25 pence for six months' sight bills. Although the banks have plenty of dollars, it being unprofitable to buy Gold *yen* or bullion for export; they were obliged to keep the dollars in their hands. This is one cause why dollars have been allowed to keep up their high price; and indeed this can be clearly seen from the fact that the price of Gold *yen* does not rise in proportion to that of dollars.

We will compare them:—

	Mexican dollars	Paper-money	Mexican dollars	Gold <i>yen</i>
Feb. 14...	1.00 cost	64.05 momme	1.00 cost	58.2 momme
Nov. 5...	1.00 „	68.25 „	1.00 „	58.95 „

If we calculate the rate of buying with paper-money of these two days the excess is 4.2 momme. But if we calculate that of buying with Gold *yen*, there is only a difference of 0.75 momme. Thus if the rate of exchange is at about 3 shillings 8 or 9 pence as usual, the banks would at once purchase Gold *yen* or bullion and pay out the dollars. In that case, the Gold *yen* being a sort of export, it would somewhat keep up the equivalence of exports and imports, and thus that the price of dollars would not continue so high is a matter to be easily understood.

EXTRACTS.

THE BARBOUR CASE.

THE Barbour case seems to ourselves of such importance, that we have taken the trouble to read up carefully the whole of the proceedings in the Rolls Court. We are indebted to Messrs. Williamson for the opportunity of doing so, and seeing that they fill a large volume of 600 pages and require to be read most attentively, we are perhaps justified in believing that very few persons in India have taken the same trouble. We took this labour upon ourselves, for the express purpose of being able to state with precision and clearness, what our previous acquaintance with the proceedings made us believe to be the strong points in Messrs. Williamson's case. And the result, quite unexpected by ourselves, is a very strong conviction that the suit ought never to have been instituted at all. The strong points in the case against Messrs. Barbour, dwindle down very considerably, when the proceedings are read with proper attention; and the conviction left upon our mind, by an unbiased and very careful re-perusal of them, is that in opening these accounts to redress what they deem injustice to themselves, the injustice which the plaintiffs are doing to the

defendants is overwhelming. We promised to put the strongest points in the case before our readers; but it is the fact that the more closely we view the case, the stronger becomes our conviction that the suit ought never to have been instituted. The general impressions conveyed to the world by Sir George Jessel's judgment, and by the comments of the London Press upon the case, and that have been reflected in some of the Indian newspapers, are as wide as possible from a really fair statement of its merits; at all events as we read the case. The temptation to compromise it will be overwhelming after such a judgment as Sir George Jessel's; but such a compromise is greatly to be deprecated, as the whole commercial world is interested in having the judgment of a full Bench upon the case.

For ourselves, we do not believe it possible altogether to eliminate 'customs,' 'usages,' or 'understandings' from the conduct of business, and never to do or leave undone anything without the letter of written agreement as authority; yet this is the unreasonable demand which the Master of the Rolls makes of business men, for any profit they may otherwise make may, to their astonishment be some day characterized as robbery and fraud. There are good, unobjectionable 'customs' and 'usages' in most trades, and where Messrs. Barbour deserve blame, is not in having followed Manchester usages in their invoices, but apparently in having at times abused usages, that are in themselves good and fair. Sir George Jessel, in his anger at usage being pleaded to cover these abuses, draws no line between the two things. With him, every thing is fraud that does not rest upon express written agreement between parties in business. Now a sweeping judgment like this is, we think, monstrous, and much that he condemns as fraud no reasonable person can so regard, *e.g.*, the practice of Manchester houses of underwriting their own risks, that is, acting themselves as the insurers of the goods they ship. To make it a fraud, there must be active, positive concealment of the fact that they are so doing. Manchester usage may properly be pleaded, we think, as sufficient excuse for not expressly calling the attention of their clients to the fact that they were so acting; not expressly asking the client's sanction to what is a usage of the trade. What, in particular, we ask, would become of profits made in the legal profession, if no charge were to be allowed, for which an express written agreement could not be produced?

A very little inquiry and reflection suffice to shew that a tariff of equitable *customary* charges, is sometimes the only practicable way that can adopted; and a very good illustration is afforded by the usual charge for rent on packages of merchandise, lying for sale on consignor's account in an agent's godown. The agent, though not a professional warehouseman, has a clear right to house the goods on his own premises, and make any profit he can out of the rent on these packages, up to the limit of what is fair and equitable, a limit to be ascertained presumably, say by what the Bonded Warehouse Company charges. In so doing, he is strictly neither an agent engaging warehouse room for the goods, nor is he exactly a principal in the matter. He takes advantage of the fact that he himself has godown room for the goods, and charges what he thinks is a fair and equitable rent upon the packages. And this is part of the profits of his business. Now Sir George Jessel says that this is fraud, because his interest as a warehouse-keeper become antagonistic to those of his principal. He wants to get as much rent as he can, while his principal wants to pay as little as he can. In these circumstances, fair and equitable usage comes in to regulate the charge; while, according to Sir George Jessel, it is fraud. The agent ought not to have housed the goods himself, but got them housed on the very lowest terms possible in other warehouses. The judgment is intensely one-sided, where it should have drawn a broad line between honest mercantile usage and understanding, and their abuse. It is not a light matter, but a very serious one, for a great mercantile community like that of Manchester, to have its whole course of business branded as dishonest before the world, on the ground that its usages are open to abuse. Condemn the distinct abuse as severely as you please, but do not lay down the monstrous principle that there is no such thing as honest mercantile usage, custom, or understanding in business, while men are dealing to the extent of millions sterling a year on such understandings, without a written line between the parties.

(The Friend of India and Statesman.)

CURRENCY QUACKS, AND THE SILVER BILL.

*From the 'North American Review';
(Concluded from our last.)*

And here the case might well enough be rested were there not so many men in Congress and in the press who prefer to compose their own conclusions on the recoinage of the silver dollar, and whose capacity to do so need not be questioned, as they themselves have not suspected it. But their compositions are open to suspicious review, all the same. Here is Mr. Stanley Matthews, for example, who opened the Senate debate on the silver bill with an argument of which the pith is given in his resolution below,* and Senator Thurman said he was "marvellously curious to know by what kind of reasoning a lawyer could arrive at any other conclusion than is asserted by this resolution."

Would Senator Thurman be surprised to hear that this argument is not convincing, because it is a merely legal argument? If it were all true, and besides were all of the truth, it would fall short of its conclusion. But it is neither; and, if it were both, it would establish only permission for economic and prudential arguments to be exclusively considered. Moreover, it skips the statesman's if not the lawyer's prior question—the expedient time and circumstance. More silver being in daily use, in pockets and pantries, on this continent than ever before, the silver bill could have waited. Two standards of dollar-value tormenting us now by favor of Congress and the United States Supreme Court, one of them variable, the proposal that Congress should anticipate the court in declaring that its laws have established a third standard, more variable than either and worse than both, might have been postponed. To one currency illegal, inconvertible, useless abroad and needing removal ere enterprise can revive in confident security, the plan to add another, non-exportable in nine-tenths of our foreign trade, or all, might have been deferred; the necessity was not urgent. Having one currency which, consisting of notes believed to be payable in gold, has nevertheless fluctuated in value from 100 to 43 and back again to 97, in fifteen years, a scheme to displace gold and substitute for the basis silver, which itself has fluctuated more than fifty per cent. in the last hundred years, might have been adjourned.

To begin with, Mr. Matthews in his first "whereas" omits to cite an important part of the act of March 18, 1869. Not only did Congress in that act pledge the faith of the United States to the payment in coin or its equivalent of all the interest-bearing obligations of the United States, but it began by first pledging "the faith of the United States to the payment in coin or its equivalent of all the obligations of the United States not bearing interest, known as United States notes," and it ended by enacting that "the faith of the United States is also solemnly pledged to make provisions at the earliest practicable period for the redemption of the United States notes in coin." What the "earliest" duty of currency-tinkers is, then, a "marvellously-curious" lawyer might find out, unless confused by the fact that, while over \$350,000,000 non-interest-bearing notes were in circulation, and "earliest" due, the Government has demanded, made a higher

* "Whereas, By the act entitled 'An act to strengthen the public credit,' approved March 18, 1869, it was provided and declared that the faith of the United States was thereby solemnly pledged to the payment in coin or its equivalent of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of such obligations had expressly provided that the same might be paid in lawful money or other currency than gold and silver; and—

"Whereas, All the bonds of the United States authorized to be issued by the act entitled 'An act to authorize the refunding of the national debt,' approved July 14, 1870, by the terms of said act, were declared to be redeemable in coin of the then present standard value, bearing interest payable semi-annually in such coin; and—

"Whereas, All bonds of the United States authorized to be issued under the act entitled 'An act to provide for the resumption of specie payments,' approved January 14, 1875, are required to be of the description of bonds of the United States described in the said act of Congress approved July 14, 1870, entitled 'An act to authorize the refunding of the national debt;' and—

"Whereas, At the date of the passage of said act of Congress last aforesaid, to wit, the 14th day of July, 1870, the coin of the United States of standard value of that date included silver dollars of the weight of four hundred and twelve and one-half grains each, as declared by the act approved January 18, 1837, entitled 'An act supplementary to the act entitled "An act establishing a mint and regulating the coin of the United States"' to be a legal tender of payment according to their nominal value for any sums whatever; Therefore—

"Be it resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued or authorized to be issued under the said acts of Congress hereinbefore recited are payable, principal and interest, at the option of the Government of the United States, in silver dollars, of the coinage of the United States, containing four hundred and twelve and one-half grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith, nor in derogation of the rights of the public creditor."

price for by demanding, and paid off with the proceeds of the sale of more than \$400,000,000 gold, a corresponding amount of the interest-bearing obligations of the United States not due.

Besides, Mr. Matthews omits from the whereas that drive him to a resolve one whole act, a "whereas" just as coercive as any, to wit, the act of February 12, 1873, which abolished the then obsolete silver coin of 412.5 grains, and refused it thereafter the name and quality of "dollar." So that, like him who lost his eyes in the bramble-bush, if this Senator has whereassed himself from legislation previous to 1877 into a resolve to have such a coin and dub it "dollar," he can whereas himself out again into legislation also prior to 1877, and nobody hurt.*

But even if the act of 1873, bastard or heritable, were not such a finality as at least forbids the United States to abuse its sovereign coinage-power over its contracts made between voluntary and equal negotiants, Mr. Matthews's argument otherwise lacks cogency by its omission of an essential part of merely legal facts and relations. This time it is the central core of the legal truth which he overlooks. For it is here submitted that the essential characteristic of the laws prescribing and regulating the coined legal money of the Union, from the beginning when Alexander Hamilton, Secretary of the Treasury, supposing that gold and silver could both be kept in circulation as full legal tender at a ratio of exchange, to be ascertained from the markets, and then declared and fixed by law, and the original coinage act said that "in all payments shall" [lbs. Silver] 15=1 [Gold lbs.], down to the year 1853, when Thomas Corwin, of Ohio, was followed by James Guthrie, of Kentucky, as Secretary of the Treasury, and this Government abandoning the attempt to find, follow, or fix that ratio, reduced silver to a subsidiary coinage, demonetized it by taking from the fractional coins 7.4 per cent. of their weight, and limiting their legal tender to five dollars—from 1792 to 1853, the quintessence of every coinage act has been to find and fix an equality in market value and purchasing power between that quantity of gold and that quantity of silver upon which those acts conferred the name of "dollar" and the quality of legal tender.

"Dollar" being the name of our standard of value in either metal, whatever the ratio and whether one term of the ratio was a numerical unit, and the other term 15 or 16 of those units, or whether both terms were of troy grains bearing the same ratio as the units in the other case, the purpose of the ratio always was to insure equal purchasing or paying power to the defined quantity of either metal—was always to indorse the commercial equivalence symbolized in the sign of equality. "Dollar" being the legal unit in every equation and act of exchange, and both metals having the full legal-tender quality, the first purpose of those honest law-makers was to see that the dollar coined in gold and

* This is as good a place as any to refer to the common charge that the passage of the act of 1873 was furtive and fraudulent. On the contrary, the bill was prepared by John Jay Knox, Deputy Comptroller of the Treasury, in 1869, transmitted to the Senate by the Secretary of the Treasury, in 1870, the views and criticisms of the Mint and Treasury officers and others versed in metallurgy and coinage having been previously collected and published by order of the House of Representatives. Mr. Knox's report accompanied the bill, explained it, and referred specifically to the silver dollar and its discontinuance as a standard. For two years it was discussed, amended, conferred upon by committees of the two Houses, and after three years' consideration, after a commendation by the Secretary of the Treasury in his annual report for 1872 to "prohibit the coinage of silver for circulation in this country," and after a speech by Judge Kelley, of Pennsylvania, declaring: "It is impossible to maintain the double standard. You must have one standard coin which shall be a legal tender for all others, and then you may promote your domestic convenience by having a subsidiary coinage of silver," the bill was passed, and became law. The charge thus refuted by the *Congressional Record* and executive documents, is also refuted by the economic journals of the time, the discussions of experts like Frederick Hymdriks (London *Economist*, May 5, 1873) and Bagehot, and the admirable and exhaustive treatise ('The Metric System,' Appendix A) by President Frederick A. P. Barnard, of Columbia College, which, by-the-way, may disclose the origin of the slight change in the half and quarter dollar, etc., enacted in the same law, whereby they were happily brought into some conformity with the metric coins of the Latin Union and several states of Central and South America. It is surprising that when so many men waked up, after the price of silver fell to find themselves defrauded of a proper knowledge of its demonetization in the act of 1873, not one of them has yet risen in his wrath to denounce the foreign bondholders, by whose machinations probably Congress, about the same time, was seduced into permitting him to measure his whiskey in hectolitres and his weight, when made, in kilogrammes. The indictment for bastardy brought against the act of 1873 omits to name the father; but that is of course a trifle which "the 5,000 representative men of Chicago" at their next mass-meeting, will doubtless correct. Since the act followed twelve years after the complete disuse and actual explosion of silver by money, it might be as well for them not to charge it with depreciative efficacy in the same breath that they expose the secret, black, and midwint'ght deed. And if their purpose be indeed to raise the price of silver by the silver bill, so that no creditor shall be cheated a cent's worth in "the swart set by-and-by," they will do wisely to rebuke, at the next "terrible" arousement of their wrath, Senator Jones, General Ewing, Judge Kelley, and others, who assembled the same day in Washington as they in Chicago, and organized a "greenback league" and "intelligence bureau" for franking, and "snowing" old inflation speeches over the Eastern States.

the dollar coined in silver were equivalents, and, by prescribing their respective weight and fineness, to give them but a single significance on either side of the equation. So long as we endeavored a bi-metallic currency, from 1792 to 1853, and whatever the terms of the ratio, *in hoc signo*, in that sign of equality, —, conforming to the commercial fact and establishing the legal fact, resided and reside the public honor and the midmost heart of every coinage law.

Yet the silver bill proposes that the unvaried "dollar" of American coinage, now by law housed in 25.8 grains of standard gold, shall also be found in 412.5 grains of standard silver, these quantities being to each other as 1 to 16, whereas the commercial equivalence of the metals now is found in the ratio of quantity, 1 = 17, or even 1 = 18, and fluctuating daily. And Messrs. Matthews, Ewing, Jones, and Bland, would fain persuade us to revive an obsolete, discarded silver piece, in order that the United States may pronounce its equality to the gold-coined "dollar" in law, and profit by its inequality in fact.

There is still another coinage act and a group of coinage facts necessary for Mr. Matthews to regard, although, to be sure, they quarrel with his conclusion. Owing partly to the Government's errors, pointed out by Mr. Gallatin, in the established ratio of quantities of the two metals made equal in exchange, and partly to changes in that ratio which took place after a certain one had been fixed, the old bi-metallic difficulty, and partly also to other causes tedious to mention, the unit coined in silver, being then worth more as metal than as "dollar," streamed to the melting-pots and foreign parts. Few were coined, none remained in use.*

But, so that silver might be kept in the country for its convenience as small change, an act in 1853 was passed omitting mention of the silver dollar altogether, for it had practically ceased to exist, reducing the quantity of silver in the half-dollar and minor pieces, and limiting their legal tender. Now, where there is a silver coinage subsidiary to gold, overvalued and of limited legal tender, the standard of value for it and every other commodity is, and cannot but be, gold. The enactment of 1853, therefore, it was, standing in unimpaired authority when silver and gold gave place to paper, which then consigned silver to its subsidiary role, discarded bi-metalism as impracticable with unlimited legal tender, and thenceforth made the dollar coined in gold our sole metallic standard and unit of value. The act twenty years later did but give strength and entablature to that pillared law.

But were all this otherwise, were legal obstacles out of the way, were the obligations of honor and the refinements of equity all conciliated, the whole economic argument would still remain untouched, the whole prudential argument would be unapproached. Now, as to the latter, there are many persons like Del Mar who prefer instructing Ricardo to learning how to spell. For them the existence of a gigantic debt invites a summary scaling of its weight, with every consequence, as an act of consummate prudence and sure profit. To such minds the reply may be suited that the burden of the tax-payer can be lightened by no such contrivance. It is vain. Nothing less than total repudiation will do their job. That may entail some inconveniences, but it offers the only prize their rascality can more than clutch at. When a great debt has to be carried for years, entailing a constant necessity of renewing transactions, the only way of diminishing the profit of the bondholder is by practising scrupulous honesty upon him. That is the best policy. It beats cheating by about \$333,000,000 in thirty years.†

In so far as the debt is held in the United States, the loss to the creditor classes would be at least as great as the gain to the debtor classes. Who are the creditor classes? Here are some of them. In the savings-banks of New York State, 861,000 persons are depositors of \$319,700,000, and the assets of these banks include, moreover, \$80,755,000 of United States securities. In the savings-banks of the United States over 2,500,000 persons are de-

* But few dollars were coined in silver from 1792 to 1804, less than 1,800,000; none were coined from 1804 to 1839; few from 1839 to 1853, less than 1,100,000; few from 1853 to 1870, less than 2,800,000, and less than as many from 1870 to 1877. Our total coinage of the "dollar" in silver had thus been a trifle over \$8,000,000, and this while during the same period from 1792 to 1877 our total coinage was over \$1,205,000,000. According to the director of the Mint, the silver dollar of the Fathers of 1792 "did not enter to any extent into circulation as money." Nor did the silver dollar of the Fathers of 1837-53, for, "notwithstanding there had been a continuous coinage of the small silver coins, they had, in consequence of their tender valuation been melted and exported to an extent rendering changes money very scarce, and entailing great inconvenience to the country, and a new adjustment again became necessary." And now what was done? So being the ground up of coinage facts, what was then the coinage act? In 1849 a gold dollar was coined (angles and their multiples previously), and in the five years 1849-53 more dollars were coined in gold than had been coined in silver from 1792 to 1877.

† Mr. Ellis, of the Third National Bank, New York City, demonstrated this by calculations read in the ears of the Senate Finance Committee.

positors of \$1,377,000,000. Their deposits are small in most cases. They are the wage-receivers, the industrious, saving poor. They are the lenders of this enormous amount to the borrowing banks which lend it again in larger sums to the borrowing capitalists and business-men who therewith employ the original lenders. The life-insurance companies of the United States, holding also among their assets \$30,421,142 United States stocks and securities, have insured the lives of 706,179 persons, on which their present liability is \$346,279,780. They, too, are agents for lending vast sums to the well-to-do, wherewith labor is employed. From these vast aggregates the silver bill will strike off ten per cent. of the value. In the census of 1870, as Mr. Garfield vainly told the blatant repealers of the resumption-day pledge, it was calculated that on any given day there were \$120,000,000 due to laborers in the United States for their unpaid wages. The silver bill proposes to swindle them of \$12,000,000 before cock-crowing.

In short, the creditor class is the numerous class, and the debtor class the small class, as any man may see by polling his own and his neighbor's households. The great capitals are the aggregate of small savings. So the "more money" that is cried for, silver or shipplaster, is not the needed thing. It is this loanable capital, now paralyzed with distrust by delayed resumption, and imminent silver swindles. Having ought to sell that bears a market price, who, between Pembina and Key West, finds the sale frustrate for lack of currency or some means of exchange? Having a well-devised enterprise to employ capital and labor at a profit, what captain of industry, from Bangor to Galveston, ever found loanable capital so hard to get at any price? Who knows the "dollar's" future worth? But if our captains of industry cannot hire capital, they cannot employ labor; and that implies hungry mouths unfed, shivering at cold hearths, and the wolves of poverty at a thousand doors.

Ignorance which seats itself in the chair of Knowledge is thus the mother of revolutions in politics, Chicago resolutions, and Missouri silver bills. The prosperity of the people of the whole Union now depends upon their ability to detect charlatanry by its apparent marks, and to choose, rather than the blind leadership of blind guides in Congress, a wise deferring to the authority of the consentient judgment of the practised economists, the best financiers, and the first statesmen, of the foremost civilized nations of both hemispheres. For, as De Morgan said to the circle-squarers, it would be right and proper for every hungry hodman or unemployed ditcher to say to his well-fed representative who applies silver solutions to national finance: "Mr. Moses, before I allow you to lead me over the Red Sea, I must have the proof that you are learned in all the wisdom of the Egyptians on this subject."

MANTON MARBLE.

[As a corollary to the argument in Mr. Manton Marble's last paragraph it occurs to us that the republication of the following petition by an obscure Britisher, who lost some money on a previous occasion by trusting the Republic, may not be ill-timed.]

THE HUMBLE PETITION of the REV. SYDNEY SMITH to the HOUSE OF CONGRESS at WASHINGTON.

I PETITION your honourable House to institute some measures for the restoration of American credit, and for the repayment of debts incurred and repudiated by several of the States. Your Petitioner lent to the State of Pennsylvania a sum of money, for the purpose of some public improvement. The amount, though small, is to him important, and is a saving from a life income, made with difficulty and privation. If their refusal to pay (from which a very large number of English families are suffering) had been the result of war, produced by the unjust aggression of powerful enemies; if it had arisen from civil discord; if it had proceeded from an improvident application of means in the first years of self-government; if it were the act of a poor State struggling against the barrenness of nature—every friend of America would have been content to wait for better times; but the fraud is committed in the profound peace of Pennsylvania, by the richest State in the Union, after the wise investment of the borrowed money in roads and canals, of which the repudiators are every day reaping the advantage. It is an act of bad faith which (all its circumstances considered) has no parallel, and no excuse.

Nor is it only the loss of property which your Petitioner laments; he laments still more that immense power which the bad faith of America has given to aristocratical opinions, and to the enemies of free institutions, in the old world. It is in vain any longer to appeal to history, and to point out the wrongs which the many have received from the few. The Americans, who boast to have improved the institutions of the old world, have at least equalled its crimes. A great nation, after trampling under foot

all earthly tyranny, has been guilty of a fraud as enormous as ever disgraced the worst king of the most degraded nation of Europe.

It is most painful to your Petitioner to see that American citizens excite, wherever they may go, the recollection that they belong to a dishonest people, who pride themselves on having tricked and pillaged Europe; and this mark is fixed by their faithless legislators on some of the best and most honourable men in the world, whom every Englishman has been eager to see and proud to receive.

It is a subject of serious concern to your Petitioner that you are losing all that power which the friends of freedom rejoiced that you possessed, looking upon you as the ark of human happiness, and the most splendid picture of justice and of wisdom that the world had yet seen. Little did the friends of America expect it, and sad is the spectacle to see you rejected by every State in Europe, as a nation with whom no contract can be made, because none will be kept; unstable in the very foundations of social life, deficient in the elements of good faith, men who prefer any load of infamy however great, to any pressure of taxation however light.

Nor is it only this gigantic bankruptcy for so many degrees of longitude and latitude which your Petitioner deplures, but he is alarmed also by that total want of shame with which these things have been done; the callous immorality with which Europe has been plundered, that deadness of the moral sense which seems to preclude all return to honesty, to perpetuate this new infamy, and to threaten its extension over every State of the Union.

To any man of real philanthropy, who receives pleasure from the improvements of the world, the repudiation of the public debts of America, and the shameless manner in which it has been talked of and done, is the most melancholy event which has happened during the existence of the present generation. Your Petitioner sincerely prays that the great and good men still existing among you may, by teaching to the United States the deep disgrace they have incurred in the whole world, restore them to moral health, to that high position they have lost, and which, for the happiness of mankind, it is so important they should ever maintain; for the United States are now working out the greatest of all political problems, and upon that confederacy the eyes of thinking men are intensely fixed, to see how far the mass of mankind can be trusted with the management of their own affairs, and the establishment of their own happiness.

YOKOHAMA MARKET REPORT.

FRIDAY, MARCH 15th 1878.

Commercial telegrams from Europe up to-day having been more encouraging, and the price of the native paper currency having been steadier, a decided improvement in tone has been manifest in both Import and Export markets. Prices have slightly advanced and a fair amount of business has been done. The prominent feature of the week's transactions has been the settlement, almost entirely to arrive, of nearly \$350,000 worth of cotton yarn. We believe the explanation of the demand for this article is to be found in the statements made in our leading columns last week. But the fact that cotton grey goods do not partake of this demand should conclusively convince Manchester that the guilt of adulteration of her manufactures is bearing its own punishment.

IMPORTS:—The very large sales of Yarns referred to in our general remarks above comprise nearly all we have to say respecting this market. A slight rise in prices all round has taken place, but not more than can be accounted for by the recovery of the paper currency from its lowest point of 460 to 438-440, at which average figure it has stood through the week. The bulk of the yarn business has been in 16-24s. Transactions in all other goods, both cotton and woollen, have been of no special importance. Quotations and particular remarks will be found in our table on another page.

EXPORTS:—**SILK.** Since our last report, rather more encouraging advices have reached us from the European markets, and the result here has been a better demand for the article, and a rise in prices of \$10 to \$20 per picul all round. About 700 native bales have been brought into buyers' godowns, during the past seven or eight days, and it appears probable that much of this will be settled. Good silks, especially good hanks, are now becoming very scarce indeed. We cannot estimate stocks altogether at a figure over 2,000 native bales.

The French Mail of the 12th inst. took away 259 bales, making the export to date 19,886 bales. This shows a slight excess in the export of the season, over that of 1876-77 at the same period, the figure then being 19,719. It must also be noted that, this season, many shippers have been increasing the size of their shipping bales—so that the season's export is thus brought decidedly above that of the last; which is remarkable, as last season's export was generally considered an exceptional one. We believe that the reason of this excess is to be found in the stimulus given by the Government to producers of both silk and tea, with the view of re-imbursing the country for the expenses of repressing the Kiushiu rebellion.

Our readers interested in silk will probably have heard that silkworms' eggs,—by latest advices,—were being offered in Milan at 3 to 3.50 *lire* per carton, without buyers. This price would bring out most shippers without loss—on account of the very low average figure at which last season's purchases were made; but it is to be expected that they will have to suffer a still farther reduction from this ridiculously low price. The Tea market is closed for the season; and in neither Import nor Export markets, have we any remarks to offer on anything but staple goods, as above.

EXCHANGE:—The business done during the week has again been on a moderate scale, and no important transactions call for remark. The demand for Bank paper has not been large, almost the whole of the large transactions in Yarns having been sales 'to arrive.' Few transactions in private paper are recorded. The ruling figures have been 4s. 0d. for Bank and 4s. 0½s to ½ for Credits; but the market closes a shade weaker.

We quote:—London Bank, 6 months' sight 3s. 11½d., sight 3s. 10½d. Credits, 6 months' sight 4s. 0½d. Documents, 6 months' sight 4s. 0½d. Documents continental, 4s. 0½d. Paris Bank, 6 months' sight 5.02, sight 4.92. Documents, 6 months' sight 5.05. Shanghai Bank Bills, sight 72½. Private, 10 days' sight 73½. Hongkong Bank Bills, sight ¾ *pro* disc. Private, 10 days' sight 1¼ *pro* disc. San Francisco Bank sight 94. New York Bank, sight 93½. BULLION. Gold Yen 392, Kinsatsu 411.

* To connect with the Belgic O. & O. S. S. sailing 22nd March.

* To connect with the P. M. S. S. City of Tokio sailing April 4th.

•• The dates of Arrival and Departure of the Mitsu Bishi Company's steamers are susceptible of alteration, consequent on the necessity imposed upon the Company—by its contract—of connecting with the steamers of the Pacific Mail.

•• No days for Arrival or Departure of the Pacific Mail Company's or Occidental and Oriental Company's steamers having as yet been fixed, we are unable to tabulate them. Each separate steamer's departure from her port will be notified in the Table below, and the day of her probable arrival at her destination.

•• Three days are allowed in the P. & O. Company's Schedule for transit of the Mails between London and Brindisi.

•• Two days are allowed in the Messageries Company's Schedule for transit of the Mails between London and Marseilles.

ORIENTAL BANK CORPORATION.

INCORPORATED BY ROYAL CHARTER, AUG. 30, 1851.

Paid-up Capital £1,500,000.
 Reserved Funds £ 500,000.

The Corporation grant Drafts, and negotiate or collect Bills payable at London, Paris, Bombay, Calcutta, Colombo, Foochow, Hiogo, Hongkong, Kandy, Madras, Mauritius, Melbourne, Point de Galle, Port Elizabeth, Shanghai, Singapore, Sydney, Tellicherry, New York, and San Francisco; on terms which may be ascertained at their office. They also issue Circular Not's for the use of Travellers by the Overland Routes via India and America.

They undertake the agency of parties connected with India and the Colonies, the purchase and sale of British and Foreign Securities, the custody of the same, the receipt of Interest, Dividends, Pay, Pensions, &c., and the effecting of remittances between the above named Dependencies.

They also receive deposits of \$100 and upwards for fixed periods, the terms of which may be ascertained on application at their office.

Office hours, Ten to Three; Saturday, Ten to Twelve.

Yokohama, January 1, 1878.

CHARTERED MERCANTILE BANK OF INDIA, LONDON, AND CHINA.

Incorporated by Royal Charter.

HEAD OFFICE—65 Old Broad Street, London, E.C.

Branches and Sub Branches.

In India	Bombay, Calcutta, Madras.
Ceylon	Colombo, Kandy, Galle, Matale.
Straits Settlements	Singapore, Penang.
Java	Batavia, Sourabaya.
China	Hongkong, Foochow, Shanghai.
Japan	Yokohama.

BANKERS.

Bank of England—London Joint Stock Bank.

The Bank receives money on deposit, buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts the usual Banking and Agency business connected with the East, on terms to be had on application.

SCHOOL FOR CHILDREN IN SWITZERLAND.

MADAME A. JAQUEMOT (née Dogny) proposes to establish at Geneva, Switzerland, a Boarding School for Girls, and for Boys under 12 years of age; where they will have the advantages of a sound education and sedulous domestic care.

Boys over 12 years of age may be committed to Madame Jaquemot's charge as boarders, and parents can thus secure for them the comforts of a home, with the opportunity of attending one or other of those educational establishments for which Geneva is so justly celebrated.

Parents wishful to place children under her charge at the Pension Dogny, may address their enquiries as to terms &c. to the Editor of the *Japan Times*, who is empowered to furnish them.

RUINED RIVERS.

SINCE we pointed out the evils of disafforestation, six weeks ago, the foreign press of China and Japan have continued the discussion, giving valuable support to our arguments by additional illustrations and examples. We hear now that the Japanese Government has, with commendable promptitude, recognized the value of our warning,—and of our advice in the companion article on afforestation:—that the subject has been considered and fully discussed;—and that Forestry laws or regulations will be shortly promulgated. We shall not, therefore, be throwing away our labour, if we follow up the subject with a few remarks on the condition of the rivers of Japan; indicating how the evils which now so greatly decrease their usefulness can be removed; and how, in the future, they may be properly conserved. Vast sums of money, and the labour of armies of men have been applied, during a wasteful past, to achieve these results, but the evils have not been removed, they have been increased; because all this labour and treasure has been misapplied by incompetent engineers. Nothing can prevent their continued accumulation but an entire change of tactics.

The ultimate results of disafforestation are, as we have shown, destruction of arable and pasture land, change of climate, scarcity, famine, desolation. And the chief agents which work this woe are the disintegrated fragments of the denuded hills which are spread broadcast over the land by the storm-waters which overflow the choked river-beds. As these fragments crumble still smaller, into sand and silt which the water can carry, they are transported along its course, but strangling the rivers as they flow, the rapidity of motion, which is the water's only power, is lost, and decreasing as the stream nears the sea, no sufficient impetus remains at last to counteract the resistance of the tide; the water drops its load, and a bar closes the entrance of what ought to be a useful highway of trade. Such effects of the folly or the selfishness of man are pitiable: a poet might figure to himself the Naiades, struggling to bear the corpses of their slaughtered sisters, the Dryades and Oreades, to their ocean grave, but sinking themselves under their burden, and sharing a common fate; a plutonomist sighs to see Nature's gifts abused and man's toil bestowed in vain, and invokes the aid of Science to repair the ills that greed and ignorance have wrought. When Science herself applies her forces in a wrong direction, then truly 'the last state of that land is worse than the first.'

To prove that Japan is reduced to such a plight, we need but adduce a few examples of the way in which some of her rivers have been treated. In our former article we quoted the Yodo-gawa, struggling through the great city of Osaka to the sea, and the Shinanogawa, prevented by the same causes from doing its duty as the waterway of the western provinces; with mistaken engineers 'pot-

tering about their mouths.' We will now exhibit in detail the mischief their mistakes have caused, and thenafter, show how it may be repaired.

One of the most unscientific schemes, and one of the most expensive, that has ever been carried out in Japan, is the canal from Osaka to Sakai. Its main object was to afford a ready means of transport from the city to the coast port, for the contents of the overflowing rice granaries of the former; and native speculators saw, in immigration, the latter affording them a site whereon to build the structure of their fortunes. But another object was to relieve the main channel of the Yodogawa of part of its storm-waters, which periodically flooded the plains. The budding hope flowered, but it never brought forth fruit. The canal damaged the river, but itself afforded no channel to the sea; and though the Osaka rice furnished the material to supply the *saki* distilleries, which were forthwith established at Sakai, and a large spirit trade was created there, the projectors' main intention was balked. Sakai did not become the port of Osaka,—and it never will. Let us now see how the construction of the canal affected the river. It is not from Lake Biwa, whence the main branch of the Yodogawa derives its waters, that it brings the materials for its bar; but from the bare, disafforested hills which circle its basin, and those of its other two branches and their numerous tributaries. During the long summer, ablaze with sunshine, all this watershed is almost devoid of rain, and in sandy, stony, dry beds flow streams that a child can cross. But during the shortened autumn, winter, and the shortening spring, the rains descend and overcharge the soil, and a wide, turbid torrent, bearing its season's share of rock and mud and sand, rushes down to Osaka. The Sakai canal taps it, and its volume and its pace diminish together, its lithic burden sinks, and through the hundred water ways of the Japanese Venice it creeps sluggishly to the sea. Every river or canal perspective in the richest city of fair Japan is marred by ever-increasing sand banks and shallows: for ever are labourers toiling, with scoops, sand-barges, steam dredgers, with no permanent result of toil; as fast as they lift the sand, the river deposits more; yearly, hourly, daily, the obstacle grows which their misdirected labour seeks to remove, and the myth of Sisyphus in Hades becomes a reality at Tempusan.

Japanese engineers are not alone responsible for this destruction of a valuable river. Holland furnishes them with accomplices, and further up the stream, between Osaka and Fushimi, these are industriously and conscientiously doing what mischief lay in their power. What 'lumbering' (American-English for disafforestation) is to a citizen of the United States, the fabrication and employment of 'zinkstuka' is to the amphibious Dutchman. For, as the American lumberer, whose life is a contest against overbearing vegetation, forgets that all the world is not virgin forest, so the Dutch engineer,—whose

education has been mainly directed towards resistance against the encroachments of a stormy sea, or towards creating new land in spite of that ever-watchful foe,—seems to think that, as on a sea-coast, so in a river's bed, his mattress of brushwood and vegetable rope is alone of value. Now, as we shall show, in the second part of this essay, the *zinkstak*, in its proper place, is a most valuable apparatus, and we shall then take the opportunity of more fully detailing its construction; but in the Yodogawa, as applied by the Dutch engineers employed, it has worked nothing but mischief. For such a length of the river as these barriers have been placed in position, they have kept the river bed clear, by croating, or rather assisting, the scour, but—to have been of any real value, they should have been continued away, past Osaka to Temposan, and thence some half mile or so out to sea; which we need hardly say was practically impossible. As employed near Fushimi, they improved the river for the few hundred yards it had to run between them, but their ultimate effect was to drive down upon Osaka thousands of tons of solid matter with which the channel there need not have been choked.

Another, happily an abortive attempt to check the flow of a river in Japan, even more costly than that we have just described, was the canal which was meant to divert a part of the waters of the Shinanogawa, at Niigata. Three or four years ago, in the columns of another paper, the writer—reviewing an interesting Report by Mr. Vicars Boyle, then Engineer-in-Chief of the Imperial Government Railways, on the town and neighbourhood of the West-coast port; exposed the folly of the undertaking, and showed that the Teradomari Cutting,—as it was called,—on which no less than 800,000 *riō* had already been spent, so far from being serviceable to Niigata, or likely to aid in extending its trade, was worse than useless; inasmuch as, if persevered in, it would certainly further deteriorate its already bad harbour. The object of the engineers, who projected the Teradomari Canal, was in this instance only to tap the Shinanogawa, and thus, as they thought, to check the devastation caused by annual floods, when its storm-waters overflowed the banks. It is the more strange that such an error as was committed in this instance should have been made, inasmuch as right before their eyes was the line, marked by Nature herself, on which could properly be expended the funds at their disposal. About five miles north of Niigata another river, called the Aganokawa, falls into the sea. This is connected with the Shinanogawa by a subsidiary stream, or natural canal, known as the Koangagawa, which flows,—now towards that outlet, then towards this, according to the rainfall on either side, which raises the level of the water in either stream. We know from native records that—about a century ago—the Aganokawa was actually a tributary to the main river, the Shinanogawa, and—through what is now called the Koangagawa—discharged itself into it near its mouth; and the combined scour of the two streams sufficed to keep open the entrance to the Shinanogawa, upon whose bar there was then a depth of water of from sixteen to twenty feet. It would not have been difficult, with half of the money at the disposal of the Government, to reinstate this condition of things, and a very small expenditure then, employed in assisting Nature, would have cleared the Niigata river of its bar. The banks of the Shinanogawa, which is the outlet for the watershed of three provinces, Shinawa, Mushashi and Echigo, rarely rise more than three feet above its ordinary water line, and being composed of a fine alluvial deposit, easily disturbed, require fortification in some one or other of the ways to be presently described; but this might have easily been done,—the scour of the stream increased, the bar cleared away, and Niigata made really, instead of nominally, a port of trade. But the engineers who pro-

jected the Teradomari cutting overlooked this obvious and easy method of improving the river—and having only in view the object of relieving the Shinanogawa of its surplus waters in flood time, commenced to make their cut to a point *twenty-five miles distant* from Niigata. Now, considering that the Aganokawa's breaking a channel for itself through the coast had reduced the depth of water on the bar of the Shinanogawa, from twenty feet to seven, it is clear that the Teradomari canal would, had it been completed, have still further reduced the volume and velocity of the central stream, and have left, perhaps, three feet of water on the bar; when Niigata would have become, like Yedo, practically inaccessible for shipping. Happily, however, the work was of such a magnitude, and its cost pressed so heavily and continuously on the resources of the district, that the inhabitants showed very distinct signs of discontent; and the Government was compelled to abandon an enterprise which had become so unpopular, that perseverance in it might, at any moment, have been made the pretext for revolt. It is much to be regretted that so much good money was thrown away upon so foolish a scheme.

Turning from these comparatively sluggish streams at Osaka and Niigata, to the dashing Fujikawa, reputed the most rapid river in Japan, we find, applied in other forms, the same waste of labour and money; the same hopeless never-ending struggle against natural forces, instead of their subordination and utilization, which should be the aim, as they constitute the triumph, of every true engineer. The Fujikawa drains the great basin of which the old province of Koshin forms the centre and, after leaving this, it descends with great velocity through a long rocky crevasse, until it meets the sea in the Suruga Gulf. As far as Kaji Kasawa, the river port of Kofu, the chief city of the province, it is navigable after a fashion, but above this, the river is ruined. Through the plains of Koshin meander numerous streamlets, the feeders of the Fujikawa. Ascend these, and in every case you will come upon the traces and results of the wood cutter's ravages. Traversing the country roads, you are constantly opposed in your journey by mighty embankments. Climb any one of these, and you find it a river bed, dry in summer, a torrent in the rainy season. On each side massive banks, representing the labour of generations of men; and each successive year requiring to be raised and widened, stealing the ground from the landlord and his labour from the farmer. These have so grown through the centuries, that now, standing on their summits, you look down on the thatched roofs of the hamlets dotted along their bases. Ascend the course of the stream and you see the cause of all the waste of treasure and of toil. The hills are bare of wood from foot to peak, and crumble, year by year, into the river's gorge. Everywhere the same evil—disafforestation—everywhere the inevitable results which we have in our former articles on the subject, fully and minutely described.

Thus are rivers 'ruined.' The second part of this essay will teach how they may be 'rebuilt.'

GOVERNMENTAL INTERFERENCE WITH TRADE.

THE *Choya Shimbun*, in an article which we quote in another column,—'Governmental Subsidies to Trade,'—and the *Hochi Shimbun*, in another,—'The Subsidy to the Mitsui Bishi Company,'—together almost indicate, in that feeble, half-articulate way which characterizes most of the utterances of the native press, a correct expression of opinion upon the question of Government interference with trade in this special direction. The *Choya Shimbun's* article may be satirical; and the bombastic elevation of the present Mikado to the level of such men as Peter the Great and Napoleon I. justifies the supposition, as does also the admirable example of Yamashiroya Wasuke, the end

of whose mercantile career with Government capital was his suicide before his creditor's doors; but, for the rest, the satire is so thickly wrapped up that its point cannot be felt. On the other hand, the *Hochi Shimbun*, affecting to supplement, or reply to, the article in its contemporary's columns,—while perfectly well defending the subsidy to the Mitsui Bishi Mail Steam Ship Company, by adducing examples from foreign countries, and by the line of its general remarks on this particular instance, fails to do more, and leaves its readers with the impression that it probably approves of subsidies altogether; as the article in the *Choya Shimbun* induces a suspicion that the writer disapproves of them. It may be of some advantage to our own Japanese readers, if we put the matter before them in a clearer light.

It is accepted as an axiom, in all communities more advanced than that of Japan,—acknowledged as a general law of trade, well understood, and thoroughly proved by experience,—that all Governmental interference with business, anything which approaches to Governmental competition, or competition by Government's protégés, is bad, as a rule. It is the worst form of Protection, inasmuch as it has not even the fallacious appearance of protecting home industry against foreign competition, but fosters, unhealthily coddles a particular class of home industry or a subordinate section of a class, to the detriment of others. It has a pauperising, demoralising effect upon the individuals assisted, inasmuch as it neutralizes some of the legitimate impulses which should stimulate men's labour,—such as the desire of distinction and the dread of failure; it tends to create monopoly and to discourage competition; it checks invention, prevents progress, encourages slovenly work; and results, invariably, in the production of an inferior article at an unreasonably high price. A Government, for instance, gives, or lends on such terms as amount almost to a gift, the capital necessary for establishing a boot factory. To recoup itself for such outlay, it naturally gives to this workshop its army or navy contract for boots from the profits on which, realized by the contractors, it expects to be gradually repaid the sum originally advanced to them. No other bootmakers, unassisted by Government, can, to begin with, make boots at the same price as the subsidized factory, because they cannot get the capital to start with on the same easy terms; and consequently there is no competition for the Government contract. Gradually the article furnished to the commissariat deteriorates in quality, and the Government hardly dare reject it, for fear of imperilling the repayment of its loan. And so the soldier or sailor is badly shod. Or, if Government does return the inferior article on its contractor's hands, it ruins him and the subsidy advanced to him is altogether lost. Also, Government always being the largest customer for any article of prime necessity in the nation, this concentration of its patronage on the establishment under its own wing, takes from the trade generally a large amount of work, and its resulting profit, and so the many are made to suffer for the benefit of the few. Whereas, if the Government contracts were divided into a number of parts, and each part put out for competition by tender, for short terms, to all the bootmakers in the neighbourhood of a garrison at a fair price, each bootmaker would strive to produce the best possible foot-gear, the Government would get the greatest possible value for its money, and the standard of boot making generally would be raised all over the district. Both of the native writers we have quoted adduce the subsidies to Steam-ship Companies as an example of necessary or advantageous assistance given by Governments to private enterprise;—and as we shall presently show, Government interference or encouragement in such directions as this is legitimate and valuable—but even here, the principle we have illustrated by our suppositional contracts for boots

has been applied with advantage; for ocean transit of mails, and with them, unavoidably, of goods and passengers, has been materially quickened by the stimulus applied to ship-owners, of the hope to gain the prizes of Government subsidies. And this stimulus has, of course been transmitted from ship-owners to ship builders and engineers, whose inventive faculty has been taxed to the utmost to produce ships on better lines and engines more and more powerful.

There are certain departments of the business of nations, which may with great advantage be undertaken by Governments; some which it is clearly the duty of Governments to undertake; and it is to these that should be devoted such portions of the nations' funds as are available; but these must be undertaken *altogether* by Governments, and they must be such as individual subjects cannot reasonably be expected to do for themselves, or such as it would not pay individuals to attempt. For it may be taken as a general rule that individuals, even under the best of Governments, understand their own interests better, and take better care of them, than any Government ever does, or can be expected to do. But there are a certain class of enterprises, requiring very large capital, which private capitalists cannot or will not undertake, because their remuneration would be uncertain or difficult to collect—even, in some cases impossible, without the aid of legislation. Such, for a familiar instance, are lighthouses. No private individual, or company, could be expected to invest money in such an enterprise as lighting a coast, because they could not collect tolls from vessels passing at sea; and to get even the most moderate interest on their capital, they would require the intervention of Government to impose light-dues on all ships entering the ports of the country. And if a profit was got in this way, the burden of its cost would fall most unfairly on the single class of ship-owners. This, therefore, is a quite legitimate purpose for the expenditure of Government funds—that is, of the nation's funds held in trust by the Government, and the interest on capital expended, and cost of keeping the lights in order is thus borne by the whole community generally, out of general taxation—less the fair charge made on shipping in the form of light-dues. Roads, canals, railways, bridges, all such means of communication are other examples of enterprises which are best undertaken by Governments; also postal and telegraphic services. In Great Britain, where there is a plethora of accumulated wealth always seeking for investment, many of these are, and more used to be, provided by private individuals or Companies; but it is found that the public convenience is best served by Government taking charge of them; because so long as they pay their expenses, a Government does not require profit. And the public has the great advantage of uniformity of service and of charges, unattainable under private management, because no private individual or Company could well undertake the whole of such a service in a large country; or if so, could be trusted to execute it without extortion. The public would suffer, either from an oppressive monopoly, or from the opposition of conflicting interests. But, as we have said, if Government interferes at all, it must take charge of the whole work to be done. If it does less than this, either directly, or by subsidizing any individual or group of individuals, it then competes, and competes with others of its own people, for whom it is the trustee, and competes on unfair terms. The motive of the Government in making the loans and gifts, referred to by the *Choya Shimbun*, is of course most praiseworthy—to stimulate native industries and to naturalize fresh ones. But the method it employs is radically wrong. No enterprise that cannot exist without this artificial aid is worth helping; and the proper way to foster trade is to leave it entirely free. If the attention of this Government were bestowed, and the public money

spent, upon assuring to individuals the peaceable employment of capital,—by the establishment of efficient police and an equitable and justly administered code of laws; in facilitating its operations by providing efficient means of transit and communication; and were inducement offered to its employment by such bribes as grants of waste land, temporary remission of taxes, protection by patent for new discoveries, and other advantages common in other countries;—then would timid capital come forth from its hiding places, and we should no longer hear of such instances as are quoted by another native journal, of hundreds of thousands of gold and silver coin being concealed in jars, or buried in the earth. The circulating medium would really circulate, the rate of interest would fall to a figure which trade could bear; foreign capital would flow in, with foreign skill and energy to apply it, and such new enterprises as had in them germs of success, such old ones as languished for want of means, would all be developed and flourish, and the country would progress at a rate little dreamed of by a paternal Government or patriotic ministers, who with the best intentions, are now really retarding its advance.

THE Japanese Government is giving us a practical proof of its vigour and activity, in the direction which we have pointed out above as a healthy one for Governments to take, in their endeavours to assist the progress and foster the rising commerce of the people committed to their charge. Having for some years successfully managed the entire postal service of Japan, and really managed it in a way unsurpassed by any postal service in Europe, it now proceeds to take under its charge the entire telegraphic service. Hitherto, a certain amount of inconvenience has been felt by the mercantile community from the existence of two separate services, the local and European: from and after Monday next, the 25th inst., this will be obviated. On that date the Great Northern Telegraph office in Yokohama will be closed, and all messages, whether for correspondents in Japan, or in any other country in the world, will be received at, and transmitted from the Imperial Telegraph office here.

The Great Northern Telegraph Company will have but one office in Japan, that at Nagasaki, and to that point of departure all foreign messages will be sent from the Government office. For the present the tariff will remain the same;—two dollars for the message of twenty words or under as far as Nagasaki, and thence on, a dollar a word; but we are informed that the Government is negotiating with a view to hereafter charging from Yokohama on a tariff of so much per word, which will effect a saving for senders of messages. At present, a telegram to Europe or elsewhere is burdened with the two dollars for local transit, whether the message be of two words or twenty; but under the new arrangement this discrepancy will disappear.

The Government has so well and so faithfully discharged its duty as the people's letter-carrier, that we can with confidence anticipate similar success for this new experiment, and shall watch its progress with great interest. An interesting ceremony on Monday next will mark its inauguration. The Minister and Vice-Minister of Public Works will meet the Director and Chief Superintendent of the Department of Telegraphs at the Central Telegraph office, at 10 a.m., when the Minister will make the official announcement of the assumption by the Department of the full responsibility for the service, and declare the Imperial Government Telegraph lines open. At the conclusion of this ceremony all the branch lines will be brought into communication with the Central office, and messages notifying the announcement just made will be despatched in all directions and replies received, the working of the apparatus being displayed, and explained to the visitors. In the evening a grand banquet will be given in the large hall of the Imperial College of Engineering to celebrate

the event, at which will be present the whole of the Cabinet, and a large number of the higher officials. It is quite fitting that so important a step should be marked with so much pomp and rejoicing, and we cordially offer our own congratulations on the event.

THE harbour has all day been gay with flags, and the roar of a royal salute marked the hour of noon. The number of houses in the foreign settlement, which are ornamented with the red, white and black stripes, indicate how strong amongst us is the German portion of this cosmopolitan community, and how loyal to their aged sovereign, whose eighty-first birthday they commemorate today. There are other ties beside those which unite our royal families—a common origin, (though at a very remote period) of race and language, and a common religion, whichought to make Germany and England friends; though in commerce here in the East, Englishmen and Germans are necessarily rivals. In our own special province of literature, rivalry means only mutual admiration, and the sordid dollar does not enter as an element of dispute. The English student willingly owns the debt he owes to the Teutonic language, which has given such nervous, manly, force to his own tongue; acknowledges too with gratitude, the mighty gift of the printing-press; and looks up with love and admiration to the giants of German literature, the mighty teachers of philosophy, philology, and history; to Schiller and to Goethe, the great masters of poetry and the drama; while our great Englishmen—especially our loved, unapproached, and unapproachable Shakespeare, are revered and appreciated by German critics equally as by ourselves. This is no fit arena for political discussion, and we read of England and Germany having divergent interests in Europe only to bewail: it is happy for us here, that we have a neutral ground on which we can join hands in peace.

WE had commenced an 'Account of the Trip to the Bonin Islands; by the Man who didn't go'—but on looking over our library for the materials for the paper:—Kaempfer, Titsingh, Commodore Perry presented themselves as such well-known friends, that we have concluded to refrain from inflicting our tediousness upon our readers, Mr. Russell Robertson, too, in a paper which he read at a meeting of the Japan Branch of the Asiatic Society on the 15th March 1876, summarized all that previous writers had to say on the subject, added all the new matter that could be collected, and completely exhausted the subject. The year is not sufficiently advanced to permit the botanist or the florist to make any observations worth recording; only three birds and two insects fell a prey to the naturalist, the voyage there and back was stormy, the vessel, flying light, rolled terrifically, the sinologue was so seasick that he had to be landed at an convenient penal settlement, with a companion, equally learned in law and medicine, to keep an ice-bag on his spinal cord;—when the steamer reached Port Lloyd, the inhabitants displayed anything but enthusiasm; the whole party returned in a limp and dispirited condition, and the only man who enjoyed the trip was 'the man who didn't go.' Therefore, for all particulars of a thrice-told tale we refer the community to the columns of the *Japan Mail*.

EDITORIAL NOTES.

WE quote, amongst our 'extracts' this week, an article from the *Straits Times*, summarizing and commenting on a letter addressed by Mr. W. Knaggs, a 'tea-planter of experience, to the *Pinang Gazette*. The last quotation from his letter should be of some value also to Japanese tea-growers and merchants. The tea trade here labours—in comparison with that of China—under the same disadvantage as does that of the Neilgherries; the irregularity

of quality in the leaf which is the necessary and inevitable consequence of what we may call 'cottage cultivation. Grown from various qualities of shrub, in diverse soils, and under inconstant circumstances of climate and cultivation, the tea grown in Japan is then all mixed together and brought down here to be fired, and naturally the result is disappointing. We hear that the Japanese are persevering in their foolish attempt to make Black Tea, so far as relates to one-third of the coming season's crop. As no arrangements have been made for doing what Mr. Knaggs points out as an indispensable condition of success—the establishment in each district of well-appointed tea-firing houses, under skilled direction, where large quantities of leaf can be simultaneously and properly treated—we can but anticipate that the black tea of the coming season will display even more irregularity in quality and value than has hitherto been shown by the uncured greens. The only possible advantage we can look for as likely to accrue from this experiment is that the reduction of export of uncoloured Japans lowering stocks in America, may have the effect of making the market there firmer. For those engaged in the manufacture and export of Japan black tea, we look for nothing but disappointment and loss.

YET another passage from Mr. Knaggs' letter will bear special quotation and re-iteration. He very truly says:—

"The manipulation and curing of the leaf is the most difficult part of the tea planter's work, and the value of the manufactured tea altogether depends upon the skill and care with which this is performed. It matters not that the leaf may have been produced under the most favorable conditions of climate, soil, and manure, if the curing is defective."

How do the promoters of this inauspicious enterprise propose to secure this 'skilful' and 'careful' manipulation which is to produce an article fit to be put into competition with the product of China, the outcome of years of experience and practice? The proper way is of course, to import competent firers from China and—as it is hardly likely that Chinese would consent to work under a Japanese superintendent—that the tea-firing establishments should be put under the control of foreign experts. But all this will so increase the cost of production as to put profit out of the question. And again, even with such a staff,—if the tea is packed for export up-country,—an imperative condition of success in the case of black tea,—does the Japanese Government know so little of the foreign tea-trade as to imagine that it would be purchased by foreign exporters at the open ports without rigid inspection of every box? 'Tea is bought by the 'chop' in China from musters of a few boxes' may be their reply to this question. It seems a hard thing to say, but it is unhappily a truth,—this cannot be done in Japan, because the Japan merchants, as a class, are utterly untrustworthy, completely dead to all sense of commercial honour, and quite careless or ignorant of the value of commercial credit, and Japanese Courts of Law afford no redress to a swindled foreigner;—whereas the Chinaman can be trusted, and has learnt the lesson that "credit is the life of commerce."—and the aid of the Courts has never to be sought.

No,—If the Japanese Government wishes to have this experiment tried under fair conditions of success, let them invite foreign merchants to undertake it at their own risk. (There are foreigners to be found who disagree with us on the subject of growing Japan Black Teas.) Let these be admitted to partnership with native teagrowers, and thus combine the advantages of foreign knowledge of the requirements of foreign markets, and of foreign administration of the manufacture, with their native colleagues' command of native labour, and local knowledge of prices, climate and other circumstances; and then the product of a farm so managed, exported straight from the district on joint account, would succeed,—if success be possible at all. But when this can be done, a number of other similar and more hopeful enterprises can be done, and Japan will be a richer country, and its people and rulers better and wiser men.

IT is probable that the success of the Silk Filature at Tomioka may have induced the Government to believe that the same increase in value, which has been achieved in the reeling of Silk by the adoption of foreign methods, is

to be got out of Tea. But the bases of the two experiments are widely different. Japan Silk is intrinsically amongst the finest in the world, and that only careful reeling is required to allow it to assert its position, is proved by the high price which the Tomioka product has always been able to command, as much as \$1,375 per picul, the highest price ever paid here, having,—we believe,—been got for it when all silk was at its highest. But this new experiment with Tea will be a failure, because—widely different from the conditions in the other article—the Tea shrub of Japan is inferior to that of China, and more specially inferior to that of Assam,—for the purpose intended, the manufacture of Black Tea. The Japanese have surely an equivalent to our proverb 'You can't make a silk purse out of a sow's ear:—let them apply it, and perpend.

THE mention of Lighthouses as an illustration of the way in which Governments may legitimately expend the national funds to stimulate, foster, or protect trade, reminds us that some weeks ago we were favoured by the gift, from Hara Takayoshi-sama (the Commissioner of Lighthouses) of a list of the Lighthouses, Lightships and Beacons which had been established up to the beginning of this year. Art. XI of the Convention of 1866 stipulated that the Japanese Government should 'provide all the Ports open to Foreign trade with such lights, buoys, or beacons, as may be necessary to render secure the navigation of the approaches to the said Port;' but we are quite certain that the Treaty Powers did not contemplate that when the work had been done, foreign shipping should avail of its advantages without paying for them. The work has been most efficiently done: there are ten lights of the 1st order, four of the 2nd, five of the 3rd, seven of the 4th, six of the 5th, and some smaller ones and staff-lights, making in all forty lights. The earliest built exhibited their lights first in the beginning of 1869, and during the past eight years, the Department has gone on working till the coast is efficiently protected as we see it now. In addition, there are fifteen buoys and four beacons, which mark shoals and other hidden dangers; and a large staff of European and Japanese officers, with two large and expensive steamers, are employed by the Department, and are always in a high state of efficiency. And hitherto, the whole service has been gratuitously done by the Government. It is high time that 'light-dues' should figure in ships' port-charges; no objection could be made to such a tax, imposed on shipping by all maritime nations, and we hardly think the formal Revision of the whole Treaties need be waited for before the tax is imposed.

WE have received, and acknowledge with thanks, the "North China and Japan Desk Hong List" a general and business Directory for Shanghai, the Northern and River Ports, and Japan, for 1878. It is published at the *North China Herald* office and is a most complete and convenient desk companion. It is illustrated by a double Map—the Empire of China on one side, and the settlements of Shanghai on the other. To enumerate or review its contents would require more space than we have at our disposal; it is enough to say that it contains, in an accessible form, all the information on persons and places that is required in such a work. We notice two features which might be copied with advantage by the compilers of our own local Directories. The alphabetical list of firms is notched down the sides of the pages like a ledger index, so that one can get instantly at the page required—and the second, nominal, list of individuals, entitled 'Who's Who' attaches to each man's name his occupation. An appendix with a large number of useful commercial tables and other lists, constantly required for reference, complete the work.

WE had intended, this week, to summarize, and review, Mr. Manton Marble's paper on 'Currency Quacks and the Silver Bill, which we quoted from the *North American Review*. But it has been suggested to us that amendments may have been introduced into the Bill in its passage through the Senate, which might possibly modify the views we entertain after reading the original Bill. We shall have the report of the debate in the Senate, we presume by the next steamer from San Francisco, to which date we therefore relegate further consideration of the subject.

THE new Boat house is completed, and preparations are being made for the opening season. Unfortunately the boisterous sea, which breaks the landing stage yearly, now delays the erection of a new one. The new quarters ought to please the members of the Club; the house covers the same ground as the old one, while being of two stories, there is ample accommodation in the ranges of dressing rooms up-stairs, and the ground-floor is left free from all incumbrance to the stowage of boats. This arrangement is a great improvement on that of the old house: members who prefer bathing to the harder work of rowing will have plenty of room to 'calithump' around and pull each other about, without interfering with the oarsmen, or occasionally barking their shins over the rowlocks of the boats. The old house has been moved back to the rear of the new one, and fresh roofed and tiled, so that now, together, the two form quite a spacious building. It is not yet determined to what use the old house will be put; it is well adapted to boxing, fencing &c.; and at a slight additional expense, might be turned into a rink for roller skates, without at all interfering with the gymnasts; but the objection the Japanese make to the premises being lighted, would prevent full use being made of them for such purposes as these. We have but few after-dinner amusements, and an opportunity for 'rinkists,' or a sparring and fencing school would be a welcome addition to the scanty list:—what possible harm the burning of the midnight oil in such a building can do to the proprietors of the land, we altogether fail to see, as the risk of fire is virtually *nil*.

There has been as yet no announcement of the date of the opening night; but as soon as the landing-stage can be laid down, we hope that the Captain will take an early opportunity of inaugurating the new house, and sorting out any new material for crews which may be found, after its hybernation, among the members of the Club. We have heard nothing of the doings of the Tokio men as yet; having the advantage of smoother water, they ought to have got to work before this.

THE JAPAN TIMES.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN TIMES must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

YOKOHAMA: SATURDAY, MARCH 23, 1878.

NOTES OF THE WEEK.

FRIDAY EVENING, MARCH 22nd.

THE O. & O. S. *Gaelic* arrived in port from San Francisco at noon on Monday last having made a passage of twenty-five days, and encountering strong westerly gales the entire passage. She was despatched hence on the 22nd for Hongkong with a full cargo, principally rice. The *Tokio Maru* from Shanghai and way ports arrived on the 21st, and the *Sunda* on the 22nd, bringing the London mail of the 1st of February and one day ahead of time. The *Malacca* left with the English mail on the 19th, due in London May 6th, and the *Saikio Maru* for Shanghai and ports was despatched on the 20th. The *Belgie*, with mails, &c. for America and Europe, is to leave to-morrow morning at daybreak.

On Sunday night, with half a gale of wind blowing, we were startled, about half-past nine, by seeing an immense red glare in the sky over Tokio, and the atmosphere being particularly clear, soon could be seen underneath the flames and smoke which indicated a fire in the capital of no common magnitude. So unhappily proved to be the case, and during the week we have continued to receive details of the disaster. The *Nichi Nichi Shinbun*, one of the best informed of the Tokio papers tells, us that thirty-one streets were burned down, and that the number of houses destroyed was 4,261. The fire commenced in the house of a carpenter and is said to have been the work of an incendiary. It is a curious fact, pointed out by the *Japan Gazette*, that the Japanese fully expected the disaster, as they say that 'on the day of the horse in the year of the tiger,' some such happens, recurring once in twelve

years. Happily there was hardly any loss of life, only one old man, sixty-six years of age, falling a victim; but the loss of property must have been enormous, and taking five to a house, a most low average in Japan, upwards of 20,000 people must have been temporarily rendered homeless.

On Monday, the 18th, we received from Kobe the particulars of the fires mentioned in our last. Of the first, that at No. 109, Settlement, the *Hiogo News* tells us:—

"When the firebell startled the community about one o'clock on Wednesday, and the word was passed for No. 109, smoke was already issuing from between the tiles in considerable quantity. The engines were immediately on the spot, and there being no fire to be seen either in the downstairs or upper rooms, a hole was knocked in the plaster of the latter, so as to allow of the roof being pumped upon from the inside, the process of removing the furniture being in the mean time proceeded with apace, and nearly everything was got out, though of course not entirely without injury. Meantime a quantity of plaster had fallen off the ceiling upstairs and shewed the whole interior of the roof a mass of flame, and as there was a stiffish breeze blowing, it was at once apparent that notwithstanding all the available power which could be brought to bear, the fire could not be confined to the top of the house. The engines, however, confined the flames to the main building while it was as quickly as possible pulled down."

We quote these particulars, as affording a very useful warning to Fire Insurance Agents and property-owners in Yokohama. It happens that the writer knows this house well, having lived in it for nearly two years, and having had occasion, during his tenancy, to examine carefully the construction of the chimneys and their position relative to the roof. The flues were composed of drain tiles enclosed in chimneys of brick and, theoretically, might have been pronounced quite fireproof. In fact, in all probability, our friends in Kobe are quite at a loss to account for the fire breaking out,—as it did,—in the roof. And, in absence of any possible proof, we are reduced to theorize on the matter, to a certain extent, ourselves. But we fully believe the cause to have been this:—that the flue and surrounding brick work of a chimney had been so far disintegrated by an earthquake, as to have allowed of the creation of a crevice, in which soot had collected in quantity:—that this soot ultimately caught fire, and then, falling outward on some of the intricate woodwork of the roof, (in which, as usual in Japanese-built roofs, there was about three times as much timber as there ought to have been), or on to the dry laths of the ceiling,—this ignited, and hence the catastrophe. The owner is a most careful and liberal landlord, and the tiling being in perfect order, not a drop of rain had touched the timbers for years; and in the immediate vicinity of the chimneys, of course, the wood-work would be especially dry. We have our own ideas upon the method of building chimneys in Japan, as also upon the proper means whereby Fire Insurance Companies might protect themselves from a large percentage of the losses they suffer from want of proper precaution, but do not feel called upon to make a present of them to the public: we only again refer to this fire for the purpose of suggesting that those interested in the subject, here, should assure themselves that they are in no danger of suffering from a calamity similar to this in Kobe, which had apparently been thoroughly guarded against.

Our Japanese friends may find a useful lesson afforded to them in the other fire we mentioned, which occurred on the following day in the Main Street of the native town, and which caused the destruction of between thirty and forty houses. The foreign engines were on the spot with the usual promptitude of the Kobe fire Brigade, but were, almost immediately, temporarily paralyzed by want of water. Now, only about eighteen months, or two years, ago, large fire wells in imitation of those in the foreign settlement, had been dug in the native town, which were supposed to be fully equal to any demand likely to be made upon them. Yet, when tried, they were found wanting. And why? Because, having been once dug, they were never looked at afterwards, and, never having been pumped out since they were sunk, so as to keep their innumerable feeding pipes clear, they had become silted up with sand and mud. Hence, of course, their contents immediately choked the engines; and it was only by their retreating on to their own properly cared-for wells on the foreign settlement, that the brigade was able to get the necessary supply of water. Let our native readers therefore lay this to heart: that it is no use adopting any foreign improvement on their own arrangements by halves: if they buy steamboats or plant tea shrubs; import machinery or dig fire-wells, let them learn at the same time how to take care of them all. Only the other day, at the Ooji Paper Mill, a couple of months after the foreign engineer had been discharged, the main Engine was wrecked through a most crass display of ignorance: now we hear of a great destruction of property, three-fourths of which might have been saved, but for the careless neglect of very simple means of protection.

Kobe has been most unlucky during the last week or two, for we hear of yet another fire in the settlement, which has destroyed the Astor House Hotel and Messrs. Skipworth and Hammond's haberdashery store adjacent: but as yet no particulars have reached us.

The repetition performance of *Cow and Box*, and the 'Two Bonny-castles,' for the benefit of Mr. Wagner, the *chef d'orchestre*, came off on the 19th inst. we were glad to see that, though the stalls were not filled as well as on the previous Wednesday, the body of the house was thronged by an appreciative audience. As the expenses of a repetition performance are small, we should think it possible that Mr. Wagner was substantially benefited by the efforts of the amateurs. Both pieces seemed to 'go' better than on the previous occasion: in the farce especially, the crudities we had to notice last Saturday were smoothed away, *Patty* had an apron with pockets to put her hands into, and *Smuggins* was capably dressed. In the burletta, *Bouncer* was decidedly in better voice, and Messrs. Pearson and Townley both acted their parts with even more *verve* and humour than last week. The score was admirably rendered, too, until—in the middle of the serenade, *Box* by, for him, a most extraordinary accident, forgot some of the words of his part and thence to the end, band and vocalists hardly seemed to be in such sympathy as was desirable. In taking leave—we fear for a long time to come,—of this sparkling little 'triumviretta,' we would say a word to the accompanist. To accompany to perfection is an art not acquired, or perhaps acquirable, by one musician in a hundred. The more conscientious and painstaking the pianist, the worse accompanist he is likely to be. He must completely efface himself, his music, his instrument. The singer may make mistakes,—his the task to conceal;—may be weak in certain notes,—his the duty to support. After all, no score can dictate, though many composers attempt it.—expression. It is the province of actor or singer to modify this and, with it, time, to suit necessities of stage accident, or the feeling or humour of the audience. The perfect accompanist is therefore by no means he who plays correctly from the composer's music; but he who so carefully watches the vocalists as almost to anticipate their errors, and to be, therefore, ready instantly to conceal them from the house—to be so thoroughly *en rapport* with them, and so well acquainted with their idiosyncrasies as to supplement all their defects, and where they can soar alone, to subordinate the instrument to the voice. To say that Mr. Griffin hardly seemed to do all this, is perhaps to show our own ignorance of the subject: but as we have never known but one instance of its being thoroughly done, our criticism is not likely to offend. Both on Tuesday last, and on the previous Wednesday, the best accompanist's patience would have been sorely tried.

The overture to *Cow and Box* and the interpolated music played during the evening, by the band conducted by Mr. Wagner, was particularly well done: the exquisite little symphony in miniature, especially, which we so praised last week, being given to perfection.

We hear that we may expect the performance of 'Trial by Jury,' by the Choral Society about the 10th of April. The piece is being diligently rehearsed, and no pains are spared to ensure complete success. Is it too late to suggest that the proceeds from this performance,—which will certainly be large—should be given to the poorer sufferers by the late most disastrous fire in Tokio, instead of being sent over to China to aid in the perfectly futile attempt to aid the sufferers by the famine in the North Western provinces? Even the claims of our own Foreign Hospital might be postponed to those of our Japanese poor, rendered homeless and destitute by the calamity of Sunday night.

We must give a word of encouragement to the *entrepreneur* of a different class of amusement. Mr. White, whose erection of a mat theatre for acrobatic performances in the middle of the settlement we were obliged to condemn a few weeks ago, has betaken himself and his *troupe* to an open space near the public garden, where a fire cannot do any harm to any other building. He opened his season on Saturday the 16th instant, and the very clever Japanese gymnasts more than upheld the reputation they have already acquired; for they introduced a number of new feats, which were all neatly performed, though some were of a most difficult character. Notably, we may commend the balancing of a combination of three ladders, on which the little girl performed, and of a boat, twelve feet long, which was supported by one man on the soles of his feet and in which three youngsters gave an exhibition of posturing. No visitor to Yokohama should fail to see this remarkable acrobatic exhibition.

We are glad to know that the site for the new foreign Hospital for infectious diseases has been staked out, and that the building will be immediately commenced. This preliminary work was done on Thursday last by a sub-committee of the General Hospital Governors, in the presence of the British Consul and an officer from the Japanese Land Office.

We must again ask our readers' indulgence for having to leave untouched a number of items of local interest, which should be mentioned in this column. In a short time we hope to have the necessary supply of type to enable us to give a fuller record of the events of the week.

NOTES AND QUERIES.

QUERIES.

Qy. 2. Where can I find any account of the ceremonies in use on the occasion of birth, death, or marriage, among the Japanese? Do any of the French, Dutch or German works on Japan contain such? I fail to find any information on the subject in English books. A work like Sir John Davis' "The Chinese" is a great desideratum in Japan.
(In process of answer.) B. H.

Qy. 6. Can any of your readers inform me whether there are any, and if so, what books on Japanese surgery, or midwifery, as practised before the coming of the Dutch and Portuguese?
(Unanswered.) Z.

Qy. 8. Mr. Bramsen's interesting note on the relative values of coins in your issue of February 23th, leads me to think that he may possibly be good enough to clear up a few points which have frequently occurred to me:—

1.—Can he say when, and under what circumstances, paper money was first issued in Japan? "Shosai" in your issue of March 9th gave a most interesting account of the *Man* paper money; and perhaps if there were a general issue before that, Mr. Bramsen may be able to do the same for it.

2.—Copper was first coined in Japan, I believe, in the Wadō period (708-715); does Mr. Bramsen know whether the nominal values of the coins made then, and also up the time of Nobunaga, were restricted to the same denomination as afterward? The Tempō was of course named in the Tempō period (1830-1844).

3.—Can he give any account of the regulations (if any) which governed coining under the feudal system? For instance, under what circumstances was permission granted to certain individuals to strike coins? This seems to have been done at various parts of the country, thus we have Musashi Ichibu, Suruga Koban, &c., I trust that Mr. Bramsen will pardon the liberty I take in addressing myself to him; but if he should ever put a query in "Notes and Queries" which I can answer (which is doubtful), I promise him that I shall do so to the best of my ability.

It may interest coin collectors to know that a collection of copper coins, which consisted of eighty-six specimens; four of which were said to belong to the eighth century of the Christian era, six to the ninth, two to the tenth, two to the sixteenth, thirty-five to the seventeenth, and the remainder to the eighteenth and nineteenth centuries, was offered for sale a few months ago in Tokiō for twenty *yen*.
X.

Qy. 9. I want information as to the locality of the signature of the original Treaty with Japan by Commodore Perry. Treaty Point, a mile or so away from the town indicates the spot: but was the treaty signed there in the Temple at Homoko, near which the butcheries now stand; or was it under a group of trees which stood on the site of the present British Consulate? I have heard both places assigned as the scene of the transaction.
B. A.

NOTES.

NOTE TO QUERY 1. Charcoal.] Not being an analytical chemist, I am unable to give a recipe for disposing charcoal of its inherent qualities, but I fancy even if it were possible to do so, you would at the same time destroy the natural properties of carbon,—its virtue is in its vice. This much I can suggest, which is likely to neutralize the mischief of the carbonic acid gas thrown off in process of combustion. Place a vessel containing crude charcoal in the vicinity of the stove, this will attract the gaseous matter evolved and absorb it, instead of its being left to permeate the chamber and poison the atmosphere. How carbon

does attract offensive effluvia is a matter I am unable to explain, but it is a fact nevertheless, as every medical man will readily admit.

X. Y. Z.

NOTE TO QUERY 7. The Forty-seven Ronins.] The story of these heroes was told by Mr. Mitford in his "Tales of old Japan" an easily accessible book, and more in detail by Mr. F. V. Dickins, in his 'Chinshingura, or the Loyal League,' which was published by the *Japan Gazette* two or three years ago. Wooden effigies of them, and a number of relics, such as pieces of armour, spear heads, &c. are still in existence at the temple of Sengakuji at Takanawa, just off the Tokaido, and close to the old Japanese foreign office and former British Legation. It was lately stated in the local papers that from the 19th April next, these relics will be open to public inspection.

T. M.

THE TIMES OF TAIKO

(FROM THE JAPANESE.)

BY F. BRINKLEY, CAPT. R. A.

ISHIKAWA GOYEMON.

Chapter XII. THE TWO TREASURES.

NEARLY a month separated Hidetsugu's promise to the monitors and the arrival of Ishida's messengers in the province of Iga, for the Baron had determined not to imperil success by impatience. His instructions to his emissaries did not include the contingency of Chika's not being at her father's disposal. Reckless as Hidetsugu's life showed him to be, the possibility of his directly disobeying the Regent's orders did not enter Ishida's calculations. The messengers therefore, presenting their rolls of silk and rouleaux of gold, described the object of their visit without any hypothesis or hesitation.

But Tarao received their statement with undisguised astonishment. He declared himself totally ignorant of the circumstances they narrated, and indeed refused to credit them, arguing that if the Regent had given such an order, Chika's dismissal, and consequently her return home must have taken place long before.

The messengers were completely perplexed by this unexpected dilemma. So great an honour as an alliance with the Baron of Sawayama precluded the idea of any evasion on Tarao's part, and for the rest, the evident sincerity of the old man's denial carried its own conviction. Accordingly, having certainly ascertained by some enquires in the neighbourhood, that Chika had not yet returned to her father's house, and further engaged Tarao to prefer the Baron's proposals to all others, the two vassals made the best of their way back to Kiyoto, and reported their want of success to their master.

Ishida, though a little disconcerted, inferred nothing more than some delay on the part of those to whom Hidetsugu had entrusted the girl's escort. It might be that she was still in Kiyoto, detained by her lover's irresolution at the moment of parting, or her own natural reluctance to abandon at once all hope of recall to the palace. Sooner or later however, her father must receive some official intimation from the Minister, and then the end could neither be doubtful nor deferred.

Many days of passive uncertainty were painfully endured by this man of action. Aged as his desire was, it had never grown infirm, but constituting itself the end and principle of his existence, seemed only to gather fresh vigour from disappointment and delay. Its solitary and furtive pursuit, too, had so separated him from the sympathy of his fellows, that insensibly the whole world had appeared to range itself against him in the struggle for a prize none could avoid coveting. So in this time of suspense, every hour added to his consuming impatience, and suggested misgivings that all his secret enquiries failed to satisfy. Chika might have fallen into other hands with her own consent, or, chased from the palace by the capricious Minister, she might have been carried off by any adventurer or even bandit—for who but Ishida himself could suffice to guard such a jewel?—or, worst and most terrible of all, Hidetsugu, the ruthless, insatiable autocrat, might have ensured her eternal fidelity by consigning her to the narrow home that admits no company but decay. Strong energy suddenly convinced of its own impuissance, is of all conditions most accessible to the agony of apprehension and despondency, and those who had an opportunity of

witnessing Ishida Mitsunari's solitary suffering, at the time of these events, have decided that his punishment was not inadequate to his crime.

In the early summer, he again sent two of his most trusted officers to Iga, bearing still richer presents, and instructed, in the event of any vagueness or hesitation on Tarao's part, to bring him back with them if possible to Kiyoto.

But in the meantime Tarao, disquieted by the intelligence he had received from Ishida's first messengers, had repaired to the Palace of Pleasure, and been placed in possession of the true facts by Hidetsugu himself. Chika's dismissal was, the Minister confessed, unavoidable, but dismissal did not, and—he was determined—should not, necessitate separation. The time was perhaps not far distant, he said passionately, when the Prime Minister might be openly true to those he loved, but in the interim he had made arrangements for Chika's concealment near the palace, and he desired Tarao to inform her family that the girl no longer formed a part of the Minister's household.

If Hidetsugu's unhappy history should ever be written by an impartial hand, something less culpable than sensuality may be discovered in a faith that preferred the risk of ruin to the abandonment of the object it cherished.

Tarao, having promised his aid in these arrangements, proceeded to describe the proposals he had received for Chika's hand from the Baron of Sawayama, and Hidetsugu, connoisseur of impulses akin to those that so largely directed his own life, recognized in a moment the origin and author of the dangers that had lately menaced him.

His rage threatened for a time to blaze out into some ungovernable flame. This catiff Baron, this damnable, plotting upstart! This then was the Regent's confidant, and this the insolent hypocrite that had dared to conspire the Prime Minister's overthrow and set eyes of longing on the favourite of the first gentleman in Japan! In the early paroxysm of his passion he had almost given orders for Chika's open recall with the determination of making her his wife, so pleasant was it to picture Ishida's impotent desperation at such ending to all his hopes and intrigues; but calmer counsels presently prevailed. Henceforth he would oppose ruse by ruse, and in nothing compromise the attainment of that absolutism whose first act should be a revenge memorable in history.

In his second interview with the Baron's messengers, Tarao, therefore, acted in accordance with instructions secretly received from Hidetsugu. He greeted the officers courteously, apologized for his inability to give them a precise answer on the occasion of their previous visit, and regretted that it was not in his power to comply with their master's request, since his daughter, though no longer belonging to the Minister's household, had been given by Hidetsugu to a gentleman of Ugo, who had married her and taken her with him to his native town of Akita. Tarao explained that his own consent had not been deemed necessary to this arrangement, and professed himself much annoyed at an interference that deprived his family of the honour of an alliance with the Baron of Sawayama.

This story would have been more probable had it been less provident. The distance between Kiyoto and Akita was sufficient not only to prevent enquiry, but to awaken suspicious of contrivance, and the astute Ishida found no difficulty in reading his opponent's scheme by the light of this one miscalculation. To whatever extent his ability was impaired, in the same degree was his determination intensified by the knowledge that his designs were no longer hidden from the man whose destruction he sought, and if he permitted himself any sentiment of regret, it was only the reflection that so many days had passed unemployed.

The arrival of the Chinese Ambassadors at Fushimi was now daily expected, and preparations for their reception on the most magnificent scale were in progress, for the Regent had determined that the condition of his court and equipage should justify the kingly title by which the embassy was to address him. The consequent disbursements for armour, trappings, constructions and decorations were regulated by the Baron of Sawayama in his capacity of Chancellor of the Exchequer, and it soon became apparent to him that the castle chests could not much longer support the daily depletion to which they were subjected.

Now the Regent's treasures were three: one at Ozaka, one at Fushimi and one at Kiyoto; the first and second being under his own immediate control; but the last in Hidetsugu's hands, to whose charge it had been entrusted during Taiko's

absence of three years at Nagoya. The funds it contained, however, although under the Minister's wardship, were not supposed to be at his disposal without reference to the court at Fushimi. For the rest, the reserve at Osaka, from usage rather than intention, had been invested with the character of a war treasure.

One morning, then, early in June, the Regent gave audience by request to three of his Councillors, Ishida, Masuda and Nagatsuka. The Chancellor of the Exchequer acted as spokesman.

"We desire to consult Your Highness," he said, as to the most advisable method of obtaining finances to meet the outlay in connection with the arrival of the Min and Korean Ambassadors. Such large disbursements have been made from the Treasury here for campaigning purposes, that but little remains to satisfy this new demand, and Your Highness will not, we presume, be disposed to order any fresh levies from the nobility after the heavy imposts to which they have already been subjected. Under these circumstances it would perhaps be best if authority were given to draw the necessary funds from the Treasury at Kiyoto."

"Certainly," replied Taiko; "there is no objection whatever to such a measure. You had better have a full estimate of probable expenses made out, and take steps to supply any deficit from the chest in the Prime Minister's charge."

"Will Your Highness then," asked Ishida, "authorize the appointment of a special commission to examine the state of the Treasury at Kiyoto? The Prime Minister may perhaps have assumed that, with the palace, its money chests also were placed at his disposal, and indeed I have heard that His Excellency has disbursed considerable sums in largess and loans to needy persons. An unexpected application might therefore cause him some inconvenience. It might perhaps be advisable to order a private enquiry first, and let the result determine whether the money is to be obtained from Kiyoto, or drawn from the reserve funds here and at Osaka."

"There is not the least necessity for so much caution," answered the Regent smiling:—"The contents of the Treasury at the Palace of Pleasure belong to the nation, not to the person who happens to be living there, and it is more than improbable that Hidetsugu has in any way squandered or misappropriated them. If he considered it advisable to employ a part of them for any charitable object, there would have been no reason for concealment, and certainly either he or his monitors would have reported the matter to me. False suspicion is the gall of government. A private commission would be vexatious and unjust. As soon as you know the amount you require, send and take it at once from the palace."

Ishida bowed and made no attempt to reply, but Masuda, coming forward, said:—

Pardon me, Your Highness, if I seem to question your decision; but I scarcely think that during Your Highness' absence at Nagoya, the Prime Minister would have deemed it necessary to consult you about such a point as the appropriation of the Treasury funds, which, I humbly submit, he would naturally have regarded as entirely under his own control, inasmuch as he occupied Your Highness' position for the time being. I think with Sir Ishida that a sudden requisition would probably cause His Excellency great embarrassment, and might otherwise lead to very serious results, for I hear he has lent large sums to many of the nobles and bannerets, no doubt with the wise policy of securing their attachment. At the same time, if this has been done without Your Highness' knowledge, the world may construe it very unfavourably, so that under all the circumstances a secret enquiry seems desirable."

It might reasonably have been expected that the plain implication of treason embodied in this speech would have stirred the Regent to some immediate action, but either his confidence was not yet shaken, or his affection for Hidetsugu made belief difficult.

"If this be true," he said calmly, "Hidetsugu has committed a grave fault. But I cannot credit it without the clearest evidence, nor can I neglect it, coming from such a source. The Minister's monitors, however, will be the proper persons to question. A commission may be appointed for that purpose, but there need be no undue haste about its despatch. It will be as well to consult me again before any final steps are taken."

Unwelcome as this delay was, it gave Ishida no uneasiness. He was sure of his facts, the deficit at Fushimi and the defalcations at Kiyoto—and with these and the Lady Yodo on his

side, he saw but a very temporary obstacle in the Regent's reluctance.

But it happened that Iyeyasu, Duke of Musashi and Vice-Minister, had just then visited the capital in pursuance of a religious vow offered at the shrine of Tenjin. Already commanding those clear sources of information that afterwards flowed to him from the four corners of Japan in the days of his supreme power, the disbursements made by Hidetsugu to the nobility, and the appointment of a commission of enquiry at Ishida's instigation, were known to him even before the members of the commission had been elected. The germ of disturbance that these complications included, added to his own friendship for Hidetsugu, determined the Duke to interfere, and the day following the audience described above, he sent a messenger to Sir Kimura, informing him of his presence in Kiyoto, and explaining that business would prevent him from waiting at the Palace of Pleasure. If, however, he added, Sir Kimura could find time to pay him a visit that evening at the temple where he was lodging, it would give him great pleasure. Sir Kimura gladly complied with this invitation, and, attended by three or four vassals, repaired at sunset to the place indicated.

The sanctuary of Tenjin lay on the verge of the city, hidden in the bosom of a time-worn forest, where the low hum of the distant streets scarcely muffled the constant cooing of the ring-dove. Crossed midway by a massive stone portal, and flecked with the shadows of leaves that trembled overhead, and periapts that waved beside huge ewers of holy water, a long avenue of granite slabs led to the precincts of the "Pine and Plum Fane," in the most remote corner of which lay the home of the Tenjin cenobites.

Here in a little room, simple as the life of an ascetic, but opening into a restful glade of the many-foliaged forest, where spiders had spun from blade to spray, and foxes chased each other across bars of moonlight, through centuries on centuries of bygone summers, sat Iyeyasu, the divine law-giver and future Regent of Japan. He was then fifty-five years of age, but his square built and somewhat high shouldered figure showed no symptom of feebleness or infirmity. His head was perhaps disproportionately large, but nobly formed, and his face, while it almost awed by its profound and lofty expression, was softened by an air of the happiest and most attractive benevolence, so that a child might have chosen him as a confidant, of a greybeard as an adviser.

On Sir Kimura's arrival he was immediately shown into the Duke's presence, and for a time the conversation was entirely general. They spoke of the many changes Japan had undergone since the appointment of the first Lord High

* It is generally believed in Japan that Iyeyasu's sovereignty was the special gift of Amida Niyorai. His history is wrapped in myths and superstitions, which he probably fostered himself, for no man had more thoroughly gauged the bigoted temper of his times.

His grandfather, Kiyoyasu, dreamed one night that he grasped in his hand the character 是 (ze: reality). A priest of the Zenshu sect, pointing out that the character in question was built up of three others (日下人) signifying "the man under the sun," i.e. the first man in the empire, found in the vision an omen that Kiyoyasu, or some one of his descendants, should attain to supreme power in Japan.

It appears that the family of Tokugawa were particularly regular in their devotions at the shrine of Yakushi Niyorai, a god remarkable for his power of restoring or improving vision. In the temple of this deity were twelve wooden images, (Juni-doji), distinguished by the names of the twelve zodiacal signs, and representing Yakushi's attendant Genii. One of these, the "Tiger Satellite," disappeared mysteriously on the day of Takechiyo's (Iyeyasu) birth, and despite the most careful search, could never be found till the hour of Iyeyasu's death, when it suddenly reappeared in its old place. The inference is obvious.

Iyeyasu himself always carried in his bosom a miniature shrine, containing an image of Kuro Honzon (Amida Niyorai), to which he was in the habit of praying morning and evening. He never wore armour, but trusted entirely to divine tutelage, and although he was personally engaged in seventy three battles during his life, and eighteen times exposed to mortal peril, he always escaped unscathed. His supernal relations were finally established by the theophany of Kuro Honzon at the battle of Osaka. During the fight, the Tokugawa vassals observed a man dressed in black with a tanned head, who performed prodigies of valour and seemed invulnerable by blade or bullet. When this was repeated to Iyeyasu, he at first supposed the unknown to be Sanada, Earl of Idzu, but finding that Sanada was a hundred miles away at the time, he took out his pocket shrine, and opening it, saw that it contained only a pedestal and a nimbus. The figure of Honzon was gone, and the mystery of the sable warrior was explained.

F. B.

Constable, Yoritomo: the power of the nine Hojo dynasties; the troublous quiet of the Ashikaga rule; the victories of Taiko, which had at last made the country one from sea to sea, and the Korean campaign, that had diverted internecine fury into channels of national renown. "And now at last," said Sir Kimura, men may begin to ornament their bow-cases and scabbards, and draw their breaths after a cycle's struggle."

Iyeyasu shook his head. "You know the song Sir Kimura," he said:—

"Oh! when will man with man join hands,
And peace obtain for peace's sake?
When seas shall cease to sap their sands,
And winds forget the buds to shake."

"I fear me some tighter hand than has yet been tied, will be needed to stay these struggling elements. But the Minister," he continued after a pause: "I hope you will explain to him, Sir Kimura, that my own business alone would not have prevented me from waiting on him, but I know how little leisure his duties generally allow him, and how much it must be encroached upon now by preparations for the approaching audit of the finances."

"What audit does your Grace refer to?" demanded Sir Kimura.

"That which was ordered yesterday by the Regent," replied the Duke carelessly. "Perhaps I overestimate its importance since it occupies you so little."

"But, your Grace, we have had no intimation whatever of any such order."

"Indeed!" said the Duke. "And yet an unexpected examination of the Treasury might cause you some embarrassment, might it not?"

"Undoubtedly, your Grace. It would cause us the very greatest embarrassment," answered Sir Kimura, who felt no inclination to be reserved in the presence of Iyeyasu.

"If that be so, Sir Kimura," said the Duke, now speaking with evident intention, "although I am very sorry to forfeit the pleasure of your company, I think you would do well to place the Minister in possession of this information at once. A Commission has, I understand, been appointed to examine the state of the Treasury previous to the withdrawal of some funds required for the reception of the Chinese embassy. The order was, as I have said, given yesterday, and mere neglect can hardly have kept it concealed from the Minister so long."

Sir Kimura understood the importance of such a hint coming from the prudent Iyeyasu. Taking his leave immediately, he hastened to the palace, where he fortunately found his colleague, Sir Tajima, and the two men having obtained a private audience with the Minister, Sir Kimura reported the intelligence he had received from the Duke of Musashi, at the same time reminding Hidetsugu that the loans to the nobles had been made in opposition to his own and his colleague's advice. Their duty, he said, had prompted them to report the matter to the Regent, but the charitable motives of the act had restrained them, as well as the hope that the deficit might be made up from the palace revenues before any question arose. Scarcely two months previously all their credit had been required to obtain the Regent's indulgence, so that now, however, willing to intercede, they could not hope for success. "This, your Excellency," concluded Sir Kimura, "is a crisis far more important than that you have just escaped, for your Excellency's motives in lending the money admit of the grossest misrepresentation, and the Regent must already be partly prejudiced against you, or he would not have sanctioned an investigation without giving you notice. It only remains therefore to summon the nobles privately and desire them to refund the money at once. Even a report and explanation of the deficit could avail nothing now."

Sir Kimura spoke with the greatest earnestness, but his words did not awaken any answering sentiment in the Minister, for Hidetsugu had long anticipated this juncture, and the discovery that forfeited him the Regent's favour would, he believed, secure him a more than equivalent support elsewhere. The role of apparent self-sacrifice, too, where inaction played the part of innocence, and contempt, of courage, was, more than any other, congenial to his supine haughtiness, and for the rest, he was somewhat in the condition of one who prefers the actual leap from the precipice, to the giddy fancy of the swift fall and the mangling crash below.

"I will take no steps whatever to recover the money," he said. "As Prime Minister my right to dispose of it is unquestionable, and were the Treasury completely empty, I should still have nothing to answer for. Under any circumstances, the expenditure of the few thousands that are deficient is justified by its object. But," he continued with an agitation that made his words almost inarticulate, "since it is determined that I am not to be left in the quiet performance of the duties to which I have been appointed, and since my best intentions are wilfully misconstrued, I am resolved to stake my fate at once on the battle-field, rather than die slowly and ignominiously by the poison of slander and treachery."

It was come then, the moment these loyal men had so long feared. The end of all their services was destined to be mutiny, bloodshed and the traitor's doom. Eloquent advocates of right and fertile of wise expedients as they were, neither of the Monitors at first found a word to reply, for there are mental sicknesses before which the ablest bow in tacit acknowledgement of their own impuissance, seeing that the virus has penetrated far beyond the reach of reason.

When Sir Tajima at last spoke, his voice seemed to have assumed a hollow, perfunctory tone that chilled and confused his ideas. He no longer commanded the earnestness of devotion, but simply obeyed the impulse of duty.

"Your Excellency has then resolved," he said, "yourself to consummate the schemes that aim at your destruction, for your traducers' designs can scarcely reach farther than to drive you to an act of treason, the shadow of which will blacken all your past life no less than your memory, and verify the falsest of their scandals. And has your Excellency considered that you will be fighting against your own father, and that success can only be purchased by parricide? Surely the vengeance of heaven will be too lightly incurred by a little lack of patience!"

"Patience!" cried Hidetsugu passionately:—"I too could preach patience were I in your place. I, the puppet, who have been put up till it became more convenient to pull me down, and at whom seven generations will point the finger of scorn! I, whose bitter mortification will not suffer me to close my eyes even in death, and who am called on to sacrifice myself for the sake of filial obedience to one that destroys me because I am not his own son! And you," he continued, turning to Sir Kimura, "you, who urge me to humiliate myself by asking the nobles to return a loan that was well understood to be a gift; can you seriously suppose that these men who were poor enough to borrow, would be rich enough to repay at a moment's notice? Does not your advice somewhat resemble the action of those that watch their friends drowning from the bank and cry to them to beware of sinking?"

"The nobles can, and I firmly believe will, restore the sum at once if they are asked," replied Sir Kimura, without noticing Hidetsugu's unjust reproaches. "However little money there be in the country, enough will be forthcoming for such a purpose, and if your Excellency consents to make the trial, I will undertake, should it fail, to provide another means of averting this danger."

"What means do you speak of with so much confidence?" demanded the Minister.

"The Duke of Musashi's intercession, your Excellency. If this Grace gave this warning, it was because he wished your Excellency well, and he is not one to stop half way. I am persuaded that he will consent to use his great influence in your behalf if necessary."

Hidetsugu reflected a moment, and then to the Monitors' astonishment and great relief said:—

"I will follow your advice and assemble the nobles. But my interview with them must be entirely private. I wish at least to save them the mortification of publicity. If you return to your own houses, I will communicate the result to you there."

"But your Excellency," Sir Tajima remonstrated, "this is now a matter of life and death for us. The presence of your Excellency's Monitors could not possibly embarrass anyone, and might perhaps be useful."

"Nevertheless," replied the Minister, "in such a delicate matter as this, one cannot be too careful. The loans were made privately, and I have no right to take anybody whatever into my confidence."

No arguments could upset this resolution. It evidently had its origin in some sentiment stronger than mere punctiliousness, and unwelcome as the idea was, the Monitors were

constrained to believe that this convocation of the nobles was a consequence of Hi-letsugu's own design, rather than a concession to their remonstrances. They had no choice, however, but to await the result with what patience they might, for the Minister, by his seeming docility, had prevented any further interference.

Little by little, these chivalrous men were drifting into that darkness where fidelity and defection cease to be distinguishable.—(To be continued in our next.)

THE JAPANESE PRESS.

GOVERNMENTAL SUBSIDIES TO TRADE.

(From the *Choya Shimbun*.)

OUR Government, since the reformation, industriously and briskly striving to originate profitable industries in the country is like an overflowing water and flaming fire in vigour.

In ancient times, Peter the Great, the Emperor of Russia, civilized his countrymen with excellent wisdom, and in the course of a few years the radiance of the country shone all over the continent of Europe; and Napoleon, a few years after, ascending the throne of France, reformed all the political laws, and although the country was then in a state of excitement and disquietude, the noise of the trumpets and drums ringing in all directions, and thus there was a great deal of business relating to war to be attended to, also devoted himself, in company with celebrated learned men, in reforming the other laws of the country. The industry and anxiety of these two Emperors in promoting the prosperity of their countries, is up to the present date praised by historians. But the industry and anxiety of our present Government is not, it appears, less than those of the two Emperors referred to.

Overcoming difficulties and enduring trouble, originating what is difficult to originate and conducting what is difficult to conduct, doing all this for the advantage of the people, and doing it rapidly and diligently, this is this principal action of our 'Meiji' Government of which the public are already aware. And the Government being so anxious to originate profitable business for country and people, cannot be satisfied with only doing so in its control of affairs. Therefore, if there be any one of our countrymen who originates an extensive business, the object of which is not to profit himself only, Government expresses great delight and protects him with all its heart; and if he has not sufficient capital, it lends him a large sum of money, or gives a certain sum annually. Ah, how can the Government be so kind as this! From what we ourselves know, the number of those who have received such favours from the Government since its reformation is not only two or three. That Yamashiroya Wanke, who committed suicide in the compound of the War Department, owed to that Department, an enormous sum of money, is very well known to the public; the steamship company, whose flags are hoisted on staffs high up in the air in the three cities and five ports and whose steamers are running in all directions, receives the enormous sum of 250,000, *yen* annually, the *Chôyôkuan* which is celebrated all over the country as giving profit to the country by the manufacture of indigo, has already borrowed a sum of 500,000 *yen* from the Government; the business of Mr. Kasano, the manager of the *Kôgiyô Kaisha* was started with the 400,000 *yen* sent out from the treasury of the Financial Department; the mining business of Mr. Goto the proprietor of the Takashima coal mines, is also conducted by the several thousands of *yen* kindly lent by the Government; the *Kôshô Kaisha* with the sum of 80,000 *yen*, the *Shindzuisha*, with 40,000 *yen*; and we also hear that the *Bokuchiku Kaisha* at Hachinoye in the province of Mutsu, has succeeded in borrowing several thousand of *yen* from the Government. And besides these, if we count those who have been favoured by the Government by lending 1,000 or more *yen* in the whole country, their total number would be so great, that it is beyond our knowledge how many millions of *yen* would be the total amount paid out from the Financial Department for this purpose. But where is the fruit of the Government's spending such an enormous sum of

money and assisting the private companies? If these private companies, while obeying and fulfilling the objects of the Government and industriously and painstakingly conducting their business, were always much afraid of being unsuccessful, we should not conclude that the money so kindly lent or given is of no service.

But the question as to whether those managers who have been specially favoured by the Government will all succeed in business and fulfil the wishes of the Government or not, we cannot as yet heedlessly reply to.

The prosperity of mercantile and manufacturing business is the fruit of activity and industry, and activity and industry are the result of men emulating each other and this is to be caused only by their seeking for future happiness. But if one who originates an extensive business be favoured by Government lending him several thousands of *yen* and another who invents a good production be rewarded with special kindness, the minds of these originators are quite satisfied with this assistance and thus their spirits of emulating each other would be more or less decreased, for none can fail. This is not alleged as a crime against the parties, but it may not be much to say that it is caused by the error of the Government's guiding them in such directions. Indeed the Government, in order to originate profitable occupations in the country should direct its attention to general affairs only and should protect and guide the public equally. Unless this is done, it is uncertain whether what was intended to result in profit, may not end in loss.

GOVERNMENTAL SUBSIDIES:—THE MITSUBISHI COMPANY.

(From the 'Hochi Shimbun'.)

A WRITER has lately discussed the question of our Government's striving to originate profitable enterprises in the country and argues the point of its lending or giving a large amount of money to the people, leaving the questions unanswered:—"as to whether those who received such favour and assistance from the Government, would succeed in their business and fulfil the wishes of the Government or not, and whether such favour and special help would result in making the originators too satisfied with themselves and thus decrease the spirit of emulation?" This is an opinion unfavourable to giving money assistance and may be a good one, as coming from a patriotic mind. The question as to the advantages and disadvantages of the Government's giving or lending a large amount of money to the people as an assistance, is continually being argued by learned men in Europe and America and although the argument has not yet come to a conclusion, the majority of opinion seems to be unfavourable to the practice. The opinion of the writer mentioned before being the same as that of the majority, and as we have so often discussed the subject, it does not seem necessary to argue the matter again.

As, however, the writer treats such Companies as the Mitsubishi, Chôyô, Tankô, Kôshô, Shindzu, Bokuchiku, &c. which have received money assistance from the Government, as equal examples, and does not distinguish the reasons of their receiving such assistance from the Government, the public may jump to the conclusion that all these Companies are in equal relationship to the Government. We will therefore take one Company which has special and distinct reasons for Government assistance, and explain how its relation with the Government is vastly different to that of the other companies mentioned before.

The relation between the Government and the Mitsubishi M. S. S. Co., is very different from that between any other Company protected by Government. The Company receives an amount of 250,000 *yen* per annum from the Government, which is not a loan, but is to be given to the Company for a term of fifteen years under an agreement made with the Government, and this subsidy is not to be returned to the Government. Upon this point only, the Company differs from all others receiving money from the Government, and the reasons it receives a subsidy are also different. We will give as an example, an account of the relations between the Government and the mail steam ship companies in the countries of Europe and America.

The P. & O. Company receives an amount of £400,000 yearly from the British Government, for conveying mails

* The Editor of the *Choya Shimbun* is misinformed here. The cost of purchase and working of the Takashima mine has been furnished entirely by a single English firm.

to and fro; in receiving this amount the Company has to execute its obligations towards the Government and notwithstanding any loss that might happen to the Company, it has to despatch steamers from one place to another at the orders of the Government. The P. M. Company at first received a yearly amount of \$500,000, next \$1,000,000 and again \$500,000, (although the terms of the contract have now expired and a renewal is under consideration). The reason that the Government gave these amounts of money was because the Company sustains more or less loss from the Government's business, and thus the Government makes good the loss. The French M. M. Company also receives a subsidy from the Government, although we do not exactly know whether the yearly amount is calculated from that of the loss of the Company through Government service (this was the system before) or if it is a fixed amount; its obligations towards the Government are very great, such as being liable for any kind of Government service in war time.

The reason of our Government's giving 250,000 yen to the Mitsu Bishi Company is the same as above. Our Government some time ago gave a subsidy to the P. M. Company for the purposes of the mail service on the Shanghai line; this line having been taken over by the M. B. M. Co. was the cause of the Government's giving a subsidy to the latter Company. Indeed it is simply giving to the M. B. M. Co. what has been given to the P. M. Co. (although the amount may be different, the principle is the same.) We are told that the service on the Shanghai line is not a profitable one to the Company at present, and that it sustains more or less loss thereby, but as this service is an indispensable necessity of the Government, it, in order to make good the loss and to make the Company be under the obligation to navigate under its orders, notwithstanding its loss, gives an amount of 250,000 yen every year. This is what is called the subsidy which fills up the insufficiency, and pays for the obligation. From what we hear, although the traffic on the Hakodate, Osaka and Yokkaichi lines is more or less profitable, that on the other lines sometimes loses. But that the Company is unable to discontinue, but must regularly despatch its steamers, by the obligation imposed by the subsidy; that is, in short, the Government purchases this obligation with money, and its paying this money is, we believe, chiefly for the purpose of maintaining the service on the Shanghai line. Now if we consider the question above argued, it would appear that the Mail Ship Company's receipt of the subsidy from the Government is in a different condition from the protection given to any other Companies by the Government. Should it be really so, the public cannot look upon the Mitsu Bishi Co. as the same as other companies and must argue the matter of the Government's giving a subsidy, and the Company's receiving it, also in a different way. This is why we are led to explain the special nature of the M. B. Co.; that is, to distinguish it from the other Companies and thus place the matter as a question of argument properly before the public.

EMPLOYMENT OF NATIVE CAPITAL IN JAPAN.

(From the 'Chingai Bukka Shimpô'.)

ALTHOUGH the modes of employing capital are more than one, the most important are only two: that which increases and that which does not increase production. The employment of capital, by which production is increased, is called by Western nations 'productive' and that which does not increase is called 'unproductive,' and to these they give their utmost care and attention. What mode of employment is called productive? To employ capital for developing mines, which produce gold, silver, copper, iron, &c., for cultivating land for gardens and pastures and to raise corn and cattle; for making roads, laying railroads, building lighthouses, erecting telegraphs and other such like establishments and manufactures which increase production, these are called 'productive' and that, on the contrary, other methods are called unproductive. Indeed a country's advancing in prosperity or falling into decay depends entirely upon the skillfulness and unskillfulness of the people in employing their capital.

* This statement requires the explanation that by 'orders of the Government' are meant the permanent arrangements for regular despatch of mails: the Company's steamers cannot under their subsidy contract be diverted in any other direction.

The most foolish of the actions, up to now, of the rich men who are the repositories of wealth in our country, is that they hoard the money with all their heart, and never circulate it among the public, nor attempt to make any increase thereof. We hear that a rich merchant in Osaka has, until lately, been actually hoarding more than 800,000 yen without employing it. Fortunately, however, in late years, there being the Government bonds and the bank shareholder guilds, &c., they, taking out the money which they had previously hoarded more than masters or parents, have purchased these and getting a certain interest, are now assisting indirectly the circulation of money among the public. That such a custom as hoarding money in jars or burying it in the earth has gone by, and that such men as the rich merchant in Osaka above mentioned, are gradually decreasing in numbers, may be called an advancement of one step. But there is yet a point which we must still strongly argue.

The rich people of our country do not seem to pay any attention as to the 'productive' and 'unproductive' employment of capital. Although they get certain interest annually from Government bonds, if we argue from the appearance of the whole face of the country, this does not increase production. And if we turn our attention to the object of the money-lenders, we observe that they, in lending, do not mind for what purpose the money is required, so long as they get sufficient security and moderate interest; but if it is for the purpose of establishing factories, &c. as above described, about eight or nine out of ten capitalists as a rule, refuse their assistance. Now, if the rich, who are the origin of wealth, were all like this, when would works and factories be established in our country? Look at the countries of Europe and America. Everything profitable, such as railways, telegraphs, mining and machinery making has been established. Where has the money for these works come from? They are not under the control of the Government, nor established by the money accumulated by the workmen. But they result from the rich having paid out large sums of money and assisted the workmen at their own risk. Indeed those in Europe and America who employ their capital, seem to be ashamed to lend money unless for the purposes of increasing production. If we say so, the rich men among the public would doubtless say that "although our argument, taking the Western countries as an example, may be reasonable, we can not agree to it, because, for instance, if we look at the results of the mercantile companies and manufacturing hitherto established in our country, those which are prospering are but very few, whilst most of them have failed, and if we agree with your opinion and lend out our money to such, we few shall all be ruined." It would not be so. The companies and factories recently established in our country being started by men unaccustomed to their business and work, (indeed being mostly a sort of experiment and study,) they could not of course obtain any moderate profit, and sometimes speculators have deceived the public in such a way, that it has finally come to be, that those who attempt to establish any factory or company and thereby to increase production are called by the name of 'speculators,' and disliked or taken no notice of. The blame of this should not fall on such businesses being newly established, but simply on account of the inexperience and carelessness of the projectors. That our country is rich in natural production and that profit may be got from the mountains and seas, both foreigners and natives are well aware of, and science and practical works have gradually advanced and we have already gained in some measure, experience and practice; and we firmly believe that future projectors would not be so heedless as hitherto. Thus what we earnestly desire of the rich now, is that, should there be one who with a firm foundation, proposes to make profits, they shall not, as before, say that such works are dangerous, business is liable to loss and thus they can not pay out the money &c., but that they should lend their aid to stimulate production.

EXTRACTS.

TEA PLANTING IN THE STRAITS.

MR. WALTER KNAGGS, a planter of Province Wellesley, and whose name may not be unknown to our readers in connection with the agricultural resources of Perak, has addressed a

very interesting communication to the *Penang Gazette* respecting the prospects of Tea and Coffee planting in the Straits. "I was asked," writes Mr. Knaggs, "a long time ago, to put my ideas upon the prospects of Tea Cultivation on paper for the benefit of the public, and I cheerfully did so to the best of my ability, and in conformity with such experience as I had gained up to that time. I did not, then, assume to know much about tea, as I had but recently arrived in the Colony, and never saw a tea plant until I came in 1873. I then found that about ten acres of tea had been previously successfully established on the Estate, of which I had come to take charge, by my predecessor, Mr. de Mornay; and seeing its promising appearance, and guided, in great measure, by the opinions of others who had been on Tea Estates in India (some of them old planters), I made up my mind to extend the cultivation as energetically as the means at my command would permit. I was not, however, able to begin planting out until late in the year 1874; and it must be borne in mind that the Tea requires to mature for three years before it can yield a remunerative crop. My connection with the Estate in question has ceased; but I left about one hundred and fifty acres established and only requiring pruning to be ready for picking, and about one hundred acres of young tea which I planted during the fall of last year.

Eminent planters from India have visited and reported, most favourably, on the cultivation; and they have further expressed their surprise at the promising results that had been attained without any previous knowledge or experience—and further, their confidence in our prospects—as they say that the plantation will compare very favorably with many of those in India. My own confidence in the prospects of Tea cultivation in the Straits is undiminished, the more especially as I have introduced a plan by which it may be planted, jointly with another article of Colonial produce, which, being gathered at the end of 18 months, will leave the tea established for nothing! This plan I have already tested, and I find it to answer completely.

The Malay Peninsula, from the Province to Singapore, contains millions of acres of low, undulating, thickly wooded hills. These are Tea lands; and the soil of which they are composed tallies with the description that I have read of many of the most favourable tea soils in India. The variety to be planted must be the indigenous Assam and no other. With cheap land and plentiful labor, regular seasons, and easy transport—all of which we have here—I think that we possess advantages unequalled elsewhere; and I hope soon to see this cultivation largely extended. In fact I see no other permanent cultivation suitable for the lands in question but that of tea or coffee. Tea, however, has been made on the Estate which has realised in the home market the price of that of Assam, and which has been declared equal to it in every respect; but anticipating the great demand for seed which will probably arise, the trees are now being cultivated for that purpose; as it is not advisable to take leaves and seeds from the plant at the same time."

This would seem to be conclusive that Tea can be grown in the Peninsula. Mr. Knaggs is a planter of experience, and although he may be perhaps a little sanguine, he has actually succeeded in growing tea and his opinions are endorsed by others, eminent planters from India, and also by two of our own officials, the late Mr. Birch and the present Colonial Secretary, whose knowledge of planting in Ceylon ought to have qualified them to judge. It is interesting to note that the coffee-planters of Ceylon have been turning their attention to tea cultivation, stimulated by the great success of the tea planters in Assam and other parts of India. The following table shows the progress made in Ceylon during the last five years:—

Exports of Ceylon-grown Tea:—

Year.	Ceylon produce. lb.	Customs value.
1873	23	58 R.
1874	493	1,903
1875	1,438	2,402.50
1876	757	1,907
1877	2,105	—

It will be seen that the progress has been but slow. The *Ceylon Observer*, however, says that there are now over 2,000 acres planted in Ceylon, half of them two years old and upwards, and that at least 100,000 lbs. of tea may be expected to be prepared during 1878. One of the Ceylon planters, indeed, has so much faith in the adaptation of the tea plant to the Ceylon soil and climate, at any elevation from sea level to 7,000 feet, that he believes there will be as much tea planted in the island at the end of ten years as coffee. The success of the Ceylon planters should be an encouragement to enterprise in the Straits. Mr. KNAGGS may be said to have demonstrated that tea can be grown beautifully in the Peninsula, and indeed, for that matter, there seems every reason

to believe that it might be grown in the island of Singapore, if it were set about properly. The soil of Singapore may be said to have been, until recently, very much under-rated, but it has been now demonstrated that not only Pepper, Tapioca and Sugar, can be grown upon it and made to pay handsomely, and why should not Tea, which is a hardy plant. At all events, there is no question about the Peninsula, and we apprehend that the great and real difficulty will be, not as to the growth of the plants, but as to the proper preparation of the leaf. This is the difficulty in India and it is discussed as follows in a report on the tea plantations in the Neilgherries:—

"The manipulation and curing of the leaf is the most difficult part of the tea planter's work, and the value of the manufactured tea altogether depends upon the skill and care with which this is performed. It matters not that the leaf may have been produced under the most favorable conditions of climate, soil, and manure, if the curing is defective. The great drawback to the general consumption of Neilgherry teas is their varying character, each plantation and garden producing different samples and qualities; they are thus to a great extent kept out of the wholesale market. If the tea planters, instead of each attempting to cure the leaf he produces, would raise the capital amongst themselves for establishing in each centre of tea cultivation large well equipped factories in which the leaf of the district could be properly cured under skilled direction, they would be able to produce a tea of an uniform sample and quality, which could be sent in quantity into the wholesale market where it would take a definite position. One such factory could be worked at far less expense than the ten or a dozen small tea curing houses which it would displace; and under good management there would seldom be any more difficulty in conveying the fresh leaf to the factory than is now experienced in carrying it to the present curing houses."—(*Straits Times*.)

SPORT IN THE PENINSULA.

[If Mr. Martin Neil is not 'pulling this Editor's leg' sport in Malaya must be better than in Japan. A pig and two tigers is a very fair morning's work.]

To the Editor of the Daily Times.

SIR.—As an account of a morning's sport in the jungle may not be uninteresting to you, allow me to give you the following, which happened many years ago at P-h-g, one of the adjacent Malayan territories. I was a solitary European at P-h-g, and to amuse myself, used to take a great delight in going out at 5 a.m., or day-break, accompanied by my dogs, carrying along with me a double-barreled rifle—one of Jacob's, which, of course, was used against any wild beast that I might chance to come across during my morning ramble. Well, this morning, as usual, I started all complete, dogs, servants, &c., and had not gone half a mile from the *palais royal* of my quarters, when there was a stir among my four-footed companions; and all at once they made a sudden rush upon a very large wild boar, who was about 20 yards ahead, standing with bristles erect, and evidently shewing signs of having made up his mind to fight. Seeing how he restless stood, I allowed my dogs to rush the boar, and so as to divert his attention, ordered one of my men to throw a spear at him, as I wished to make the beast run, so as to afford a little better sport for all. No sooner said than done; away go half a dozen spears; and off goes Mr. Wild Boar, one spear having slightly touched him on the raw. Now came the fun; off go the dogs in full career, barking and yelping as only Malay pariah dogs can do; besides, in close chase behind—myself included—enjoying the sport and the fine morning breeze. After about 300 yards of a good fair run, Mr. Porker came to a stand-still on the banks of a stream which interfered *pro tem* with his further running; and perhaps the exercise having got his dander up, he may have thought that he might venture upon having a tussle with his canine foes; so the attack soon commenced, and he had not long to wait, when the dogs were all on to him *en masse*, and certainly kept his muscular powers in full play. On my approaching, the poor persecuted porker took it into his head that, I suppose, he was not getting exactly fair play, so he turned from the dogs, faced the stream, jumped in, and made off for the other side of Jordan, canine tribe following close up. As the stream was a shallow one, and only some 20 yards broad, we were all soon on the other side, also another bit of a run, and another determined stand made by the persecuted "unclean;" this time he was really waxy, and so were the dogs; the consequence of which was that two of them got rather roughly handled—one had his eye gouged out, and another a severe gash in his stomach. Thinking 'twas time to put an end to the fray, as I did not like to see my four-footed friends getting the worst of it, I walked up and pistolled "Mr. Porker," leaving him there, of course, as the Malays, though they will kill wild pig, don't eat them.

I then went sauntering on, calling off the dogs, as I was not far away from a spot where some deer had lately been seen, and it being only now about $\frac{1}{2}$ past 6 A.M. I might still come upon them, feeding outside, in the belt of the jungle. I had not however proceeded very far, when all my dogs at once came helter skelter back from all points, and running towards me with their hair all bristling up, and their tails not exactly erect. Wondering what the matter could be, I of course came to a stand still, my followers doing the same; so putting my fore finger to my lip, as a sign to my biped followers to keep quiet, which hint they understood, I awaited patiently to see what the beast was—a deer or another pig, or a porcupine, monkey, or what; when suddenly I felt a hand put on to my shoulder, for the purpose of attracting my attention to a certain spot where the rustling noise I had heard came from. On watching intently, my eyes were pleasantly rewarded by seeing a full grown tiger coming quietly along—evidently aware, from the manner of his progression, that there were either enemies or food for him close at hand—he having no doubt by this time got a snuff of the canine gentry, who were all stretched on the grass, ears erect, noses twittering, and eyes looking all round the compass.

The tiger came gradually on at a snail's pace, scarcely making any noise—; within ten yards of me, I thought it was time to startle him, so from behind the fallen trunk of the dead tree, I made a slight hissing noise like that of a serpent going quickly along grass—when Mr. Tiger suddenly came to a full stop; and stood upright; just as he did so, I let fly the contents of my right barrel; and landed same on his throat, cutting the wind pipe. The beast on receiving the ball gave one roar—sprung some ten feet up in the air, and fell on his back a quivering corpse. I however did not go up to the animal just then, but reloaded my piece; and, whilst doing so, I heard another roar, which rather startled me, as it proceeded from another quarter. However, being now reloaded, I waited patiently, as it was evident the last roar must have come from the male of the one lying dead close to me. I was not long however kept in suspense, as presently there was another roar; and this time quite close—a few minutes more, and the animal in question came in view, emerging from close behind where the dead brute lay. On coming close to his companion, the beast stood stock still—scented and sniffed all round, and commenced to look wildly all about. As it was evident he was taken aback at what he saw, and did not look in the best of humour, as I could see from the slight and sudden twitching of his tail, I thought it was time to make him acquainted with my presence, and a favourable side shot offering, I fired at his near fore shoulder, which was towards me, and tumbled him over. The ball went crashing in, and broke his shoulder blade, but he was not however settled so easily and managed to get up, and made an attempt at a spring, but could not fortunately manage it, and before he could recover himself, I had planted another ball in his other shoulder, which told, and laid him also a corpse within eight yards of the first beast, dead.

I need not say that my return to the *palais royal* at about 8 A.M., was anything but a quiet one, and the old Rajah who was a confirmed opium smoker and at that hour always asleep, was even roused out by the hubbub, but in the excitement forgot to order any one to be executed for disturbing him. Many other adventures as well as hair breadth escapes I have had, and if a few of them will amuse you, I can send you the accounts of the same. Meantime—Adieu.

Yours, &c.,

LIEN NITRAM EMERAL.

Singapore, 21st February, 1878.

BOMBAY COFFEE-HOUSE POLITICIANS ON THE WAR.

IT was drawing towards the small hours of the morning as a small party of the "Faithful" sat smoking their hookahs in one of the best known of the many coffee-shops which exist in and about Bhendry Bazaar. The pleasures of the "water-pipe" and the tiny bowls of *café-noir* did not prevent the free flow of conversation, which on this occasion—as, indeed, on most when men assemble together to sit, smoke, and drink—dwelt principally upon the political topics of the day.

"It is written," quoth the senior member of the party, old Nubbee-buksh, "it is written that when *kinat* approaches and the end of the world is coming, that at that time signs will be given to man, and one sign is that Stamboul (Constantinople) shall be taken by 70,000 of the posterity of Isaac, and there will be war with the Greeks. Now, we hear that the Russians are close to Constantinople. What then, do they come from Isaac?" Here the old fellow paused and looked around for the meed of applause which he thought his brief speech deserved, but not receiving it, he continued. "If the Russians have 70,000 men, that is nothing, they cannot take Constantinople."

"That may be true," said Hajee Yosuf, an Arab who had travelled much and had but little regard for the *Meahs*, or Indian

Moslems. "That may be true, but the Russians have taken the whole of *Roum* (Turkey); the Sultan has only a few men and Russia has many."

"And whose fault is that?" queried Mirza Ali, a Persian of nondescript character.

"Whose fault?" retorted Nubbee-buksh. "It is the fault of the English; they should have helped the Sultan."

"Pshaw! What could the English do?" asked the Hajee. "Who are the English? Kafirs, infidels. If the Sultan had money enough, he might easily have got assistance from the English by paying for it, but what better are they than anyone else."

"Yes," said Cassim Mahomed, a Bombay Memon, "but the English gave help to the Sultan before and why don't they do it now?"

"God knows," said the Persian laconically.

"The English are afraid of Russia," suggested Nubbee-buksh.

"What is England to Russia? Besides, Germany is siding with Russia, and England is afraid of Germany too."

"That can't be true," said Cassim, "because the telegram said the other day that the French and Italians had promised to help England if she went to war for Turkey."

"But whose fault is it that the English didn't help Turkey?" ejaculated the Persian. "Why, the *padres* and Mister Gladstone's. The English Government and the Ranees (the Queen) wanted to help the Turks and the *padres* wouldn't let them."

"And why didn't the Shah help Turkey?" asked the Arab sarcastically.

"Why did the Sultan refuse to help the Shah before, and tell him he thought the Russians were better than the Persians, and that the Persians were no Mahomedans," retorted the Persian fiercely.

"Bus, bus, bus," cried old Nubbee-buksh, "let us not fight among ourselves; besides, the war is over now, the Sultan is going to make a *bunderbust* with Russia, and there will be peace."

"Yes," said Cassim, "but suppose they can't make a *bunderbust*. Suppose Russia wants too much and the Sultan won't give it, what then? The Sultan has got no army now to go on fighting, and what is he to do?"

"I'll tell you," said Nubbee-buksh. "Everyone knows that the Sultan is the head of Islam, and do you think we are going to see him beaten; no. If the Sultan falls, Islam falls; but God is great and merciful; and if there is no peace, then every Moslem must lift the sword and fight for his religion. Look in the Holy Book, in the *Heedis*, and read the history of Islam. Have you not all learned of the battle of Beder, and think you that God will forsake the armies of Islam now? If there is no peace now, then every Moslem must rise up and go and fight for his religion."

"True," said the Arab, "if there is more fighting, then every Moslem must go forth and fight, for he who will not is no Moslem but a kafir."

"But England will help" retorted Cassim.

"Pho! We want no infidels to fight for Islam," said the Arab.

"England won't fight" commented the Persian. "She doesn't want to fight; and, what's more, the *Siecar* won't let anyone go from India to fight against Russia."

"Won't let anyone go from India! Ma—shallah!" cried the Arab, "then they must fight in India."

"Phah," quoth the Mirza, "fight like they did before."

Here a break occurred in the conversation, during which the merry hubbub-bubble of the hookahs was distinctly audible, as was the long "isp" which old Nubbee-buksh made as he imbibed a cup of coffee and the satisfied smack with which his lips met as he removed the cup.

"Russia is a great nation," said Cassim after some time in a cogitating voice, as though speaking to himself.

"Wah! Wah!" retorted Nubbee-buksh contemptuously. "Wah! Wah! What sort of a great extent of territory?"

"Half the world," interposed the Persian.

"And they say true," continued old Nubbee-buksh not heeding the interruption, "who say that Russia has a large army."

"Large army," ejaculated the man from Iran. "Large army, indeed; why she has twenty armies, and when they are all killed and gone to *gehennam*, she has twenty more, ay, and twenty more again!"

"Perhaps," said Nubbee-buksh, "but I was going to say what is a great country and a great many soldiers when the raj is all *zu'um* and *zubbuchudee*? Besides, everyone knows Russia is a bad nation—they are bad people, they have bad laws, their country is a bad one, and their religion is the worst of all. I was reading a telegram—"

"Pho!" said the Arab, "the telegrams are all lies. I don't believe a word of them!"

"You are a wise man," said Nubbee, "but in truth some of the telegrams must be true;" at any rate if the telegrams aren't true, there is nothing else to believe. But the telegram I was reading was dated from Constantinople and—"

"It's my opinion," interrupted the Persian, "that, may-be, after all, England will go to war."

"That would be very good for the Sultan," said Cassim, "and besides," he added after a pause, "it would be very good for trade. For I'm sure they would send troops from India and then we would make plenty of money in Bombay as we did in the Abyssinian war time."

"Yes," said Nubbee, "I was reading a telegram—"

"Well, after all is said," began the Persian, once more interrupting old Nubbee-buksh in his attempt to repeat the telegram he had been reading, "after all is said, what has the war got to do with us here in Bombay?"

This heretical suggestion well nigh drove the Arab to extremities but being rather a stranger in Bombay, and the Persian being much larger than himself, he moderated his zeal and retorted, "the Sultan is the head of Islam, and the book says we must fight for him. Don't you pray for him every Friday in your mosques?" "No, we don't," replied the Persian sturdily.

The Arab frowned and scowled and muttered something about kafirs and dogs and pigs; other countries and other places and breaking of heads, and old Nubbee-buksh seized the opportunity to disburthen his mind of the telegram which seemed to lie somewhat heavy on his conscience.

"As I was saying," he began, "I was reading a telegram the—"

"One of the last telegrams," Cassim treating old Nubbee with indifference, "says that the English had ordered troops to be landed at Gallipoli, and another that the fleet had been sent to Besika Bay. Now that looks as if the English were going to fight."

"So it does," said Nubbee, "and I was reading a—"

"Boeh," quoth the Persian, "the fleet has been at Besika Bay from the first; and as to the troops at Gallipoli who knows whether the telegram is true or not; may be it's a telegram from Bhendy Bazaar."

"Well," said Cassim, "may be it's true, may be it's not, but at any rate we'll soon know the truth, and whatever occurs—it's *hissat*."

"True," said the Arab, "God is great, and everything must go according to *naseeb*; so after all there is nothing to fear."

"Praise be to God," cried old Nubbee turning up his eyes, "thy words are true, and as I was telling you I read a telegram the other day about the war, and it said"—here he paused, smoked his hookah reflectively, and resumed "the telegram I was reading said that—Mahmood, one more cup of coffee—he continued interrupting himself—"the telegram I was reading was from Constantinople, and so it must have been true, and it said that—"

Here Mahmood handed him his cup of coffee, which he swallowed with three or four long "isps," with great satisfaction, and then applied himself to his hookah with renewed vigour.

"Well," cried the Persian testily, "what *did* the telegram you were reading say, it's getting late and time to be going home, come, tell us at once, or not at all."

"In truth, then," said old Nubbee-buksh, finding himself pushed into a corner, "I have forgotten what the telegram said, but I think myself it must have been true, because it came from Stamboul."

YOKOHAMA MARKET REPORT.

FRIDAY, MARCH 22nd 1878.

IMPORTS—During the first three days of our week, the same demand for Yarns which was the principal feature in last week's report, continued, the bulk of the operations being 'to arrive,' but a fair amount of business being done for delivery in the usual short terms. But the paper currency again showing signs of weakness, native merchants have been compelled to hold their hands and, during the latter half of the week hardly any business has been done, and at the close we have to report on the whole our Import market as decidedly dull. No other goods but Yarn calls for any general remark, and our mercantile friends will find the record of the week's transactions in any special article in which they are interested, in our table of quotations.

EXPORTS—**SILK**. We were able to report, in our last, a rising market and a fair amount of transactions, for this time of year. During the first half of the week at present under review, the same activity was to be remarked and about 500 bales were settled at a still further advance of \$10 to \$15 per picul on our last quotations. But, during the last two or three days, the depressing news from Europe, which appear to indicate that war is hardly to be avoided, have made a decided change: operations have ceased, a good deal of the silk under inspection has been returned on sellers' hands, and prices have receded to at least our last quotations, at which the market closes very weak; natives being now eager to sell, but without finding purchasers for their goods. We leave our last week's quotations, therefore, as they stood, but they must be taken as more or less nominal.

Total shipments to date are 19,993 Bales and stocks about 1,800 native.

TEA—We have still nothing of the least importance to note: the only business doing is the execution of very small special orders, which are very difficult to fill: to get even ten piculs of any particular class of leaf being almost impossible. In other columns of this Review we have referred to the impending experiment in manufacturing Black Teas which natives seem determined to make, and we have nothing more to say, here, upon the subject. For the few hundred pounds bought it is not worth while to change the quotations at which we left the market when it virtually closed, and the two or three firms interested in the minute transactions now taking place can furnish their special quotations themselves.

EXCHANGE—There has been but little change in quotations for sterling Bills, during the past week: six months' Bank paper has been steady at 3s. 11½d. with fair demand, but sight bills have advanced an eighth on our last week's closing rates. Some remitters who have been holding out for 4s. 0d. finding the Banks firm have, we hear, been sending their money home through New York at 94½, but transactions of this character have not been of any very great extent. 94½ was obtained late this afternoon.

Private credits and documentary paper have been taken to a moderate extent at a trifle easier rate.

On Shanghai, transactions have been limited, without change. Rates on Hongkong close firm at 1½ disc. for Bank, and 1½ for ten days' sight Private.

On New York and San Francisco a fair amount of Bank paper has been taken at our quoted rate.

We quote:—London Bank, 6 months' sight 3s. 11½d., sight 3s. 11d. Credits 6 months' sight 4s. 0d., Documents 6 months' sight 4s. 0½d., Documents continental, 4s. 0½d. Paris Bank, 6 months' sight 5.00 sight 4.91½. Documents, 6 months' sight 5.05. Shanghai Bank Bills, sight 73. Private, 10 days' sight 73½. Hongkong Bank Bills, sight 1½ o/o disc. Private, 10 days' sight 1½ o/o disc. San Francisco Bank sight 94½. New York Bank, sight 94½. **BULLION**. Gold Yen 390, Kinsatsu 442.

* To connect with the *Belgic O. & O. S. S.* sailing 22nd March.* To connect with the *P. M. S. S. City of Tokio* sailing April 4th.

••• The dates of Arrival and Departure of the Mitsu Bishi Company's steamers are susceptible of alteration, consequent on the necessity imposed upon the Company—by its contract—of connecting with the steamers of the Pacific Mail.

••• No days for Arrival or Departure of the Pacific Mail Company's or Occidental and Oriental Company's steamers having as yet been fixed, we are unable to tabulate them. Each separate steamer's departure from her port will be notified in the Table below, and the day of her probable arrival at her destination.

••• Three days are allowed in the P. & O. Company's Schedule for transit of the Mails between London and Brindisi.

••• Two days are allowed in the Messageries Company's Schedule for transit of the Mails between London and Marseilles.

CARGOES:—Per Jap. str. *Tokio Maru* from Shanghai and ports:—Treasure, \$9,000.00 and 149,500.00 yen.

Per Brit. str. *Sunda* from Hongkong:—General Merchandise, 4,017 packages

REPORTS:—The British steamer *Gaelic* reports:—Left San Francisco on the 21st February, at noon. Encountered strong westerly gales the entire passage. Passed British barque *Formosa* of Liverpool 200 miles West of San Francisco on 22nd February, 53 days out from Puget Sound, bound for Pico, Peru.

The French barque *Succes* reports:—Left Newcastle, N.S.W., on the 6th of January. Had moderate weather throughout. Called at the Solomon Islands and did some trading with the natives, also touched at Pleasant Island. The natives were very unruly. There were two Europeans on the Island.

The Norwegian ship *Jotun* reports:—Left Newcastle, N.S.W., on the 20th January. Light and pleasant weather in South Pacific; strong N. W. winds on Japan Coast.

H. B. M.'s Corvette *Juno* reports:—Left Shanghai on the 15th March. Passed P. & O. steamer at 5 p.m. on the 19th, standing West. Experienced light winds from N. E. until nearing Van Dieman's Straits, when it blew strong from the North. At 3 p.m. on the 20th off Japan heavy sea from the South.

The British steamer *Belgie* reports:—Left Hongkong on the 13th March, 1878, at 4.16 p.m., with 3 saloon and 494 steerage passengers, and 1,905 tons cargo. Encountered strong N. E. monsoon and high head sea to Yokohama; thence to port variable winds. Arrived March 21st, at 12.07 a.m.

ORIENTAL BANK CORPORATION.

INCORPORATED BY ROYAL CHARTER, AUG. 30, 1851.

Paid-up Capital £1,500,000.

Reserved Funds £ 500,000.

The Corporation grant Drafts, and negotiate or collect Bills payable at London, Paris, Bombay, Calcutta, Colombo, Foochow, Hiogo, Hongkong, Kandy, Madras, Mauritius, Melbourne, Point de Galle, Port Elizabeth, Shanghai, Singapore, Sydney, Tellicherry, New York, and San Francisco; on terms which may be ascertained at their office. They also issue Circular Notes for the use of Travellers by the Overland Routes via India and America.

They undertake the agency of parties connected with India and the Colonies, the purchase and sale of British and Foreign Securities, the custody of the same, the receipt of Interest, Dividends, Pay, Pensions, &c., and the effecting of remittances between the above named Dependencies.

They also receive deposits of \$100 and upwards for fixed periods, the terms of which may be ascertained on application at their office.

Office hours, Ten to Three; Saturday, Ten to Twelve.

Yokohama, January 1, 1878.

TREATY REVISION.—THE JAPANESE YEN.

A FORTNIGHT ago, we enunciated our conviction that a 'revision of the Currency Question should take precedence of revision of any part of the Tariff . . . that, under the Revised Treaty, Mexican Dollars should enter Japanese ports only as bullion, and that proper respect should be paid to Japan's indubitable sovereign right of minting the coinage which shall thereafter be the medium of exchange in the Japan Trade.' We very briefly reviewed the original Treaties, showing how evilly for Japan had worked the provision in Art. X. (Great Britain and Japan 1858) that all foreign coin should 'be current in Japan, and pass for its corresponding weight in Japanese coin of the same description ;'—enumerated the opportunities Japan had lost and the errors into which her financiers had been led; summarized the results of twenty years' mismanagement, culminating in a confusion of currencies, gold, silver, and paper, which impede commerce, while they promote gambling; endorsed the demand of an intelligently-edited native journal, that the Mexican Dollar should be excised from the trade as an excrescence; and, having thus diagnosed the evil, concluded with the remark that 'happily, the remedy is not far to seek.'

A move in the proper direction was made eight years after the opening of the port, the inconveniences attendant on the exchange of dollars for boos having become intolerable. In Article VI. of the Convention of 1866, which effected the first revision of the Tariff, it was stated and agreed as follows:—

"In conformity with those articles of the Treaties concluded between Japan and Foreign Powers, which stipulate for the circulation of foreign coin at its corresponding weight in native coin of the same description, dollars have hitherto been received at the Japanese Custom-house in payment of duties at their weight in Boos (commonly called Itchiboo), that is to say, at the rate of Three Hundred and Eleven Boos per Hundred Dollars.* The Japanese Government, being however desirous to alter this practice and to abstain from all interference in the exchange of native for foreign coin, and being also anxious to meet the wants, both of native and foreign commerce, by securing an adequate issue of native coin, have already determined to enlarge the Japanese Mint so as to admit of the Japanese Government exchanging into native coin of the same intrinsic value, less only the cost of coinage, at the places named for this purpose, all foreign coin or bullion, in gold or silver, that may at any time be tendered to them by foreigners or Japanese. It being essential however to the execution of this measure, that the various Powers with whom Japan has concluded Treaties should first consent to modify the stipulations in those Treaties which relate to the currency, the Japanese Government will at once propose to those Powers the adoption of the necessary modification in the said stipulations, and, on receiving their concurrence, will be prepared from the 1st of January, 1868, to carry the above measure into effect.

* Now, \$100 Mexican are equal in weight to 312 boos;

"The rates to be charged as the cost of coinage shall be determined hereafter, by the common consent of the contracting parties."

The 1st of January 1868 found the country suffering the premonitory birth-throes of a new polity; but as soon as could be reasonably expected, the Cabinet of the restored Mikado fulfilled the promises of the Shōgun. The Hong-kong Mint, discarded by that Colony without sufficient trial of its working, was purchased and set up at Osaka. This was an initial error, and the site was selected in opposition to the advice of the Oriental Bank; but it was a pardonable one, as the Japanese Cabinet only shared the hope, since proved so delusive, which was entertained by a majority of foreign merchants, that Osaka, not Tokio or Yokohama, would be, in a near future, the commercial metropolis of Japan. And it is to be regretted that the men who had drafted Art. VI. of the Convention of 1866 did not have the carrying out of their own policy. For it was clearly implied, though not clearly stated, in that proposition, that the Mexican dollar should only enter the country in the same way as any other bullion, through the Mint,—and though the error of bi-metalism was foreshadowed, still it is evident that they meant to give us a Japanese silver yen as the sole unit of value in silver currency, and to abolish the Mexican dollar, with all its variable values, intrinsic and fancied. Their successors unfortunately overlooked this point, so essential to the success of their attempt at Currency Reform. A pity; for they were evidently in earnest. The services of Major Kinder, a man of European reputation in his line, and one of the best servants the Government has ever had, were secured for the new Mint; he arrived, with a thoroughly efficient staff, and the establishment was formally opened, and coinage on a large scale begun, on April 4th 1871. But then the Government committed a grave error;—radical; by no means so venial as the wrong selection of site; an error not of omission or forgetfulness, but deliberate and persisted in, spite of the strenuous opposition of the Government's own foreign banker, and its own foreign Mint-Director; an error to which is traceable the loss which the Mint has caused, and which has deprived the country of the profit it should have given, during the past seven years. Gold was made the legal tender. And yet the silver yen was not made altogether a subsidiary coin, for. Art. IV. of the 'Currency Edict,' notified to the public shortly after the opening of the Mint, that

"for the convenience of commerce at the open ports, the silver one yen will be coined for the present for Japanese and foreigners on application; this will be the silver coin of commerce, and is intended to facilitate the operations thereof.

"This silver one yen is solely to be used in the payment of import and export duties and all other taxes at the open ports, and in operations between Japanese and foreign merchants; not only will it be unavailable for the public payment of internal taxes of every sort, nor will it be

generally current; but it will be optional to any person to use it, in making or receiving payments by mutual agreement throughout Japan.

"In payment of duties and taxes at the open ports, the relative value of the silver *yen* and the standard gold coin will be for the present at the rate of 100 *yen* for the 101 gold *yen*."

It had been originally the intention of the Government, then acting under the advice of the Oriental Bank and Major Kinder, to have made silver the standard and the silver *yen* the unit of value and legal tender—gold and the smaller silver pieces being coins of convenience. But unhappily, they "gave careful consideration to the convenience of the gold and silver coinage systems of Europe and America;" they "referred to books," and took "the opinion of experienced persons;" heard of the "Coinage reform Conference of Paris" and "maturely and minutely considered what would be most advantageous and convenient for the future of Japanese coinage." And by these processes, in the course of a few weeks, they "arrived at the conclusion" embodied in their new Currency Edict: viz. to abandon the path marked out for them by men, the study and business of whose lives had been currency and finance. Verily, this people must be of the descendants of Reuben; it has 'the excellency of dignity, the excellency of power'—but the curse clings to it—'unstable as water, thou shalt not excel!'

We have no intention of writing an essay on the virtues and vices of a bi-metallic system of currency generally, to be criticised by the half-dozen of our readers who understand or care for financial questions—to be thrown aside unread by the large majority who do not. It is quite enough for us to note briefly the consequences of its introduction here. For though, nominally, gold was made the standard and the legal tender; and the silver *yen* was stated to be 'solely' for payments of taxes and duties at the open ports, and for commercial operations between Japanese and foreigners; still, in the same breath, the people were told that any one might use it for making payments, by mutual agreement, throughout Japan. It may be argued that, unless this latter sentence had been inserted in the edict, the people, accustomed to receive very minute instructions from their rulers, would have conceived a prejudice against the silver coin; but to us it seems that the phrase,—as also the temporary advantage given in exchange of one *per cent.* in payment of duties to silver over gold,—indicated a sort of half-hearted inclination to conciliate the advocates of a silver standard. We need not say that they were not conciliated, and the port records show how both kinds of coin were exported to the melting-pot, without either going into circulation; becoming merchandize, just as silk and shirtings, and bought and sold just as their bullion values fluctuated in other markets. For the fundamental error of 1858, which had not been corrected by the Convention of 1866, was still left unrepaired by the Currency edict of 1871. The Mexican dollar was allowed to remain as a current coin, as a favoured rival to the Japanese *yen*, instead of being imported solely as bullion, and passed through the Mint,—in accordance with an inherent sovereign right vested in the monarchy, which Japan has always neglected to demand, which the European Powers, in obedience to recognized principles of international law, could not, nor would have, refused. We trust that, in the approaching re-revision of the Tariff, this inherent right will be persistently maintained, and that the trade will at last be freed from the illegitimate tax, paid mainly to Chinese shroffs, which it has so long borne in the shape of that excrescence—the Mexican Dollar.

For this is the *crux* of the whole question. It was hopeless, when the Mint was originally started, with two *per cent.* charged as seigniorage for coining silver

yen, to expect that the Mexican dollar, another coin, equally current by law or force of Treaty, and payable for customs-dues and Taxes, would come to the Mint unless forced thither; dropping the seigniorage to one-and-a-half *per cent.*, to one, to a-half, to nothing, could have no better result: the Mexican is too strongly rooted in custom, prejudice and petty profits, to be *coaxed* out of use and, as we have seen through all these years, buys the Japanese *yen*, on the contrary, at a varying discount.

And here we may, as appropriately as elsewhere, interpolate the warning that the Government,—when it asks the consent of the Treaty powers to the relegation of the Mexican Dollar to its proper position as bullion,—must be prepared to face the loss of the whole cost of recoinage—without any seigniorage at all—of whatever Mexican Dollars are then to be found in Japan. Holders cannot be fairly made to pay either the cost of re-coinage, or the charges of returning them to China. But this item of cost, though it will be heavy, will be a single and special one, not to be repeated; and for the Finance Minister's comfort, we may tell him one of the Chinese shroff's secrets:—that there are certain issues of Mexican Dollars which contain in their 417.60 grains of metal a modicum of gold, which the Mexican Mints that send them out have not the means of extracting from the silver ore, but which the Osaka Mint has, — in common with the London bullion refineries;—and the value of which will very considerably aid in paying that establishment for its work. Proper precautions, in making the change, must of course be taken against spurious Mexican coin, of which there is not a little in circulation, being foisted on the Government; and it will only be fair that the new coin should be returned, weight for weight,—not by tale; but that some loss has to be faced is of course certain, and it must be contentedly endured. The counterbalancing advantages of the reform will be immediately felt, and these will go on growing, long after its cost has been buried in oblivion.

But we must have no more mistakes. In the concluding part of this attempt to show how Japanese currency may be replaced on a sound basis, we may explain why the Japanese 'Trade Dollar' must be abolished. It must suffice, at present, to lay it down as a fact of necessity. A silver *yen*, of 900 fineness and 417.60 grains weight, must be current, and a legal tender—throughout the country,—not merely at the Treaty ports. In currency, simplicity should always be aimed at, and to make a coin a legal tender for some purposes, and not for others, invests it on occasion with a fictitious value which it should not possess. Care must, of course, be taken that its action shall not be detrimental to the paper-money now in circulation; and this fear as well as the desire to get gold into circulation, seems to have been influencing the authors of the Currency Edict, when in Art. IV., quoted in full above, they enacted that it would be "unavailable for the public payment of internal taxes of every sort, nor would be generally current." Now,—the opportunity ought to be taken of putting the paper-money, also, upon its proper basis. It is of course impossible, in the existing state of Japanese finance, for Government to put *kinsatsu* in the same position as the bank-notes of a rich European State, and declare them, at once, payable in silver on demand. But a step should now be taken in this direction. As we have frequently insisted, Japan enjoys quite an exceptional advantage over every other nation,—traceable to her long isolation from the rest of the world: her own people have a most valuable faith in their Government's irredeemable paper promises to pay. But as her foreign commerce increases—and only by her foreign commerce can she accumulate wealth—she must seek to extend this feeling of confidence in her paper to foreign minds. Her punctual and prompt payment of all her foreign loan engagements hitherto have gone far to establish her credit;

and the announcement that she intended, as soon as possible, to convert her present irredeemable paper into notes payable in silver on demand, would most materially enhance it. Consolidation of her internal debt by means of a new foreign loan at low interest would be greatly assisted by such a Proclamation.

This would be a digression, were it not that the operation of the paper and silver currencies so overlap as to make it impossible to consider them altogether apart. To return, however, to our main argument: the silver *yen*, we repeat, must be a legal tender, current for all and every purpose, and *kimsatsu* legal tender as far as the people will stand it. And, having sufficiently insisted on this point, and on its corollary, that the Mexican dollar must be forced out of circulation, we may pause for the present. Subsidiary coinage, and the extension of the Japanese Mint into a money-making machine for the China trade, (thus carrying the attack on the Mexican enemy into its own country) together with the details of the guarantees and safeguards which the Treaty Powers are entitled to demand of Japan, when restoring her imperial right of coinage;—these are subjects too important to be forced upon the attention of exhausted readers at the end of an article already too long.

RIVERS REBUILT.

WE HAVE shown how Rivers are ruined; we have now to explain how they may be restored.

As the character of each stream varies with several circumstances of the country through which it passes, and of the watershed which supplies it, it is of course clear that no such precise instructions or rules can be promulgated for the work of restoration of rivers, as in the case of re-creating woods; the assistance of the skilled engineer is here requisite, to determine,—after careful survey of the locality,—the proper method of procedure. But as the ignorance or the greed of man loosened the bonds which restrained the prodigious forces of Nature, and set them free to destroy: so, happily, can man's skill,—by very simple means, easily applied,—so mould and direct these forces, that they hasten to repair. The method of their application and the time required for their action, are varying quantities in each calculation, but in every case the same principles come into play:—the utilization of the force of the water, to move obstacles, the employment of materials found on the spot to create the necessary barriers to control it;—and, imperatively and universally, the application of these principles at the proper points. Contemplating a river in ruins at its choked mouth, or through miles and miles of devastated land upwards towards its source, it would seem that the task of restoration was hopeless to attempt. But when we have reflected that a torrent, which it is almost impossible for masonry to bridle, is but composed of drops which trickle off single blades of grass; that the fall of a whole hill side into a river's gorge is caused by the tiny pressure of the same drops, expanding as they freeze in the fissures of the rock; it becomes at once clear that to direct and use these forces in their earlier stages of development is sufficiently easy; that it is only when permitted to accumulate without our direction, that they become difficult to control.

It is therefore to the sources of the ruined river that the attention of the engineer should be first directed, not to its mouth: and these are found in gorges in the hills which ultimately all debouch into what thereafter becomes the bed of the main stream. These vary in contour. When their course is through argillaceous schist, they are comparatively straight, the rain-fall rushes through them with great violence, continually undermining and bringing down masses of the banks on either side, which dissolve into

mud and form a heavy torrent most difficult to manage. For, as the storm-water subsides, mud dams accumulate at points where slight obstacles present themselves, and on the next occasion of heavy rain, these are at once swept away, and carry with them, down into the main gorge, rocks, trees, conglomerated masses of earth and pebbles, to continually recruit the store of material already there in excess. Material which the river carries onwards in suspension, steadily to fill up its bed; periodically—under exceptionally heavy rain pressure—to distribute over the cultivated land on either side of its banks; and ultimately, to diminish the depth of water on its bar. The only cure for this form of evil is the establishment, in the bed of the torrent itself, or at accessible points on either side of its course, of numerous small reservoirs; and these are not difficult to construct. If the reader will place a straight ruler or a paper-knife at an angle upon a table, and imagine its edge to be the bed of such a torrent, he will see that, by cutting notches at intervals and piling up, just in front of them, the stuff taken out of these notches, a series of deep holes will be formed with sufficient embankments, which will collect and arrest the rain-fall in its successive stages, check the rapidity of the fall by depriving the water of accumulation of impetus, and compelling it to rest at intervals; and finally transmit to the main gorge the surplus water in a comparatively limpid state. Then, during the intervals between rain-falls, these reservoirs discharge another duty. On totally disafforested hills, of course evaporation under the sun's rays goes on rapidly, but still some of the water percolates through the rocks to stimulate vegetation in every favourable nook, and gradually a *humus* is formed which can nourish seeds borne to it by the wind, or deposited in it by wandering birds. To the tree-planter, who is seeking to restore the forests, such reservoirs are of course of great value, as they soon enable him to start a fringe of young plants on each side of the water courses, of which a fair percentage will live. And here we must interpolate a reiteration of what we have written before, when treating of Forestry:—that afforestation is the main agent for the restoration of rivers, ruined by the destruction of the woods which used to protect their sources. The 'rebuilder' of a river, if we may apply such a phrase to an engineer, must work with and for the forester. The growth of the new woods will, year by year, moderate the flow of the rain water; and, absorbing some, and spreading much over the surface of the ground, will prevent its too rapid concentration in the channels we have described. The roots of the trees will give cohesion to the soil, and carry the water down to dissolve the mineral salts below, to trickle out again lower down the hill in fertilising little rills, or perhaps to reappear, miles away, in the valley springs. And the disintegration and downfall of the hill-sides and torrent banks will be in great measure arrested.

But the majority of the upper torrents which feed a river rarely flow in any thing approaching a straight line, particularly in such a country as Japan, where severe volcanic action has so dislocated geologic formations, that a variety of rocks, of various hardness, form the sides of the *crevasses*, or rifts, through which they fall. Water, always seeking the path along which it can move most rapidly, wastes neither time nor power in attempting to pierce or overpass an obstacle which it can circumvent. By judiciously observing the flow of a sinuous torrent like this, the engineer can guide it, by very simple means, down to the bed of his main river in the foot-hills, and can prevent its doing damage, by using its own weight and force to place the necessary restraints upon its fall. To explain how this can be done, we must have recourse to another homely means of illustration. Let the reader drop a ribbon or a piece of string upon a table in a zigzag line, and this will fairly enough represent the

course of most mountain torrents. Now the natural course of the stream being direct, it will be at once seen that its force is first projected against the rock at the uppermost bend of the channel, and if this obstacle consists of anything but the hardest material, it will soon be undermined, broken up, and carried down into the torrent's bed. But brushwood, interlaced and laid across from the point where the water strikes, diagonally to the opposite wall of the chasm, and loaded with the dislodged stones lying about, will immediately form a simple but effective weir. The force of the water is lessened by the diagonal wall across it increasing its width; it may be made to precipitate itself over any desired point of the little fall, and its impingement upon the bed below will soon wear out a hollow, in which the stream finds temporary rest. The detritus swept down against each of the barriers set up thicken and strengthen them, and, instead of a raging torrent, after an hour's rain, rushing down the gorge, tearing every thing before it, the water gradually fills up a succession of levels and is, so to speak, handed down the hill side in pools-full, and delivered at the bottom 'in good order and condition.' And these weirs, and the excavated reservoirs in the other class of torrent-bed we have referred to, are simple, inexpensive, yet perfectly effective checks to the initial destruction in the upper divisions of rivers, and possess the great advantage that the remedy they bring begins to operate immediately on its application. Other contrivances have to be made to suit particular emergencies; for each river-nymph has her own idiosyncrasy, which must be humoured; but these the river-engineer will have no difficulty in inventing on the spot, or in carrying out with material lying ready to his hand. We have given examples of the two chief groups of mountain torrents, the sources of rivers, and pass to the treatment of the middle sections of their resulting streams.

For the upper, middle, and lower divisions of rivers require each a different method of conservation and improvement, as the animal must be educated through infancy and youth, up to the fulness of maturity, if good use is to be made of its life. Descending from the mountains to the foot hills, and supposing the descent of lithic matter to have been checked as we have described and the torrent-force restrained within due bounds, we have still a modified waterfall to control, for the stream has many yards of height to descend before it reaches the plains, and with its continually added tributaries, its volume and its force increase in proportion to its usefulness, and its rapids now require as much care in directing and controlling them, as did the upper falls. Similar means must be employed to diminish the velocity of storm-waters by diagonal weirs, built with material obtained from the river's bed during the dry season, and the reservoirs of water-power accumulated above each barrier may now be drawn off and utilized to drive machinery of many descriptions. The banks of the stream specially require protection, and here the planting of willows, alders, osiers, and all such trees as, in a state of nature, mark the course of an unspoiled stream, must be encouraged. Occasionally, the character of the original geologic rift is such—as in the case of part of the Fujikawa, quoted last week—that for some miles nothing is required but occasional weirs, to check the stream's velocity, and to give it opportunities, when under stress of flood, to deposit the lithic burden it may then have to carry in spots convenient for subsequent removal; but where the banks are softer to the touch of the stream, protection must occasionally be given by 'groynes'—artificial bulwarks built out at the weak points to receive its impact. By any one who has travelled at all in Japan, numerous instances of attempts in this direction will be at once recalled to memory, and doubtless, a fair proportion of the 1,416,500 *yen* which appeared in the Finance Minister's estimates for the expenditure for 1878, under the head

of 'Repairs and Constructions of Dykes in Fu and Ken' will be devoted to the purpose. Some of these constructions are highly ingenious, and, if more judiciously placed, would be serviceable and lasting. Unfortunately they are not so, and the expenditure under this head will go on increasing, until the lesson is learnt that such embankments must serve a double purpose. They must not be designed and placed solely to shield the bank, but also so as to influence what we must call the 'rhythmic' flow of the stream, which, once secured, will soon leave the 'groynes' unmolested, except under stress of an unusual weight of storm-water.

For the river whose course we have been tracing from its stormy birth amongst the hills, now enters the third division of its existence,—its useful progress through the plains, as a highway for shipping; and from this point to its peaceful death in the sea, its treatment must be changed, for the promotion of this 'rhythmic' flow is now the chief object of the hydraulic engineer. Hitherto his efforts have been directed towards restraining the velocity of the current, and adapting it to the geologic formation of the country through which it has passed, so as to prevent its moving any considerable quantity of solid matter which would choke its bed and force its waters over the banks. Now the country, as a rule, becomes flatter, the bed of the stream has less fall, and the task of the engineer is to promote—or rather carefully to remove every obstacle that might check—the river's flow; so that, on reaching the sea, sufficient force shall remain to enable it to so far overcome the resistance of the mass of ocean water on which it impinges, that it shall carry sufficiently far from its mouth the now finely-granulated solid matter held in suspension. Every river is more or less obstructed by a 'bar,' the name given by mariners to the bank of material deposited, generally in the form of a crescent, with its convex side turned towards the sea, in front of the mouth. As we have insisted more than once, each river has its own peculiarities, and nowhere are these more strongly marked than in the formation of its 'bar.' It is of course a leading fact, that the collision of the two masses of liquid flowing in different directions—the river down, and the tide up—is the primary cause of the deposit, but the configuration and progress of the work varies in every case, in every part of the world. And so must vary the means employed for removing or lessening the obstacles; and it is of course impossible, within our limits, to even enumerate their causes or their cures.

Enough for our present purpose to deal with those of the principal rivers of Japan which have been 'ruined,' and which appear susceptible of being 'rebuilt.' There is a certain generic resemblance between them: at Osaka, Tokio, Niigata, the stream, after suffering in its upper and middle courses from the destructive influences we have described, flows through an alluvial plain, without any scientific attempt being made to guide its course, breaking down or overflowing its soft banks in the rainy season and, in the dry, diminishing to mere threads of water, many of which actually disappear in masses of sand before they reach the sea. In neither of these, nor in any other similar case, will dredging be of avail, until the operating causes, which we have detailed as at work higher up the streams, are removed; and until this is done as we have described, dredging on the bar must always be as we have called it—a Sisyphæan labour. But with the constant access of debris from the upper and middle streams checked by afforestation, reservoirs, dams and protection of the banks, the force of the river in its lower division may then be utilized to assist the hydraulic engineer and his dredgers in opening out again a fairway for vessels to the sea. This is not at all a difficult matter, Nature asking only slight assistance from man to do most of the restoration work herself.

No river flows continuously in a straight line. The slightest obstacle suffices to turn the flexible water, which strikes off from it at an angle of reflexion equal to the angle of its previous incidence. In the case of a river, it necessarily project itself against the opposite bank and, then returns again, and this action once set up, the river's flow becomes what we have called 'rhythmic,' the current must go on winding, in accordance with *the law of reciprocity of curves*, a law which we need not more fully explain here than by saying that it is identical in principle with that which governs the motion of the pendulum. If a river flowed between banks of precisely similar materials, and had no variety of obstacles to check it, its passage to the sea from the point where the first impulse had been given to its current, would be through a series of alternate curves of precisely equal radius. But the mass of the current does not confine itself to a mere change of direction. In striking against each bank in succession, it gradually eats it away, and in the case of the rivers we are now considering, as continually adds to the superfluous deposit in the bed. We are indebted to M. M. Laporte and Vézian, French engineers, for the idea of assisting this rhythmic flow, and at the same time protecting the banks from erosion, by a system of what they call 'guiding-banks.' They are difficult to describe without the assistance of a diagram: but if our readers can imagine a ladder, bent in alternate slight curves, and with its rungs divided alternately at their right and left junction with the sides, and then bent, so as at each curve of the ladder, to prolong the arc a little way inwards; they will almost realize the figure. We occasionally see, in Japanese rivers, attempts to protect the banks from erosion by breakwaters of stones, stone-laden fascines, or rows of piles laced together with bamboos—but these are all wrongly placed, projecting perpendicularly across the set of the current, or at various incorrect angles to it; and not correctly placed, relatively to each other. Everything depends, in the employment of this simple means of protection, on the 'guiding-banks' exactly corresponding to the parabolic curves taken by the current itself, and upon their being placed at precisely the proper spots on each bank. Their value is made apparent from the day they are built. Instead of rushing against and into the banks, the water silently slips along the faces of these embankments, the volume of the current is increased, scour of the bed is created, and a portion of the deposit which the river is carrying is dropped by the slack on each side of the winding centre channel, into the still water behind these guiding-banks, where it can easily be utilized to strengthen them; until in course of time the river gradually assumes a precisely correct configuration, with a clear fairway, on a smooth bed in the middle of its stream.

Of course, when streams have been neglected for centuries, as in Japan, there is much work to be done,—after this—at their actual mouths, and, besides dredging, in most instances, jetties would probably have to be built out into deep water, before the rivers could be made navigable. And in this country, it is here that the Dutch 'zinkstijks' would be very valuable. But consideration of this part of the subject involves also that of the various methods of reclamation of fore-shore; and requires an article to itself. We trust that, so far as we have written of the restoration of rivers proper, we have been able to make ourselves understood; if we are as successful in directing the attention of Government to this very profitable reform, as we have been in the matter of Forestry, our object will have been fully attained.

AFFORESTATION.

IT is with very cordial satisfaction that we publish the following Notification by the Naimusho (Home Office)

respecting Forestry, which reaches us just in time for publication in this week's *Times*. We have reason to believe that the articles which appeared in this Review on the subject attracted the attention of the Government, and that this Notification is their sequence; the most grateful reward for his labour which a journalist can receive.

We sincerely trust that the recommendation urged in the second article of our series will be carried out in detail. A sub-department of the Naimusho, analogous to our Department of Woods and Forests, should be at once appointed; and intelligent and intelligible Instructions, such as we sketched out in the rough, immediately prepared, to be placed in the hands of the Government forest-tenants. And the people must, moreover, be compelled to carry them out. There is no more opined, wrong headed, stupid animal in all countries under the sun, than your agricultural peasant, and he cannot be led, but must always be pushed, into paths of reform. We warn the Government, that unless this most important matter be attended to, time, labour and money will all be thrown away. Forestry is a science, and cannot be learnt in a day.

NOTIFICATION BY THE NAIMUSHO (HOME AFFAIRS DEPARTMENT.)

No. 4A. 14th day of the 3rd month of the 11th year of Meiji.

It is hereby notified that, as the plantation of woods is of most urgent necessity, the accompanying Regulations for 'joint interest'* plantations have been decided upon and will be carried out, and that the people must adhere thereto in taking advantage thereof.

OKUBO TOSHIMICHI
(Minister for Home Affairs.)

REGULATIONS RELATING TO TITHED PLANTATION OF WOODS.

I.—Mountains and fields without trees belonging to the Government, may, in the event of there being no obstruction on the part of the Government, and on application from the people, be leased to them for the planting of such trees as are suitable for the ground, the Government taking some portion of the products and the other portion remaining to the people themselves. This is what is meant by tithed plantations.

NOTE. Government forests in which the trees have already been cut down, may be worked under these same Regulations, if any similar system of joint-interest planting has heretofore existed regarding them.

II.—Those who are willing to become tenants of such Government lands with the object stated in Clause I must in the first place, survey the extent of the ground, ascertain the quality of the soil and apply to their local Government office, in the accompanying form No. I.

III.—In the cases mentioned in the preceding clauses, the local Government office will despatch officers to inspect and ascertain that everything (stated in the application) is correct; and will then accede to the application and give the applicants a tenancy certificate (lease) in the accompanying form No. 2.

IV.—The mode of dividing trees grown on the land will be decided suitably, according to the means of transit, quality of the ground, and the degree of anxiety of the people to do it;—from two-tenths to the Government and eight-tenths to the people (for instance, if there are 100 trees, 20 will be taken by the Government and 80 by the tenant) to five-tenths to the Government, and five-tenths to the tenant.

V.—The mode of dividing the products mentioned in Clause IV. may be as follows:—the trees after they have grown, may be divided where they stand; or at the time of felling, both the Government and the tenant may ap-

* It is not easy to find a single word expressive of the meaning of the Japanese here. There is a compound word, signifying that the Government and its tenants are to be proportionally interested in the ventures. Perhaps a better term would be 'tithed' plantations.

point a valuer for each side, and then divide the amount of money estimated by the valuer to be the total of the trees. Either of these modes may be adopted by mutual consent of both parties.

NOTE. In case the Government should unavoidably require the ground for some other purpose, the Government will purchase at a suitable price such trees as are due to the tenant.

VI.—The local Government office will keep a full record of the extent of ground lent to people each year, the name and number of the trees (sown or planted) and the name and address of the tenants, and submit the same for the year ending in December, to the "Chirikiyoku" (the Geographical section of the Naimusho) not later than during January of the next year.

VII.—The Government will take no rent for the ground,* but the tenant will be responsible for the expenses of plantation and protection of the trees.

VIII.—If, after plantation, and as the trees grow, the tenants wish to cut some down, in order to thin out the wood, they should apply to the local Government office beforehand, and that office will, if it is proved to be correct on inspection, accede to the same, and the trees felled for that purpose will all belong to the tenant. The Local Government office will report to the Chirikiyoku of the Naimusho, for correction, (of the list) the number of trees so felled, without fail, not later than January of the next year.

NOTE. If however, trees which have grown more than 15 years, are felled for that purpose, such trees will be divided according to the agreement made in the fourth clause.

IX.—On the application for leasing ground being granted, the tenant should fix its boundaries on four sides and erect a post as under-described at each of the four corners.

X.—If, for his own convenience, the tenant wishes to transfer to another his right to the plantation, he must make application to the local Government office, with a full account of all circumstances relating thereto; and the office will, if it finds there is no inconvenience, endorse the request on the back of the lease and report the same to the Chirikiyoku of the Naimusho.

NOTE. If the tenant wishes to pawn or mortgage the trees, he must obtain the approval of the local Kocho (village officer) in accordance with Notification No. 6 of the 7th year of Meiji.

XI.—The extent of the ground to be leased is not yet decided, but such an extent as would be suitable for the number of trees proposed for plantation will be leased.

NOTE. According to the number of trees to be planted, if although a large extent is required, it is impossible to plant them all at once, planting gradually may be allowed within a limit not longer than three years—but if any of the land is left unplanted after the lapse of the three years, such will at once revert to the Government.

XII.—When the plantation shall have actually been completed, whether all at once or gradually, such should be reported to the local Government office and an inspection made.

Here follow the forms of application &c., &c.

We shall take an opportunity of criticising these Regulations in detail next week; at present we have neither time nor space for the performance of the duty. We would only point out now the necessity of carrying on the restoration of Forests and Rivers simultaneously—as urged in other columns to-day.

PAPERS OF THE GERMAN ASIATIC SOCIETY.

ON EARTHQUAKES AND VOLCANIC ERUPTIONS IN JAPAN.

By DR. EDMUND NAUMANN.

"Und haett ich nicht geschuettelt und geruettelt
 "Wie waere diese Welt so schoen?—
 "Wie staenden Eure Berge droben
 "In praechtig-reinem Aetherblau,
 "Haett ich sie nicht hervorgeschoben
 "Zu malerisch-entzueckter Schau!"

Faust,—Part II.

SLOWLY but unceasingly water and fire act on the inorganic nature which surrounds us, transforming, disturbing, and building up anew. Even the weather-hardened rock itself succumbs finally by their untiring labour.

* Won't it? Two or five-tenths of the timber is rent, just as much as money,—and a big rent, too. Ed. J. T.

Thousands and thousands of years elapse before the works of nature are developed in their full grandeur, and hence all inanimate nature seems to us unchangeable. Nevertheless man is often enough witness of destructive calamities, which, breaking on us quickly and unexpectedly, had also sudden and speedy results. Although these convulsions, more or less local, of the earth, may have no real participation in the changes which the surface of the earth undergoes, in our time at least, yet they explain many phenomena, otherwise mysterious, and furnish us with an estimate of the working of the forces of the earth in early ages.

Historical accounts of the geological events of western countries are too meagre and inadequate. The wave of peoples has repeatedly rolled over world-governing Europe, and the same portion of the earth has seen again and again new nations settling there after a hard struggle. In the Far East, on the contrary, the development was peaceable and undisturbed in comparison. Barbarous hordes did not threaten it from without; culture, protected by lasting peace, prospered on an ancient basis, although its bloom was not so beautiful as that of the West. Hence it is explicable that the Japanese accounts of earthquakes and volcanic eruptions, although far from complete, compare particularly favourably with those of occidental countries. The following paper will show that such phenomena were extraordinarily numerous in this country. This is well known to be the case in all places which are conspicuous by their volcanoes, and of these Japan has a large number.

The traditions which are collected and discussed here go as far back as the third century before Christ. From this up to the seventh century of the Christian era, however, the records are too limited and uncertain, to be of any value for our purpose. The two most ancient historical works dealing with this period are the *Kojiki* and the *Nihonji*; but there are weighty reasons for doubting the general authenticity of these sources, more especially where dates are concerned.

According to the *Kodaiki*, Fujiyama rose in a single night in the year 286, and at the same time a portion of Omi province sank, and Biwa Lake was formed. So incredible does this whole story sound that it is remarkable that it should have found an entrance into European literature of volcanoes without having encountered any serious opposition. In Siebold's "*Nippon*" there is a copy of an old Japanese chart, accompanied by a translation of the explanatory Japanese text. In the latter it is stated that the island of Ichikuru in Lake Biwa arose in the year 265 B.C., that the lake itself seems to have existed there from the beginning, and that the statement of the *Kodaiki* and some other writings is founded not on fact but on fancy. So the author of this old map, which refers to the time of Jimmu Tennô, was quite correct in putting in the lake of Omi. The Honchô Iishinki says "Fuji mountain and Biwa Lake have existed since the Divine age, as is written in the poems of our ancestors." We see therefore that the story of the *Kodaiki* has received far more credence in Europe than among the Japanese themselves. Modern Geology teaches us that a mountain nearly 12,000 feet in height never could be formed in a single night:—

"Nie war Natur und ihr lobend'fges Fliesen
 "Auf Tag und Nacht und Stunden Angliewien
 "Sie bildet regelnd jeglige Gestalt
 "Und selbst im Grossen ist es nicht Gewalt

It must also be mentioned that it is highly probable that in the reign of the Emperor Kōrei the neighbourhood of Fuji belonged to the Ebi no kuni, or Aino land, and that the Japanese Empire of the fourth century before Christ can hardly have embraced the provinces from which Fuji is to be seen. Thus the real discovery of the mountain by the southern invaders may well have occurred in the third century before Christ.

The legend of the sudden formation of the mountains of Suruga and of the basin of Omi, however, deserves interest in a certain degree. It furnishes a commentary on certain views of Japanese scholars which seem to have descended from most remote times. According to their theories, a fall or depression is the necessary result of an Eruption. They think that the sinking of portions of the earth's crust is inevitable when subterranean masses are thrown up. The author of the "*Idzukaishii*" expresses

his surprise that the volcanic islands of the Idzu sea constantly throw up new matter, and yet at no place can a depression be perceived.

According to the records which have been consulted, only four earthquakes seem to have occurred up to the year 676. These were in 416, 599, 642 and 676. Henceforward the accounts are numerous and minute. An explanation of this circumstance requires consideration of various historical events. In the first place it has to be borne in mind that among the gifts which Japan received from her continental neighbour by the introduction of Buddhism, was a knowledge of astronomical science. According to the Nihonki the Buddhist priest Kwankiu brought over from his native country Patsi (Korea) in 602, astronomical and chronological works. The erection of the first observatory took place in 675, and in 690 the first Calendar was introduced into Japan. Although the great exactness with which the date of the accession of Jimmu Tennô to the throne is given, may excite considerable astonishment, yet we are fortunately in a position to undertake the transposition of Japanese dates which refer to the later times with a remarkable accuracy. The impulse given by the introduction of Buddhism caused arts and sciences to flourish, and people could not have omitted to collect and arrange all that was known about the past, and later on to record events with more accuracy than before. In the years 711 and 720 the above mentioned historical works, the Kojiki and Nihonji, were composed, and to the authors of these we owe our information as to the earliest dates. In the map, attached to this, on which are shown the succession of volcanic Eruptions and Earthquakes, and their synchronism or antichronism with each other, or with other natural phenomena, we have for reasons already given left out all mention of the period before 676. Our collection can by no means be regarded as complete, as will be seen by a glance at the table referred to. With full justice, we mark those periods which are remarkable for the infrequency of the phenomena here treated as real gaps; as their coincidence with political revolutions or warlike enterprises is evident. The records of the twelfth and sixteenth centuries are very meagre. The foundation of the Shôgunate which took place in the twelfth century, could only be accomplished after severe struggles. The chronicler himself heard in the immediate proximity of the Imperial City of Kiôtô the War-trumpet sound, and dropped his pen. Again in the sixteenth century the country was visited by long and severe disturbances, which, as before, brought about a new order of things. It was only after the rebellious princes were subdued by the powerful arm of Hideyoshi, and after China and Corea had been defeated, that Minamoto Iyeyasu could restore that peace to the Empire, which the great Shôgun had the wisdom to strengthen by the precious gift of his wonderful code of laws.

In other respects also, the reader can see what were the great periods of Japanese history, from the information contained in our tables. In most cases they deal chiefly with the centre of spiritual action in the country,—the residence of the ruler. At first we read almost exclusively about earthquakes in Nanto; then after the year 794 when the capital was removed from Yamato to Heian-jo, we hear chiefly of those which occurred in Kioto. In 1186 Minamoto Yoritomo made Kamakura the second capital, and now we hear of the phenomena which took place both at this place and at Kiôtô. Finally Yedo, which in 1603 was elevated by Iyeyasu to be Shôgun's residence, is added to the list. Our informants, therefore, were always in the Imperial palace or in its immediate neighbourhood, and could only hear by accident of the phenomena which were taking place in distant provinces. The following table is therefore to be regarded as incomplete both as regards time and place. From these remarks it will also be clear that the accounts of volcanic eruptions in Japan are more defective than those of earthquakes. The chronicler was at too great a distance from the seat of volcanic activity, and furthermore these eruptions are by no means so devastating as the great seismic shocks.

A particular portion of this paper will show that, as a rule, the records are very detailed. In the cases of earthquakes, the time of the day, and the various shocks are exactly related; the names of the temples, houses &c. which are destroyed frequently find special mention, and even the accompanying phenomena are generally noted.

The Japanese have always been good observers. In their records, one seldom finds direct observations spoiled by their own crude views. It also merits special remark that the people never see an earthquake or eruption without being prepared for it. They seem to observe with the utmost attention the slightest agitation of the forces latent in the earth. The movements of Asamayama have lately caused excitement. Lately the mountain emits no more smoke, and this is taken as a sign that an eruption is imminent. Unscientific foreigners used to consider Fujiyama an extinct volcano. The people themselves are not of this opinion, although they have seen the mountain for more than a century and a half in uninterrupted, harmless repose. During the last months of the past year, the inhabitants of the places around Fuji were much terrified by frequent and violent quakings, and every one dreaded a new and devastating eruption.

The books mentioned in the following list, which have been consulted by us, are partly collected works, partly monographs. The materials for writing the first have chiefly been collected in the capitals of the Empire, and it seems that for a long time particular persons were appointed by the Government for that purpose. Only earthquake Calendars belong to this class; so far as we know there is no complete account of volcanic eruptions in the Japanese literature on the subject. The monographs mentioned hereafter have in many cases been taken from records furnished to the Government. Of the books whose names are given in the second list, there are without doubt many still existing in the interior of the Empire, and it is to be hoped that, in the interest of Science, they have been preserved, in order to afford further evidence of the greatness of the volcanic phenomena which have occurred in historical times in the Eastern Asiatic Archipelago.

EDITORIAL NOTES.

A MOST effective illustration of the value of the artificial reservoirs and weirs of which we have written in our leading columns, we find in the following paragraph, from M. Viollet-le-duc's book on Mont Blanc, to which we are indebted for part of the information condensed in our article:—

"We have seen, not once merely, but several times, the "Petit-Nant, which comes down above the hospice of "Nant-Borant, and whose source is about 5,000 feet from "this hospice, in one of those very deep schistose troughs, "swell so considerably, after half-an-hour's storm-rain, "that it swept down in black mud, blocks of rock of four "or five cubic yards in bulk, and the uprooted trunks of "firs, and carried away in a few moments enormous "masses from the banks so as to undermine the timbers of "the bridge, which went some twenty feet beyond those "banks—threatening to destroy the bridge itself, which is "the only approach to the cold Bonhomme. Scarcely "had the rain ceased when the torrent resumed its harmless flow. All this was an affair of a quarter of an hour."

And all this might be easily prevented by the use of the simple appliances we describe.

DR. NAUMANN'S interesting paper on Earthquakes in Japan is supplemented in the original by two appendices; one a list of the authorities consulted, and the other a categorical list of all the earthquakes recorded, from the earliest times mentioned in his text. It will not be possible for us to give these in full, nor would our readers in general thank us, we fancy, for filling in this way five or six pages of this Review: but we will give, next week, a synopsis of the latter appendix, with detailed accounts of such of the special phenomena as are required for the proper elucidation of the learned writer's arguments.

OUR articles on Afforestation having attracted some attention in Hongkong, a correspondent there has been good enough to send us a few particulars of Governor Hennessey's forestry work there. It appears that sixty Chinese gardeners are constantly employed in planting out, in suitable places, young trees of such kinds (some from seed shipped hence) as take kindly to the soil and climate, and which are raised in proper nurseries scientifically tended. Very few, indeed, now remain of the earliest foreign set-

ters on the island, but those who do will remember how it then really deserved its title of the 'Isle of Fragrant Streams'; when, through each little ravine in the hills, one might wander upwards, protected by the cool greenery of luxuriant vegetation, and listen to the brook singing:—

'I come from haunts of coot and hern,
I make a sudden sally,
And sparkle out among the fern,
To bicker down the valley.

'I steal by lawns and grassy plots,
I slide by hazel covers,
I move the sweet forget-me-nots
That grow for happy lovers.

'I murmur under moon and stars
In brambly wildernesses;
I linger by my shingly bars;
I loiter by my cresses.'

but, now, all this is denied to Hongkong residents. 'Men may come and men may go:' but the brook no longer merrily sings. 'I go on for ever.' The little voice is hushed; the woodcutter has murdered the Dryades and the Naiades have wept themselves away. It is refreshing to think that in a few years all this will be restored; and Mr. Hennessey's name should live in history linked with those of John Evelyn, Gilbert White, Jesse, Capability Brown, and other sylvan worthies.

WE have been informed that, for this Hongkong afforestation scheme, considerable quantities of seed have been lately forwarded thither, at the request of the authorities. As much as will furnish a quarter of a million trees has been sent, the varieties being the *sugi*, *hinoki*, and *tsubaki* (the wild, single-flowered camellia.) The first shipment took place about two months ago, the second about three weeks back, and the experiment will naturally be watched with great interest.

THE state of our Law Courts does not admit of our publishing this week No. II. of the 'Japan Times' Law Reports', as we had intended to do. The several cases which are in the lists have been advanced a stage; but one case only is ready for the reporter, and that is not of sufficient proportion of quantity, or of interest, to entitle it to a separate record. It will be fully treated at the proper time; meanwhile we give it brief mention below. The evidence in the second opium-smuggling case against Mr. Hartley is closed, and the case awaits judgment. The charge in this case is founded, as in the first, on the smuggling of the prohibited drug;—but the prosecution seeks to obtain a conviction, by showing that the opium seized is worthless as a medicine, and contends that it is deficient in morphine; and therefore not 'official.'

In the great 'right of way' case:—"Japanese Government *versus* Cope and Mitchell," after several day's hearing, and a final sitting till two in the morning, answers to sixteen questions were pumped out of an exhausted jury; who, in order that there might be no mistake, adopted the novel expedient of illustrating their reasons by a diagram. The number of problems submitted to them for solution must have taken their fancies back to the days of their youth; for their diagram assumed the figure by which school boys delight to represent a gallows, erected in chalk upon a garden door, for the pendulous punishment of a dreaded pedagogue. The defendant Cope has moved for leave to enter judgment for the defendant on the facts found by the jury; and the matter now stands next in the list for argument.

In the case of *Hart versus Herhausen*, Mr. Wilkinson has delivered a judgment of some importance, bearing on the question of the effect of a posterior Act of Parliament, to control the provisions of the Order in Council for China and Japan of 1865. The case came before the Court on a judgment-debtor summons, issued under Sections 130 and 131 of the Rules of Court framed by virtue of that Order, for the examination of the defendant. The sections in question provide that a debtor failing to obey an order, or decree, for payment of money, may be examined as to the circumstances under which he contracted the debt, or incurred the liability, in respect of which judgment was rendered; and as to his ability to make the payment ordered—and provide certain penalties for cases where the

debtor is shown to have dealt improperly with his property. The defendant's counsel contended, that, as the Debtor's Act of 1869 abolished imprisonment for debt and attachment of the person of a debtor, unless he was shown to be, or to have been at some time since the decree, in a position to make the payment ordered; therefore the plaintiff was precluded from enquiring into any matter relating to the dealings by the debtor with his property previous to the decree. (In this case, the subtle distinction that the debtor was dealing with the plaintiff's property, was ignored.) His Honour decided that, although the Debtors' Act was of force within the district of the Supreme Court for China and Japan; yet the sections 130 and 131 of the Rules had not been repealed thereby.

The ingenuity displayed by our bar in taking objections, and the success which occasionally attends some of these efforts, remind us of the case of the 'Dog and Duck,' the moving incidents of which trial, recorded in verse and sung by a witty learned Serjeant now, alas, deceased, served to give zest to the refrain of a song:—"Now always get, A Counsel to defend you!"

YOKOHAMA: SATURDAY, MARCH 30, 1878.

DEATH.

On the 28th March, 1878, at No. 145, Bluff, ALFRED LAWRENCE TURNER, Esq., Acting Manager of the Hongkong and Shanghai Banking Corporation, aged 32 years.

NOTES OF THE WEEK.

FRIDAY EVENING, MARCH 29th, 1878.

THE *Tibbs*, with the Marseilles mail of the 10th February, arrived in harbour at noon on the 28th, the *Tanai* left with the homeward mail on the 26th due in London May 13. The usual coasting steamers have arrived and departed and the *City of Tokio* is advertised to sail on the 5th for San Francisco. The *Malacca* with the London-mail of the 15th ulto left Hongkong for this, on the 28th inst. at 4 p.m. For all other particulars, we refer our readers to our Mail Register and Shipping Intelligence.

Death has struck a name from our list of residents, since we wrote last: The Acting Manager of the Hongkong and Shanghai Bank, Mr. Alfred Lawrence Turner, died on the morning of the 28th inst., after a painful illness of many weeks' duration. A young man, and a promising officer of the Bank, his career of usefulness has been 'untimely nipped.' He entered the service, we believe, soon after the establishment of the Corporation, and, rapidly passing through subordinate grades, served with credit as acting manager at more than one of the branches, as also at the Chief Office in Hongkong in the capacity of acting-sub-manager. His social qualities seem to have particularly endeared him to his subordinates, and the sorrow expressed for his loss is more than perfunctory.

The scanty news from Europe which we get by wire keep us still in a most anxious state of uncertainty, and business suffers accordingly. To Englishmen especially, the news of a Declaration of War would be hailed as a relief from what is becoming unbearable suspense. There appears to be no likelihood of Russia receding from the position she has taken up; nor is it indeed, reasonable to expect that she should; and England cannot withdraw her fleet from the Dardanelles, nor consent to recognize the separate Treaty made between Russia and Turkey, without a loss of prestige, even of reputation, the effects of which would be far worse than war. So imminent does it now appear, that both Russian and English men-of-war in harbour are kept constantly in readiness for sea.

Late last week, and during the present, a circular has been going the round of the settlement, inviting the signatures of such residents as consider that a measure of Municipal Reform should be carried into effect, in the direction of restoring control to the

foreign residents themselves. We believe it emanated from the office of our contemporary the *Gazette*, and as a very large number of people have signified their adherence to the principle, a Public Meeting may soon be expected, when a scheme will be proposed. Our own views on the subject have been placed before our readers, and we see no reason at present to change them: the difficulties in the way of getting a Municipal Council like that of Shanghai, purely unofficial, appear to us very great: whereas the success of the mixed official and unofficial system of Kobe has been such as to justify its designers in consenting to extend its benefits to Yokohama; and we think that if this be the boon solicited, there is a fair chance of its being granted. At the same time, as we have said, we are perfectly ready to abandon any pre-conceived ideas of our own in favour of any proposal which will ensure us a change from the existing disgraceful mismanagement. There certainly ought to be no two opinions on the question of finance, and any one who argues that this little settlement cannot be kept in proper order for \$50,000 *per annum* must either be a very poor hand at figures, or have some vested interest in keeping things as they are.
